### The Scientific Foundation for European Integration

EXTENSION OF REMARKS

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. KEFAUVER. Mr. President, Robert MeKinney, editor and publisher of the New Mexican, Santa Fe, N. Mex., delivered a challenging address on the "Scientific Foundation for European Integration" before the American Club of Paris on April 23. This address has many suggestions for unifying our scientific efforts with our friendly allies. Knowing it will be of interest to Members of Congress, I ask unanimous consent that a digest of the address be printed in the Appendix of the Record.

There being no objection, the digest of the address was ordered to be printed in the RECORD, as follows:

THE SCIENTIFIC FOUNDATION FOR EUROPEAN INTEGRATION

(Digest of remarks by Robert McKinney before the American Club, Paris, April 23, 1959)

During the observance of the North Atlantic Treaty Organization's 10th anniversary it is a privilege to be here in Paris, the capital of the NATO Alliance. In spite of any imperfections of its first workings, we are fortunate that we can celebrate a constructive decade since NATO's birth and look forward to a long life of increasing usefulness.

Each of NATO's member nations has come far in perfecting its own domestic unity and order. But all Atlantic nations have found out that, to make liberty safe, they must do more than look out for their own individual defense and separate welfare.

Some of the most striking examples of international cooperation for peaceful purposes are now to be seen in Western Europe.

Although the widest cooperation is highly desirable, there are many interfering patterns and traditions which dissolve only gradually. In the case of Europe, OEEC and economic cooperation within NATO can sensibly be encouraged. But we may profitably direct our discussion today to the small six-nation group which has progressed further in devising structures for cooperation, as evidenced by the Common Market, the Coal and Steel Community, and the Atomic Energy Community. Because scientific co-

operation is easiest to extend across frontiers and because the Euratom Treaty already provides that any European state may apply for membership in that community, it should be of particular interest for us to examine whether Euratom can play an expanded role in European integration.

In essence, economic development is technological development. The growth potential of any economy is determined by its technological foundation which, in turn, is determined by its scientific foundation. Any country can add to industrial plant by importing machinery or borrowing blueprints and technicians. But sustained, longrange development of any economy must derive from that economy's scientific and technical resources. This is not to preach economic isolationism. It is simply to face the fact that—no matter where an advance first occurs—its broad and successful application depends upon the level of sophistication of the mechanical and personnel complex using it. In any area this level must be practically equal to that of the place in which the development occurred.

That is the reason why the political concept of the European Economic Community will not flourish unless coupled with expansion of the scientific and technologic resources of Western Europe. Now I do not want to be misunderstood as being against the Common Market. I am for it, so much so that I think we should all try to find ways to help make it work most effectively. And, as I said before, I believe broadening the role of Euratom can do just that.

As originally conceived in the Brussels report of May 1956, Euratom had two objectives: The first objective was research and exchange of information in the atomic field. Creation of a center to complement the research pursued by national, governmental, or private bodies was contemplated. The second objective was the development of investments, common installations, a supply of nuclear fuels and other overhead services for atomic electric powerplants. These are both valid objectives; they are, in fact, exactly what the U.S. Atomic Energy Commission cuts across State lines to do in America. But all this was before Suez.

After it, as was proper, a new study was made. The market analysis, entitled "Target for Euratom," called for the creation of 15 million kilowatts of atomic electric generation capacity by 1967.

As a first step, Euratom planned an interim, short-term goal of 1 million kilowatts of atomic power by 1963. Financial commitments of the six nations were set at about one-quarter billion dollars. To support this effort, the United States undertook commitments totaling around one-half billion dollars in money, materials and probably liability for guarantees. One million kilowatts of conventional electric generating capacity would cost about \$150 million. The motivation for this American support was said to be strengthening the six nations' economic base as a defensive shield and future dividends to American atomic technology.

Inasmuch as statements of intent to submit proposals for construction of the atomic powerplants contemplated in the joint E.S.-Euratom program are due May 28, it is perhaps appropriate to review these earlier beliefs and conclusions. The thesis which I shall attempt to develop today is this:

1. The factors which seemed controlling at the time of Suez are no longer controlling; hence the target of 15 million atomic kilowatts by 1967 should be reexamined.

2. The construction, meanwhile, of several atomic powerplants in Western Europe will serve the very valid purpose of providing the six nations and the United States with design, engineering, and operating experience; it will not be catastrophic, however, if the proposals do not add up to 1 million

kilowatts or if the plants proposed are not finished by the date now set.

3. Whatever importance one attaches to either of these programs, there is a paramount role for Euratom to play in the scientific and technologic integration of Europe.

The specific goal of kilowatts of atomic power—however great its merit appeared in 1956—seems much less urgent today, nor can one see greater urgency in at least the middle future. With a freer Western European economy, with currency convertibility, with expanding export trade, atomic fuels will have to stand on their own feet in competition with coal and oil.

The cold light of dawn often gives new perspective. In 1959 we in the United States have found that the real costs of building nuclear powerplants are much higher than we assumed in the "impressionistic" period of atomic energy in 1956.

Before long, natural gas will make in Western Europe the same revolution in cost and convenience that it has already made in the United States. The conclusion seems inescapable that any shortage of fossil fuels has receded farther into the future. It seems, also, that the pressure of overproduction will keep coal and oil prices down, even in an inflationary period.

Suez demonstrated a basic independence of Western Europe from oil deposits in the Middle East—or, for that matter, it demonstrated Europe's independence from all particular reserves anywhere. The incident showed that Egypt was more dependent on the Suez Canal than the very nations whose lifeline Suez had been thought to be. More than that, Suez set the limits to what newly emergent political regimes in oil-producing countries—Iraq, Venezuela, or elsewhere—can do. Realisticaly, they can neither cut off supplies nor raise prices. These regimes are limited to trying to keep at home a greater percentage of a diminishing profit.

By now, I hope we have given a little more perspective to the belief generally held about the time of Suez that Western Europe is by nature a dollar-short, fuel-short, high-cost energy area, unable to pay for coal and oil imports and vulnerable to their interruption. And I repeat that, whether you agree with this conclusion or not, I believe we can all agree that Euratom can play an important role in the integration of Europe.

The second part of my thesis calls for a few words on nuclear power, about which there are also deep questions—questions of whether present-day technology can provide atomic kilowatts at competitive costs, even in areas where fossil fuel prices are high. There is genuine doubt about the type of atomic unit which will best meet the competition of carbon fuels.

Already there has been a minor revolution in the type of fuel element for atomic reactors. There are fascinating developments in the direct conversion of heat energy to electricity. Should these be perfected—and in 5 years we are apt to see further advances beyond those recently made at the Los Alamos Scientific Labratory near my own home—the whole cycle of use of a hot working fluid to drive a turbine, which in turn drives an electrical generator, could be eliminated.

With all the factors I have mentioned now in mind, one is forced to the conclusion that Western Europe's present need for atomic power can scarcely be any greater than the need in the United States or the U.S.S.R.

We now come to the third point: the role Euratom can play in the scientific and technologic integration of Europe.

At the time of Euratom's conception the atom was the newest frontier of science, but newer frontiers have since emerged. True, atomic science calls for a breadth of knowledge and skills; it has a diversity of appli-

cations in physics, chemistry and biology, as well as a wide range of specific practical uses in medicine, agriculture, industry and even space travel. Nevertheless, activities across the whole scientific spectrum could help build a stronger, broader technologic foundation for the European community.

Such a broadening of the purpose of Euratom would be wholly consistent with the objective of the United States to bulwark the economy of Western Europe. There is even a sense of urgency for this expansion, when we reflect on the shortage of engineers and technicians to plan, build and run Western Europe's expanding industrial complex. Perhaps Euratom in all its phases might in time come to be known by the name of what in fact it would then be: The European Scientific and Technical Community.

Specifically, I envisage an organization having as its center a laboratory, equipped with nuclear and other facilities, open to qualified people from the 15 nations of the Atlantic Community, and having as its function the advancement of science and tech-nology on a broad front. Its program would go beyond that contemplated in the present Euratom concept and would include research and training in the various aspects of basic science. There would be a parallel structure devoted to practical problems of engineering and instrumentation. The provision in the Euratom Treaty that "an institution at university level shall be set up" may be the seed of an all-European seat of higher learning,

Euratom is a living structure which contains the seeds of truly vital purpose. The 1956 problems Euratom was to have solved—a fuel shortage and insufficient dollar resources to meet that shortage—have resolved themselves at least for the present. The more fundamental problems Euratom can now help solve will not resolve themselves.

Even from the world perspective with which we opened our discussion, the opportunities for a European Scientific and Technical Community in helping build the foundation for European integration and thus, in turn, bulwarking the Atlantic Union are real and important. If these opportunities can be realized with American help, there will be real impact upon the decade of the 1960's.

### Report of Board of Visitors to U.S. Military Academy

EXTENSION OF REMARKS

### HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. RUSSELL. Mr. President, yesterday I placed in the Appendix of the RECORD the report of the Board of Visitors of the Naval Academy for 1959. I have also received the annual report of the Board of Visitors for the Military Academy at West Point.

I believe these reports are of interest to Members of Congress and to the country generally. I therefore ask unanimous consent that the report of the Board of Visitors to the Military Academy may be printed in the Appendix of the Record.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

U.S. MILITARY ACADEMY,
West Point, N.Y., April 11, 1959.
Subject: Report of Board of Visitors to the

U.S. Military Academy, 1959. To: The President of the United States.

#### 1. APPOINTMENT OF THE BOARD

The Board of Visitors to the U.S. Military Academy was appointed in accordance with the provisions of section 4355 of title 10, United States Code. Pertinent extracts from the code are appended to this report and are marked "Exhibit A."

#### 2. PERSONNEL OF THE BOARD

The membership of the Board as constituted for the year 1959 was as follows:

Senators: Prescott Bush, Connecticut, representing Richard B. Russell, Georgia, chairman of the Committee on Armed Services; Styles Bridges, New Hampshire; Kenneth W. Keating, New York; Gale W. McGee. Wyoming.

Representatives: Samuel S. Stratton, New York, representing Carl Vinson, Georgia, chairman of the Committee on Armed Services; Louis C. Rabaut, Michigan; Olin E. Teague, Texas; Stuyvesant Wainwright, New York; Melvin R. Laird, Wisconsin.

Presidential appointees: Dr. William V. Houston, president, the Rice Institute, Houston, Tex.; Gen. Anthony C. McAuliffe, American Cyanamid Co., New York, N.Y.; Dr. Frank H. Bowles, College Entrance Examination Board, New York, N.Y.; Dr. Ivan C. Crawford, consulting engineer. Boulder, Colo.; Dr. Harlan Hatcher, president, University of Michigan, Ann Arbor, Mich.; Dr. Clark Kerr, president, University of California, Berkeley, Calif.

Col. Charles J. Barrett, professor of for-

Col. Charles J. Barrett, professor of foreign languages, U.S. Military Academy, was appointed Executive Secretary for the Board by the Superintendent, U.S. Military Academy.

#### 3. PRELIMINARY DATA

After considering the wishes of the members of the Board of Visitors for 1958 and the 1959 academic calendar of the Military Academy, the Superintendent notified all members whose terms extended into 1959 that April 9-12 had been selected as the dates of the visit. Announcement of those dates was transmitted to all new members as notification of their appointment was received.

The Superintendent likewise caused to be distributed to all members of the Board certain reports and informational material, and a suggested program for the visit. A list of the data furnished is appended and marked "Exhibit B."

#### 4. CONVENING OF THE BOARD

The members of the Board assembled during the afternoon and evening of April 9, 1959, but undertook no formal action until 8:30 a.m. on April 10. Present at that time were Mr. Stratton, Mr. Rabaut, Mr. Teague, Mr. Wainwright, Mr. Laird, Dr. Houston, General McAuliffe, Dr. Bowles, and Dr. Crawford.

The Board elected General McAuliffe as chairman for the 1959 annual visit.

Senators Bamcas and Keating were detained in Washington by pressure of congressional business until the morning of April 11, when they joined the other members at West Point.

It is regretted that the appointment of Dr. Hatcher and Dr. Kerr to the Board was so late as to make it impossible for them to participate in the visit.

Congressional business caused the departure of Mr. TEAGUE at 9 p.m. on April 10, and a prior engagement required Dr. Houston to depart at 7 a.m. on April 11. The remainder of the Board departed following the final meeting of the Board, which ended at 1:45 p.m. on April 11.

#### 5. PROCEDURE

The detailed program followed by the Board in its visit is appended and marked "Exhibit C." The mornings of April 10 and 11 and the afternoon of April 10 were devoted to inspections, observation, and conferences. On the evening of arrival the Board viewed a film made of the summer activities of the Third Class, U.S. Corps of Cadets, at Camp Buckner, a type of training which the Board has not heretofore seen because of the time of year at which that training is conducted. In several instances on April 10 and 11 the Board was divided into groups so that simultaneous observation in different fields was possible. Special conferences and interviews were arranged for members of the Board who wished information on matters not covered by the program of the Board as a whole.

#### 6. COMMENTS

# (a) Morale

Formulation of a definitive judgment in this matter during the brief stay of the Board at West Point is obviously impossible, but in the cadets, officers, and enlisted men with whom the members came into contact there was no indication of lack of morale.

### (b) Discipline

The Board saw no evidence of lack of discipline and believes that a satisfactory standard is being maintained. It would like, however, to inform itself better concerning the disciplinary procedures incident to the training of new cadets during the summer months, and indicated its desire to see at firsthand the conduct of that training.

(c) Curriculum

Under the direction of the Superintendent a lengthy and detailed study of the curriculum is being made, and is now approaching its final stages. Four members of this Board have been closely associated with the study since December 1958. Changes in the curriculum are doubtless imminent and the Board believes that the critical evaluation made by the Military Academy itself will result in a curriculum appropriate to the future needs of the graduates and of the military service.

It appears that elective courses may replace parts of the now fully prescribed curriculum. Because the teaching of the pure and applied sciences at the Military Academy is a responsibility divided among so many departments, it is hoped that those departments will work together in the formulation of a program which will be planned as a sequence in terms of breadth and depth of coverage, and will be supported by suitable electives. The Board notes that nearby universities, research institutes, and scientific schools form one of the world's greatest reservoirs of scientific talent, both for specialized instruction and for advice on program planning.

#### (d) Instruction

(1) Academic: The Board in small groups or as individuals visited classes in session to observe instruction. The participation of the cadets themselves in the conference type of classroom session must be heartwarming to an instructor, but it is recognized too that at least a part of that participation is sparked by the instructor's own interest, enthusiasm, and preparation. The quality and training of the instructors compare favorably with those of the instructors in our good civilian colleges. The fourth class may be said to have an advantage over freshman classes in many colleges because all of the former's instructors have been trained and prepared for the assignment, whereas the graduate assistants to be found in many schools are nonexistent at West Point.

(2) Military: No actual tactical instruction was observed. The Commandant of Cadets outlined the military training program to the Board. To judge from the film on summer training activities, the means for military instruction are on hand. No deficiencies were observed or reported.

#### (e) Physical equipment

(1) Cadet barracks: The Board visited a former academic building which is now being converted into cadet barracks. Problems in adapting fenestration of former classrooms to the smaller rooms occupied by cadets as living quarters are being satisfactorily overcome. The interior, as converted, will present in its generally horizontal plan an appearance quite different from the vertical development of the divisions of other cadet barracks. No significant problems of administration should, however, result from this difference. The barracks should be ready for occupancy prior to organization of the Corps of Cadets for the academic year 1959-60.

But even with this conversion, several hundred cadets will continue to live three in a room designed for two. A plan drawn for the erection of an additional barracks on a site between existing barracks and the hospital was presented by the Superintendent, who considers the need for additional space most pressing. The new construction appears feasible and would permit the Corps of Cadets as presently constituted to be housed two to a room, the optimum condition for community living, for study, and for the maintenance of the numerous articles of cadet uniform.

(2) Housing for Officers and Enlisted Men: A housing shortage exists in the area surrounding West Point, which makes it extremely difficult to find a place to live for the overflow of officers and enlisted men at West Point. At the present time approximately 100 officers and more than 250 enlisted men entitled to quarters must seek homes in surrounding communities. The quality of housing available is low and much of it is at such distance from West Point as to place undue hardship on those whose duties at West Point begin at 7:30 or even earlier in the morning. An additional factor is the nearness of Stewart Air Force Base, whose officers and men are faced with the same problem and whose area of search for housing overlaps that of West Point personnel.

The Military Academy has prepared plans for the construction of additional housing at West Point. Members of the Board viewed potential construction areas and were impressed with the engineering obstacles to be found everywhere. Since level terrain is scarce and is required generally for training purposes, places which are suitable for hous ing construction are limited. Because utilities must be extended to any new area, and because the underlying rock formation makes site clearing and all construction especially expensive, costs cannot be held within the limitations set for Capehart housing, without reducing to a ridiculous figure the size of the houses provided. The Board concludes that direct appropriations for housing at West Point will be required to provide minimal accommodations, and that the human needs of the officers and enlisted men concerned make the provision of additional housing essential.

(3) Library: Next in order of the superintendent's priority for West Point is improved and expanded library space. The present building was constructed primarily as an observatory. On two occasions since it became a library it has received additional space, once by expansion into one of the academic buildings and later by construction of a new wing. Whereas a rule of thumb for college libraries would provide seats for one-quarter of the student body, the seating capacity at West Point will accommodate

less than one-tenth. Many books of general interest are necessarily kept in reference rooms of departments of instruction, available but not readily accessible, and sometimes inaccessible during library hours.

Growing emphasis is being placed at West Point on the use of multiple texts, especially in the humanities. Individual research, a balancing of opinion, the drawing of individual conclusions—such are some of the requirements of modern education, and they cannot be accomplished without the use of a library.

The anticipated introduction of elective courses will again expand the use of the library. Some of the electives under consideration will be of the seminar type for which no one textbook or group of textbooks will be sufficient. And the very fact that a cadet is studying a subject of his own choosing will doubtless lead to more background reading by the student. It is not impossible that the lack of adequate library facilities could jeopardize the academic standing of the U.S. Military Academy.

The superintendent has considered the solicitation of contributions from individuals or foundations for the construction of a new library at West Point. While such persons or foundations could rightfully be proud of their part in the intellectual development of the cadet, it seems highly undesirable to leave room for questioning the Government's concern for an important aspect of education. The Board believes that prompt action should be taken to provide an adequate, modern library for West Point, a suitable companion-piece for the remainder of the academic plant.

(4) Recreational facilities: The Board notes with approval the continuing concern of the Military Academy for the provision of suitable recreational facilities for cadets during their off-duty hours. Individual members have noted the increase in such facilities at West Point in the past year or the past 2 years. All hope for continued fruitful effort in this field.

A plan for a cadet activities building was presented to the Board. The proposed building would support all the activities of the cadets and its construction is very desirable, but the estimated cost is so great as to indicate considerable delay in obtaining the necessary funds. The Board hopes that ways may be found to proceed with such a building.

#### (f) Fiscal affairs

No serious deficiencies were reported to the Board, and no major problems of operation are known to exist.

#### (g) Religious activities

The Board visited the cadet chapel and the Catholic chapel, and it was also informed of the provision of services for cadets of the Jewish faith. The Catholic chapel is currently being almost doubled in size, by the use of private funds. All cadets are given opportunity to attend religious services during the week, in addition to the compulsory attendance on Sunday. Cadet participation in the choirs, in Sunday school teaching, and in religious discussion groups, indicates that there is a healthy spirit of service and of interest among them.

Catholic and Jewish chaplains are provided by the agencies of those two faiths. The cadet chaplain is selected from the Protestant faith and is appointed by the President. He is assisted by another chaplain paid from private funds. But the statutory limitation on the pay of the cadet chaplain makes it ever more difficult to obtain the services of a clergyman with the qualities so necessary to inspire and guide moral and spiritual development among the cadets. Several ministers approached have indicated their willingness to accept some

reduction in income in order to undertake this important task, but not a reduction to the \$5,600 per annum now paid to the cadet chaplain.

The Board believes that few things are more important than a lively and strong faith, and that a few thousand dollars per year should not be permitted to stand in the way of procuring vigorous and able leadership in this field for the cadets. It is reported that proposals to increase the pay of the cadet chaplain and to provide him with an assistant chaplain are being submitted to Congress. It is hoped that they will meet with favorable action by the Government.

#### (h) Strength of corps of cadets

The Army expects to receive approximately 1,200 new officers each year and would like to have about half of them come from the service academies. To date it has not been possible, except in isolated years, to attain the figure 600 from the academies. Part of the problem here lies in the fact that the authorized strength of the corps of cadets is set for the date of admission of a new class. Because attrition immediately sets in, and because admission occurs only once a year, the corps of cadets is below authorized strength for almost the whole of every year.

The Board of Visitors was informed that proposals are to be made to Congress by the Department of Defense to overcome the effects of this understrength period.

It would appear that all requirements for housing, etc., should be based only on the authorized strength of the corps of cadets. But the facilities for feeding the cadets and the hospital to support them are already available. Personnel requirements for instructors need not change unless there is a great change in the size of the corps. Thus, with the acceptance during the first few months of each academic year of some additional crowding in barracks, with which all recent classes of cadets are familiar, a larger number of cadets could be trained at no additional expense to the Government other than the pay and subsistence of the additional cadets.

The Board of Visitors is sure that these factors will be weighed when the anticipated proposals are offered.

#### (i) Designation of additional alternates

Under present conditions a Member of Congress may find that, through no fault of his own, cadets appointed by him have become concentrated in certain classes. If two or more are members of the same class, no appointment can be made in at least one year out of four. Yet good prospects present themselves every year and, forced by lack of vacancies to enroll in other colleges, are frequently lost to the military service for which they had once had a strong preference.

The Board feels that Members of Congress who have no vacancy to fill in a given year should still have the opportunity to nominate alternates who would thus be able to compete on the national level for one of the additional appointments now authorized by law. This procedure would lend support to the Superintendent's search for quality in the entering class of cadets by broadening the base from which to select those who are to receive the additional appointments to be made.

#### (j) Internal procedures of Board of Visitors

The Board takes this means to suggest to subsequent Boards of Visitors certain items of procedure that seem desirable. They are placed herein because they will thus be recorded in a form which will come to the attention of Boards appointed in the future.

 For a majority of the Board an annual visit in April seems to be best. Recent experimentation with changing dates for the visit has not accomplished the desired

(2) More contact between the Board of Visitors and the United States Military Academy in the period between annual visits is desirable.

(3) Assignment of special spheres of in-terest to groups of Board members for study during the annual visit should permit greater depth and breadth of coverage of the activities of the Military Academy. program for the whole Board as a group is deficient in this respect.

In extension of the suggestions in subparagraph 6b and in subparagraph 6j(2) above, the present Board is considering a visit by part of the group to West Point during the summer, to observe the summer training of cadets at West Point and to engage in free and extended discussion with cadets to ascertain their feelings with respect to the Military Academy, its aims, and its accomplishments.

### 7. RECOMMENDATIONS

### (a) Curriculum

That the heads of departments which instruct in pure and applied sciences at the United States Military Academy consult with qualified scientists in the formulation of an integrated science program at West Point and in the establishment of suitable elective courses for its support.

#### (b) Cadet barracks

That construction of an additional barracks on a site adjoining the present cadet housing area be undertaken, so that each cadet may have a suitable amount of space for normal living.

(c) Housing for officers and enlisted men

That the 156 sets of family housing for which preliminary plans have been drawn be constructed and that funds therefor be sought as a direct appropriation rather than under the Capehart plan, because the limitations under that plan are too low for this high-cost area.

#### (d) Library

That steps be taken at once to construct a new library, with suitable provision of space therein for increased use of the library. Greater facilities are necessary for a modern, expanding curriculum.

#### (e) Chaplain, U.S. Military Academy

That the chaplain be provided with an assistant chaplain to minister to the U.S. Corps of Cadets, and that the pay and allowances of both be set at figures which will make it possible to secure vigorous and understanding young leaders for both important posts.

#### (f) Nomination of alternates when no vacancy exists

That the Department of the Army investigate the possibility of changing present admission procedures to permit Members of Congress to nominate alternates in a year when no vacancy in the Congressional district (state in case of a Senator) is available.

#### 8. CONCLUSION

It is our belief that the Military Academy, under the leadership of its Superintendent, Lieutenant General Davidson, is progressing in tune with the times and the expanding needs of its graduates. The staff and faculty appear to be dedicated to the important task in which they are participating. The cadets take pride in themselves; they give every evidence of loyalty, of enthusiasm, of devotion to high standards of honor and duty. The mission of the Military Academy has been entrusted to capable and willing hands and is being faithfully accomplished.

Anthony C. McAuliffe, General, U.S. Army, retired, American Cyanamid Co.; Samuel S. Stratton, U.S. House of Representatives; Louis C. Rabaut, U.S. House of Representatives; Olin E. Teague, U.S. House of Representatives; Stuyvesant Wainwright, House of Representatives; Melvin R. Laird, U.S. House of Representatives; Styles Bridges, U.S. Senate; Kenneth Keating, U.S. Senate; William V. Houston, President, the Rice Institute; Frank H. Bowles, President, College Entrance Examination Board; Ivan C. Crawford, Consulting Engineer.

### Results of a Poll: Fifth Congressional District of Ohio

EXTENSION OF REMARKS

# HON. DELBERT L. LATTA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. LATTA. Mr. Speaker, recently I conducted a survey of my district on several issues before the Nation. In order to apprise the House of the thinking of the people of the Fifth Congressional District of Ohio on these important matters, I am inserting the results of this poll in the RECORD.

The questions and the percentage of "Yes" and "No" answers to each question given by the people of the district in the questionnaires are set forth below:

1. Should we maintain the best possible defense regardless of its impact on the budget? Yes, 80.5 percent; no. 19.5 percent

2. (a) Should our mutual security-foreign aid program be limited to military assistance? Yes. 74.8 percent; no, 25.2 percent.

(b) Should we also continue our economic assistance in the hope that these countries will remain allied with the non-Communist nations? Yes, 47 percent; no, 53 percent.

3. Do you favor President Eisenhower's position on Berlin? Yes, 91 percent; no, 9 percent.

4. Do you favor the proposed 11/2-cent increase in the gasoline tax to maintain our Federal interstate highway construction program on a pay-as-you-go basis? Yes, 54.6 percent; no, 45.4 percent.

5. Do you favor the proposal to expand the social security program to include the payment of surgical and hospital bills if it means an increase in your social security tax? Yes, 30.1 percent; no, 69.9 percent.

6. Do you favor legislation to effectively curb the irregularities revealed by the Mc-Clellan committee in some of the labor unions? Yes, 95.2 percent; no, 4.8 percent.

7. Do you favor an expansion of the Federal Trade Commission's investigation of the price differential betweeen what a farmer receives for his product and what the consumer pays for it? Yes, 76.1 percent; no, 23.9 percent.

8. Do you favor Federal aid for schoolbuildings if it means any Federal control? Yes, 24.8 percent: no, 75.2 percent.

9. (a) If you are engaged in farming do you believe that Public Law 480 which provides that the Government may sell farm surpluses abroad for foreign currency should be expanded? Yes, 80.6 percent; no, 19.4 percent.

(b) Since the Soft Red Winter Wheat grown in Ohio is in demand and is not contributing to the what surplus, do you believe that a Government control-price support program is helpful to you? Yes, 11 percent; no, 89 percent.

(c) Do you agree that the farmer generally wants fewer controls and more freedom from Government interference even though it may

mean a temporary period of price adjust-ment? Yes, 90.4 percent; no, 9.6 percent. (d) Has the soil bank program been help-ful to you? Yes, 10.7 percent; no, 89.3 percent.

### The United Nations: Soviet Strategy and the Strategy of Freedom

EXTENSION OF REMARKS

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article that appeared in the General Electric Defense Quarterly for April-June 1959, which is published in Schenectady, N.Y.:

THE UNITED NATIONS: SOVIET STRATEGY AND THE STRATEGY OF FREEDOM

(By Henry Cabot Lodge, U.S. Representative to the United Nations)

"It is possible to conquer the more powerful enemy only by exerting the utmost effort, and by necessarily, thoroughly, carefully, attentively, and skillfully taking advantage of every, even the smallest fissure among the enemies, of every antagonism of interest among the bourgeoisie of the various countries, among the various groups of types of bourgeoisie in the various countries; by taking advantage of every, even the smallest opportunity of gaining a mass ally, even though this ally be temporary, vacillating, unstable, unreliable, and con-ditional. Those who do not understand this fail to understand even a grain of Marxism and of scientific, modern socialism in general." (Lenin, "Left-Wing Communism, an eral." Infantile Disorder," (1920).)'
Turgid and heavy-fisted though it is, this

famous passage of Lenin's expresses (with a frankness long since abandoned by his heirs) one of the basic maxims which still guide Soviet Communist world strategy: Divide

and conquer.

Soviet diplomacy and propaganda put this old battlefield rule to daily use. The peaceful solution of a free world dispute may be a cause for rejoicing elsewhere, but in Moscow it is a signal to blow on the dying embers. Recently we saw the truth borne out in the Cyprus affair, which was no sooner brought to the point of solution after 5 years of delicate diplomacy than Moscow began to tell the people of Cyprus they were being "stabbed in the back."

Obviously the leaders of world communism, although their theory speaks of contraditions in the opposing camp inevitably leading to proletarian revolution, know perfectly well that if they held aloof there would be nothing inevitable about it. are busy all the time promoting contradictions, hoping thus to give a decisive push to the so-called inevitable.

But as often as Moscow and Pelping seek to divide and conquer, the threatened nations obey a maxim equally old: "United we stand." Experience at the United Nations bears this out.

#### THE MIDDLE EAST, 1956-58

In no part of the non-Communist world have revolutionary events, with all the hatred and fear they generate, given the Soviet Union, that "scavenger of revolutions," more opportunities than in the Middle East.

When the Suez crisis broke out in October 1956, simultaneously with the Hungarian revolt, the Soviets did their best to pose as the defender of Arab nationalism against Western imperialism. They even invited the United States to join with Soviet troops in intervening in Egypt-a grotesque proposal which we rebuffed immediately.

Meanwhile the attack on Egypt was immediately and vigorously opposed by American diplomacy and by the overwhelming majority in the United Nations. The United Nations quickly assembled and dispatched an emergency force, containing no soldiers of any great power, to maintain quiet in the area and thereby secured the withdrawal of the

There were few things the Arab leaders desired less in any case than to be helped by troops of the Soviet Union-who were at that very moment helping Hungary with a blood bath. Moscow's maneuvers may have aimed at widening the breach among the free nations, but history may record that they actually caused it to heal more quickly.

#### A PHONY CRISIS

A year later, there being no real crisis in the Middle East, Moscow concocted a phony crisis. On September 10, 1957, just before the opening of the United Nations General Assembly, Soviet Foreign Minister Gromyko called a press conference in Moscow to announce the discovery of an American plot, in collusion with Turkey, to overthrow government of Syria (a country to which Moscow had been sending large supplies of arms). The propaganda buildup proceeded steadily. By October, Mr. Khrushchev was threatening: "When the guns begin firing,

The whole question was thoroughly de-bated in the United Nations General Assembly. The Soviet charges were so thoroughly discredited that the resolution embodying them was not even brought to a vote. Within a few months Syrian leaders, in evident fear of seeing their country taken over by the Soviet Union, brought about a with Egypt in the new United Arab Republic. Thus Moscow's attempt to "divide and conquer" produced more unity than had existed before.

Then came 1958 and the troubles in Lebanon and Jordan. In July the Government of Lebanon-for months the scene of civil strife, evidently aided from neighboring Syria—requested President Eisenhower to send American troops to help preserve its independence and integrity. The President responded to the Lebanese call, as did the British Government in the parallel case of Jordan, We then asked the Security Council to authorize United Nations action-including the sending of armed contingentswhich would make possible the withdrawal of our troops and the removal of danger to the integrity of the two threatened countries. The Soviet Union promptly vetoed this proposal.

During this whole period the Soviet line was to try to prevent the United States from going to the aid of a small and threatened country, Lebanon-even though the lawful Lebanese Government asked us to do soand to take the credit when we withdrew.

But again that strategy failed. The General Assembly met in emergency session. President Eisenhower appeared before it and proposed a series of steps to enable our troops to withdraw and to help the countries of the Middle East toward peace and eco-nomic betterment. Then the Arab countries themselves proposed a peace plan which was unanimously adopted by the Assembly. Soviets found so little support for their resolution, which was aimed against the United States, that they withdrew it without a vote. At the end of October, on schedule, our troops were out of Lebanon and Britain's out of Jordan.

The Middle East remains a dangerous place. But the area has thus far been spared the worst tragedles-major war and Soviet conquest. And the leaders of the region are increasingly aware of Soviet ambitions.

#### NUCLEAR WEAPONS AND THE OPEN SKY

"Ban the bomb," "end the tests"-in the 12-year debate on disarmament, with all its opportunities for striking virtuous attitudes, no Soviet slogan has been plugged more untiringly than these-and for obvious reasons. Each is short and simple. It plays on the fear of war. It could be used to make millions fear American power-and at the same time make them doubt American firmness.

The Soviets exploited the atomic bomb issue in all its variations. Year after year they demanded (with little or no mention of control) an end to its manufacture or its possession; a pledge not to use it; a pledge to destroy stocks; then, a pledge not to test it: and so on.

To counter this Soviet thrust we needed a position which was both simple (as theirs was) and honest (as theirs was not). In the thicket of military technology and political mistrust the search for this combination was hard going.

The United States has steadily improved its position. Much of this improvement has come from two striking U.S. proposals, both initiated by President Eisenhower and both reducible to a phrase.

First, Atoms for Peace (December 1953). Second, the Open Sky (July 1955).

When the President came to the United Nations in 1953 and proposed a world agency to spread the peaceful benefits of the atom, the worldwide response was electric. A new prospect appeared for cooperation across the dangerous gulf of the cold war. Ordinary people began to realize that the atom-until then a symbol of man's death—could equally be consecrated to his life. Faced with this tide of enthusiasm, Moscow (often mistakenly thought to be beyond the reach of world opinion) dropped its opposition and joined the International Atomic Energy Agency.

#### AMERICA'S IMAGE VISIBLY BRIGHTENED

By this one act the image of America. which Moscow had worked so hard to blacken, was made visibly brighter throughout the world.

Then, in Geneva in 1955, President Eisenhower put before the Soviet leaders his plan for an exchange of military blueprints and for mutual inspection against surprise attack by aerial sentinels in an open sky-a technique made possible by great progress in aerial photo-reconnaissance. In the United Nations resolution on disarmament that autumn, the Eisenhower plan was overwhelmingly endorsed.

Like atoms for peace, the open-sky plan was aimed only tangentially at disarmament

as such. But its influence on the disarmament debate has been great. Through it world opinion came to realize more vividly than ever before that any mutual arms reduction plan cannot work without some irreducible minimum of openness-no matter how repugnant openness may be to the Soviet Communist mind.

How valuable this progress was appeared in April 1958, when Moscow launched still another of its periodic propaganda blitzes against the United States. This time they complained that U.S. nuclear bombers were threatening peace by carrying out flights over the Arctic regions in the direction of the Soviet Union.

The aim, clearly, was familiar-to raise walls of fear between us and our friends abroad, and to undermine our will to maintain the defensive nuclear shield on which free world security rests.

The Soviets brought the question to the United Nations Security Council. This was a mistake. Not only did we explain clearly the so-called fail-safe system which makes an accidental nuclear bombing of Soviet territory by the Strategic Air Command impossible. We also renewed our 1957 proposal that the open-sky system be installed in the Arctic region. Thus the Soviets could further insure themselves against the surprise attack they professed to fear.

The Soviets killed our Arctic open-sky resolution with their veto—but not until it had received worldwide notice and influential support throughout the United Nations community, including 10 of the 11 votes in the Security Council and the open support of the Secretary General.

Thus the issue of inspection, with its larger connotations of openness and mutual tolerance, has been fairly joined. As President Eisenhower said last August in the United Nations:

'The nature of today's weapons, the nature of modern communications, and the widening circle of new nations make it plain that we must, in the end, be a world community of open societies.

"And the concept of the open society is the ultimate key to a system of arms con-trol we can all trust."

#### STRATEGY AND IDEALS

At the root of our strategic effort, involving as it does many diverse nations and cultures, lies the search for common purposes which can be translated into common ac-

We trust that those common purposes exist and that there is, at the most elemental level, the common desire to prevent World War III. Presumably the Union-regardless of its global ambitionswill share this desire as long as it respects our military strength.

There is also the common desire of non-Communist nations not to be conquered and not to be treated as Hungary was treated.

There are common bonds in the impulse to relieve suffering, in the love of beauty and in the search for scientific and religious

And finally there is the powerful hunger for a better life which deeply affects the majority of the peoples of the world. To meet that hunger the economic development programs which we are carrying on, both directly and through the United Nations, play a vital part.

It is pertinent to ask how people in Africa and Asia, animated by such purposes, compare the United States and the Soviet Union in their own minds. Six years of association with the representatives of Africa and Asia in the United Nations convince me that they see the difference in some such terms as

"The big difference between the United States and the Soviet Union is that the United States has shown that man's material lot can be improved without violence, without coercion, and without sacrificing his

civil rights."

People in Africa and Asia may have much or little or no practice in the techniques of multiparty, representative democracy, but all of them can understand the brutal lesson of the Chinese Communist communes and even the lesson of distant Hungary, as was shown in the overwhelming United Nations votes on that issue.

Likewise they can understand the lessons of progress in the United States toward justice for members of all races. When they read of the happenings in Little Rock our country's interests suffered; but when they see pictures of children of different races studying peacefully in the same high school in Virginia, they give our country credit.

HUMANE IDEALS OUR GREATEST ADVANTAGE

It is thus in the realm of humane ideals that our greatest advantage over communism lies. Through them we can unite what communism seeks to divide.

We do not need more doctrine. wonderful doctrines which are as true in the age of space exploration as they were in the age of the oxcart. We have the Declaration of Independence which tells us that "all men are created equal" and that among the rights with which their Creator has endowed them are "life, liberty and the pursuit of happiness." We have the words of the Old Testament prophet Micah who bids us to "do justice, love mercy, and walk humbly with they God." We have the Christian com-mandment "Thou shalt love thy neighbor as thyself."

These doctrines are not exclusively American; they are universal. They do not need to be modernized or codified; they need to be lived up to-both at home and abroad. Only as we are faithful to them can be succeed in the struggles of this century.

### Mrs. Booth Tarkington

EXTENSION OF REMARKS OF

### HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. BARR. Mr. Speaker, it is only fitting and proper that on behalf of Marion County, Ind., and the Congress of the United States, I say "Happy birthday" to a great Hoosier lady, Mrs. Booth Tarkington. Mrs. Tarkington is the widow of our beloved Indiana author, the late Booth Tarkington.

In Indiana we cherish our authors and our poets. We have a genial preoccupation with politics and politicians, but long after the Governors and Senators have departed the scene and are forgotten, we still read and reread the wonderful prose of Booth Tarkington. As children most of us loved "Seventeen," and "Penrod." When we grew up, we read and appreciated the Pulitzer prize winners, "The Magnificent Ambersons" and "Alice Adams."

Booth Tarkington's genius and work were supported by the wonderful lady that I am honoring today. All of us owe her a profound thank you as well as a hearty happy birthday.

When the Public Judges the Court

EXTENSION OF REMARKS

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article by Prof. Alan F. Westin entitled "When the Public Judges the Court," which appeared in the New York Times magazine of May 31, 1959, be printed in the Appendix of the RECORD.

In this article Professor Westin reviews the criticisms which have been made of the Court throughout the history of our country, and he also gives his analysis of what the reasons are behind the current day criticisms.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN THE PUBLIC JUDGES THE COURT (By Alan F. Westin)

In the past 3 years, the Supreme Court has been denounced for judicial misbehavior by a wide assortment of critics, ranging from the American Bar Association and southern officialdom to State court judges and the Daughters of the American Revolution. Bills and constitutional amendments have been sponsored in Congress to limit the Court's jurisdiction, and to make the Justices think twice before extending their offensive doctrines.

To listen to many of the wisest commentators on our constitutional politics, this imbroglio is not strikingly different from situations which the Supreme Court has encountered ever since the days of Chief Justice John Marshall and his self-declared archfoe, Thomas Jefferson. But is it? In my opinion, this battle between Court and critics is distinctly different from any other in our history.

In each previous struggle over the proper role for the Federal judiciary in our governmental system, a property issue has been at the heart of the controversy. While the doc-trines of the Jutsices have always been a matter of debate, there were five notable periods when the Supreme Court became a leading political issue, and prompted cam-paigns by powerful blocs in Congress to alter the Court's personnel or its powers.

The years 1821-24 and 1831-33 saw protests against the Court's interference with State regulation of banks, land titles, companies and other parts of the mercantile establishment. Arguments during 1857-60 dealt with the Court's treatment of slavery as a property matter and the impact of the alave system upon the economies of the West, North and South. The years 1896-1912 were marked by protests against the Federal judiciary's insulation of corporate enterprise from both State and National measures aimed at monopoly, taxation and labor relations. Finally, 1934-37 centered on the Supreme Court's barriers to social welfare legislation and to national management of the national corporate economy. In all of these episodes powerful economic interests were directly involved in defense of their privileges.

The current debate over the Court's rule has no comparable economic basis, reason for this lies in the character of the decisions that have precipitated protest. While the Supreme Court under Chief Justices Vinson and Warren has not been a probusiness Court, as in the days of Chief Justices Marshall or Taft, neither has it been antibusiness. In matters directly affecting business, as in labor relations, antitrust and tax issues, the Warren Court has been simply an enunciator of the social capitalist status quo in American politics.

Instead of propety issues, the present con-troversy deals with matters of liberty and equality. Where the outcome of disputed cases in the past decided what people could do with their property, free from Govern-ment restraint, the new cases decide what people can advocate and organize to promote, which people are consigned to be more equal than others, and what procedures Government may follow in apprehending and prosecuting the nonpropertied antisocial elements in our population.

Where the beneficiaries of the Court's rulings were once land speculators, planters, railroads and public utility holding companies, the new befriended are Negroes, syndicate leaders, Communists, balky college professors, rapists and Government em-

ployees accused of disloyalty.

Accompanying this shift in the issues has been an equally fundamental shift in the groups who attack and defend the judiciary. Previously, it was the spokesmen for liberalism and majority rule-from Jeffersonians to New Dealers-who denounced the Supreme Court. They did so on the rational liberal theory that the Court was an insufferable restraint upon majority will. In a democratic society, they argued, judges with life tenure had no right to substitute their notions of good policy for the wishes of the people acting through their elected representatives-Congress, the President, and States governments.

Yet, in the 1950's, liberal groups are defeading the judiciary as a wise agency tocheck mass passions and to protect natural rights from invasion by the political branches of government.

A similar reversal has taken place in the conservative camp. Previously, liberal critics were opposed by propertied groups who declared, in rational conservative doctrine, that the Supreme Court was a badly needed brake upon populist democracy. Yet, in the 1950's, the critics of the Court are led by groups we ordinarily associate with conservatism-American Legion, the DAR, the American Bar Association, State and local law enforcement officers, southerners, right-wing Republicans and Democrats in Congress, and the like. Their cry now is that the Supreme Court is tampering with the wise conclusions of the people's representatives, and they denounce the notion that any doctrine of higher right permits the judiciary to inter-

Finally, this is the first conflict not to present basically a party line division. Previously, Jefferson, Jackson, Lincoln, Bryan, and Roosevelt led the bulk of their party faithful against the disputed judicial doctrines. The party dominated by property in-terests being protected by the Court defended the Justices. Today, with property issues absent, there are no party positions. Eisenhower remains aloof. Stevenson supports the Court. Congressional Republicans and Democrats are divided. In this controversy, conservatives among the two parties face liberals from the two parties.

What do these changes import for the present controversy over judicial review? On this score, I think it may be wiser to ask questions and supply speculations than to issue firm conclusions.

First of all, why have liberal and conservative elements changed positions? Have the ideological bases of these classic comps undergone a transformation in the 1950's? I

think the answer is less spectacular than that. An overwhelming majority of liberals now defend the Supreme Court and judicial review because the Justices are banding down rulings on liberty and equality issues which accord with liberal beliefs. Conservatives are opposing the Court because, it has become dangerously unsound on these matters.

It is clear that whether a group's ideological toe has been pinched is the first determinant of whether the pinching institution will be praised or damned. Since the five major crises over judicial review in our past found the Court steadfastly devoted to conservative positions, the simple explana-tion of the first liberal switch toward judicial review is that liberals have had to wait from 1790 until the 1950's to find a set of Justices to whom they could attach their allegiance.

A second question is why a majority of Justices came to make this shift of positions possible. On this subject, since Justices do not allow themselves to be polled or given Rorschach tests, the area of speculation is

remarkably wide.

Perhaps, like nature, Supreme Court Justices abhor a vacuum. Since 1937, a majority of Justices have been committed to the concept of "judicial self-restraint" in matters of economic regulation by the elected branches of Government. For two decades, not a single Federal tax measure, regulation of commerce, national welfare program, or labor law has been declared unconstitutional.

While there was some talk within the Court between 1937 and 1953 of applying a different, more interventionist, standard of review for liberty and equality cases, a majority of the Court generally applied self-re-straint across the board. Appointees who looked forward to enunciating high constitutional principles must have chafed under

these self-imposed bonds.

By itself, I doubt whether this yearning for glory would have precipitated the departures of 1953-59. The personal discomfort coincided, though, with urging by powerful elements, including the Eisenhower administration, to advance from the "gradualist" approach of the Vinson Court on equality matters and overturn the whole separate but-equal doctrine of racial segregation.
Growing sentiment in condemnation of the
Court's ducking of fundamental issues,
rlsing anti-McCarthyite spirit in the Nation 1954, and the arrival on the Court's docket of liberty cases which represented the most excessive and least necessary aspects of the internal security programs-all these factors pressed in upon the Court.

However, the Supreme Court, or even a majority, is not something with a life of its own. Justices are distinctly individuals. with viscera and predilections inside them rather than gears or IBM cards. Thus one has to consider personalities as well as "forces" to reach satisfactory explanations

of judicial behavior.

Chief Justice Vinson and Justices Jackson, Reed, Minton and Burton were judges Who either found the case for authority persuasive in most liberty cases or else felt that the Supreme Court ought to exercise self-restraint in these as well as property cases,

In place of these Justices, the Eisenhower administration has installed Chief Justice Warren and Justices Harlan, Brennan, Whit-taker and Stewart. While there are important differences in constitutional philosophy among these men, ranging from the liberal Interventionist credo of Warren and Brennan to the legal institutionalist focus of Harlan, the Eisenhower appointees as a group are different from the Justices they replaced.

Trained in law school when legal realism was at its height, and free from personal

involvement in the anti-court, judicial selfrestraint fight of the 1930's, these men approach the post-1954 cases with a freer and less self-conscious perspective than their predecessors.

However, I think the earlier Justices, had they still been on the Court when the outer limits of the internal security issue were reached, between 1954 and the present, would also have been impelled to take a more active position than they had previously. Justice Frankfurter, for example, has found a way to vote against Government action and for defendants far more after 1954 than he had before. Justice Jackson would very likely have done the same.

In support of this hypothesis, it is useful to remember that courts have a way of defending liberty after a crisis has passed A delay in constitutional showdowns occurs on the theory that only when the dangers of excess are demonstrable and hysteria has diminished will the public heed the Justices' call to constitutional ideals.

It is also pertinent to note that the liberty and equality issues, while similar in being nonpropertied, do not represent identical problems for the Supreme Court. This has led to two different configurations within the Court. On cases dealing with segregation and its implementation the Justices have presented a 9-0 face to the Nation. Here, liberal interventionism is the judicial credo.

In liberty matters the present Supreme Court has a four-man interventionist core made up of Chief Justice Warren and Justices Douglas, and Brennan. Justices Black, Douglas, and Brennan. Justices Frankfurter, Harlan, and Whittaker have joined the four-man liberal phalanx in many of the disputed liberty cases, but usually with opinions which adopted more limited grounds for the result in the cases. Justice Clark has been in dissent in virtually all liberty cases. This leaves Justice Stewart, who has not participated in enough cases as yet to indicate exactly what his position represents, but seems to lean to the Frankfurter-Harlan group. Thus, close divisions are destined to be the rule in the liberty cases, with a divided Court mirroring nonsectional public divisions on these questions.

A third question to consider is what effect these changes in the fight over judicial review will have upon the Supreme Court's power position, or, put another way, whether the Court can find as powerful a constituency to support it today as in the past.

Most Americans are not used to thinking that the Supreme Court has a constituency, like Congressmen with their electoral dis tricts or the President with the national electorate. Yet the Supreme Court, despite life tenure for its members and a tradition of judge-worship in the population, remains a highly vulnerable institution. Decrees from the High Tribunal are realistically enforced only if the President and Congress acquiesce in them and public opinion supports-or is not actively opposed to-the basic trend of decision.

Who will support the Court today? seems to me that business conservatives have been uncommitted so far in the present Court controversy and are likely to remain so as long as the Court does not add antibusiness decisions to its disputed doctrines. To be sure, a few men associated with business organs, such as David Lawrence, have joined in the attack upon the Justices, but I think it is more significant to note that corporate spokesmen and business associations, such as the NAM, have chosen to stay out of this campaign.

Can the Court depend upon liberals, plus residual Court-worship in the population, to defend it against the nonbusiness conservatives? As congressional events in 1958 showed, the Court's critics are far from few. With

the unending animus of the southerners (and southern political power in Congress) to lead the drive, the Court is faced with more than a temporary round of dissent.
On the other hand, it would be a mistake

to underestimate the strength of the Court's defenders in the new political atmosphere of post-World War II America. With the importance of Negro voters constantly growing in urban politics outside the South, and with white groups such as Jews continuing to identify themselves strongly with the antisegregation issue, the Court's equality decisions are likely to be supported, not just by liberal groups, but by the urban machine leaders of both our political parties.

I think the Court has a somewhat rockier road for its liberty decisions, and it would not be at all surprising to see Congress reverse several specific rulings, such as those dealing with the Smith Act, passport policy, or State sedition laws. Even on the liberty side, however, the Court is not altogether defenseless. Distaste for McCarthyism, a desire for more careful scrutiny of internal security measures, and concern for fair procedure seem to be steadily increasing since 1954.

Indeed, the existing sense of moderation is indicated in the fact that many local bar associations have dissented from the American Bar Association's criticism of the Supreme Court, that the ABA's resolution was really rather mild, and that the president of the ABA has felt it wise to stress publicly that the ABA had no intention to attack the Court, but only to suggest stronger anti-

subversive machinery.

I do not mean to give the impression that a determinist tide rules the future of the present conflict over judicial review. Much will depend on how wisely and well the Justices decide specific cases, when they choose to intervene, and when to leave Issues to the political branches of Government, and whether the Court displays that basic craftsmanship in opinions without which a judge appears naked to those who do not agree with the results in cases.

The debate will also be affected by many factors not under the control of the Justices at all, such as whether the Nation can find a President who understands what the Justices are saying and will place the prestige of the White House behind the Court's decisions.

At present the Court seems firmly fixed in its course. For the interventionist Justices there are the lures of making high national policy and promoting liberal goals to spur them onward. For the Justices who lean toward judicial self-restraint there are other compelling factors. Concerned with the prestige of the Court, they realize that the Court cannot draw back from its desegregation approach without compromising basic position.

On the liberty side they realize that the arrival of radical antisubversive measures, threatening the traditional values of fair procedure and ordered liberty, has impelled them to take the distinctly moderate stands inaccurately described by angry critics as sweeping doctrines. There is nothing which can stiffen a good judge's back more firmly than erroneous charges by groups which equate assumption of inescapable responsibility with a treasonous arrogation of power.

Whatever this examination of the history of American judicial review indicates about the present or the future, one thing seems clear. French proverbs to the contrary notwithstanding, the more things change, the less likely they are really to be the same. History may teach the Justices that they are not the first to face fundamental attacks. but this Court will have to find its own path to success in dealing with status issues which have replaced property politics of past generCommencement Address of Lawrence G. Derthick, U.S. Commissioner of Education at Boston University

EXTENSION OF REMARKS

### HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include the significant address delivered at the graduation exercises of Boston University by Lawrence G. Derthick,

University by Lawrence G. Derthick, Commissioner, U.S. Office of Education, Department of Health, Education, and Welfare, on Sunday, June 7, 1959, at

OF TIME AND CIRCUMSTANCE

(Address by Lawrence G. Derthick)

Let me begin by thanking you for the opportunity to share with you some of the spirit of this momentous day, this day fraught with satisfaction and sadness, accomplishment and anticipation. Through commencement days occur with the regularity of the seasons and the tides, there is always a quality of uniqueness about them, a special thrill and sense of newness as the hour approaches for one more group of young men and women to leave their alma mater and take up the pattern of their lives in the outside world.

The first graduating classes left this campus in the cradle of education here in the new world, much as you do today. They were fired with enthusiasm for the job ahead. though not without some apprehension about their adequacy for it in a world which even then must have seemed to be moving exceedingly fast. They helped settle the last of the American physical frontiers and lay the foundations of our present-day economic system. They participated vigorously in the processes that so radically transformed life in rural communities and contributed new inventions to increase production and build whole industries. As Nevins and Commager tell us, "No other generation in American history witnessed changes as swift or as revolutionary as those which transformed the rural republic of Lincoln into the urban empire of McKinley and Roosevelt."

Those early classes lived through some of

Those early classes lived through some of the most important aspects of this transformation. They too, were trained for leadership role and wondered, as you are doing today, whether their qualifications would measure up to time and circumstance. We should remind ourselves that for them life ahead was just as perplexing and filled with just as much mystery and promise and demanded their very best just as these crucial times demand the best of you.

For some of your early predecessors, as with every graduating class, achievement fell short of aspiration, while others became the great men and women of their time. What made them great? What makes for greatness in anyone? One can think of great men and women down through history and each has outstanding and very different qualities.

Socrates was one of the wisest of men and the best of teachers. But he did not claim to have wisdom—only to seek it lovingly. In addition to all of his other great gifts, he had humility.

Voltaire put all the energy and eloquence at his comamnd into trying to make men realize that they should learn to tolerate one another's philosophic, political, and religious differences.

Mahatma Ghandi taught his followers that love and peace were far more powerful weapons than hate and war.

In our own country Lee is revered for his devotion to duty. And Lincoln, as Stephen Vincent Benet says, for:

'Honesty rare as a man without self-pity, Kindness as large and plain as a prairie wind.

And self-confidence like an iron bar."

One could go on. The point is that greatness is achieved when men and women have outstanding gifts and qualities which they fit to their particular time and circumstance, and when they use these gifts supremely with total dedication.

This is a time of great issues and great events for all of us. I need not remind you, but let me say it again, even as it must be repeated over and over in ringing terms:

"Our civilization is now menaced with the possibility of war so terrible that vast segments of the human race can be extinguished within the briefest space of time."

Tolerance and unity are vital if man is to continue to enjoy the good things of the earth. Yet he is beset by intolerance and disunity as never before. This springs in many ways from a struggle for power between three goups of nations, and from the great disparity which exists among them in their customs, their beliefs, and their ways of life, in a world which seems, because of modern transportation and communications, to be getting smaller all the time.

America finds herself leader of the free world allies, diametrically opposed to the ideology of the group headed by Soviet Russia. The third group consists of the so-called uncommitted nations—the emergent countries of Asia plus some of the African nations.

Potentially this latter group possesses enormous strength and immense natural resources. All of the members are characterized by varying degrees of tension. On the one hand there is a resistance to change, and on the other an irresistible reaching out toward social and economic betterment.

Soveit Russia in her commitment to world domination is determined to exert the compelling influence over these nations. When I was in Russia last year the Soviet Minister of Education remarked:

"We believe in a planned society, you in individual initiative. Let time tell which is best."

With clever propaganda the Soviet leaders are saying "Through education and our ideology we can take first place in the world." To the peoples of the uncommitted countries the Communist doctrine says: "Forty years ago we too were a backward and undeveloped people. What we have succeeded in doing under communism we can help you to do too."

Unquestionably, they can point to phenomenal growth, but we know that the fearsome ideology they seek to spread is not the
source of their advancement. Any system
underwritten by vast natural resources and
exerting intensive effort to develop the minds
of its people is bound to progress impressively, for herein lies the secret of Russia's
progress and the real challenge she presents.
Her leaders are convinced that education is a
primary essential in attaining supremacy.
Soviet schools, scientific academies, and universities are vigorously supported with prestige and money to train manpower—their
way.

This very day, this month, in the year 1959, as you receive your degrees an educational revolution is taking place in Eastern Europe and Asia, over millions of square miles where, only scant years ago, there was virtual illiteracy.

In Red China and the Soviet Union more than 243 million men, women, and children are hard at work studying. Almost 5 million of them are in institutions beyond the secondary level. The Red Chinese claim that enrollment in their institutions beyond the secondary level increased 70 percent in 1957-58, and is still going up at that rate.

In the United States one out of every three young persons aged 18 to 21 is in college or a university—some 3.2 million students. There is no way to compare accurately the ratio of students to population in the U.S.S.R. and Red China. But the overall figures—almost 5 million to our 3.2 million—carry a warning not to be ignored, for our inferiority in numbers of trained manpower brings into sharpest focus the critical need to reassess and redouble our efforts to develop educational programs of highest quality, to cultivate and make the most of our precious human resources.

America's strength, prosperity, and her position of world leadership are directly attributable to the education which her people have received. The uncommitted nations know this, even if we have come to take our educational blessings all too much for granted. But let us never forget that our leadership will be maintained only to the degree that education can be made more effective for all of the people. One-room schools, halftime sessions, teacher shortage, school districts too small and poor to offer children adequate programs—these have no place in the richest country on earth. Nor, in the midst of prosperity should scores of thousands of our most capable young people drop out of high school each year because they lack the money or the incentive to go on to

Happily a new climate is beginning to develop across our land in regard to the importance of education. There are signs of a growing respect for scholarship. People are more concerned with the curriculum of our schools and colleges, becoming more cognizant of the value of knowledge. The manner in which the new National Defense Education Act—still only 9 months old—is "taking hold" all over the country is heartening evidence of the new interest.

Americans are always at their best when confronted with a stirring challenge and I am confident that we shall, for we find the means to overcome our problems in education. We must find ways to streamline and improve our system, to find the teachers we need, and utilize the wonders of our modern means of communication to transmit knowledge more effectively and improve technical skills. We must find ways to take care of the tide of young people who have been flooding the high schools and are already lapping over our college campuses. It may be difficult to find ways, but found they must be. Never before have Americans been in such an all-out race for knowledge; and we must remember there is no second prize in the kind of contest that confronts us now. Time will tell, the Russian said. and threw the gauntlet to us to prove that individual initiative can tell. This simply means that, whereas the Communists rely on a system, democracy relies on you and me and expects of each of us strong hearts and a determined unselfish commitment.

There is no time to lose. We are compelled to concentrate all of our energies upon a rekindling of the spirit and conviction possessed by our forefathers. For them, even on the frontier, education had priority along with food, shelter, and security. In these days of space probing and international tension our frontiers are infinitely wider, but the basic challenge remains the

We need to honor those who teach and those who devote themselves to study. And I think also that we could do more—much more, to instill in each other and our young people greater appreciation of what it means to be an American, to enjoy the freedom to

know, to be able freely to express one's views, and work freely for the fulfillment of one's personal ambitions.

To work hard and well, to know how to husband and cherish our vast resources are more than ever vital factors in the educative process, as are some of those old-fashioned virtues that our forefathers used as a vardstick to live by-thrift and the Golden Rule.

There is a very real danger that in enjoyment of our fortunate way of life we could go soft as other highly civilized peoples have done. With our shiny cars and glittering gadgets, and all the glamour and ease of our lives in a modern wonder world, we could become overwhelmed by our own mastery of time and circumstance.

Democracy, we need to remember, was not built on good times and easy living. It was fashioned by God-fearing, brave, and dedicated men and women who made moving sacrifices and carried heavy burdens to gain and hold freedom. It will flourish only as long as our people are ready to work and

sacrifice to keep it.

The Soviets are confident that their planned society will triumph. There is much to be said for good planning, but planning which confines and restricts and puts a ceiling on individual efforts and aspirations does not belong in this category. There is no ceiling to the power of democracy save that which is self-imposed. All we have to do to unleash the power is to release the brakes of complacency and sharpen the values and ideals which have inspired democracy. these days when we are so often portrayed as "materialists" it is more important than ever to emphasize the part that moral and spiritual values have played and must continue to play in improving our culture. Let us show those nations looking toward new opportunity that democracy is more than material achievement; that democracy is not just a word out of the cold war, but a creeda creed to ennoble and enrich a man's spirit, not merely his way of life.

You who are leaving this institution today are destined for leadership in this dynamic and awesome period in human history. You go richly endowed. Right here in this class you have as rich and representative a store of wisdom assembled as one could ever

hope to find in one place.

If there is one thing that I can wish on this great day for each of you it is that wherever you go, whatever you are able to do with the knowledge you have gained here, you will always endeavor to enrich humanity with the best that is in your hearts as well as your

Some of you are destined to be among the noted men and women of your time. Some will achieve greater material success, and some greater material satisfaction than some greater material satisfaction than others. I hope, however, that all of you will come to know the wisdom and the peace of mind, if not the circumstance, which prompted an unknown Confederate soldier to write this prayer found in the archives of an old southern church: .

"I ask God for strength that I might achieve, I was made weak that I might humbly learn to obey.

I asked for health that I might do greater things.

I was given infirmity that I might do better

I asked for riches that I might be happy, I was given poverty that I might be wis I asked for power that I might have the praise of men,

I was given weakness that I might feel the

need of God.

I asked for all things that I might enjoy life, I was given life that I might enjoy all things. I got nothing that I asked for, but everything I hoped for, Almost despite myself my unspoken prayers were answered:

are among all men most richly blessed'.'

And may each of you in fulfillment of the ideals embodied in this prayer be most richly

### A Permanent Advisory Commission on Intergovernmental Relations

EXTENSION OF REMARKS -OF

### HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 19, 1959

LOSER. Mr. Speaker, under Mr. leave to extend my remarks in the Rec-ORD, I include the testimony of the Honorable C. Beverly Briley, judge of the Davidson County (Tenn.) Court before the Senate Committee on Government Operations and the Intergovernmental Relations Subcommittee of the House Committee on Government Operations. He appeared as the representative of the National Association of County Officials. His testimony is related to hearings on S. 2026, H.R. 6904 and H.R. 6905, These bills are to establish a permanent Advisory Commission on Intergovernmental Relations

Judge Briley is chairman of the NACO Urban Area Committee, and is peculiarly fitted by training and experience to speak with authority on the many complex problems of modern life and the need for the fullest cooperation and coordination of activities between the levels of government. These problems have received this man's thoughts and intellect for several years and it is my judgment that no one in the Nation is better qualified to speak on this vexatious subject than Judge Briley of Nashville. Tenn.

His testimony follows:

TESTIMONY OF JUDGE C. BEVERLY BRILEY

Mr. Chairman and members of the committees of the joint hearing: My name is Judge C. Beverly Briley. I am chairman of the Davidson County Court, Tennessee, and president of the Tennessee County Services Association. I am a member of the National Association of County Officials Officials (NACO) and chairman of the NACO Urban Area Committee. Intergovernmental relations falls within the scope of function of the Urban Area Committee. I deeply appreciate having been afforded this opportu-nity to state the position of the National Association of County Officials on this important proposed legislation. My statement will be on behalf of the nearly 6,000 elected and appointed county officials from 47 States who compose the membership of NACO.

The American County Platform is the of-ficial policy statement of the National Association of County Officials. The American County Platform takes a strong stand in support of the recommendations of the President's Commission on Intergovernmental Relations: "The National Association of County Officials reaffirms its enthusiastic support for the recommendations of the President's Commission on Intergovernmental Relations and commends the President, the Congress and the members of the Commission for this outstanding contribution to the understanding of American representative government. We particularly indorse the basic government philosophy of the Commission which states:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performances and popular approval; reverse national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake." 1-6.1

We believe that the subject legislation is essential, laudatory and in direct further-ance of the American County Platform policy statement. The bills under consideration today recognize that local governments are virile and extremely active in the correction of their problems. Speaking for counties, I can testify to the amazing job which revitalized county government is doing to provide sound, efficient government services to millions upon millions of our people. The proposed legislation would not replace these increasingly efficient close-to-the-people local governments; rather, it is definitely a step in the right direction because it would fill the serious need of providing permanent leadership in the study and development of relations between local governments, the States and the Federal Government. The creation of the Advisory Commission, in many ways, is an outgrowth of the comprehensive investigations by Chairman Fountain and the Subcommittee on Intergovernmental Relations of the House Committee on Government Operations.

The National Association of County Offcials heartly urges the passage of this legislation, with one important revision which I shall respectfully submit later in my statement. Let me proceed quickly through this legislation (for the purpose of commenting) on those phases which are particularly meri-torious in that they fill serious gaps in our intergovernmental relations.

The intended performance of the Advisory Commission would be to:

1. Bring Federal, State and local representatives together on common problems.

- 2. Provide a forum for discussion of Federal grant and other programs requiring intergovernmental cooperation.
- 3. Give critical attention to conditions and controls involved in Federal grant programs.
- 4. Make technical assistance available to the Federal Government in review of proposed legislation to determine its overall effect on the Federal system.
- 5. Encourage discussion of emerging problems requiring intergovernmental coopera-
- 6. Recommend allocation of governmental functions and responsibilities among the several levels of Government.

The congressional intent appears wellcalculated to assure that the Commission will have wide enough range to be really effective in promoting better intergovernmental relations. The performance area of the Advisory Commission is broad and provides freedom of movement for the Commission to get the job

The Advisory Commission would engage in such activities and make such studies as necessary to carry out its job within the intent of Congress. The Commission would have the authority to consider, on its own initiative, ways and means of fostering better relations between levels of Government. Here again, the grant is broad enough to

permit the Advisory Commission to effectively carry out the congressional objectives.

I am happy to note, too, that this legislation would give the Advisory Commission teeth in carrying out its duties by authorizing it: to hold hearing, take testimony, administer caths; to require furnishing of necessary information by executive branch subdivision; and to appoint, affix the compensation of, and remove a staff director.

It is the provision for membership of the Advisory Commission which deeply disturbs conscientious county officials. As proposed, the Advisory Commission would be com-posed of 24 members, including: 6 appointed by the President (3 officers of the executive branch; 3 private citizens); 3 Senators, appointed by the President of the Senate; Representatives, appointed by the Speaker of the House; 4 Governors, appointed by the President: 3 legislators, appointed by the President; 4 mayors, appointed by the President, and I county official, appointed by the President from a panel of at least 2 county officers submitted by the National Association of County Officials.

It is difficult for us to hide our disappointment at the proposed composition of the We respectfully submit that Commission. commission. We respectfully submit that our disappointment is justified. In an otherwise laudatory and immediately de-sirable piece of legislation, this proposal stands as a grim reminder to dedicated county officials of a situation that we have been trying to overcome for years: The stepchild treatment of county government. Enlightened, hardworking county people are hurt at this latest failure to be recognized because we have been conducting a hard, uphill fight to gain for county government recognition as a government form equal to and on a par with the Federal Government. State governments, city governments, and other local governments.

In the name of fairness and in terms of the task which the Advisory Commission will have before it, I raise this question: Why should an Advisory Commission on Intergovernmental Relations be so heavily weighted in its composition in favor of the Federal Government (12 members including the 3 private citizens appointed by the President). State governments, (7 members), and city governments (4 members)?

If counties are to make a really helpful contribution to the work of the Advisory Commission, we must be allowed sufficient voice. We must be afforded representation commensurate with the increasingly important role of counties in intergovernmental relations. As constituted in the present proposals, the makeup of the Advisory Commission fails to afford due recognition to the prominent role of counties in expediting and carrying out many vast Federal programs. I need cite only the immense welfare programs which are administered through county officials in betterment of the living and working conditions of millions of our people.

The National Association of County Officlais respectfully recomends, then, that a minimum of four county officials be appointed by the President to the Commission from a panel submitted by NACO.

If there ever was a time when county government and its officials could use a morale boost of this nature it is now. We struggle with seemingly insurmountable problems in meeting the demands and needs of millions of new citizens for augmented services of all kinds. Where there is a national interest, the Federal Government often assists in meeting these burdens. An Advisory Commission on Intergovernmental Relations, giving appropriate voice to each level of government, could work a tremendous service by providing the Congress and the public with a clear and accurate picture of where these Federal programs are needed and

Commission would give local officials a forum

to make their needs known.

The proposed legislation is also sound in that it recognizes that while there is serious need for coordination between the Federal Government and local government, the coordination is needed among the governments and not just among the Federal agencies. For this, and other basic reasons going to the very foundation of the American system of government, we have opposed the creation of a department of urban affairs. The American county platform is, again, unequivocal in its stand against the weakening of the American system of government by the creation of any Federal department of urban affairs: "We oppose the establishment of a Federal department of urban affairs on the grounds it would further weaken the States and would tend to create an unwieldly bureaucracy of the type found in many foreign countries." (Secs. 1-4.) We believe that the immediate and compelling need is for the strengthening of local governments, with a strong program of coordination and that this can most effectively be accomplished by creation of a permanent commission on intergovernmental relations such as was originally recommended by the President's Commission on Intergovernmental Relations (Kestnbaum Commission). You undoubtedly recall that the Commission recommended that: "\* \* \* an Advisory Board on Intergovernmental Relations would be appointed by the President after such consultation as he deemed appropriate with associations that represent various levels."

In March of this year, here in Washington, D.C., the National Association of County Officials sponsored the first national Urban County Congress ever held in the United States. It was my privilege to serve as general conference chairman of this historic meeting, and to be its keynote speaker. To my mind, the Urban County Congress was, and stands today as, the most convincing proof that county government is alive and virile and anxious to take whatever steps are necessary to meet the problems of the present and the future. County officials from across the Nation, meeting on a note of urgency, demonstrated what county government is capable of doing. The Urban County Congress in a dramatic way never before equaled at any place or forum in America, brought home the crying, desperate need for closer working relationships and cooperation between the various governmental forms in this country. The Urban County Congress forcibly brought home the truth: Federal, State, and local governments must cooperate-must know and appreciate each other's needs and problems and work hand in hand toward their solution-or else a mounting tide of problems will force them into de-

I think that Senator JOHN F. KENNEDY, of Massachusetts, vividly summed up the nowor-never atmosphere which pervaded the Urban County Congress: "Let me conclude by emphasizing one point. These problems of streamlining our Government, making the most of our potential growth, strengthening the core of our Nation in building a better, wiser, stronger America—these are not really questions of party politics or even governmental philosophy. Today they affect the very question of survival itself."

Mr. Chairman, we believe that a truly representative permanent advisory Commission on Intergovernmental Relations, such as would be created by the subject legislation, would help immeasurably toward strengthening the core of our Nation and building a better America. Again, I say, I am most grateful for this opportunity to come before you. I shall endeavor to answer to the best of my knowledge and ability any questions that you may have.

where they could be perfected. With a truly representative membership the Advisory Court of Justice. Part I

> EXTENSION OF REMARKS OF

### HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. REUSS. Mr. Speaker, the April issue of the American Journal of International Law contained an outstanding analysis of the United States and the International Court of Justice by Prof. Herbert W. Briggs of Columbia University.

Today, under leave to extend my remarks, I wish to offer the first part of this excellent study. Tomorrow, under the same title, I will offer the second part of Mr. Briggs' article.

THE UNITED STATES AND THE INTERNATIONAL COURT OF JUSTICE: A REEXAMINATION

(By Herbert W. Briggs)

In his state of the Union message on January 9, 1959, President Eisenhower declared his purpose of intensifying efforts "to the end that the rule of law may replace the rule of force in the affairs of nations" and of making proposals for a "reexamination of our own relation to the International Court of Justice."1 It is no secret that the tide of criticism has been rising against the Connally amendment reservation pursuant to which the United States excluded from its acceptance of the compulsory jurisdiction of the Court-

(b) Disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America as determined by the United States of America."

Although revision of the declaration of August 14, 1946, by which the United States accepted the Court's compulsory jurisdiction should lead to the elimination of the ambiguous multilateral treaty reservation as well as of the Connally amendment reservation, the latter commands immediate attention. It may serve a useful purpose to pass in summary review the facts with regard to domestic jurisdiction reservations and the Court's behavior when confronted with pleas of domestic jurisdiction.4

#### DOMESTIC JURISDICTION RESERVATIONS

Most states accepting the compulsory jurisdiction of the Court have found it unnecessary to exclude from their acceptances disputes with regard to matters of domestic jurisdiction. Of 39 States 5 currently accepting the compulsory jurisdiction of the International Court of Justice by declarations made pursuant to article 36(2) of the Court's statute, only 13 have included in their declarations reservations of disputes with regard to matters of domestic jurisdiction. Twenty-six states currently accepting the compulsory jurisdiction of the Court have never limited their acceptances by reservations of matters of domestic turisdiction. Of the 45 states as sometime accepting the compulsory jurisdiction of the Permanent Court of International Justice under the optional clause, only 117 ever included in their acceptances reservations of disputes with regard to matters of domestic jurisdiction.

Prior to 1929 no state accepting the compulsory jurisdiction of the Permanent Court of International Justice included in its declaration a domestic jurisdiction reservation. In that year, after mutual consultation, the United Kingdom, Australia, Canada, India,

Footnotes at end of speech.

New Zealand and the Union of South Africa deposited declarations containing identically phrased reservations withholding from the compulsory jurisdiction of the Court "disputes with regard to questions which by international law fall exclusively within the jurisdiction" of the declarant state. In 1930 comparable reservations, were made by Albania, Iran, Rumania and Yugoslavia, and in 1937, by Brazil.

The reason for this paucity of domestic jurisdiction reservations is clear: Court's statute does not extend the jurisdiction of the Court to disputes with regard to matters which by international law fall exclusively within the domestic jurisdiction of a state. By depositing a declara-tion accepting the compulsory jurisdiction of the Court in accordance with article 36 (2), a state does not confer on the Court jurisdiction which is excluded by the statute. Article 36(2) serves as a limitation on the jurisdiction of the Court, confining it, in relation to declarations made thereunder, to legal disputes comprised within the categories of international law disputes there listed. Nonlegal disputes or legal disputes with regard to matters which by international law fall exclusively within the do-mestic jurisdiction of a state are not comprised within the categories set forth in article 36(2).

THE COURT AND DOMESTIC JURISDICTION

The consistent jurisprudence of the Court provides an additional safeguard against its consideration of disputes with regard to matters of domestic jurisdiction. Although, in the Electricity Company of Sofia and Bulgaria case," the Norwegian Loans case " and the Right of Passage over Indian Territory (Preliminary Objections) case,10 the Court did not find it necessary to make pronouncements on arguments by respondents that legal disputes with regard to matters which by international law fail exclusively within the domestic jurisdiction of a state are not comprised within the categories set forth in article 36(2), its views on the exclusion from its jurisdiction of such disputes are not in

Exclusive of the Norwegian Loans and Interhandel cases, in which the peremptory form of the domestic jurisdiction reservation was invoked, the Court has been confronted with pleas of domestic jurisdiction in four contentious cases—the Losinger (1936). Electricity Company of Sofia and Bulgaria (1939). Anglo-Iranian Oil Company (1951). and Right of Passage (1957) cases—and with regard to three advisory opinions—Tunis-Morocco Nationality Decrees (1923). Treatment of Polish Nationals in Danzig (1932). and Interpretation of Peace Treaties with Bulgaria, Hungary and Rumania (First Phase).

Analysis of these opinions reveals that in all seven opinions the Court regarded the concept of domestic jurisdiction as comprising matters which according to international law are within the domestic jurisdiction of a state. If the dispute or question arose out of matters which were governed by treaty or other principles of international law and determination of the rights of the parties involved an examination of their obligations under international law, the matter ceased to be one exclusively within the domestic jurisdiction of a state and the plea of domestic jurisdiction was ill founded.

In six of the seven opinions the concept of domestic jurisdiction was that by which a matter had to be by international law exclusively within the domestic jurisdiction of a state in order to remove it from the jurisdiction of international tribunals or organs. In the advisory opinion on Interpretation of Peace Treaties, the Court declined to treat a matter alleged to be essentially within the

domestic jurisdiction of States as differing from matters exclusively within domestic jurisdiction when the matter involved the interpretation of treaties.

In two advisory opinions-Tunis-Morocco and Polish Nationals in Danzig-the jurisdiction of the Court itself was not challenged. In the Tunis-Morocco opinion the Court found that the jurisdiction of the League of Nations Council was unaffected by a plea of domestic jurisdiction based upon matters which were, on a provisional view, governed by international law. In the Polish Nationals in Danzig opinion the Court did not discuss the issue in the language of domestic jurisdiction, but rejected a Polish contention that Poland could submit to compulsory international jurisdiction claims based on matters falling within the domestic jurisdiction of Danzig and involving no violation of the international obligations of The fact that a dispute arose out of matters solely within the domestic jurisdiction of a state removed it from the scope of international obligations to submit to compulsory jurisdiction only questions of an international legal nature.

In five 38 of the seven opinions the jurisdiction of the Court was challenged on the plea of domestic jurisdiction, but in none of these cases did the Court regard the plea as barring its jurisdiction in limine litis. In the Peace Treaties opinion the plea was rejected as ill founded. In the Electricity Company of Sofia and Bulgaria case, the plea was rejected as not possessing the character of a preliminary objection, since it went to the merits, but it could be reargued as a defense on the merits. In the Losinger and Right of Passage cases the jurisdictional plea of domestic jurisdiction was joined to the merits for further hearings, since a provisional view of the cases suggested the possibility that the issues could be decided only on the basis of principles of international law. In the Angle-Iranian Oil Company case the plea of domestic jurisdiction was rejected as a bar to the juris-diction of the Court to indicate interim measures of protection, but the Court reserved the question of jurisdiction on the merits for further hearings.

The Losinger and Electricity cases were discontinued before a decision on the merits, the Right of Passage case is still pending on the merits, and in the Angio-Iranian Oil Company case the Court later found that it lacked jurisdiction on grounds other than the plea of domestic jurisdiction.

Certain conclusions are possible from this jurisprudence. First, reservations or pleas that the Court lacks jurisdiction with regard to matters which by international law fall either exclusively or essentially within the domestic jurisdiction of a state do not stop the Court in limine litis from determining its own competence when confronted with such a reservation or plea. Secondly, if the Court finds that a dispute relates to matters which according to international law fall exclusively within the domestic jurisdiction of a state, the Court will lack jurisdiction to decide the merits of the dispute.

The United Kingdom Government defended the domestic jurisdiction reservation included in its declaration of September 19, 1929, on the supererogatory ground that this is merely an explicit recognition of a limitation on the jurisdiction of the Permanent Court which results from international law itself <sup>20</sup> Judge Manley O. Hudson has observed with regard to reservations excluding disputes relating to matters of domestic jurisdiction:

It is difficult to see what is accomplished by this exclusion; if a dispute relates to questions which wall within exclusively national jurisdiction, it does not fall within one of the classes enumerated in paragraph 2 of article 36.<sup>a</sup>

Prof. C. H. M. Waldock writes that a well-founded plea of domestic jurisdiction will serve as an effective defense on the merits even in the absence of a reservation of matters of domestic jurisdiction; and where the jurisdictional instrument contains an express or implied reservation of matters of domestic jurisdiction, "the defendant State may raise the issue of the reserved domain both as an objection to jurisdiction and as a substantive defense on the merits."

Since article 36(2) of the Court's statute excludes by clear implication disputes relating to matters which by international law fall within the domestic jurisdiction of a state, question arises as to the need for inserting domestic jurisdiction reservations in declarations accepting the Court's compulsory jurisdiction. As early as 1930, Professor Lauterpacht speculated whether the unstated purpose of such reservations might not be to permit declarant state to substitute itself for the Court in determining whether or no a matter fell by international law within the exclusive jurisdiction of declarant state.23 The jurisprudence of the Court appears to lay at rest such a fear but, in its 1946 declaration accepting the compulsory jurisdiction of the Court, the United States explicitly reserves the right to make such determination.

# THE PEREMPTORY DOMESTIC JURISDICTION RESERVATION

The history of the Connally amendment is too well known to require more than a brief summary here. In the resolution originally introduced by Senator WAYNE Morse on July 28, 1845, the proposed declaration accepting the compulsory jurisdiction of the Court was qualified by a reservation of "(b) disputes with regard to questions which by international law fall exclusively within the jurisdiction of the United States" 24-the identical formula then employed by the United Kingdom and other states reserving such questions. A year later, a new Morse resolution was introduced with bipartisan support. By this resolution the wording of the domestic jurisdiction reservation was changed to read: "(b) disputes with regard to matters which are essentially within the domestic jurisdiction of the United States." The changed phraseology, based on article 2(7) of the United Nations Charter rather than on article 15(8) of the League of Nations covenant, omitted any reference to "questions which by international law fall exclusively" within such jurisdiction.

In this form, S.R. 196 survived public hearings and was endorsed, without dissent, by the Senate Committee on Foreign Relations with the following statement:

The question of what is properly a matter of international law is, in case of dispute, appropriate for decision by the Court itself, since, if it were left to the decision of each individual state, it would be possible to withhold any case from adjudication on the plea that it is a matter of domestic jurisdiction. It is plainly the intention of the statute that such quesions should be settled by the court . . . [citing article 36(6)]

The committee report continued that, although other states had reserved matters of domestic jurisdiction, in no case did they reserve to themselves the right of decision. The committee therefore decided that a reservation of the right of decision as to what are matters essentially within domestic jurisdiction would tend to defeat the purposes which it is hoped to achieve by means of the proposed declaration as well as the purpose of article 36, paragraphs 2 and 6 of the Statute of the Court.

Despite this clearly reasoned statement, the Senate, on August 2, 1946, by a vote of 51 to 12 adopted the Connally amendment: "as determined by the United States." \*\*\*

The example set by the United States has since been followed by France (1947), Mexico (1947), Liberia (1952), Union of South

Africa (1955), India (1956), Pakistan (1957), and the Sudan (1957).

The peremptory domestic jurisdiction reservation "as determined by" declarant state has been invoked in two cases before the International Court of Justice. In the Norwegian Loans case, although the Norwegian declaration accepting the Court's compulsory jurisdiction contained no domestic jurisdiction reservation, the Court permitted Norway to invoke, on the basis of reciprocity, the French reservation of "differences relating to matters which are essentially within the national jurisdiction as understood by' declarant state. Since the validity of the reservation was not questioned by the parties, nor argued before it, the Court declined jurisdiction on the basis of the questionable reservation, while stating that it was not prejudging the question "whether the French reservation is consistent with the undertaking of a legal obligation and is compatible with article 36, paragraph 6, of the statute." It is important to note that the invocation by Norway of the peremptory domestic jurisdiction reservation did not stop proceedings in limine litis. The Court joined Norway's pre-liminary objections to the merits; 30 and it was only after the case had been fully argued on the merits, with no issue being raised between the parties as to the validity of the peremptory reservation, that the Court allowed it without passing on its validity.

140 Dept. of State Bulletin 118 (1959). See also statement by Secretary of State Dulles to the Senate Foreign Relations Committee, Jan. 14, 1959, where he said that "we envisage further steps to encourage the greater use of that Court." Ibid, 153.

<sup>2</sup> See, e.g., Loftus Becker, "Some Political Problems of the Legal Advisor," address before the American Society of International Law, Apr. 26, 1958, 38 Dept. of State Bulletin 832 (1958); 1958 Proceedings, American Society of International Law 267; Attorney General William P. Rogers, "Inter-national Order Under Law," address to the 48th conference of the International Law Association, printed in 39 Dept. of State Bulletin 537 (1958).

On Apr. 29, 1954, the Institut de Droit International unanimously adopted a voeu expressing the hope "that States which include in their declarations accepting the compulsory jurisdiction of the International Court of Justice a reservation in respect of matters of domestic jurisdiction will leave it to the Court to decide in each particular case whether the reservation is applicable." 45 Annuaire de l'Institut de Droit Interna-

tional 197, 300 (Tome II, 1954). In the Introduction to his Annual Report for 1956-57, the U.N. Secretary General deplored "new and far-reaching reservations" which "may render the whole system of compulsory jurisdiction virtually illusory." General Assembly, 12th sess., Of-ficial Records, supp. No. 1A, p. 5 (1957).

The American Bar Association has opposed the Connally reservation ever since its See 32 A.B.A.J. 873-74 (1946); adoption. 33 ibid. 249, 430, 512 (1947). In August 1958, the Report of the Special Committee on International Law Planning of the American Bar Association (Hon. Thomas E. Dewey, chairman) stated, in part:

"The committee believes that the withdrawal of the U.S. reservation to the jurisdiction of the International Court, to the extent that it allows the United States unilaterally to determine which disputes lie essentially within its own jurisdiction, would be a most salutary step. It would be a demonstration of faith in the rule of law, and a persuasive example to others. We believe it would materially strengthen the position of the United States in the world community as a leader in efforts to achieve the goal of the set-tlemen of all disputes by peaceful means." \*T.I.A.S., No. 1598; 1957-58 I.C.J. Yearbook

\* The materials are discussed in more detail in the writer's lectures delivered at the Hague Academy of International Law in August 1958 on "Reservations to the Acceptance of Compulsory Jurisdiction of the Interna-tional Court of Justice," which will shortly appear in 93 Recuell des Cours 223-367 (1958, in press).

#### Can We Entrust Defense to a Committee?

EXTENSION OF REMARKS

### HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. HUMPHREY. Mr. President, there is increasing concern among serious persons in Washington about the problem of fragmentation and the lack of long-range planning in national strategy. A number of proposals have been made for dealing with this situation. Recently proposals along this line have been made by Senators Jackson. JAVITS, and WILEY.

I have also made some proposals designed to deal with the problem of fragmentation, both in the executive and

legislative branches.

Recently, I was appointed a member of a subcommittee under the chairmanship of Senator Jackson to review the Nation's policymaking machinery to determine its fitness to meet the challenges of our time. In this connection, I should like to commend to the attention of my colleagues a discriminating article by Prof. Hans J. Morgenthau entitled "Can We Entrust Defense to a Committee?" This article which appeared in the June 7, 1959, New York Times magazine, is a careful critique of the National Security Council, pointing out that the NSC has never been able to perform the central function for which it was established, namely, longrange planning. One can gain a great deal of insight from this article without necessarily accepting the conclusion of the distinguished author that in the final analysis the problem of coordinating strategy must be entrusted to a man, who in effect would be an assistant President.

Mr. President, I ask unanimous consent that Professor Morgenthau's article be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD. as follows:

CAN WE ENTRUST DEFENSE TO A COMMITTEE? (By Hans J. Morgenthau)

Senator HENRY M. JACKSON, Democrat from Washington, created something of a sensation when, last April 16 before the National War College, he summarized his criticism of our governmental process in the field of national security in these words: "As it now functions, the National Security Council is a dangerously misleading facade." Following this address, Senator Jackson was appointed chairman of a Subcommittee on National Policy Machinery to study the Nation's ability to plan and coordinate cold

war strategy.

There is nothing new, however, in concern over the operations of the National Security Council. During the campaign of 1952, General Elsenhower, referring to the planning function of the council, declared: "We have seen how that planning has failed time and again these last years. The failure of this agency to do the job for which it was set up—to make the right plans in time—produces waste on the grand scale. The National Security Council as presently constituted is more a shadow agency than a really effective policymaker." Is it still, and was it ever, as bad as all that?

The Jackson committee and, with it, the Nation will have to ask themselves four fundamental questions: How is the National Security Council supposed to function? How has it actually functioned? Have the original conception and the actual performance of its functions been sound? Insofar as they are not sound, what remedies are

available?

The National Security Council was established in 1947 by an act of Congress in order "\* \* \* to advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security \* \* \*." The law ascribes to the National Security Council two fundamental duties: "(1) To assess and appraise the objectives, commitments, and risks of the United States in relation to our actual and potential military power, in the interest of national security, for the purpose of making recommendations to the President in connection therewith; and (2) to consider policies on matters of common interest to the departments and agencies of the Government concerned with the national security, and to make recommendations to the President in connection therewith."

According to the law, the National Security Council is composed of the President, who is its chairman; the Vice President, who presides in the President's absence: the Secretaries of State and Defense; the Director of the Office of Civil and Defense Mobilization, and such department heads as the President

has appointed or invited.

Thus, the Secretary of the Treasury, the Attorney General, the Director of the Budget, the Chairmen of the Atomic Energy Commission and of the Joint Chiefs of Staff, the Director of the Central Intelligence Agency, and the head of the National Aeronautics and Space Administration regularly attend the meetings of the Council. So do the President's Special Assistant for National Security Affairs and the Council's executive secretary and his deputy. This nucleus is surrounded by department heads, Government experts, and outside consultants who are invited to particular sessions.

Two subsidiary agencies assist the Council in its work: the National Security Council Planning Board and the Operations Coordinating Board. The purpose of the Planning Board is to bring the total resources of the Government to bear upon the clarification of issues, upon the sharpening of alternative policies and their implications. The Council, thus presented with a concise and complete picture of the situation and of the policles to cope with it, either agrees upon a single policy to be recommended to the President or else submits to the President alternative recommendations from among which he may choose one or none. Once the President's decision is rendered, the Operation's Coordinating Board is responsible for marshaling the total resources of the Government for the faithful execution of that To what extent does reality correspond to this picture of highly competent and thoroughly coordinated policy planning, formulation, and execution? The answers which officials participating in the work of the council give to this question—and, in view of the secrecy of the council's operation, they are the only ones who can answer it with any degree of competence—range all the way from the assertion that if the National Security Council did not exist there ought to be something like it to the statement that it is a waste of time. The extreme diversity of these assessments points to extreme differences in the quality of the different phases of the council's performance.

In order to understand what the council can and cannot do it is essential never to lose sight of the fact that the council is, a committee. This is true of its two subsidiary boards as well. The virtues of the committee system are few, its vices are many—and the National Security Council shares in both.

Aside from bringing order into a formerly disjointed system, the National Security Council compels the representatives of several agencies concerned with different aspects of the same policy to cooperate continuously and systematically on the three levels of planning, formulation, and execution of policy. The representative of Agency A cannot help but take note of the assets, limitations, and concerns of Agency B and of the ways of thinking of its representative, and vice versa. This continuous confrontation of diverse points of view is an educational process that may well engender mutual understanding and lead to a built-in coordination of policies.

The system has enabled the National Security Council to handle the continuation and development of established policies with a considerable measure of success. But the committee system has failed—and was bound to fail—in the vital task of initiating new policies and resolving major conflicts of views and interests among agencies represented on the council.

The men who meet in the National Security Council and its subsidiary boards are not free agents but instructed ambassadors representing the particular interests and particular points of view of their respective agencies. Only rarely have they dared to deviate from the policies of their agencies; making clear that they were speaking for themselves.

Since the agency representatives meet in the National Security Council on equal terms, a minority point of view, if pressed, must be brought before the President. In that case, one side or the other stands to lose—both sides, if the President does not choose between the alternatives, but leaves the decision in abeyance. Thus, while there have been many split recommendations on minor issues, few alternative proposals on basic policies, generally supported by the Departments of Defense and State against the Bureau of the Budget and the Treasury, have been advanced. This imposition of budgetary limitations on all levels of policy planning distorts and inhibits the planning process from the outset.

An air of diplomatic politeness is said to permeate generally the deliberations of the National Security Council; members of a team hesitate to antagonize each other by speaking their minds freely in criticism of their colleagues' policies. More particularly, a minor agency will think twice before opposing the position of a major department.

As a result the National Security Council has tended to shy away from bold innovation in favor of a compromise—sometimes inconsistent within itself or with other compromises—or the evasion of decision altogether—often concealed in an exhortative

formula which satisfies everybody because it means all things to all agencies.

Thus when the issue reaches the President its outlines, in terms of both information and judgment, are likely to be blurred, while the alternative solutions have been dissolved in the formula of compromise. In the process the President is relieved of the burden of choosing; he approves what is presented to him as the Council's unanimous advice.

Since the formula which has thus become the policy of the United States has not really resolved the issue, but only glossed it over, the working groups under the Operations Coordinating Board interpret it in terms of their own agencies' preferences. The result is either further compromise or no coordingtion at all on the level of policy execution. Key agencies, such as the Defense and State Departments, are no more coordinated today than they ever were. But worse than that, agencies can find themselves without an approved policy, the National Security Council's formula not having provided it and the Operations Coordinating Board not having distilled it, and therefore yield to yet another incentive to continue safe but obsolete rou-

It is small wonder that there has been a tendency on the part of certain agencies to circumvent the National Security Council altogether. Some of the most important new policies upon which the United States has embarked in the past 10 years were never brought before the National Security Council at all. A strong agency whose chief has the ear of the President has a much better chance to get what it wants by bringing its policy recommendation directly to the President than by having it processed out of recognition by the machinery of the National Security Council. On the other hand, small and new agencies, which carry little weight within the governmental hierarchy, have at times been rather anxious to use the National Security Council as a forum and to avail themselves of the opportunity to enlist the support of powerful agencies.

There are those who praise the National Security Council as democracy in action, government of laws and not of men. representative government. They are doubly mistaken; for they misunderstand both the nature of democracy and the nature of policy

Democracy is responsible government; that is to say, the people or their representatives can hold the officials of the government to account for their policies. Yet it is the earmark of government by committee that it shifts responsibility from an individual to a faceless collectivity.

Who is responsible for the neglect of Latin America or the surprise of the Iraqi revolution? Who will be responsible if tomorrow a renewed crisis over the offshore islands confronts us with a new dilemma and an increased danger? Below the President, the people's finger can point to nobody in particular. In a sense, all the committees that had a hand in these policies are responsible, and since, as it were, everybody is responsible, nobody is.

As democracy demands individual responsibility, so does the policymaking process. The conception of that process as representation of different points of view misunderstands the difference between the executive and legislative decision as well as the relation between the making of a decision, on the one hand, and information and consultation, on the other.

The policy decisions of the executive branch of the Government, like the decisions of the business executive or any decision an individual must make in his private affairs, are fundamentally different from the legislative decision. The latter is supposed to represent divergent interests brought to a common denominator or one interest which has won out over the others. The executive decision is supposed to be, first of all, the correct decision, the decision which is more likely than any other to bring forth the desired result.

The committee system is appropriate for the legislative process, and it is not by accident that it originated and was institutionalized there. The Executive decision requires the mind and will of one man who. after hearing the evidence and taking counsel, takes it upon himself to decide what the right action is under the circumstances.

The relation between the making of the decision, on the one hand and information and consultation, on the other, is hierarchical, not equalitarian. The informant and consultant are the servants of the decision maker, not participants in the decisionmak-They provide the raw material ing process. for the decision, not the decision itself.

In theory, the President is the one man who decides, on the advice of and with the information supplied by the National Security Council. In practice, however, in the great majority of cases, the collectivity of the National Security Council decides, or goes through the motions of deciding, with the

President approving the result.

The theory of the completeness of the President's Executive power is defied by the multiplicity and complexity of the decisions expected of him. The theory of the President deciding with the advice of the National Security Council has become in good measure a fiction. But what of the decision of the National Security Council replacing the President's? It, too, has become in good measure a fiction. Thus the bureaucratic machinery moves slowly on, following the direction of its past movements rather than of a clear-cut decision from above, and at best shifting its heavy weight slightly this way or that according to the changing distribution of the weights within itself.

Not even the wisest and most vigorous of Presidents could perform the functions our system of government expects him to per-form; nor could even the best organized and staff National Security Council. The President cannot do what he is supposed to do because of the nature of his task; the National Security Council, by virtue of

its nature.
Where, then, is the remedy? Three types of remedies have been proposed: to change the composition of the National Security Council, to create another to advise the President and the National Security Council, and to interpose between the President and the National Security Council another man with the power of decision.

The President has at different times espoused the first and third remedies, while Senator Jackson, in suggesting the estab-lishment of an Academy of National Policy to advise the President, has identified him-

self with the second.

In the campaign speech quoted earlier, Mr. Eisenhower called for the appointment to the National Security Council of "civilians of the highest capacity, integrity, and dedication to public service. They should have no other official duties."

And in a private letter, printed in Life of March 16, 1959, he said: "\* \* In our conversation I pointed out to you that my 'ideal' organizational change would be to create a post which I would call 'the First Secretary of the Government.' This officerwho is this case would be Mr. Dulles— would be responsible to the President for coordinating and directing the efforts of

partments of Commerce, Agriculture, Labor, and Treasury. He would be relieved of the chore of meeting with committees and long chore of meeting with committees and hours of detailed discussion and argument he would be given time to think . This letter, it seems to me, goes indeed to the heart of the problem.

The problem lies in the congenital inability of the National Security Council to present the President with an overall view of the issue, and sharply defined alternative policies, since the National Security Council is not an independent agency with an independent cutlook, but only the sum total of the views and interests of the agencies represented on it. It cannot cure the disease of fragmentation and parochialism but institutionalizes it on the highest level. The President, deprived of independent sources of information and judgment, is thereby reduced to one of three roles, all inadequate: (1) arbiter of interagency conflict, (2) ratifier of compromise or the exhortative formula, (3) abstentionist who will return the issue to the agencies concerned in the hope that they will finally agree upon a formula which he can ratify.

Would the addition of independent members to the National Security Council solve this problem? It might add to the prestige of the National Security Council's advice, but it could not change its nature, for no outsider could dare to put his judgment against the judgment of the agencies which have all the information and all the respon-

sibility for the execution of policy.

Could another committee of independent members provide the remedy? It might provide the President with ideas; it might plan policy with independent boldness. But when it comes to the formulation and execution of policy, the President would still be faced with the impossible task that faces him

No President can perform the functions of Head of State, Chief Executive, Commander in Chief, and head of his party at the same time. He cannot even plan, formulate, coordinate, and supervise the execution of policy at the same time. A committee, such as the National Security Council, can make the President seem superfluous, but it cannot replace him. Only one man can do that, who combines the knowledge, judgment, character and, above all, authority necessary to impose his will, through a chain of command of officials individually responsible, upon an executive branch fragmented into semiautonomous fiefdoms. The President has the authority, but he has neither the time nor necessarily the other qualities. Yet he can appoint a man who has these qualities and invest him with his authority, and he can dismiss him when he shows himself lacking in these qualities.

It matters little whether this man be the Secretary of State or the Vice President, whom President Eisenhower wanted to appoint in 1956 Chairman of the Policy Cooridinating Board. But it must be a man, not

a committee.

It has been said that there is no substitute for victory. Let it be said that there is no substitute, either, for one man's mind grasping the Nation's interests, for one man's judgment deciding how these interests can best be served, for one man's will seeing the decision through, for one man's soul feeling the anguish and the exhilaration of great deeds. Great men, not efficient committees, have made nations great and guarded their greatness, and a great nation could well be ruined by a committee, however efficient.

EXTENSION OF REMARKS OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. KEFAUVER. Mr. President, recently, the Honorable George Cochran Doub, Assistant Attorney General in charge of the Civil Division, addressed the Federal Bar Association on "Presidential Inability: The Constitutional Problem."

In his remarks, Mr. Doub reviews in a most incisive manner those situations in our history which so clearly point to the need for a constitutional solution to the problem of Presidential inability. In his concluding remarks, the Assistant Attorney General made the following statement:

There is now presented the best opportunity in our history for the solution of this problem. The time required for the ratification of a constitutional amendment will undoubtedly extend beyond the term of this administration and accordingly will be inapplicable to it. We do not know the person or the party that will occupy the White House in 1961, but we do know that under the Constitution, it will not be President Elsenhower. At this moment in history, the proposed measure can be considered entirely upon its merits without any consideration of personalities or parties.

Mr. Doub ended his address by urging Congress to take action on a proposed constitutional amendment—Senate Joint Resolution 40-which has the unqualified support of the administration and wide bipartisan support in the Senate.

This proposed amendment has been favorably recommended by the Subcommittee on Constitutional Amendments. and it is my hope that it will be favorably reported to the Senate by the Judiciary Committee in the very near future. It is my further hope that the Senate will consider and act favorably upon this resolution during this session of the 86th Congress.

I ask unanimous consent to have printed in the Appendix of the RECORD the text of the very excellent address by the Assistant Attorney General.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL INABILITY: THE CONSTITUTIONAL PROBLEM

(Address by George Cochran Doub, Assistant Attorney General, Civil Division, U.S. Department of Justice, at dinner of the Federal Bar Association in honor of the Federal judges of the seventh circuit, Chicago, Ill., June 11, 1959)

On March 4, 1881, James A. Garfield, who as a boy drove the mule team of a canal boat on the Ohio Canal, became President of the United States. Only 4 months later, Garfield drove in his carriage from the White House down Pennsylvania Avenue to the Paltimore and Potomac Railroad depot on Sixth Street intending to take a train to New England. As he walked through the station arm-in-arm with Secretary of State James G. Blaine, an assassin stepped forward with a cocked revolver and fired two shots at Garfield striking him in the arm and side. When the lunatic, Charles J. Guiteau, was seized and dragged through the crowd, he cried, "Arthur is President of the United States now."

Garfield lay in a coma for 80 days completely unable to perform the duties of Presi-During that period, he performed only one official act-the signing of an extradition paper. The total incapacity of the President, during this period, we are told, had a harmful effect on the country. Considerable Government business could not be conducted nor could important officials be appointed. It has been said that the Nation's foreign relations, lacking the direction of the Chief Executive, seriously deteriorated. Only routine business was handled by department heads.

Yet, nothing was done. There was criticism that Secretary of State Blaine was attempting to usurp the President's duties and there were insistent demands that Vice President Chester A. Arthur act. After 60 days, a Cabinet meeting was held in which it was unanimously voted that Vice President Arthur should assume the powers of the Presidential office. But would be become President and thus preclude Garfield from returning to office? Opinions were divided. The members of the Cabinet voted 4-3, with Attorney General Wayne MacVeagh among the majority, that Arthur would become President and would thus permanently oust Garfield from office. The majority relied upon the fact that upon the three prior occasions of the death of the Chief Executive. the Vice President had become President and the language of the Constitution concerning death and inability was exactly the same.

The Cabinet resolved that, before Arthur should take this momentous step, Garfield should be consulted about the serious consequence to him which might attend Arthur's assumption of the powers of President. However, this could not be done by reason of Garfield's desperate condition. Arthur himself emphatically declined to take any steps to assume the powers of the President on the ground that he would not be a party to ousting Garfield from office. If Vice President Arthur had believed that he would exercise the powers of the Presidency only for the duration of the President's disability, there would have been no reason for his failure to exercise those powers. Considerable sentiment developed at the time for clarification of the law, but after Garfield's death Arthur took office as President and the matter dropped.

If such uncertainty could occur during the peaceful days of 1831, how frightening Would be the prospect of similar uncertainty at a time when it is essential that the Nation have such continuity of official leader-ship as to enable critical decisions to be met and made.

In periods of peace and quiet of the past, this issue may not have been of vital importance but in the dangerous critical days of world leadership, of nuclear weapons, of the touch of the ICBM on the nerve of danger, of a powerful threatening enemy, the problem becomes one of paramount consequence. In times of almost continuous international crisis requiring immediate decisions by the Executive to safeguard the Nation's interests, our future safety could possibly depend upon our ability to have provided clear definitive answers to this constitutional question.

In the event of the inability of the President to discharge the powers and duties of his office, does the Vice President succeed permanently to the presidency? Or does he act as a temporary pinchhitter during the disability period? Who is authorized to say a President is unable to discharge his duties?

You will recall that paragraph 6 of section I of article II of the Constitution provides that "in case of the removal, death, resignation and inability to discharge the powers and duties of the Office of President, the same shall devolve on the Vice President." You will notice that the language is mandatory. "The same shall," not "may," devolve on the Vice President. "Devolve" means to pass down, descend, to transfer, and the mandatory transfer to the Vice President occurs in the same way in each of the four situations: removal, death, resignation, or inability to discharge the powers and duties of the Office of President. No distinction is made as to what happens in case of Presidential inability and the President's removal, death, or resignation.

The Constitution states, "the same shall devolve on the Vice President \* \* \*." To what do the words "the same" refer? What is it that shall "devolve" upon the Vice Pres-Is it the office of the President? that case, the President would thenceforth be permanently excluded from his office; or do only the power and duties devolve upon the Vice President and in that case, his tenure as the acting chief executive would end upon the recovery of the President.

It appears that there was a constitutional question, when the issue first arose, whether the Vice President, in the case of the death of the President, became President or acting President for the balance of the term, but this doubt has now been settled by established practice.

The question first was presented when President William Henry Harrison died of pneumonia in office in 1841, 1 month after his inauguration, "worn away and destroyed by the hordes of applicants for public office." Did Vice President John Tyler become President or acting President? Many objected at the time to Tyler becoming President because it was believed that the precedent would establish that the same result must occur when the President became disabled. It was argued that the records of the Constitutional Convention indicated that Convention had not intended that the Vice President become President under the succession clause but merely that he should exercise the powers and duties of the disabled President until his inability was removed. Daniel Webster, then Secretary of State, was the only Whig who was not greatly alarmed over what the Democrat, Tyler, would do in opposition to Whig poli-cies and interests. Webster took the posi-tion that Vice President Tyler actually became President. It was Tyler's initial belief that he would act as President during Harrison's unexpired term, but reflection changed his attitude and in his "inaugural address" he boldly proclaimed that he had been called to "the high office of this Con-

The first paper submitted to Tyler for his signature had below the space for his signa-ture the word "Acting President." Tyler was incensed and by a stroke of his pen eliminated the word "Acting" and signed as President, and President he became. After him. six other Vice Presidents, Fillmore, Johnson, Arthur, Theodore Roosevelt, Coolidge, and Truman, did likewise upon the death of the President in office. From these precedents, it is now assumed that, in the case of the death of a President, the Vice President becomes President for the unexpired term. Yet, the very way the original doubt was resolved by these precedents has contributed to the problem in the case of the inability of the President to discharge the powers and duties of his office.

When we examine the original articles agreed upon in substance by the Consti-

tutional Convention before their revision by the Committee of Style, we find that they made clear that upon the inability of the President to discharge the powers and dutles of his office the Vice President should exercise those powers and duties "until the inability of the President be removed.'

In other words, the framers of the Constitution intended that the Vice President would be acting as President, but would not become the President. Although acting as President, he would remain in the office of Vice President.

The obscurity developed by reason of the revision made by the Committee of Style, which boiled the provision down to the simplified statement that in case of removal, death, resignation, or inability to discharge the powers and duties of the office "the same shall devolve on the Vice President.'

This interpretation is borne out by the debates in the Convention indicating that the Vice Presidency was originally created to provide for an alternate Chief Executive who might function from time to time should the President be unable to exercise the powers and duties of his office. Indeed, only after the Convention decided upon this standby position did the Convention con-sider giving the Vice President something while he waited in the wings. idea of assigning him the duty of presiding over the Senate seems to have been an afterthought.

In 1919, President Woodrow Wilson suffered a stroke while leading his great fight for the adoption of the Covenant of the League of Nations. At that time the posi-tion of the United States had developed into one of world leadership. After our spectacular military and economic exertions in World War I, and at the moment that the leader of democracy was stricken, in the midst of the postwar effort to establish a lasting peace, a dramatic Senate battle over ratification of the Versailles Treaty and of the Covenant of the League of Nations was

being waged.

The illness of Wilson continued from his collapse on September 25, 1919, until the end of his Presidential term on March 4, 1921. During this period of 1 year and 5 months, the President was unable to attend any Cabinet meetings or to perform most of his duties. The exact extent of his inability is not clear because his condition was care-fully shielded from the public by Mrs. Wilson, his personal physician, and his en-tourage in the White House. Indeed, even the Vice President and the Cabinet were kept in the dark about Wilson's condition. It is said that for a considerable period of time-although the precise time is subject to speculation-he was completely unable to perform any of the duties of his high office. It has been believed that Mrs. Wilson and the President's physician played a major role in making and deciding matters of large public policy. In any event, the administration of the Government almost was at a standstill for 11/2 years.

Without the direction of the President or Vice President, Secretary of State Lansing called 21 Cabinet meetings in an attempt to prevent the affairs of the Government from becoming paralyzed. When Wilson heard of these meetings he accused Lansing of usurping Presidential power and forced this outstanding Secretary of State to resign. Upon Lansing's suggestion that the Cabinet re-Vice President Marshall to act as resident, Joseph P. Tumulty, Wilson's secretary, replied: "You may rest assured that while Wilson is lying in the White House on retary, replied: the broad of his back I will not be a party to ousting him." At that time widespread discussion again ensued for clarification of the law, but when Wilson's term expired the matter died down again.

Now, why did Wilson's personal advisers fear knowledge of his disability becoming known? I believe that there can be no doubt that a primary reason was because of their fear that public opinion would demand that Vice President Marshall take over the powers of the Presidency and, if Wilson should recover, he might face a constitutional fight to regain his office. In other words, the dangerous uncertainty of this constitutional provision was responsible for this deplorable situation. Attempts made to induce Vice President Marshall to act as President failed. The major reason Marshall was unwilling to act was because of the fear that once he did so, Wilson would be ousted permanently from the Presidency.

The permicious consequences of the belief that a Vice President actually succeeds to the Presidency for the balance of the Presidential term, when called upon to exercise the powers and duties of a disabled President, have been in both the Garfield and the Wilson cases to frustrate the intent of the drafters of the Constitution that the Nation should have an alternate Chief Executive ready to provide continuous Executive leadership. If it had been perfectly clear that constitutionally the President could resume his power at any time his disability ended and he was relinquishing the reins only temporarily, this dangerous problem should not have arisen in either the Gar-

field or Wilson administrations. Immediately upon President Eisenhower's recovery from his heart attack in Colorado in September 1955 he directed the Department of Justice to institute a full legal study of the constitutional problem with respect to presidential inability. His purpose was the preparation of a plan for the protection of the Nation in the event any President in the future were to become disabled. After an extensive study of the problem by Attorney General Herbert Brownell, the President reviewed alternative plans and authorized the Attorney General to consult persons outside the Government for their views and criticisms. The President also sought the opinions of the members of the Cabinet at a Cabinet meeting. Finally a definitive plan proposing a constitutional amendment was prepared by Attorney General Brownell, approved by the President, orally presented by the President at a meeting of congressional leaders of both parties and publicly an-nounced in the testimony of the Attorney General before a subcommittee of the Judiciary Committee in the House of Representatives.

President Eisenhower was the first President of the United States who had the courage, the interest and the appreciation of the problem to attempt to correct this serious deficiency of the Constitution. Every prior President shrank from attempting to deal with this delicate matter or manifested no realization of the difficulty.

On March 3, 1958, the President and the Vice President took an historic step in consultation with Attorney General William P. Rogers when they reduced to memorandum form, and published, their own understanding of the constitutional role of the Vice President as acting President during the disability of the President. The Elsenhower-Nixon understanding was stated in these terms:

"The President and the Vice President have agreed that the following procedures are in accord with the purposes and provisions of article 2, section 1, of the Constitution, dealing with presidential inability. They believe that these procedures, which are intended to apply to themselves only, are in no sense outside or contrary to the Constitution but are consistent with its present provisions and implement its clear intent.

"1. In the event of inability the President would—if possible—so inform the Vice President, and the Vice President would serve as acting President, exercising the powers and

duties of the office until the inability had ended.

"2. In the event of an inability which would prevent the President from communicating with the Vice President, the Vice President, after such consultation as seems to him appropriate under the circumstances, would decide upon the devolution of the powers and duties of the Office and would serve as Acting President until the inability had ended.

"3. The President, in either event, would determine when the inability had ended and at that time would resume the full exercise of the powers and duties of the Office."

I have no doubt that this unprecedented document, although not binding upon future Presidents and Vice Presidents, will become recognized as a notable state paper of our constitutional history.

On the day following the Eisenhower-Nixon announcement a bipartisan majority of the members of the Senate Judiciary Committee, including Senators Kefauver, Dirksen, Hruska, Hennings, Johnston, Langer, Watkins, Jenner, and Butler, joined in sponsoring a proposed constitutional amendment on Presidential inability which adopted the administration's proposal with certain changes in section 4 acceptable to the Executive. This proposed bipartisan amendment was promptly introduced in the Congress.

Section 1 restates existing law in case of the removal, death, or resignation of the President.

Section 2 provides that, if a President declares in writing that he is unable to discharge the powers and duties of his office, those powers and duties shall be discharged by the Vice President as acting President. This section assures a President in announcing his own inability that his powers and duties will be restored to him upon his recovery.

Scction 3 deals with a situation in which the President is unable or unwilling to declare his own disability. In that case, the Vice President with the approval of the majority of the heads of the executive departments in office—that is to say, the President's Cabinet—shall make this decision. Many scholars agree that the Vice President alone now has the authority under the Constitution to make this determination. Section 3 requires the written concurrence of a majority of the members of the Cabinet.

Section 4 provides that, whenever the President declares in writing that his disability is terminated, he shall resume the exercise of the powers and duties of his office. This provision affords a constitutional guarantee to a President that he will regain the powers of his office when his disability has been removed.

The realities of the situation suggest that it is unlikely a Vice President would attempt to assume the duties of the presidency unless it were clear beyond challenge that the President was, in fact, unable to exercise the responsibilities of the office. The proposed constitutional provision proclaiming plainly that the Vice President will merely discharge the powers and duties of the presidential office for the temporary period of disability should negative any motive of usurpation. At the same time, the Vice President should not in the future under the amendment refuse-as Vice President Arthur and Vice President Marshall-to perform his constitutional duty of serving as the alternate executive temporarily when the circumstances require that he do so.

Section 4 will allow the President to resume the functions of his office although there might be a difference of opinion between the President and the Vice President whether the disability has ended. However,

in the event of a dispute between them as to this, provision is made for immediate action by the Congress, whether then in session or not, to resolve the issue if raised in writing by the Vice President with the support of the majority of the Cabinet. A two-thirds vote of the Members present in both Houses would be required to establish the continued existence of the President's inability. Thereafter, the announcement by the acting President that the President's inability has ended or a resolution adopted by a majority of both Houses will restore the powers of the office to the President upon his recovery.

Historically this problem has never been one of a too aggressive Vice President but rather of a reluctant Vice President, who hesitated to exercise the powers of the President under the present succession clause of the Constitution because of the uncertainty that his action might result in the permanent elimination of the President from his office.

The essential solution is a clarifying amendment establishing that the Vice President's tenure of the presidential powers is only temporary. This provision is the foundation of the administration's proposal submitted in 1957, resubmitted in 1958, and the bipartisan amendment proposed in the same year. The proposal implements the original understanding of the members of the Constitutional Convention as indicated in the debates and in the original articles.

There is now presented the best opportunity in our history for the solution of this problem. The time required for the ratification of a constitutional amendment will undoubtedly extend beyond the term of this administration and accordingly will be inapplicable to it. We do not know the person or the party that will occupy the White House in 1961, but we do know that under the Constitution, it will not be President Eisenhower. At this moment in history, the proposed measure can be considered entirely upon its merits without any consideration of personalities or parties.

At the time of each illness of President Eisenhower, as in the case of President Garfield and President Wilson, there was a general recognition of the seriousness of this constitutional problem of succession and clamor by political leaders of both parties and the press that constructive measures be taken for its resolution. Although the problem arises from a permanent inherent defect in our constitutional system, proposals for its resolution now lie dormant in the Congress under the press of far less significant matters. The bipartisan constitutional amendment was proposed over a year ago yet the Senate Judiciary Committee and the House Judiciary Committee have taken no action of any kind.

An informed and responsible public opinion appears needed to secure the action which the interests of the Nation plainly requires.

### New York County Lawyers' Association Opposes H.R. 3

EXTENSION OF REMARKS

----

### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement of the special

committee on the U.S. Supreme Court

of the New York County Lawyers' Association opposing H.R. 3, a bill to establish rules of interpretation governing questions of the effect of acts of Congress on State laws:

STATEMENT OF THE SPECIAL COMMITTEE ON THE U.S. SUPREME COURT OF THE NEW YORK COUNTY LAWYERS' ASSOCIATION OP-POSING H.R. 3

The special committee on the U.S. Supreme Court of the New York County Lawyers' Association opposes H.R. 3. As lawyers, we call attention to the fact that this shotgun approach to the intricate technical problems of Federal jurisdiction is most hazardous. If this unwise measure is enacted, the legal effect of long-established statutes governing business conduct, labor management relations and many other areas would be placed in doubt. . The public would be faced with sudden uncertainty concerning the meaning of many important laws and the courts would be burdened with the relitigation of long-settled issues.

HOWARD M. HOLTZMANN,

Chairman.

#### John Foster Dulles

EXTENSION OF REMARKS

### HON, EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. REES of Kansas. Mr. Speaker. under the consent granted me by the House. I include a fine editorial that recently appeared in the Baltimore Evening Sun concerning the late John Foster Dulles, Secretary of State:

Nothing was more impressive about John Foster Dulles than his fortitude in the face of his final illness. Few men in public life have shown more courage than he in continuing his work in the presence of fatal disease and few have met the final challenge with more composure. He was a controversial figure throughout his public career, but his critics were as loud in his praise during the concluding months of his life as his friends and supporters.

Mr. Dulles served as Secretary of State from 1953 until early in this year, and many people think of him exclusively in terms of this office. Actually, aside from a few brief periods during his early manhood when he was a minor member of various delegations after the war of 1917-18, his public career began in 1944 when he became the campaign adviser on foreign affairs to Governor Dewey, of New York, then running for the presidency.

On Mr. Dewey's behalf he entered into consultations with Secretary Hull and negotlated the arrangement under which the plan for organizing the United Nations was kept out of the presidential campaign. This was the beginning of the bipartisan foreign pollcy, or as Mr. Hull preferred to call it, nonpartisan foreign policy. Later, he worked closely with Senator Vandenberg and was one of the useful contributors to the bipartisan support for the various moves initiated during the Truman administration. His chief achievement was in the negotiation of the Japanese peace treaty.

During this phase of his career, Mr. Dulles was not partisan in his approach and his utterances were largely noncontroversial. Briefly during the presidential campaign of 1952, Mr. Dulles became a vigorous partisan. and when he took office as Secretary of State another change occurred: He began to use speeches and public statements not to inform the public about what he was doing but to create certain effects in Moscow, Peiing, or some other foreign capital. word, be became a diplomatist of the old school, seeking in everything to further aims which were not always publicly disclosed.

It was this change which led to most of the controversy about Mr. Dulles. No other American Secretary of State had ever shown the mastery of the arts of diplomatic publicity which he demonstrated, but his very excellence in this field led to confusion as to what his immediate aims were. His ultimate aims were, of course, always clear. His policy in the main was to resist expansion of Communist influence along the lines laid down by General Marshall and Mr. Acheson. And in general he succeeded in carrying on the work they had begun.

Now with the Berlin crisis confronting the world, Mr. Dulles passes from the scene. There is reason to believe that had he lived and continued in office, he would have been a tower of strength in this emergency. His work in general remains to be assessed, but one thing is clear. He was a strong man who dominated the State Department as few Secretaries have ever done, and he has left a lasting and affirmative mark on our foreign policy.

### Transportation-Tax Repeal

EXTENSION OF REMARKS OF

### HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. ROGERS of Colorado. Speaker, for many years I have felt the 10-percent wartime travel tax on passengers should be repealed. Along with many other Members of this body, I have this year introduced a bill, H.R. 6874, to achieve this end. No one I know of defends this tax on its merits. Everyone seems agreed it should go. I, for one, think it should go this year.

The reasons why the tax should be repealed are pretty well summed up in a recent letter I have received from the president of the Denver Chamber of Commerce, which I insert in the RECORD at this point:

The Denver Chamber of Commerce respectfully asks your support of legislation to repeal the 10-percent tax on passenger travel. We detail some of the reasons that we feel this tax should be repealed.

At the time of enactment, this tax was not intended to be a revenue-raising measure, but was imposed for the purpose of discouraging passenger travel during World War II. The public accepted the tax as a deterrent to private travel in order to free transportation facilities for service in relation to the war needs of the country. The need for discouraging private travel has long since passed, but the tax which was imposed to discourage such travel still remains in force. It still operates effectively to discourage travel and has the effect of weakening the financial structure of our public carriers who have proved themselves vital to our national defense.

We understand this tax adds \$2 million per year to the transportation costs of the Nation. It is our opinion that the repeal of the tax would stimulate passenger travel to the extent that the increase in passenger revenue would result in profitable operation for carriers. Increased profits in turn would result in additional income taxes, substantially offsetting the loss of Government revenue which would result from repeal of the

You are well aware of the importance of the tourist business in the United States. The 10-percent transportation tax encourages the tourist to go to a foreign country in preference to the United States, since the tax is not applicable to foreign carriers. Canada was very quick to realize this and other detrimental aspects of this type of tax, and they repealed a tax similar to ours only 31/2 years after the war, in March 1949.

I am sure many other Members have received similar letters or resolutions, not only from chambers of commerce but from a large number of individual travelers, who, after all, are the ones who pay this tax. It is truly a penalty on the

I have further noted that both regulatory agencies established by the Congress to regulate the transportation industry, and assure the Nation of a sound transportation system so essential to its commerce, defense, and general econamy, have recommended repeal of this tax.

Recently, in a decision of May 18, 1959, relating to the railroad passenger train deficit situation, the ICC made as its first recommendation the repeal of the 10 percent Federal excise tax on the passengers fares. In its decision the Commission said:

Without repeating all of the reasons advanced for the repeal of the transportation tax, we wish to emphasize that it is having a serious effect upon the passenger-train service of the railroads. Since the tax on passenger travel tends to discourage the public from using common carriers, it thereby aggravates the ever-mounting passenger defi-While we recognize that the would not provide a cure-all for the pas-senger deficit problem, such action would remove a serious deterrent to a greater use by the traveling public. In strongly urging that the Congress take action to repeal the tax outright, we are not unaware of the efforts which various Members of the Congress have made and are presently making in this regard. We are also not unmindful of the revenue needs of the Government. We are, however, convinced that any possible loss of revenue would be more than offset by the public interest in strengthening and preserving a transportation system capable of meeting adequately the country's need for service both in peacetime and during emergencies in conformity with the national transportation policy as declared by the Congress.

I understand the Civil Aeronautics Board has similarly said that repeal of this tax would have a beneficial effect on the air transport industry. The chairman of the CAB in recent testimony before the Senate Appropriations Committee indicated repeal would "produce a substantial increase in traffic" and, to some degree, "reduce subsidies to local service carriers."

Certainly, the millions of passengers who travel by common carrier buses between the 40,000 communities that industry serves are entitled to this relief. Many of them have no alternative but to travel by bus, or by private vehicle. Driving customers away from the buses, or any other common carriers, as this tax most surely does, can only result in those transportation companies facing serious economic problems—and, by no means unimportant, in their paying a lesser amount of corporate income taxes and other taxes than otherwise would be the case.

I am satisfied that the net loss in revenue to the Federal Treasury would not be great and would moreover be offset in large measure by additional revenue from other taxes.

I fully appreciate the heavy burden carried by the Ways and Means Committee of the House, and particularly by its distinguished chairman. WILBUR MILLS. They have done a splendid job of exercising fiscal responsibility, holding the line on tax reductions while Government expenditures remain, of necessity, at a high level. I am further gratified to note that the chairman of that committee plans to undertake a broad study of the Federal tax structure later this year. I am sure it will result in removing many present inequities, closing loopholes, and otherwise bringing the tax structure into a better balance.

### The Untold Story of Panama

EXTENSION OF REMARKS

### HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. THOMPSON of Texas. Mr. Speaker, on May 12, 1959, I placed in the Congressional Record an extension of remarks concerning a most timely and important publication entitled "The Untold Story of Panama," by the author, Earl Harding. The book has created a great deal of interest, particularly among those who recognize the serious and complex problems concerning the Panama Canal and our present and future relationship with our good neighbor, the Republic of Panama.

My attention has just been invited to a review of Mr. Harding's book by the Reverend Leopold Braun, a native of New Bedford, Mass. Father Braun's international background is such that his comments on Mr. Harding's "Untold Story of Panama" are particularly significant.

It is my pleasure to insert in the Con-GRESSIONAL RECORD Father Braun's review which appeared in the New Bedford Standard Times of Sunday, June 14, 1959:

REV. LEOPOLD BRAUN PRAISES NEW STUDY OF PANAMA CANAL INTRIGUES—"THE UNTOLD STORY OF PANAMA," EARL HARDING, ATHENE PRESS

(This book is here reviewed by the Reverend Leopold L. S. Braun, A.A., a native of New Bedford, and chaplain to the American Catholic community in Moscow 1934-45. Father Braun's life was then saved from "accidental" destruction secretly planned by Red enemies by his flight under diplomatic

protection of then Secretary of State James F. Byrnes. Since 1946, Father Braun's analyses of the international Communist conspiracy have been the subject of lectures throughout the United States and Canada.)

#### (By Rev. Leopold Braun)

For the American public as for the student of U.S. history, this experienced writer narrates, in highly readable English, some heretofore-concealed aspects of Panama's birth as a Republic. Mr. Harding enjoys the unique distinction of being the sole survivor of the glorious newspapermen who fought for and won an epic battle for the freedom of the press at that time.

The author pursues his purpose of handling the truth with striking frankness and disarming objectivity, leaving no doubt in the reader's mind as to the true paternity of this extrordinary politico-territorial parturition.

The content of this book's 19 chapters bears witness to the author's outstanding qualifications as an on-the-spot observer and investigator of undeniable facts leading to the quashing of the Federal indictment against the New York World and the Indianapolis News, both attacked personally by Theodore Roosevelt.

Though Mr. Harding played a capital role in battling for a free press, this Panama story is told, not in the form of a personal vindication, but as an impartial and powerful contribution to a clear understanding of an artificially confused period of American history.

The oft-quoted Presidential aphorism of the time, "I took the isthmus," is exploded with no lack of humor to the detriment of a conscience-stricken administration which, aided even by the famous talents of William Nelson Cromwell, was unable to cover up all the telltale tracks of questionable manipulators.

A jewel of rare historical luster is Mr. Harding's insertion, in his handily indexed text, of the "Dear Little Son" letter of October 18, 1903, written by Dr. Manuel Amador who coauthored the spontaneous revolt with Theodore Roosevelt. Honestly obtained in dramatic circumstances by the author from the addresses in person, it is expertly used to stud this fascinating story with long-awaited brightness and clarity.

Who really got the American taxpayers' \$40 million paid off to the bankrupt French company? Why were Cromwell's fantastic fees so drastically reduced by the French arbitrators? Why were copies of Cromwell's incriminating cables found destroyed? What gave rise to the regrettable revision of the Hay-Bunau-Varilla Treaty of 1903? Why did Alger Hiss include the Panama Canal Zone as U.S. occupied territory in a list sent to the U.N.?

These and many more questions are examined by Mr. Harding with the expert qualifications of a trained eye in fact reporting.

But the Panama Canal is not only a link between two oceans. It has become the focal point of irrational and irresponsible discussion on the part of some American left-minded writers or Moscow-inspired academic agitators. All put together, they are quite willing to agree to a giveaway bigger yet than the combined annuities, compensations, maintenance costs, and other expenditures pulled out of Uncle Sam's Treasury.

Because of the fate of Suez, because of the internationalization mania and the malicious or asinine application of the good neighbor policy, Mr. Harding understands the overtones of international importance which the Panama Canal situation now spells out with glaring and ominous imminence.

To be sure, the Kremlin's long era is now reaching out into this hemisphere. Mr.

Harding meets this challenge with aplomb, serenity, and positive facts of hard-hitting type.

All readers of "The Untold Story of Panama" are in for much veil lifting, historical entertainment, accurate reporting, and a timely contribution to contemporary American and world history. Mrs. Louise Graham Harding, whose precious collaboration made this work possible, must also share in the credit due to this revealing story.

#### REPORTER PROBED CANAL MYSTERIES

Earl Harding, the author of "The Untold Story of Panama," is a newspaperman of many years' standing. Born in Colorado in 1880 on his parents' ranch, he attended public schools in Denver, Colorado School of Mines, and Columbia University in New York where he specialized in English and American constitutional history.

can constitutional history.

He opened his 50 years of newspapering as mining and telegraph editor of the Denver Republican in 1902. In 1904, he became assistant Sunday editor of the Chicago Record Herald. Following his Chicago stint, he joined Joseph Pulitzer's New York Morning World, first as copy editor, then as roving correspondent and day news editor. In 1908, he was assigned to investigate the hidden history of the 1903 revolt which separated Panama from Colombia.

His discoveries anent the distribution of some \$40 million paid to the French company which had tried and failed to build a canal across Panama led to libel prosecution initiated by President Theodore Roosevelt against the World and the Indianapolis News. Roosevelt attempted to have the case tried in Federal instead of State courts, a grave attempt to infringe upon the freedom of the press to cover the news. The suit was finally quashed.

Mr. Harding lives in New York and often

Mr. Harding lives in New York and often speaks to clubs and organizations there concerning Panama and the threats to its security made in recent months.

## A Solution to the New Bar Admittee's Most Pressing Problem—The Army's Judge Advocate General's Corps

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a very interesting article on the legal profession, which appeared in the May-June 1959 issue of the Case and Comment, the lawyers' magazine published in Rochester, N.Y.

The article follows:

A SOLUTION TO THE ADMITTEE'S MOST PRESSING PROBLEM—THE ARMY'S JUDGE ADVOCATE GENERAL'S CORPS

(By First Lt. Francis L. Crowley, Jr., Judge Advocate General's Corps, U.S. Army)

(Lieutenant Crowley, who received his B.S. (SS) and LL.B. degrees at Georgetown University, Washington, D.C., is assigned to the Industrial Relations Branch, Procurement Law Division, Office of the Judge Advocate General, Department of the Army. In addition, he serves as assistant to the Labor Adviser to the Secretary of the Army and the Deputy Chief of Staff for Logistics.)

The most vexing and immediate problem a new admittee to the bar must solve is: How and where to practice law and still make a living? Those who are not particularly interested in practicing law as such can usually earn an adequate living in other fields, utilizing their legal talents and whatever other native talents they may possess. But to practice the art, most young lawyers encounter difficulty, first, in finding the opportunity and, second, in making the practice pay. To those who can qualify, the Judge Advocate General's Corps of the U.S. Army offers an excellent solution to this problem.

Too many young attorneys completely overlook the possibility of service in the Army as a legal career because of prejudice or bias against or suspicion or ignorance of a military career. As a result of two general military mobilizations and continuation of the draft in times of relative peace during the past 18 to 20 years, many law school graduates enter the employment market with a dislike of military life as part of their heritage. Downgrading the military has been the vogue. This is unfortunate, especially as this attitude stems largely from ignorance of the career opportunities available in the military to these young men in their chosen profession. It is true that there are professional and social requirements and obligations which are peculiar to a military career-to insist otherwise would be unrealistic. The question is whether these peculiarities are so burdensome, when compared to similar requirements and obligations of practice and life in the civilian sphere, as to constitute a real disadvantage.

The foremost inquiry when choosing any legal career must be: Am I, after having spent long and energetic years preparing to become an attorney, choosing a career in which I can truly practice the legal art in the manner in which I want to practice it? Accordingly, the young lawyer must consider the type of practice involved in the choice and the extent to which he will participate in it. Practice opportunities in the Army's Judge Advocate General's Corps are excellent. The variety is great. There is opportunity to specialize to some extent; however, a general practice is the norm. Individual responsibility is very high, and the day-to-day opportunities for a challenging practice are exceptional. These opportunities can be best demonstrated by an analysis of the client which the Judge Advocate General's Corps serves— the U.S. Army.

The Army's size is one of its outstanding characteristics. It operates on an international scale. Organizationally, and to a lesser extent, functionally, it compares to our corporate giants, but it is much larger than the largest of these. It is also an arm of the executive branch of the Federal Government and as such has functions and practice requirements similar to those of other Government agencies. These characteristics of the client suggest a practice similar to that found in a corporate or governmental General Counsel's office, e.g., commercial law, fiscal and tax law, international law, the law of property, real and personal, torts, employees' compensation, labor law, and so on.

In another respect it is unlike Government and big business, or any other client for that matter, as its members or employees are, to a considerable extent, governed and disciplined by it. This distinction suggests the practice of criminal law, perhaps the largest single phase of military law practice and historically the reason for the existence of judge advocates. An elaborate system of courts and boards at the trial and appel-

late levels and a comprehensive code of law and practice to meet the needs of the military organization has been established by Congress. This current code is relatively new, having been revised in 1951. As a consequence, new law is being made daily. It is a dynamic practice. This code though, admittedly it makes provision for a few crimes unknown to the civil community, contains laws similar to those which can be found in any Federal, State, or local criminal code.

Despite its size, the Army has components which are expected to, and do, operate as independent units with minimum reliance for assistance on the next higher unit. In this sense the Army is composed of countless middle-sized communities, each with its own problems of self-government. The judge advocate performs the function of the city attorney when serving the client in this regard. Many of these units, the Army's posts, camps, and stations, are remote from civil communities and, even though some are relatively close to civil communities, the camaraderies and esprit de corps that exists among career military people tend to draw them toward activities within the installation. As a consequence, these individuals rely to a great extent upon the judge advocate on the post for legal assistance. This phase of the military practice suggests the entire field of domestic relations law, the law of wills and probate, personal finance law and individual income tax law, inter alia.

This brief analysis demonstrates that law is practiced by members of the Judge Advocate General's Corps to the same extent as by civilian practitioners. There is adequate opportunity for counseling, advocacy, prosecution, defense, trial, oral argument, legislative drafting, legal composition, commercial negotiation, legal assistance, and participation in polleymaking. The young Judge Advocate General's Corps officer can also look forward to a position on the bench of courts-martial. There is a wide variety in the substantive law involved, in addition to a great diversity of practice potentialities.

to a great diversity of practice potentialities.

There can be little if any complaint concerning the kind of practice found in the Army. Is the fact that the practice is performed as a member of the military organization a significant disadvantage? contrary, if there is any disadvantage, it is fully offset by the professional opportunities and the emoluments that go with the career. But first, what are the disadvantages, if any? The wearing of a uniform is certainly no disadvantage. Lawyers in civil life feel con-strained to wear a particular type of apparel. They are expected to be dignified. young lawyer pass a senior firm member, a client, or a judge without an appropriate greeting and what are the consequences? Is a salute any more of a burden? Is it any less disturbing to be overruled on a legal matter, on which you feel you are certain, by a senior attorney in a civilian law firm than by a senior attorney who is also a superior officer in the military? Or is it any less distressing to have a client refuse to take your good advice when the client is a businessman than when he is a military officer in charge of a military unit? Men are men whether they are in or out of uniform. The job is somewhat different as are the customs, but basically they are the same as in civilian practice.

The opportunity to travel worldwide may be an advantage or disadvantage, depending on the individual. This is a matter to which the prospective candidate should give careful consideration, especially if he has or hopes to have a family.

Do you feel you can be, and desire to be, a wealthy man? You'll make a comfortable

living and have an incomparable retirement benefit in a military career, but you'll not be a wealthy man unless you have an independent income. After 20 years' service, a colonel's salary and allowances will gross about \$12,500 per year; however, the retirement benefit that is built up during active service is worth from \$200 to \$300 per month. Medical care, post exchange, officers' club, and commissary privileges must also be considered, as must a 30 day per year vacation and an unlimited amount of sick leave.

Most posts have excellent recreational facilities and relatively inexpensive housing. Much of the expense of private practice is born by the Government, including such luxuries as legal reading services and a program of continuing legal education, which is encouraged. These fringe benefits are a substantial addition to basic pay and allowances.

Promotion opportunities to the young man contemplating a military career are particularly encouraging at the present time. In the early 1960's a great number of officers will reach retirement age as a result of the sizable augmentation of officer strength in the period immediately following World Waf II. They must be replaced. Accordingly, promotion at an increased rate can be anticipated, comparable to that experienced only in time of general mobilization.

I have stipulated that concentration on the disadvantages of military life is inordinate. There are disadvantages to almost any choice we make, whether the choice concerns our career, marriage, home, automobile, or what have you. But in making any choice, disadvantages are normally weighed against advantages. My purpose has been to focus attention on the benefits of a military legal career which are most often overshadowed by the popular attitude that the practice of law in the military is undesirable and unrespectable. As a result of 3½ years of service in JAG, I have not found justification for that attitude. On the contrary, I have found that my senior partners are for the most part capable and dedicated lawyers who are achieving real satisfaction from practicing law in a challenging arena.

My conclusion? That a legal career in the

My conclusion? That a legal career in the Army is an outstanding opportunity. A far-sighted young attorney should not let the opportunity pass without giving it careful consideration. There is a good practice, better than average income, and retirement benefits which very, very few successful attorneys can afford. Success in such a career is solely in the hands of the individual. Success is not contingent upon the obtaining or retaining of clients—a problem faced by even the well established private practitioner.

Perhaps the most outstanding reward of a career as an Army judge advocate is one which I have refrained from mentioning until this time. The rewards resulting from service to your country, especially in these days of limited emergency, cannot be weighed in any concrete terms. There is a true value involved, which cannot be realized to the same extent in any other practice. It is a contribution to society of which you can be truly proud and one which is deserving of, and will receive, the approbation of your countrymen and fellow officers.

#### INFORMATION ON APPOINTMENTS

Complete information on appointments in the Judge Advocate General's Corps of the Regular Army is readily available upon request directed to the Military Personnel Division, Office of the Judge Advocate General, Department of the Army, Washington 25, D.C. Senior law students desiring to apply, may file their applications in advance of graduation and admission to the bar. Veterans' Pension Act of 1959

EXTENSION OF REMARKS OF

### HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. COFFIN. Mr. Speaker, together with the overwhelming majority of the House, I voted for H.R. 7650, to revise veterans' benefits. I do not know when a committee has done a more painstaking job of trying: First, to deal with so many complicated systems of benefits; second, to devise a responsible program that can be recommended to the American people, that can pass both House and Senate, and that can be signed into law by the President: third, to present such a complex schedule of benefits in a clear and understandable manner; and, fourth, to secure the assent of the major veterans' organizations representing the great majority of our veterans from the several conflicts in which our Nation has been involved.

It is my hope that any inequities and inconsistencies which are inevitably found in any such comprehensive legislation can be eliminated through future amendments.

Mr. Speaker, it is significant that the New York Times carried an editorial in this morning's issue, proclaiming that "the bill is a distinct improvement over the present system." While I do not agree with the Times' suggestions that no exemptions be allowed for a spouse's income, I feel that the general tone of the commendation is proof that the work product of the committee and of the House was a major forward step.

I ask, therefore, to include the editorial with these remarks:

#### VETERANS' PENSIONS

Merely by reason of having served in the armed services in time of war, veterans deemed disabled for any reason-and under present regulations most veterans over 65 qualify-are entitled to a standard monthly pension if they meet certain income limita-tions. The Bradley Commission, in its careful study of this expensive program, con-cluded that "the non-service-connected needs which veterans have in common with all citizens should be met \* \* \* through the general welfare programs under which veterans are covered along with other people \* benefits non-service-connected should be minimized and gradually elimi-nated."

It has long been apparent, however, that the idea of "phasing out" and eventually ending pensions is simply not practical politics. It is in the light of this reality that the major pension bill passed by the House should be judged. And in that light the bill is a distinct improvement over the present system.

It establishes for the first time the principle of pensions varying with the veteran's income. Also for the first time it establishes the concept of disqualification on the basis of a large net worth, regardless of income. It makes a start at reform of the present costly and unjust system under which a veteran can transfer income to his wife to enable him to qualify for a pension.

These changes will have a major effect in reducing the future costs of this program, which under present law would rise steeply from the current \$1.1 billion a year to \$3.4 billion by 1985.

To sweeten this package the House Veterans Committee decided to increase the scale of benefits somewhat, meaning an immediate additional cost of \$300 million. Perhaps this price must be paid in return for savings in the billions later on. But the Senate could greatly improve the bill, without reducing the scale of benefits, by tightening the program further.

For example, it could require counting all of a spouse's income in determining a veteran's qualification for a pension, instead of excluding the first \$1,200 as in the House could abolish the present system bill. It under which social security income is sometimes excluded in determining a veteran's income.

In short, the Senate could carry the concept of true need to a conclusion not only logical but fair, while at the same time moderating further program's still-heavy future

#### The Townsend Plan

EXTENSION OF REMARKS OF

### HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. HOSMER. Mr. Speaker, I am pleased to present for consideration of my colleagues the following analytical memorandum on H.R. 4000, the Townsend plan bill, as prepared by the plan's Washington legislative bureau:

ANALYTICAL MEMORANDUM ON H.R. 4000, PAY-AS-YOU-GO SOCIAL SECURITY FOR ALL-TOWNSEND PLAN AMENDMENTS TO TITLE II OF THE SOCIAL SECURITY ACT

Why should we adopt H.R. 4000 instead of continuing to liberalize the present system of old-age and survivors insurance?

H.R. 4000 is based on the simple proposition that what is good for America's aged is good for America, because all our people will benefit if we provide economic security as their final reward in life. Existing social security and other retirement systems fall far short of producing this happy outcome.

In February 1954, the Social Security Bulletin carried an article by Jacob Fisher, of the Social Security Administration's Division "Postwar of Research and Statistics, Changes in the Income Position of the Aged. This report shows "The population aged 65 and over increased 17 percent from 1947 through 1952 (while the total population aged 14 and over increased only 5 percent); but the elderly population's share of total personal income increased from 7 percent in 1947 to only 8 percent in 1952."

Direct analysis of Census Bureau data shows those past 65 to have received 7.3 percent of personal income in 1953, 7.7 percent in 1954, 7.9 percent in 1955, 7.6 percent in 1956, and 7.4 percent in 1957. By 1957, the over-65 population increased 36.9 percent over its 1947 number-while the total population aged 14 and over increased only 11.5 percent. Thus, the average aged person's comparative income position went from bad in 1947 to worse in 1957. More aged are slicing the same sized income pie, which obviously means a smaller portion for each.

This is the case in spite of congressional

action in 1950 increasing old-age and survivors insurance benefits by 70° percentand additional increases in 1952 and 1954and in spite of the dramatic increase in private pension systems and the liberalization of just about every existing public and pri-

vate retirement system as well. Since World War II, OASI has not only failed to solve the social security problem; it has even failed to prevent it from getting

If OASI could be refashioned to do the job. there would be no logic in scrapping it. However, a 1955 report from the Social Security Administration itself points to the impossibility of attaining the desired end through the present machinery. This report warns that even so modest a minimum benefit as \$75 a month would require a payroll tax rate so high as to endanger public support of the contributory principle upon which the present system is based.

Unabated surpluses of production dictate that we must keep buying power abreast of our ever-expanding ability to produce. Unless we stop destruction of the average American's buying power upon his reaching old age, we can never do this. This is what OASI has proven unable to do. It is exactly what H.R. 4000 will do.

Added to what we know the American people can do privately for their own retirement, the benefits of H.R. 4000 will end poverty in old age, retiring all persons on living standards comparing reasonably to those of the adult population in generalthus amplifying buying power, the only way prosperously to absorb surpluses,

### Against Recognition of Red China

EXTENSION OF REMARKS

# HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959.

Mr. SAYLOR. Mr. Speaker, the House Un-American Activities Committee report on Red China atrocities comes at a propitious time. It is another chapter in a long series of accounts of Communist attempts to stamp out Christianity in Asia.

While it is doubtful if this publication will per se prompt advocates of Red Chinese recognition to reverse their position, the additional evidence of brutality on the part of the Peiping government may bring conclusive public pressure to bear on elected officials of the U.S. Government who would otherwise carry the banner of the Mao regime. In view of the vehement denunciations that have been voiced by spokesmen for the many faiths, it is inconceivable that public officeholders will continue to stump for diplomatic acceptance of Red China.

Last November, the Committee of One Million, whose membership included some of the most respected Protestant clergymen in the United States, polled a cross section of ministers on the question of whether Red China should be admitted to the United Nations. The committee included Bishop Fred Pierce Corson, Dr. Norman Vincent Peale, Rev. Daniel A. Poling, and Bishop Herbert

Welsh. Eight-seven percent of the 9,000 clergymen of all denominations who were contacted voted against admission.

The attitude of Roman Catholics, whose missionaries have suffered continuous indignities since Communist forces seized China, is also well-known. Last December, the National Council of Catholic Men passed a resolution which stated, in part, that "war, religious and secular persecution, and the violation of human rights are not credentials acceptable for recognition by either the United Nations or the United States."

The memorandum which the late John Foster Dulles sent to the 84 U.S. missions around the world explained most effectively why this country cannot and will not recognize Red China. It stated that a contrary policy would cripple Nationalist China if not destroy her completely, thus blasting all hopes for Chinese on the mainland as well as on Taiwan: that nearby nations would be confused and demoralized, and would feel abandoned by the United States: that other nations probably make a quick deal with Peiping on the best terms possible; and that millions of Chinese living abroad would have no alternative than to switch their loyalty

Mr. Speaker, I was impressed with this paragraph by the Honorable Hollington K. Tong, Ambassador of the Republic of China to the United States, at Tufts University on March 20, 1957:

As long as the moral force of the world continues to reject it, communism is bound to fail, even though it has occupied so huge an area of God's earth. History has shown that moral force is always more powerful than physical might.

It is the responsibility of the Congress of the United States to lend the moral support necessary to oppose communism throughout the world. So long as subjected and threatened peoples are assured that this great Nation stands firmly against the atheistic philosophy of the Red despots, the spirit of freedom will stay alive regardless of the effectiveness of Red savagery.

Mr. Speaker, I am confident that a . tremendous majority of the Members of Congress would vote against recognition of Red China if the issue ever comes to the floor. Yet the attitude of a few of my colleagues on this vital issue is a matter of national concern. Less than 3 months ago the United States officially denounced the Communist Chinese for the attempt to destroy the historical autonomy of the Tibetan people. Since that time, 4,000 fugitives have left their native land to follow the Dalai Lama

into havens thus far free of Red domination.

How the innumerable instances of Communist tyranny and cruelty can summarily be discounted by an elected official of the U.S. Government is incredible. Perhaps a reminder from the voting public is necessary. The capture and imprisonment of American servicemen apparently has been forgotten; the ruthless and barbaric treatment of Tibet and other nations has conveniently been discounted; the appeals of our church leaders have been cast aside. If the public clamor against recognition of Red China reaches a crescendo in the communities back home, maybe then it will be heard-and heeded-by some individuals in Washington.

### Siuslaw South Jetty Project, Lane County, Oreg.

EXTENSION OF REMARKS

### HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following letter from Robert A. Finlayson, city manager of Eugene, Oreg., of June 11, 1959, and a resolution passed by the City Council of Eugene urging that work be completed on the Siuslaw Harbor at Florence Oreg.:

EUGENE, OREG., June 11, 1959.

Hon. CHARLES O. PORTER, House of Representatives,

Washington D.C. DEAR CONGRESSMAN PORTER: The Common Council of the city of Eugene at their meeting on June 8, 1959, unanimously adopted the enclosed resolution concerning the south jetty on the Siuslaw River and requested that we forward copy to our Lane County representative and to each of our Senators in the Congress.

Very truly yours, ROBERT A. FINLAYSON, City Manager.

The Honorable WAYNE L. MORSE, Senior Senator, Oregon, The Honorable RICHARD L. NEUBERGER, Junior Senator, Oregon, The Honorable Charles O. PORTER, Representative, Oregon, U.S. Congress, Washington, D.C.

Whereas the Siuslaw River is the only river offering a natural harbor in Lane County, State of Oregon; and

Whereas within the last few years the north jetty has been replaced and rebuilt and has provided a great improvement for the entrance of the Siuslaw River and the port of Florence, Oreg.; and

Whereas it is imperative that the investment already made by public funds on the north jetty be protected and implemented, and said harbor improvement work be completed by the early completion of the rebuilding of the south jetty; and

Whereas the city of Eugene is anxious and desirous that the port of Florence, Oreg., be fully developed and utilized, and that said port may be a port of entry for oceangoing cargoes to flow into the Willamette Valley and southern Oregon, through said port of Florence: and

Whereas the Common Council of the City of Eugene, Oreg., desires to assist its neighbor city, the city of Florence, and the port of Florence in obtaining the early completion of said port facilities: Now, therefore, be it

Resolved by the Common Council of the City of Eugene, Oreg., in regular session held

on June 8, 1959, as follows:

1. That the Common Council of the City of Eugene, Oreg., representing said city are cognizant of the need for the appropriation of Federal funds and the early completion of the south jetty improvements to the Siuslaw River.

2. That the Senators to the U.S. Senate from Oregon and the Representative to the U.S. Congress from the Fourth Congressional District be immediately advised of this passage of this resolution and urged to propose and support the necessary legislation to provide funds for and completion of the program for the early building of the south jetty of the Siuslaw River in Lane County, Oreg.

This resolution adopted this 8th day of

T. W. KIESS. Assistant Recorder.

### My Contribution to America's Future

EXTENSION OF REMARKS

OF

### HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. THORNBERRY. Mr. Speaker, recently the Brenham, Tex., chapter of the Daughters of the American Revolution sponsored their annual essay contest among the students of the Brenham High School

Miss Mary Brisbin, daughter of Mr. and Mrs. Morris Brisbin of Brenham. won first place with her essay entitled 'My Contribution to America's Future."

This young lady, who hopes to become a member of our Women's Army Corps, rests her contribution to America's future on three cornerstones: a trained mind. a healthy body, and a nourished soul.

I think that this essay is excellent and that these cornerstones would make a perfect foundation for every citizen to build on; therefore, under unanimous consent, I include it in the Congres-SIONAL RECORD. The essay is as follows:

MY CONTRIBUTION TO AMERICA'S FUTURE

#### (By Mary Louise Brisbin)

What shall be my contribution to America's future? I think that it will be the improvement of my mind, body, and soul. This statement is true because if I improve myself, I will, in turn, contribute to the protection and uplifting of my Nation.

I think that everyone should have a desire to become better educated and better informed. This increase in learning will also be very necessary to the future of America. Thomas Jefferson must have thought so, too, because he wrote these words to James Madison, "Educate and inform the whole mass of the people. Enable them to see that it is to their interest to preserve peace and order, and they will preserve them." Today all I need is the desire to better myself because it is very easy to be better informed and better educated. With the development of television and radio have come the news programs that tell me what is going on in every part of the world today. There are also educational programs available, My contribution will be to become a better informed and better educated citizen.

I must feel well to do a good job in whatever way I serve my country, and to feel well my body must be in good condition. To feel well, I have to keep my body clean and free of social diseases; in short, I must live a good life. I must be ready to serve my Nation in time of hemispheric peril; I must not grow weak through soft living in peacetime. I quote these words of Richard E. Byrd to prove my belief that a strong body is just as necessary as a trained mind: "Health has much to do with this quality, the ability to face protracted danger. A man may cease to be sanguine after a bad illness. It is not necessarily a matter of courage at all—a man simply may be temperamentally

unfitted by ill health."

To nourish my soul, I will go to church and Sunday school; when I go, I will listen and try to understand and apply the words of God to my own life. In attempting to apply these words in everything I do, I shall become a much better human being and a more useful American citizen. Thus, I shall free my mind from fear and doubt through faith as well as preserve my good health through the teachings of the Old and New Testaments.

Let my contribution to America's future rest on these three cornerstones: a trained mind, a healthy body, and a nourished soul.

# Aid to Tito: Proof That We Have No Foreign Policy

EXTENSION OF REMARKS

# HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the RECORD my remarks on the subject of "Aid to Tito: Proof That We Have No Foreign Policy":

In our foreign aid program there are admittedly cases where it is not easy to determine whether or not it is in our best interest to give aid, and if aid is to be given, to what extent and under what conditions. But there are cases where it is absolutely beyond any doubt that the aid given is not benefiting the United States, but is being used against us. At the top of this list is the case of aid to the Yugoslav Communist dictator, Tito.

The plain and incontrovertible facts

of the Tito case are these:

First. That he never was, nor did he ever pretend to be anything else but a Communist, dedicated to the victory of Communist imperialism in the world.

Second. That, according to his own admission, his foreign policy has never changed, but remains the same before and after his break with Stalin—June 28, 1948.

Third. That before that so-called break, during the break and after the reconciliation with Moscow—June 1955—Communist Yugoslavia constantly and unchangeably voted in all questions of any substance with the Russian Communist bloc, against the United States.

Fourth. That the internal regime of Communist Yugoslavia has remained the same, and was not in the least affected in any democratic sense by the huge aid which Tito has received from the United States.

Fifth. That only recently Yugoslavia nationalized—i. e., confiscated—all real estate in Yugoslavia with the explanation that Communist Yugoslavia's road was clear and it clearly led to commu-

nism. Therefore, private property had to disappear.

Sixth. That Tito repeatedly declared that he was using all the aid from the capitalistic West to build socialism—communism—in Yugoslavia.

Seventh. That Tito time and again declared that there was not and could never be any democracy or freedom for the enemies of communism in Yugoslavia.

Beyond all this, Tito has played and is playing an exceptionally important part in the Communist conquest of Asia. In November 1957 Vice President Nixon called public attention to the decisive role which Asia will play in the final outcome of the contest between human freedom and communism in the world. He then said that if the Communists succeed in winning control over Asia and the Middle East, they will win. Unfortunately, we are not far from that critical point and the man who played the key role in the conquest of the minds of the Asian people for communism is Tito.

How is it possible, in view of this record, that there are still people to tell us that it is in the interests of the United States to help the ruthless tyrant of Yugoslavia and that such is still the foreign policy of the greatest democracy in the world? Let us briefly examine the arguments of the adherents of our aid-to-Tito policy. They can, briefly, be summarized as follows:

First. That Tito is a Communist, but different and independent from Mos-

cow.

Second. That Tito is, moreover, waging political warfare against the Russian Communists and Red Chinese.

Third. That he will, in case of war, be neutral or may fight on our side and, finally,

Fourth. That the people in Yugoslavia have accepted the regime and have reconciled themselves to living under communism.

In reality, all these assertions of Tito's propaganda, skillfully served to gullible Westerners by Communist agents in the free world, have no basis

whatsoever in facts.

The fairy tale of Tito's independence was concocted by Yugoslav Communist propaganda and further spread by those who wish to help Tito, not to help the United States. From the first oppor-tunity—Danube Conference in August 1948-after the Stalin-Tito rift until the present, Communist Yugoslavia has adopted the same attitude as the U.S.S.R. on all issues with which world communism is vitally concerned. What kind of independence is it that implies no important differences, but complete identity and conformity with the Russian plan for world conquest? At the VII Congress of the Communist Party of Yugoslavia-April 1958-the Yugoslav Vice Premier, Edward Kardelj, summed up his explanations about Yugoslav foreign policy by saying that "it can be understood only if one bears in mind that Yugoslavia is a Communist country and that its fate depends on the fate of communism in the world."

As for the dissention and feuds between Tito and Moscow and Peiping, they are not completely faked, which means that they are not just staged for the sake of fooling the West. They differ on nonessentials but they all agree on the plan for communism to dominate the world. But, on the other hand, the importance and consequences of those battles of words are no mystery, since Tito and others have often spoken about them and precisely defined their nature. The most outspoken was Edward Kardelj, the chief theoretician of the Yugoslav Communist regime, who said, May 5, 1959, that the differences between Yugoslav Communists and other Communists were "only the expression of the contradictions which are proper to the whole socialist development, that is which do not represent any national specific trait of Yugoslavia." He also laid full emphasis on the fact that the differences were not due to any nationalism on the part of any Communist, nor on any difference of dogma. Finally, he stressed that the Yugoslav Communists were "consistent not only in the building of socialism-Communist-but in the defense of the principle of Socialist-Communist-solidity.'

In the light of these facts and Tito's solemn statement in Stalingrad-June 1956—that Yugoslavia would march shoulder to shoulder with the Soviet Union in peace and in war, there is no need to refute the willful and vile contention of Yugoslavia's neutrality in case of a war. The full cooperation between the Yugoslav submarine base in Boka Kotorska and the Russian submarine base in Sasseno-Albania-as well as the Russian-Yugoslav identity of opinions on the creation of the Khrushchevsponsored zone of peace in the Balkans and the Mediterranean must be explained out of existence before any responsible Western statesman would dare to hope that Yugoslavia would stand in our camp in case of war. Incidentally, there are recent reports that the Russians are building in Kocevje, in northwestern Yugoslavia, a long-range missile launching site. It would certainly pay to investigate this news before giving a single dollar to the Communist oppressor of 18 million human beings in Yugoslavia.

Finally, the claim of the pro-Tito clique among our American opinion makers, that Tito's communism is different and more democratic and thus made acceptable to the people of Yugoslavia, is shattered by the findings of the Zellerbach Commission on Refugees, which issued recently a comprehensive and carefully documented report on the problem of refugees in Europe. In this report the Zellerbach Commission stated that Yugoslavia is the main refugee producing country in Europe. In the last 2 years nearly 40,000 people have escaped from the democracy of Communist Tito.

In view of all these fundamental and irrefutable facts, the policy of aid to Tito is absolutely indefensible. There is not one reason for continuing that policy and there is every reason for immediate

ately putting an end to it. Our present policy of aid to Communist Tito is a policy of national suicide. Khrushchev warned us a year ago in a public statement that the Communists would bury us. By helping Communist Yugoslavia we are hastening the process of our own destruction, helping the spread of communism in the world and thus digging the graves for ourselves, for our children, and for our children's children.

### Cleaning Up the Rivers

EXTENSION OF REMARKS OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. DINGELL. Mr. Speaker, I am very happy to see an editorial in the Washington, D.C., Post and Times Herald of today's date, enthusiastically supporting H.R. 3610 introduced by our able and distinguished colleague, the Honorable John A. BLATNIK, which would double the amount of Federal grants to States and municipalities for pollution abatement works and facilities.

This editorial should be read by all Members of Congress, especially by those who in the past have opposed H.R. 3610 or other similar measures, and the all important appropriations to carry out such legislation.

Early passage of this bill, by the other body, after its passage unimpaired in the House of Representatives last week, would help assure pure and healthful water to our people, and usable water to our growing industry and agriculture. The editorial is as follows:

## CLEANING UP THE RIVERS

House passage of the Blatnik bill to double the amount of Federal help on pollution control is a hopeful sign of increased awareness in Congress of what has been happening to the Nation's rivers. Prediction after pre-diction has held that the country faces a water shortage over the next generationnot an absolute shortage, but a shortage because industrial and household wastes are contaminating water sources. The problem is remediable, but only with considerably greater effort than is now being exerted.

Since passage of the original Blatnik bill in 1956, there has been encouraging progress in the construction of municipal sewage treatment plants, especially in smaller communities. Four States, of which Maryland is one, have enacted assistance programs to accompany Federal grants in aid. The current bill would increase from \$50 million to \$100 million the annual Federal grant authorization over a 10-year period, With local communities supplying 70 percent of the funds and the Federal Government 30 percent.

The Republican minority, reflecting the view of the administration, contended that the States ought to match the Federal grants and advocated a formula of 50 percent local, 25 percent State, and 25 percent Federal funds. Certainly pollution control is partly a State responsibility. But the plain fact is that with a few conspicuous exceptions the States have not been in a position to give much help. The struggle for State revenues is, if anything, more intensive than the struggle for Federal revenues. Many States as well as communities recognize the problem, but the attack is very slow. It is significant that Republican Governor Rockefeller, of New York, endorsed the Federal stimulus.

Speed is part of the objective. It won't be much consolation if the States finally get around to acting 50 years hence, after streams are more heavily polluted and the cost of providing potable water goes up enormously. We hope that the Senate will act promptly on the Humphrey-McCarthy bill which is the counterpart of the Blatnik measure, and that the administration will acquiesce. This is a good example of the sort of sensible investment in the national welfare for which more public spending is thoroughly warranted.

#### The Reverend Edward Engram Tate

EXTENSION OF REMARKS

### HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include a citation read by the Right Reverend Frederick Deane Goodwin, D.D., LL.D., president of the board of trustees of the Protestant Episcopal Theological Seminary in Virginia, on the occasion of the conferring of the degree of doctor of divinity upon my good friend, the Reverend Edward Engram Tate, now rector of the Church of the Incarnation in Dallas, Tex., and formerly rector of Emanuel Church in Alexandria, Va., and founder and headmaster of St. Stephens Episcopal School for Boys in Alexandria. This degree was conferred on May 28, 1959, at the seminary chapel in Alexandria.

I have known Ed, as he is affectionately known to hundreds of his friends, for about 15 years, even before his marriage to that wonderful Alabama princess. Elizabeth "Bettye" Byrd, in 1947, and I know of his early struggle in establishing St. Stephens School and his leadership under the many difficulties of its formative period.

Not least among his distinctions is that he is the son-in-law of Mr. Roy Edward (Pauline Vann) Byrd, well known to so many of our Members for her efficient service down through the years in the Veterans' Administration Congressional Liaison Office.

The citation follows:

THE REVEREND EDWARD ENGRAM TATE

The founder and for 10 years the headmaster of St. Stephen's School in Alexandria, you return to your seminary today to receive a recognition you richly deserve.

Since your ordination your ministry has been marked by vision, determination, and evangelical zeal. Your combination of attributes Our Lord has been able to use well in the extension of His kingdom on earth.

Following your graduation from this seminary in the distinguished class of 1936 and after a brief tour of duty in Pennsylvania, you returned to Virginia and served effectively as rector of the growing parish of

Emmanuel in Alexandria. Your interest and skill in Christian education, your concern for the youth of the land, led you to establish a church school for boys in this community.

Harassed and frustrated by all the prob-lems of a new school, by unbalanced budgets and overdue debts, by spoiled boys and parents who had done the spoiling, by high hopes dashed and unexpected pitfalls met, often despairing the whole venture-your dogged determination, your conviction of the validity of your vision and your ever-sus-taining love of your Lord and His children won the day and the months and the years. St. Stephen's School in Alexandria with its present enrollment of nearly 400 boys in its 15th year of existence is a spiritual monument to your ministry. A new and com-modious building, Tate Hall, has been appropriately named after the founder.

We welcome you today as rector of one of the great parishes of our church in the Southwest, the Church of the Incarnation in

Dallas, Tex.

This seminary, which you now serve as a trustee, is proud of your ministry as pastor, preacher and priest, as educator, administrator, and man of vision. It admits you to the degree of doctor in divinity in appreciation of the services you have rendered and will continue to render in the service of Our Lord and His children.

### Father's Day-Wembley Ties

EXTENSION OF REMARKS OF

### HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES -Wednesday, June 17, 1959

Mr. HÉBERT. Mr. Speaker for the fifth consecutive year a Wembley tie was delivered today to the office of each Member of the Congress, House and Senate, with the compliments of my friends and constituents, Samuel and Emanuel Pulitzer, as a gift for Father's Day which is Sunday.

In addition to the Members of the Congress there were a goodly number distributed on a selected basis among the press, radio, and television correspondents. For obvious reasons this distribution had to be on a limited basis and confined to those with whom I come in contact for the better part of the session. I only wish it could be a hundred percent distribution but it simply could

In addition Wembley ties were distributed to the many offices and staffs attached to the Congress such as the Clerk of the House, the Doorkeeper, including all the pages and doorkeepers, reporters, document room, folding room, and so forth.

In all, there were 1,500 ties distributed with the compliments of the Pulitzer brothers. Their generosity and thoughtfulness is indeed to be appreciated and I have already thanked them in the name of the recipients. The origination of the idea of distributing these Wembley ties on Father's Day was received with such acclaim when first started that the Pulitzers decided to make it an annual affair. Old Members have become accustomed to the practice and I hope the new Members will like it.

The Wembley plant in New Orleans is the world's largest manufacturer of neckties.

I hope each individual who received one will like it.

I assure everybody that they are privileged to swap about if they do not like the one which they received. The ties were distributed on a "blind" basis and I hope the "draw" matched more personalities and eyes than missed them.

And just to keep the record straight I am here reproducing a copy of the letter which was sent with each tie:

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

Washington, D.C.

DEAR FRIEND: Sunday is Father's Day—as if you didn't already know it.

And here again is your Father's Day tie with the compilments of my two dear friends, Sam and Manny Pulitzer, owners of Wembley, the world's largest manufacturers of neckwear.

Since last Father's Day we have run the gamut from vicuna to nepotism, and now we are in the throes of finding out whether or not retired military officers ever die or just fade away on the payroll of some defense contractor. Washington wouldn't be Washington without such goings on and Capitol Hill wouldn't be Capitol Hill if the Members of Congress, and those who help them make the news, wouldn't be remembered on Father's Day by the Pulitzer brothers with a Wembley tie. This gesture is the only competition death and taxes have for sureness.

Take my word for it that acceptance of this Father's Day tie is not intended to influence you one damned bit, and there are no mental reservations in this statement. Wembley is not a defense plant, nor a public works project. The Pulitzer brothers are not farmers. The plant is not located in a distressed area. As a matter of fact, New Orleans is one of the most progressive areas in the Nation—"The city care forgot and industry remembered." There is no taxpayer's money involved except when the thinking taxpayer buys a Wembley tie.

So, with a clear conscience, in the name of the Pulitzers, I again wish you a happy Father's Day with a Wembley tie,

Sincerely.

F. EDWARD HEBERT

The A. C. Gilbert Co. Marks 50th Anniversary

EXTENSION OF REMARKS

### HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. KOWALSKI. Mr. Speaker, tomorrow the city of New Haven, Conn., will observe A. C. Gilbert Day, honoring the 50th anniversary of the founding of the A. C. Gilbert Co., a firm which has contributed greatly to our country in times of peace and war.

It was on June 18, 1909, that A. C. Gilbert, a graduate of the Yale University School of Medicine and the holder of the Olympic pole-vaulting championship, opened the doors of a small manufacturing plant.

In the years since then, this business has developed into one of the largest toy

manufacturing firms in the world. The names of such Gilbert products as Erector sets and American Flyer trains have become household words. Mr. Gilbert believed that every child was a potential builder, inventor, engineer, or scientist. Their natural curiosity to learn the answers to how and why phenomena occur could be channeled into the useful, dedicated occupations of adults, provided that in the process a child derived hours of fun.

That his reasoning was and still is correct is indicated by the thousands of youngsters who have been directed to vocations as engineers, chemists, laboratory workers, and technicians, and other professions, by radio kits, chemistry sets, microscopes, atomic-energy sets, and other educational playtools which found their way into the toy industry.

All this has paid off for America. Scientific toys have helped win a war; have held a part in the fight for the development of new techniques in medicine; in the development of industrial products and in the promotion of business ventures, all because some boy, now a scientist, businessman, or engineer, remembered his boyhood playtools and went back to them for aid in perfecting prototypes for such things as the Bailey bridge of World War II fame, heartlung machines, machines for making artificial heart parts, the Gantry crane, the pigeonhole garage, to name a few.

It is a pleasure to salute this great Connecticut firm on its 50th anniversary and to pay tribute to it for its pioneer work in interesting young people in working and achieving for themselves.

Minimum Wage-\$1.25

EXTENSION OF REMARKS

# HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions in support of the legislation for a minimum wage of \$1.25:

RESOLUTION CALLING UPON THE 86TH CON-GRESS TO ENACT H.R. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular

danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James Roosevell and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it Resolved by Local Union No. 610, Interna-

Resolved by Local Union No. 610, International Brotherhood of Electrical Workers, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James Roosevelt and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore, be it

Resolved by Plasterers' Union Local No. 8 of Philadelphia, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

Mr. Speaker, this type of legislation is long overdue and certainly \$1.25 is not an unreasonable figure. My bill, H.R. 5842, is among several on this subject and I truly hope we shall have an opportunity, during this session of Congress, to recognize the great number of underpaid wage earners.

New Pan-Am Labor Pact Is Hailed

EXTENSION OF REMARKS

# HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. LANKFORD. Mr. Speaker, to a large extent U.S. commercial airlines are dependent upon various Government agencies for considerable of their revenue. This is only proper because the airlines render an invaluable service to the U.S. Government both at home and abroad.

There is no need for the Post Office Department to fly its own airplanes when air mail services are so readily and so cheaply available from commercial carriers. Likewise the State Department can shuttle its Foreign Service personnel all over the world through excellent services available to it from TWA, Northwest and Pan American.

We on the Armed Services Committee recognize the need of keeping a trained military transport fleet on a ready alert. We are happy that the Military Air Transport Service has developed as well as it has and is as capable as it is; however, we do worry sometimes that perhaps MATS is expanding and growing out of proportion, to the detriment of U.S. civil commercial airlines.

One of the principal objections on the part of MATS to dealing more extensively with commercial carriers has been the argument that labor trouble being experienced by a carrier could greatly jeopardize fulfillment of a military

contract.

Mr. Speaker, I am happy to report that Pan American World Airways has put that objection to permanent rest. Just the other day Mr. Juan T. Trippe. the farseeing progressive president of Pan American, announced to his annual meeting that Pan American has completed a history-making agreement with three of its most important unions, the airline pilots, flight engineers, and airline dispatchers. As the result of this agreement the unions involved have pledged that there will be no strikes against a project which has been certified by a Pan American officer as being exclusively for national defense.

Mr. Speaker, I desire to congratulate Pan American, its president, Mr. Trippe, and the three unions for a display of patriotism and good commonsense and under unanimous consent I include in the RECORD an article written by Mr. Fred W. Perkins, distinguished labor reporter for the Scripps-Howard newspapers, which appeared in the Washington Daily News of May 28, plus an editorial entitled "Sensible and Patriotic Unionism," which appeared in the same newspaper on June 8:

[From the Washington Daily News, May 28, 19591

NEW PAN-AM PACT IS HAILED (By Fred W. Perkins)

Government officials here see in labor contracts just signed by Pan American World Alrways a formula that might be followed in other industries.

The Pan-Am agreements, with three airline operating unions (airline pilots, flight engineers, and airline dispatchers), include these major provisions:

Even though any of the three groups should shut down commercial airline service because of a strike, they will continue at their respective jobs to insure the airlift of cargo and personnel essential to national defense.

A Pan-Am official will certify in writing that the flight concerned will be exclusively for these (defense) purposes.

Juan T. Trippe, Pan-Am president, called the agreements an important breakthrough

in labor relations and the first of their kind rial from the Washington Daily News of in the transportation industries.

HOPE

Leverett Edwards, Chairman of the National Mediation Board—the agency that endeavors to keep labor peace on the airlines under the Railway Labor Act—said he hoped that other labor organizations and airlines will work out similar agreements, of course voluntarily.

Officials saw possibilities in other indus-The Steelworkers Union, it was believed, would not object to a guarantee that no stoppage of steel production would be allowed to interfere with strictly national defense purposes.

WORK TOGETHER

The new contracts, according to Mr. Trippe, "illustrate the ability of free men in a democratic nation to work voluntarily together, while still retaining the privileges and freedom of the individual."

National Mediation Board Chairman Edwards said the Pan-Am agreements were particularly important because of that line's international operations, in relation to the same kind of operations by the U.S. Department of Defense.

A union official said, "there has never been any doubt that American labor will respond to needs of national defense, but there is no harm to placing it in writing."

[From the Washington Daily News, June 8, 1959]

SENSIBLE AND PATRIOTIC UNIONISM

Agreements just made by three aviation unions with an airline show how sane labor leadership can contribute to the safety and strength of the country.

The Air Line Pilots Association, the Flight Engineers International, and the Air Lines Dispatchers Association have contracted with Pan American World Airways that cargo and personnel vital to national defense will be moved, under Government control, despite any future labor dispute in which the three unions might become involved.

We have been told by Pan American that these agreements are the first of their kind in the history of transportation. We hope they are not the last.

It seems to us that here is an example that other unions whose members handle material or personnel essential to defense could well follow. Such commitments would go far to offset the bad propaganda that the activities of unioneers like Jimmy Hoffa and his like have evoked to blacken all organized labor.

But such commitments would do more than that: they would be a significant warning to Moscow not to rely on the false Communist notion that a free society is soft because its members are too selfish to discipline themselves. Instead, it would be a clear and unmistakable demonstration that while as free men we may differ, we have by no means forgotten that "united we stand, divided we fall."

Paying the Piper

EXTENSION OF REMARKS OF

# HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edito-

June 9, 1959:

PAYING THE PIPER

If the Government spends more money than it raises in taxes, there are only two ways to make up the difference; borrow the money or print it.

If it is to be borrowed, the Government must compete for money in the free market.

Hence the President's message to Congress yesterday, along with the Treasury's request for permission to pay higher interest rates. The new laws would not raise interest rates arbitrarily, as is sometimes charged. would merely permit the Treasury to pay the market price for money, just as the house-wife has to pay the market price for potatoes—if she wants any potatoes.

The Treasury wants to remove the present

limitation of 41/4 percent interest on longterm Treasury bonds. There is no such limitation on short-term Treasury paper. changes would encourage purchase of securities extending over longer periods of years and lessen the expensive turnover of the

Of far greater popular interest is the proposal to raise the interest on series E and H savings bonds, from the present 3¼ percent to 3¼ percent. For the H bonds this would mean somewhat larger periodical in-terest payments. For the E bonds, popular under payroll deduction systems, the purchase price would remain the same-\$75 for bond worth \$100 at maturity. But the bonds would mature earlier. At present they must be held 8 years and 11 months to get the full price. Under the new system this would be reduced to 7 years and 9 months.

There can be small question, in these infiationary days, of the justice in paying higher interest to the small-scale buyers of Government bonds. There's the further, practical consideration that nearly \$43 billion of the Government debt now is in form of these E- and H-bonds, held by 40 million people. Currently, 8 million are buying them on payroll savings plans.

There has been an increasing tendency to cash them in. In the first 5 months of last year their sum increased by \$13 million. In the same period this year the sum has been decreased \$309 million. The increased interest rate should tend to encourage savings

and reverse this trend. The alternative, under present conditions, to increasing the interest rate, is a complicated process which amounts to printingpress money. Such a further process could only serve to dilute the money supply, firing up inflation and raising prices for everyone. Increased costs for the Government, currently spending \$80 billion a year, easily could be many times the cost of the higher interest rates on borrowed money.

Along with the interest rate requests went an application for authority to increase the permanent debt limit, from the present \$283 billion to \$288 billion and the temporary limit from \$288 billion to \$295 billion.

This is money already spent and Congress. having authorized the spending, hardly can quibble over the tab.

The only way to reduce the debt limitation is to reduce the debt. This process, by cutting down the total demand for credit, also likely would reduce interest rates.

Congress will grant all these changes, if at all, with great reluctance and after considerable oratory from the funny-money contingent which believe you can create reliable currency by waving a wand over a piece of paper.

These are bills which must be paid, one way or another. Request for this legislation emphasizes to Congress and the country the urgent necessity for a balanced budget, plus a firm plan for regular payments on our huge debt.

### Higher Postal Rates

EXTENSION OF REMARKS

# HON, F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. HÉBERT. Mr. Speaker, sometime ago I had some remarks to make about the proposed raise in postal rates.

My remarks drew a letter from the assistant postmaster general which, in turn, caused me to reply to him.

I think the exchange of correspondence speaks for itself:

POST OFFICE DEPARTMENT, BUREAU OF FINANCE, Washington, D.C., June 1, 1959.

Hon. F. EDWARD HEBERT, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN HÉBERT: Your statement on postal rates and public service costs, reported in the Congressional Record of May 14, 1959, has been called to my attention.

You expressed in your statement the view that the postal rate adjustments recently proposed by the Postmaster General are in conflict with the public service reimbursement provisions of Public Law 85-426. I am taking the liberty of calling to your attention that this part of your statement is apparently based upon a misconception which I am sure you would wish to have invited to your attention.

The rate proposals of the Postmaster General will produce additional revenues in the amount of about \$350 million. This compares with a minimum anticipated deficit of more than \$522 million in fiscal 1960. Thus it is apparent that even if the maximum amount of public service reimbursement estimated in the President's budget-\$172 million-is made in the appropriations act now under consideration there still will be sufficient loss to warrant the rate increases proposed by the Postmaster General.

The Senate Committee on Appropriations, in its recent report on the Post Office Department's appropriation bill for fiscal 1960, estimated the total public service costs at \$37.4 million. Should this view be endorsed by both Houses, the need for postal rate increases over and above the amount of reimbursement for public service costs would be even greater.

For many years prior to World War II firstclass revenues were maintained at an average annual level of 40 percent above allocated costs. At present such mail is only 12 per-cent above cost. The proposed rate adjust-ments submitted by the Postmaster General would raise the cost coverage of first-class mail, the Department's prime service, to the level previously maintained by the Congress.

I trust the information provided above will place this problem in better perspective and any possible misunderstanding eliminate which may have arisen in regard to the need for postal rate increases apart from the question of reimbursement for public service costs.

Sincerely yours,
Hype Gillette, Assistant Postmaster General.

JUNE 11, 1959.

Hon. HYDE GILLETTE, Assistant Postmaster General, Post Office Department, Bureau of Finance, Washington, D.C.

DEAR MR. GILLETTE: This will acknowledge receipt of your letter of June 1, in reply to my recent statement (105 CONGRESSIONAL REC-

ORD A4073, May 14, 1959), respecting the request of the Postmaster General that the House consider a bill to increase postal rates on first-class mail.

The proposed bill has not been introduced in the House, but has been introduced in the Senate as S. 1923.

Your letter confirms my understanding, that the bill to increase first-class postal rates is designed to tax one class of mail-users, to "produce additional revenues in the amount of about \$350 million," in order to reduce "a minimum anticipated deficit of more than \$522 million in fiscal 1960."

You further state that the "proposed rate adjustments submitted by the Postmaster General (now incorporated in S. 1923) would raise the cost coverage of first-class mail, the Department's prime service" to "40 percent above allocated costs."

As I understand your letter, it is the position of the Post Office Department that the revenues obtained from first-class mail, in excess of the cost of handling that class, should be applied to the cost of handling other classes of mail at reduced rates, and to offset losses incurred in performing "public serv-

In other words, the users of first-class mail would be required to help pay for the cost of handling other classes of mail, which are presently being handled at a loss, despite the fact that it is the declared policy of the Congress that each nonprivileged class should

pay its own way. You maintain that the anticipated deficit of the Department, which the users of firstclass mail are bing called on to underwrite, is far in excess of the cost of financing the Department's "public services," estimated by the Senate Committee on Appropriations in its recent report on H.R. 5805, at \$37.4 mil-

H.R. 5805, a bill to appropriate almost \$4 billion for Post Office Department operations in the fiscal year beginning July 1, 1959, did not, originally, provide for the financing of the cost of the Department's "public services" out of the general fund of the Treasury, because, according to the House Appropriations Committee, "the concept of payment for public services under the Postal Policy Act of 1958 is a device which invites flagrant abuse in the form of hidden subsidies.

Although the Senate Appropriations Committee gave some effect to the Postal Policy Act, by amending the House version to appropriate funds to finance the subsidized services of the Department, I am impelled to point out that the Senate approved its Appropriations Committee's estimate of the total cost of the Department's public services, over the strong protest of its Post Office Committee.

Senator Johnston of South Carolina, the chairman of the Post Office Committee, favors a further study of the cost of the public services to give a realistic appraisal of such costs.

He has pointed out that a base congressional action on such an unrealistically small public service cost figure as \$37.4 million, would nullify the Postal Policy Act of 1958, which calls for all mail users to pay the cost of service they receive, after public service costs of the Department have been itemized and removed from postal costs for rate-mak-

Senator Carlson, of Kansas, ranking minority member of the Senate Post Office Committee, agrees that "the \$37.4 million figure is but a fraction of the cost of public service performed by the postal establishment."

It is quite obvious that some definitive, sound method for computing the cost of the Department's "public services," as well as the realistic cost of handling the various nonprivileged classes of mail, must be adopted, if we are to give full effect to the Postal Policy Act of 1958.

The present method of taxing one class of mail users, without relation to the cost of services rendered-of which the proposed bill to increase first-class mail rates, and the present tax on the advertising content of second-class publications are two prime examples-clearly conflicts with the Postal Policy Act of 1958.

The introduction of S. 1923 to increase first-class postal rates, couples with the unrealistic appraisal of the cost of public services performed by the Post Office Department, in the bill to appropriate funds for postal operations, will have no less effect than to scuttle the Postal Policy Act of 1958, despite the fact that this statute has not been repudiated expressly.

Sincerely yours,

F. EDWARD HÉBERT.

### Fifty Years of Public Service

EXTENSION OF REMARKS

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. MUNDT. Mr. President, 50 years ago this week, the Northern States Power Co. was founded in Stillwater. Minn. Today this company is marking its anniversary most appropriately by developing final plans for an atomic powerplant to be located near Sioux Falls, in my home State of South Dakota.

The growth and progress of Northern States Power Co. is another illustration of the great American story in which men, through their own perseverance, initiative, and energy, are able to achieve the objectives and goals to which they aspire.

Northern States Power today serves a four-State area, including South Dakota. It continues to make significant contributions which yield returns of benefit to all citizens.

In recognition of this notable anniversary, the June issue of the "NSP News", a publication of the company, devotes considerable space to a history of the firm, and I am happy to call one of the articles to the attention of the Senate.

Mr. President, I ask unanimous con-sent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### FIFTY YEARS OF PUBLIC SERVICE

Fifty years ago June 16 an electric company was incorporated under Minnesota laws in the historic St. Croix River town of Stillwater. The community itself was experiencing a slowdown in business activity; the great logging boom had almost ended. Stillwater residents, if they paid any attention at all to the newly incorporated firm, probably thought it just another one of the numerous "light companies" that dotted the While it was here today, it might be area. gone tomorrow. The outlook for the new company would hardly appear to have been

This year we are celebrating the 50th anniversary of the founding June 16, 1909. of that corporate entity. Northern States Power Co. grew from that inauspicious beginning. It's a business success story, yes, but most importantly a story of 50 years of public service.

Emphasizing our company's code of providing the best in public service, from 1909 to 1959, will be several significant 50th anniversary year events during the coming months.

It's expected that ground will be broken this summer for Northern States Power Co.'s 66,000-kilowatt atomic powerplant near Sioux Falls, S. Dak. Completion of the plant is planned for 1962. The Pathfinder plant will be a significant addition to Northern States Power Co.'s long record of pioneering for the benefit of its customers.

In September an open house at our High Bridge plant in St. Paul will mark the completion of the 156,000-kilowatt unit No. 6. The new unit is the largest between Milwaukee, Wis., and the west coast and its addition is part of Northern States Power Co.'s longstanding policy of keeping its generating capability well ahead of the largest demand for power.

Also a part of the company's 50th anniversary activities is a message from President Allen S. King to employees now being prepared. The color film will be shown in all Northern States Power Co. divisions later this year.

And during the week in which we mark our actual 50th anniversary date of June 16, anniversary advertisements will appear in every area in the company's service area.

There is much for us to be proud of in our company's half century record of service. When Northern States Power Co. was founded in 1909, the art of generating and distributing electricity was, in many respects, still in its infancy. Generating plants were usually built and operated by one person or a group of businessmen, and often producing and selling electricity was a sideline for an enterprising man. A mechanic, for instance, might install a small generator in his place of business and extend a few lines to nearby homes or stores.

Dusk-to-midnight electric service, for lighting only was common in many small communities. Introduction of the electric iron brought daytime generation of power and also load problems. The usual arrangement was to have customers wash on Monday and iron on Tuesday.

In the larger cities two electric companies often sold power competitively, operating duplicate facilities at a larger cost both to them and their customers.

Then customers in smaller communities began to demand the same improved electric service that their big city brothers were beginning to get. It was learned that transmitting power from larger generating stations to smaller communities was much cheaper than producing electricity on a small scale within the community. The cry went up for high line power, as it was called, but the small town operators did not have the resources to provide it.

That was the situation when Henry M, Byllesby became interested in Minnesota electric companies. At the age of 23, he had worked as an assistant to Thomas Edison, making the layout drawings and electrical calculations for construction of the Pearl Street station. At 25 he became vice president and general manager of the Westinghouse Electric Co. A large, restless man with a booming voice and natural leadership qualities, he formed H. M. Byllesby & Co. in 1902. The company's aim was to purchase small, struggling utilities and build them into going concerns. In 1909 H. M. Byllesby & Co. became active in Minnesota.

The first step was incorporation of our company as the Washington County Light & Power Co. in Stillwater June 16, 1909. The name was changed to Consumers Power Co. later the same year and to Northern States Power Co. in 1916.

On July 28, 1909, the Washington County Light & Power Co. acquired the Stillwater Gas & Electric Co. and our company was in business.

After 1909 a great many independent electrical systems were acquired and became part of our system. Some 90 predecessor companies, plus approximately 70 other electrical systems (municipally and individually owned and operated systems) have become part of our company in its 50-year history.

The greatest acquisition activity was between 1909 and 1926, and since that time there have been relatively few additions to the Northern States Power Co. system Acquisitions were made so frequently in the early years, that in 1929 the corporate structure of our company involved some 24 different corporations. These have now been reduced to four by means of a corporate simplification program.

Northern States Power Co. some time ago severed its last ties with the H. M. Byllesby interests.

As soon as our company acquired new properties, steps were taken to improve and expand service. Plans were immediately made in almost every case to expand generating capacity, because the small independent plants had fallen so far behind the growing demands for power. We provided more power to meet these customer demands, increased capacities, and built interconnections between properties. At the same time we were able to lower electric rates because of more efficient generation and operations.

Northern States Power Co. built an integrated system and grew because it had the talent and resources to provide more power at less cost, plus the best in service. The company is what it is today because we could provide what customers needed and demanded.

The first property acquisition in Stillwater provides an example of the immediate steps toward improved service that the company took after almost every purchase. At the time of acquisition the Stillwater generating plant contained a 50-kilowatt alternating current generator belted to a steam machine, and two are lighting machines, one a 30-light and the other a 15-light machine. Our company immediately arranged for construction of a new steam plant containing a 750-kilowatt generator, and also moved the old machines to the new plant when it was completed.

In 1910, our company's major acquisitions included the Union Light, Heat & Power Co., which became the Fargo division; the Red River Power Co., which formed the Grand Fork division, and six small companies which become the Faribault and Mankato divisions. Another large purchase was made in 1911, when the Minot Light & Telephone Co. joined the Northern States Power Co. system as the Minot division.

The largest purchase to date came in 1912, when the company bought the Minneapolls General Electric Co. and subsidiary companies. This gave our company its first metropolitan property. Next to join the system was the Sioux Falls Light & Power Co. in 1914. It formed the nucleus of our Sioux Falls division.

In 1917 properties which became the company's Southwestern division were purchased.

A highly important addition to Northern States Power Co. was made in 1923 when the Wisconsin-Minnesota Light & Power Co. was brought into our system. It became Northern States Power Co. of Wisconsin, because under Wisconsin law, utilities operating in the State must be incorporated in Wisconsin.

Two other noteworthy acquisitions the same year were the St. Anthony Falls Water Power Co. and the Minneapolis Mill Co. at St. Anthony Falls in Minneapolis. They both traced their water power histories back to 1856.

Important also in the growth of our company was acquisition of eight companies affiliated with the St. Cloud Public Service Co. in 1924. These properties formed our St. Cloud division. The final major Northern States Power Co. purchase occurred in 1925 when the company acquired the St. Paul Gas Light Co. and two other companies. The St. Paul Gas Light Co. was a pioneer utility, dating back to 1857.

Largest of the Northern States Power Co. purchases since 1925 were 13 properties in the Waconia, Minn., area in 1956, and the Wisconsin Hydro Electric Co. in 1957. That company became the Amery division of Northern States Power Co. of Wisconsin.

There have been challenges during Northern States Power Co.'s 50 years and they have been met. In 1917 the Coon Rapids dam near Minneapolis developed a leak which became a blowout, necessitating a million-dollar repair job. A flywheel explosion nearly wrecked the Minot plant in 1918.

During a prolonged coal strike in 1922 Northern States Power Co. purchased coal from retail dealers to keep operating. Coal dust was scraped from the yards, but somehow we kept the kilowatt-hours coming.

A turbine exploded at the High Bridge plant in 1928 and almost wrecked the station. Nature has given Northern States Power Co. some bad moments, too. Two recent natural disasters were tornadoes in Fargo, N. Dak., in June, 1957, and in west central Wisconsin last June which drew heroic efforts

Wisconsin last June which drew heroic efforts from company personnel who patched up the damage. Northern States Power Co. also tightened

Northern States Power Co. also tightened its belt during the depression and stood the test of two wars.

There have been innumerable highlights, too, along with the challenges. Northern States Power Co. led the way for an industry-wide development when it introduced the common neutral system in 1916. Our company played a major role in pointing the way to rural electrification when it built the world's first experimental farm lines near Red Wing, Minn., and Renner, S. Dak., in 1023. Northern States Power Co. also provided national leadership in 1924 when it installed the first multiple street lighting facilities, using pilot wires, relays and substation controls.

Northern States Power Co.'s growth is well illustrated by some comparative figures. When the company first began operations in Stillwater in 1909, it had 29 miles of electric lines serving 771 customers and 11 miles of gas mains serving 484 customers. The company then had 19 employees. Total revenues in 1909 were \$71,316.

Today Northern States Power Co. is a \$539 million corporation owned by more than 73,000 shareholders. We serve nearly 845,000 customers and 578 communities in a 4-State service area roughly 400 miles from east to west and 200 miles from north to south. There were 6,720 full-time Northern States Power Co. employees at the end of last year. Gross revenues in 1958 totaled \$154,787,000.

Approximately 2,400,000 people live in Northern States Power Co.'s service area. The company provides utility service to about one-half of the people in Minnesota, about one-fifth of those in North Dakota, and to about one-tenth of the people in South Dakota and Wisconsin.

Our facilities include 18 steam electric generating plants, 38 hydroelectric plants, and 20 diesel plants. Northern States Power Co.'s generating capability totals nearly 1,519.000 kilowatts, more than 200,000 kilowatts over the highest demand to date on our system.

Northern States Power Co.'s 4-State facilities today also include nearly 23,000 miles of transmission and distribution lines serving some 677,000 electric customers and more than 1,750 miles of gas mains serving 155,000 gas customers. The company also owns the water system in Tracy, Minn., serving more than 900 customers; provides telephone service to more than 9,500 customers in Minot, N. Dak., and provides steam heating service to 1,045 customers in 6 communities. We serve a total of 38 communities with natural gas and manufactured gas.

There are six words which well describe Northern States Power Co.'s 50 years of operations: Acquisition, interconnection, integration, expansion, improvement, and service, with the emphasis today on the last two—improvement and service. Northern States Power Co. has been built on the cornerstone of improved service. That was our code in 1909 and still is today as we observe Northern States Power Co.'s 50th anniversary.

#### Right-To-Work Laws

EXTENSION OF REMARKS

### HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. METCALF. Mr. Speaker, twice in the past 5 years Montanans have rejected the union-busting so-called rightto-work law.

Those who would weaken unions and reduce the effectiveness of collective bargaining are regrouping, apparently

for another try next year.

.I have a copy of a letter dated January 7. from an outfit called the National Right To Work Committee. It is an appeal for donations of \$50 or more to help supply students "with factual documented informational material" to offset the "propaganda, distorting the issue," being circulated by opponents of this proposal.

The letterhead of the committee includes: E. S. Dillard, president, Old Dominion Box Co., Charlotte, N.C., past

chairman of the board.

In this connection, I call to the attention of my colleagues the following article concerning Mr. Dillard in the April 19, 1959, issue of the Charlotte, N.C., Observer:

CHARLOTTEAN IS FIGHTING BIG TAX
ASSESSMENT

(By Don Oberdorfer)

Washington.—Charlotte businessman E. S. Dillard is fighting a Federal Taxe bite of \$92.506 in back taxes, according to records filed in U.S. Tax Court here.

Dillard, president of Old Dominion Box Co., announced the sale of two of his three Charlotte divisions to Weyerhaeuser Timber Co.

last week.

Records filed by Dillard, plus Internal Revenue Service judgments attached, show the big tax dispute arose after Dillard's 1954 purchase of Brown Dynalube Co., Inc., of Charlotte. The company makes lubricating equipment and planned to expand into sales to the Armed Forces.

Dillard bought the outstanding common stock and accounts payable of the firm for \$1. He advanced \$1,824 to the company and acepted from the company \$85,000 in face value of debenture bonds due in 20 years.

The Government said these bonds were worth their face value and should have been

reported as income. Dillard says they weren't worth anything.

Later E. H. Newcombe, president of the lubricating firm, asked to buy some of the bonds of the company from Dillard.

Dillard agreed to donate \$10,000 face value of the bonds to Trinity Presbyterian Church, deducting the gift from his taxes as a \$10,000 contribution.

Newcombe bought the bonds from the church for their face value, \$10,000 in cash.

The same day Dillard donated another \$20,000 in bonds to Dillard Foundation, Inc., a tax-exempt charitable foundation which he incorporated. This was deducted from his taxes as a \$20,000 contribution.

About 10 months later, in the fall of 1955, Dillard donated \$10,000 more in bonds to Trinity Presbyterian Church, making the usual deduction. A total of \$4,500 worth of these bonds were bought for \$4,500 from the church by Minor Foundation, Inc.

This foundation was incorporated by W. T. Minor, Jr., of Charlotte, who is Dillard's tax lawyer. Minor prepared the papers which

were filed here on the tax case.

Dillard says the bonds were worth their full value when he contributed them, and deducted them as contributions, though they were worth nothing when he acquired them.

The Governor takes the opposite view. It says they were worthless when contributed (and so the tax credit for contribution has been voided) but it claims the bonds were worth full face value when acquired and should have been reported as ordinary income.

The Tax Court judges will have to decide who was right about the value of the bonds at each point in the transaction.

### Poison in Your Water-No. 123

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Portland (Oreg.) Oregonian of September 11, 1958, entitled "Columbia Flow Said Polluted": COLUMBIA FLOW SAID POLLUTED—CITY OF

PORTLAND, PLANTS ON RIVER DECLARED CULPRITS

(By Lawrence Barber)

The city of Portland and six industries along the Washington side of the Columbia River were charged Wednesday by a Federal authority as being the sources of 90 percent of the pollution found in the stream between Bonneville Dam and Cathlamet, Wash., 104 miles downstream.

The charge was made during the opening day's sessions of a joint fact-finding conference by Federal and State agencies.

The city failed to appear with a statement or rebuttal Wednesday but the pulp and paper mills at Camas and Longview came back with statements denying that the effluent from their plants was damaging to fish life or to public health.

#### HEALTH SERVICE CALLS CONFAB

Portland is still pouring raw sewage and unchlorinated effluent into the Willamette and Columbia Rivers, but will vote on a proposed \$5 million project at the coming election to eliminate raw sewage, Gordon Burt, manager of the city department of public utilities, explained. Another \$5 million will be required to rehabilitate existing sewers, Burt said.

The city's program will be explained at

Thursday's hearing.

This 2-day conference was called by the U.S. Public Health Service to determine the extent and sources of contamination in the river, and possible solutions to various problems arising. Murray Stein, chief of interstate enforcement of the water pollution control program, who sat as chairman, said the conferees will endeavor to reach conclusions and summaries Thursday after hearing from various interests that did not appear Wednesday.

Portland was charged with contributing 89.6 percent of the bacterial contamination dumped into the river in the stretch being investigated, according to a statement read by F. W. Kittrell, in charge of stream sanitation studies for the Robert A. Taft Sanitary Engineering Center, Cincinnati, Ohio.

St. Helens and Rainier, Oreg., and Cathlamet, Wash, which do not have sewage treatment plants, were charged with most of the remaining bacterial contamination. A section of Vancouver, Wash., also dumps its untreated sewage into the river, Kittrell stated.

### Oregon Centennial and International Trade Fair

EXTENSION OF REMARKS

### HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. ULLMAN. Mr. Speaker, Oregon will be host to the world in 1959. The Centennial Exposition and International Trade Fair opening in Portland on June 10 is "a window through which the world may view the industrial, recreational and excellent living opportunities the State offers."

The following letter from the Pendleton Chamber of Commerce touches on some of the activities planned by Oregon Indians to help us celebrate our 100th birthday and make your visit to Oregon more enjoyable:

Pendleton Chamber of Commerce, Pendleton, Oreg.

Representative At. Ull.Man, House of Representatives, Washington, D.C.

DEAR AL: You may have heard some of our proposed Indian program here in Pendleton, July 18 through 26, but did want to give you a brief breakdown on it so you would know what we are doing and you might also come up with some ideas or help from the Washington level.

The Pendleton Chamber of Commerce, the Umatilla and Nez Perce Tribes are going to put on a National Indian Encampment in Pendleton. This is a joint effort. The program is broken down into several parts. One is the encampment itself which will be a competitive affair between tribes as to authentic tepees, design, and so forth. Another part will be the daily show in the Roundup Arena. This will feature competitive games, dances and skills such as Indians used 100 years ago. We are trying for the true legendary Indian acts as will be specified by the Indians. A third part will be the Indian Museum put on in the armory. This will also be on a true competitive basis with

awards in painting, sculpture, beading and all of the many Indian acts. This will not be a junk type of a deal but a true exhibit of authentic Indian art and culture. Another part will be a pageant nightly in Happy Canyon Arena. We are using the play writ-ten by Bill Gulick on the signing of the Stevens Treaty. We are using the ratification of same which was in 1859 or 100 years ago as the pitch in the pageant. Last, but not least, will be an Indian centennial beauty

The centennial and State are behind us a this program. Governor Hatfield is inviting all of the tribes of the Nation to attend. So you see it is quite extensive in its scope. You will probably see several places where you could help out, such as knowing historical societies or similiar groups who might be interested in displaying, recording or photographing the event.

I will keep you posted on the developments but did want you to have the facts up to

this time.

Very truly yours,

FORD ROBERTSON

## Congressional Study of Highway Deaths, Injuries

EXTENSION OF REMARKS

#### HON, WILLIAM L. SPRINGER

OF HAINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. SPRINGER. Mr. Speaker, all of us on the Committee on Interstate and Foreign Commerce have been delighted with the irrepressible way in which our colleague from Alabama [Mr. ROBERTS], has been pushing his committee on Traffic Safety to come up with legislation which will be of assistance in lowering the accident rate in this country. His work has been attracting nationwide attention. I attach herewith an editorial from the Decatur, Ill., Sunday Herald and Review of June 14, commending him and also making some observations with reference to the entire matter of highway safety:

CONGRESSIONAL STUDY OF HIGHWAY DEATHS, INJURIES

A House subcommittee, headed by a Congressman who led the successful fight to have escape handles installed inside refrigerators, will hold hearings next month on ways to cut down the toll of death and injuries on the Nation's highways.

Two auto tragedies in central Illinois, in Which a total of 14 lives were lost, have done much to focus the attention of area residents on a public health problem that has long since reached epidemic proportions.

With some 70 million vehicles on the U.S. highways and a good many more drivers, it is not to be expected that Federal action can solve the problem in a day or even for

However, Representative Kenneth A. Rob-ERTS, Democrat of Alabama, chairman of the subcommittee, will begin with hearings on a bill to forbid the Federal Government to buy cars not equipped with safety features recommended by the Secretary of Commerce.

A more drastic proposal, but not being

considered at the forthcoming hearings, is to ban from interstate shipment altogether all cars not meeting the minimum safety stand-

Among the safety devices Congressman ROBERTS and many safety experts have in mind are attachments for safety belts, padded dashboards, recessed steering wheels, roof-top bars to support the car if it rolls over, safety locks on doors, seats and cushions that will not become displaced upon impact, and better packaging of the driver and passengers.

Many of these are standard or optional equipment on cars now, but for some reason, including the failure of a concerted drive by all auto manufacturers, safety features

have not been popular.

Although no responsible spokesman for the automotive industry dismisses the need for increased safety, the Jones subcommittee and the legislation under consideration may run into opposition of manufacturers who maintain that research on highway accidents and safety is not complete enough to permit the writing of minimum standards.

Highway fatalities have declined slightly in recent years (37,000 deaths in 1958) but the number and rate of injuries has risen steadily (an estimated 4,888,000 in 1957 or 582 personal injuries per hundred million miles traveled.) Doctors are becoming more adept at patching up victims and preventing their death from trauma, but the highways are not becoming more healthy.

The American Medical Association, Public Health Service, and American College of Surgeons are among organizations undertaking studies of highway casualties, using the methods of epidemiology. Their researchers will concentrate on learning more about the cause and prevention of accidents rather than just curing victims or relying upon present surveys, weighted on the legal aspects of accidents.

Basic to these surveys is the premise that a driver may cause an accident, but that it is the automobile that causes injuries.

The Jones subcommittee, as well as the medical surveys now underway, may not resutl in legislative action being taken this session or even next. However, the hearings and studies may pinpoint some of the everpresent dangers to the motoring publicanother way of saying the American people.

## ARPA, the Defense Department's Space Agency

EXTENSION OF REMARKS

## HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

, Friday, June 12, 1959

Mr. FULTON. Mr. Speaker, in the interest of acquiring my colleagues in the Congress, as well as the American people with our Government organization for space research and exploration I submit for the RECORD an excellent article on the Defense Department's Advanced Research Projects Agency which appeared in the May 1959 Space Digest:

ARPA, THE DEFENSE DEPARTMENT'S SPACE AGENCY

The primary effect of sputnik on the Defense Department's space age research and development has been organizational. Before sputnik, the military services—through such organizations as the Air Force's Air Research and Development Command, the Army's Ballistic Missile Agency, and the Navy's Office of Naval Research—did most of the "nuts-and-bolts" work "in-house" and contracted advanced research and development. They still do. But there has been interposed, for purposes of funding and coordination, a Defense Department space agency (which also is concerned with projects not strictly "space"), the Advanced Research Projects Agency (ARPA), as well as an overall Director of Research and Engineering. ARPA's mission is described in the following fourth article in Space Digest's series on our national space effort.)

The intent of Congress, in legislation on the national space effort, was to create a separation of management between civilian space exploration and projects having primarily military applications.

Because of the continuous interchange of

talent, hardware, and facilities in the still infant science of space technology, this is

easier said than done.

But the ground rules have been laid, and under them the Defense Department is designated as the planner and funder of space research and development expected to have military applications.

These include among others: observation, navigation, communication, and meterological satellites; superthrust engine clusters; advanced forms of propulsion; maneuverable space vehicles with a reentry capability; and solid and exotic fuels.

ARPA, born after sputnik, is headed by Roy W. Johnson, a former General Electric official. It has important dissimilarities from the National Aeronautics and Space Administration. These differences go beyond differences in mission.

NASA is an executive agency unto itself with a considerable "in-house" research establishment carried over from its predecessor, the old National Advisory Committee for Aeronautics (NACA). NASA, as explained in April Space Digest, uses both its own research and development facilities and the facilities of the military services for its

ARPA is, by its own account and present operation, a small-staff line agency of the Defense Department. Its principal job—with a fiscal year 1959 budget of approximately \$427 million—is to initiate and fund programs in space technology, assigning them for development by the military services. These are, principally, the Ballistic Missile Division of the Air Force's Air Research and Development Command and the Army's Ordnance Missile Command. Those in turn let contracts to industry and research groups in a manner similar to the pre-ARPA ap-proach. ARPA itself has no laboratories and does not contemplate setting any up.

ARPA does have contracting rights, but, for the most part, it has preferred to give the already established service research and development branches the contracting assignments, confining its own activities to initiating programs and keeping track of their progress, especially when they are divided among Air Force, Army, and Navy. An example of one such divided project is the reconnaissance satellite.

This project, originally known as Sentry, but which has had a series of other names, is concurrently under development as an ARPA project by ARDC, AOMC, the Army Signal Corps, and the Office of Naval Re-

ARDC is providing the early propulsion, AOMC the "tomorrow" propulsion—the 11/2 million-pound-thrust engine called Project Saturn. The Signal Corps is working on the communications payload, and ONR is planning the tracking system. Together, as ARPA sees it, all these approaches will meld eventually to create a weapon system. Which the services will operate the final system will be up to the Secretary of Defense.

ARPA's assignment is thus to act as the research and development management arm of the Secretary of Defense and to set up a unified, single space program on the military side, utilizing the capabilities of the military services and their established industry suppliers of talent and hardware. In addition, ARPA is authorized to "farm out" projects to other Government agencies.

To do its job, ARPA is organized with a

staff of about 80 people.

Of this staff, approximately 80 are managers and administrative people, and the remainder are providers of technical advice. The technical group are scientific people from the Institute of Defense Analyses (IDA) who give technical advice on contract with ARPA. IDA is a nonprofit group of university technical specialists which also serves as a "brain factory" for the Defense Department's Weapons Systems Evaluation Group (WSEG), and the Joint Chiefs of Staff. In a somewhat unusual arrangement, George P. Sutton, who is Chief Scientist at ARPA, is also Director of IDA's Advanced Research Projects Division. This arrangement also existed when Dr. Herbert F. York, the newly appointed Director of Research and Engineering, was chief scientist of ARPA.

Here is probably a good place to explain

the role of Dr. York in his new job.

When Dr. York was first appointed to the new post of Director of Research and Engineering, there was much speculation as to whether Dr. York would now be ARPA Director Johnson's boss.

On the face of things, that appeared to be the new status of Dr. York. But things are

not that simple in the Pentagon.

As Dr. York explained it to inquiring Senators, his is a staff job and ARPA is a "line" agency. This would seem to mean that Dr. York is to serve as a staff adviser to the Secretary of Defense on all research and engineering matters, which would include military space technology, but also in many other scientific areas. Thus Dr. York's role is somewhat similar to that of Dr. James R. Killian as special adviser for science and technology to the President.

But the analogy is only a rough one. Dr. York is charged with thinking about and planning for whole areas of technology, and he is a statutory officer, while Dr. Killian's job is even more generalized and primarily concerned with national organization of sci-

entific effort.

Dr. York and the staff he is gathering about him are concerned with broad questions, such as, "What can we try in communications?" not specific projects. His job will be to recommend to the Secretary of Defense technical areas that ought to be pursued or not pursued and to point up unnecessary duplication of effort, as well as to review work being done on operating levels.

review work being done on operating levels. The relationship between ARPA and Dr. York's office can be discussed only in terms of the Secretary of Defense and his authority.

ARPA Director Johnson reports directly to the Secretary of Defense, and his assignment of projects to the military services is subject to the order or approval of the Secretary. But at the same time he and ARPA are, like all the research and development agencies in the Defense Department, now under Dr. York's supervision.

Hence, ARPA can go to the Secretary of Defense with proposals for a specific project, and it is the Secretary who will make the decision. But, of course, the Secretary's principal scientific adviser is Dr. York, so certainly Dr. York's influence will be sizable and often decisive.

In a similar vein, although ARPA hands out most of the space assignments and funds for space technology to the military services, its word is not necessarily the last word. The Air Force, Army, or Navy can, through its civilian secretary, go directly to the Secretary of Defense for a decision.

As constituted, ARPA's Director sits at more or less the same level, in relation to the Secretary of Defense, as do the civilian service secretaries. ARPA acts essentially as a funnel for the regular military research and development establishment, serving as a combination of foreman and financier. Although there are many people who feel that ARPA is an additional layer in a structure already quite complicated, it is in business and seems likely to stay so.

Mrs. Ruth Lois Bryson, Arlington County Teacher

EXTENSION OF REMARKS

## HON, JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. BROYHILL. Mr. Speaker, Arlington County is extremely fortunate to have one of the best school systems in the United States. This has been accomplished only through honest endeavor and combined talents of our very capable school administrators and teachers. The parents of Arlington County, through their participation in the parent-teacher associations of the various schools, have worked closely with the school administration and the teachers to promote the welfare of our young and to maintain the high standards of our schools.

Recently my attention was called to a tribute paid to one of our Arlington County teachers, Mrs. Ruth Lois Bryson, by the parents and teachers of the Robert E. Lee School where she has taught for the past 8 years. Their appreciation was expressed in a letter read and presented to her at their last PTA meeting on May 19, 1959.

Mr. Speaker, I ask unanimous consent to insert that letter in the Congressional Record, and in doing so I wish to join in this tribute to Mrs. Bryson and wish her good luck and happiness. The letter follows:

Mrs. RUTH LOIS BRYSON, Third Grade Teacher, Robert E. Lee School.

DEAR MRS. BRYSON: For the past 8 years we have been fortunate in having you as the third grade teacher at the Robert E. Lee School. Each of these years a group of third grade parents has been saddened because this ended pleasant student-teacher and parent-teacher relationships which you have been instrumental in establishing. This year all of the parents of the Robert E. Lee PTA are saddened by the thought that this is your last year at Robert E. Lee.

We have been cognizant of the wholesome growth and development, from an educational standpoint of our children while under your supervision. We have also been aware that you are richly endowed with the wisdom, the temperament and the determination necessary for success in the educational field. We are appreciative especially of the kind and understanding treatment which each child has received.

It has been a privilege to be associated with a teacher who has consistently demonstrated her competence in inspiring as well as teaching. Your skill in bringing forth the best in each of our children has made a

distinct and lasting impression on us as parents.

Although there is considerable reluctance and regret in saying goodby to you, you may be sure that you have the sincere wishes of the Robert E. Lee PTA for continued success and personal happiness.

Very truly yours,

MARY ELIZABETH WRIGHT, President, Robert E. Lee PTA.

Family of Eight Here on Trek to Africa
Plans for Life in a House Trailer

EXTENSION OF REMARKS

## HON, ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following clipping from the Washington Post of June 17, 1959, describing a fine family from Ionia, Mich., which is in my congressional district. I think it is certainly very commendable of Dr. Foust to give up a fine practice and take his family into Africa to work as a medical missionary without salary. Dedicated Americans like these can be a vital force in combating communism in Africa or anywhere else in the world. I predict he can do more for our country's reservoir of good will there than can a great many so-called bureaucrats operating under the foreign aid program:

Family of Eight Here on Trek to Africa Plans for Life in a House Tealler

(By Dorrie Davenport)

The children of Dr. and Mrs. Joseph C. Foust think they're the lucklest people in the world—they are going to make their permanent home in a house trailer in Central Africa.

Dr. Foust, 35, and his wife, Helen, got the idea while on their honeymoon in the Bahamas. They saw that medical help was desperately needed there, and since then they've been searching for another place where they might do some good.

"Besides," says Dr. Foust, "the only way to overcome the potential influence of communism in Africa is to get over there and show some personal kindness and charity. Our aim is really that of President Eisenhower's people-to-people program."

Dr. Foust will be the second physician sent to Africa under the auspices of the Foundation for All Africa, Inc., an organization of professional men! The first, Dr. Gregory T. O'Connor of Hartford, Conn., has been in Uganda for a year. The doctors serve without salary.

The Fousts and their six children—Stephen, 12; Pete, 10; Carl and Ann, both 9; Teresa, 5; and Monica, 9 months—came to Washington this week from their home in Ionia, Mich. They will sail for Africa Friday and there, will drive 1,500 miles to Mbeya on the plains of Tanganyika.

At the moment the family's favorite evening reading is a book called "Quick Swahill." The children have already learned a few phrases, but Dr. Foust believes that languages will be family's biggest problem for some time to come.

Mrs. Foust, a former teacher and art supervisor, plans to teach all the children, since their new home has no elementary school. Five-year-old Teresa is proudest of all because she's starting the first grade by herself.

Stephen, the oldest, is looking forward to becoming a great hunter. He was given a .22 rifle for his 12th birthday and is counting on shooting at least a jackal.

The Fousts think that during the next few years they can easily manage to fit four more children into the house trailer. "The

more the better," they say.

The family's future home has a gas-operated stove and refrigerator, a large double bed and four bunk beds, and a modern bathroom. The parlor will be a 10- by 12-foot tent.

#### You and the U.S. Fiscal Plans

EXTENSION OF REMARKS OF

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of June 5, 1959:

> YOU AND THE U.S. FISCAL PLANS (By Donald I. Rogers)

What does the administration's new emergency fiscal program mean to you, average American, and you, average American investor? How will you fare when the Treasury raises its interest rates on Government securities and boosts the debt limit to \$290 or \$295 billion?

First, temporarily at least, your dollars will be more stable; inflation will be slowed.

Second, your paper profits in the stock market may be cut back as the program has a reaction on all stock prices.

Third, any new home mortgage or personal loans you take out will bear a higher interest rate. (Mortgages might go as high at 61/2 percent.)

Fourth, if you own a small business, your commercial loans will cost you more.

Fifth, if you run a large corporation, your bonds and debentures will carry a higher interest ticket.

Sixth, if you are a prudent saver, you will get higher interest payments on your savings and thrift accounts and on any Government

savings bonds you buy.

Your prudence may be rewarded, albeit slimly, because of the imprudence of your Representatives in Congress. They have done What you, as a taxpaying American, are not allowed to do-they have spent more than they own or will own.

As a result, they're going to have to borrow more money. Trouble is, people don't want to lend our Government money, at least not at the present rates of interest they pay. So Congress, within a few days, will vote to raise the legal interest rate above the present 41/2 percent.

#### WHYS OF BIG BUYERS

Big investors, individuals and banks alike, buy U.S. Government bonds for four fundamental reasons: (1) They're the most secure securities you can buy; (2) there's no cost for servicing them; (3) you don't have to make an appraisal of the property; and (4) you always know when and how much you're going to be paid.

Recently, however, well-heeled investors have turned to the stock market as a hedge against continuing inflation in the belief that stock prices would advance (as the value of all property traditionally advances) when dollars are eroded by inflation. Moreover, since most of these investors are in the higher income brackets, they have tempted by the tax-exempt bonds of States and municipalities. The interest payments on these bonds are not taxable, while the Government and the States both tax the proceeds of Government bonds. In addition, the bonds and debentures of solid private corporations have been carrying some handsome interest tags which have had allure for the more affluent investors. A corporation can deduct from taxes 48 percent of the amount of money it pays out in interest, so it's not always so particular about the rate of interest it affixes to its bonds.

#### SAVERS DUE FOR BREAK

That's why the Government, if it wants to borrow more money, must pay more to get it. This, of course, will add to the Government debt, too. It is the other side of the vicious cycle.

You savers were due for a break this summer, anyway. Most savings banks now paying 31/4 percent have been planning to boost their interest payments on deposits to 3½ percent some time before fall. It is conceivable that some months later, they may boost the payout to 3% percent.

The temporary surcease from inflationary pressures expected to accrue from this crash program of money-juggling will be effective only if the big private investors find the new interest rates on Government bonds attrac-

When a bank buys a Government bond, It sets up an account in the Treasury's name against which the Treasury can draw at any time. This creates more money, puts more in circulation, for the Treasury does not physically take the bank's money. This contributes to the inflation.

When an individual buys a Government bond (a nonbank loan, they call it) he takes his money out of a bank and physically gives it to the Government, via his check. While it to the Government, via his check. this does not reduce the money supply, it does not increase it; yet at the same time it gives the Government the money it needs.

Management of the debt is less complicated than it seems. It's sufficiently complex, however, to escape the policing and scrutiny of the general public. Yet what the Treasury does and is about to do reaches every pocketbook in every walk of life in our

#### Look for the Joker

EXTENSION OF REMARKS OF

## HON, HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following thoughtful editorial from the June 10, 1959, issue of the Owego (N.Y.) Gazette, one of my hometown newspapers, which bolsters my belief that the majority of my constituents are not sold on Federal aid to education:

STRINGLESS AID-No SUCH THING

There has never been a Federal ald program that did not mean some degree of Federal control over the program being aided whether it be highways, agriculture, airports or housing. The school aid bill being pushed in Congress this year which provides, according to the sponsors of the bill, assurance against Federal interference in the schools, is no exception.

The bill (H.R. 22) has been approved by

the House Education Committee and would authorize Federal grants totaling \$4.4 billion for 4 years to States on a basis of flat grants per school-age child-grants which the States could use either for buildings or teachers salaries, or both. No Federal control of our schools here, says the proponents of this bill.

But listen to what the citizens public expenditure survey found in the provisions of the bill:

The aid money for school construction must be used to build only facilities specified in the bill.

In any school construction projects financed with Federal funds, school districts would have to pay no less than prevailing wage rates, as determined by the U.S. Secretary of Labor.

The amount earmarked for teachers' salaries must be used for that purpose only and it is spelled out by the Federal Government how this salary aid is to be distributed.

States must bring their spending level up to a federally determined average for all the States by the end of 2 years or face a reduction in their aid apportionment. Now, if this isn't Federal control, we'll eat our high school diploma. What it boils

down to is Washington bureaucrats telling us that if we want Federal school building and teachers' salary aid, we must build the type of school facilities they want us to build and spend no less than the amount they say we should spend for labor in construction; we must distribute the money to teachers according to the way they say it is to be distributed; and if our relative school support from State and local taxes doesn't come up to Washington standards, they'll just reduce our cut of the school aid

money.

But, the real kicker in this deal is that New York State taxpayers would pay much more in Federal taxes than the State would receive in Federal handouts. This is because New York has an estimated 8.3 percent of the Nation's school-age population, but its taxpayers pay 13.3 percent of Federal taxes.

So for each dollar this State would get in school grants, its taxpayers would have to ante up \$1.60 in Federal taxes-hardly a good business deal from where we sit. On a 4-year basis that would cost us \$577.2 million in Federal taxes for grants totaling §361.2 million—a loss of \$216 million.

It might be well to note that many of the so-called poor States-particularly those in the South-do not want Federal aid for education. Just who is pushing the measure is something we have not been able to determine, but it seems to be making progress.

The citizens survey reports that the bill may be placed before the House for a vote any day now. This would be a good time to remind our Congressman that we do not appreciate picking up the tab for other States that are not willing to pay their own school costs and that we want the control of our school system left right where it is, here in the Oswego-Apalachin district and in Albany.

## Cross Country With the "On to Oregon" Cavalcade-V

EXTENSION OF REMARKS OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. PORTER. Mr. Speaker, the Oregon Centennial Wagon Train is rolling on toward Oregon. Under leave to extend my remarks in the Record, I include the account of the fifth week written for the Drain (Oreg.) Enterprise by Rudy Roudebaugh. It covers the days May 10 through May 22:

[From the Drain (Oreg.) Enterprise, May 28, 1959]

HORSES TRADED FOR MULES AS WAGONS NEAR MOUNTAINS

(By Rudy Roudebaugh, as he drives the Drain covered wagon)

May 16, 7:07 a.m.: Here we go to North Platte. 8:59: Crossed White Horse Creek. 9:35: Crossed the Platte River. 10:11: Arrived in North Platte alongside the Court House. 11:45: Stopped for lunch and feed the stock. 12:40: we are on our way again. 1:08: We are stopped waiting for a train. 2:27: Arrived in camp. Dan wasn't feeling good and I had the veterinarian come and look at him. Hope I don't have to get new horses. Seen some more of my old friends today.

Sunday, May 17: It's raining and hailing. Wish you (Kiwanda) and Judy were along so you could meet my old friends. Janell is going to stay with her grandmother a few days longer. Wayne and Pat (Rudy's brothers) think Janell is the nicest little girl. Had dinner with the chamber of commerce at the country club today. We are

on the Larry Steel Ranch.

May 18: Dan has new shoe on left front foot and Daze got one on her right hind foot. Sunday we set our time back I hour. 7:00: Here we go. I never did get the shipment of letters to pass out. 8:07: Arrived at Sutherlin (population 860). The kids are sure looking us over. 11:06: Pulled out to feed and have lunch. 12:18: On our way again. Dan and Daze are eating and drinking good today. A friend of mine came 100 miles to see me today. 2:15: Arrived at camp at the Carl Zimmerman Ranch, 2 miles west of Paxton. Jean Marshall rode with me this afternoon.

May 19, 5:58: Just waiting for the word to take off. Susan, 11, and Peggy Zimmerman, 9, are riding with me this morning. These girls live at the ranch we stayed at last night. Mountain time, 6:14: Going west again. 6:48: Arrived in Paxton. 6:59: We have stopped at a sod house in Paxton. We are in the sand hills of Nebraska. It rained all night. We didn't have any company after 7 o'clock so we went and visited the sod house. I had the 8 to 11 watch last night. The weather looks a little better, just a few clouds and the sun is trying to come out. 9:51: Roscoe. 9:56: We are stopping for lunch just outside Roscoe. We fust saw our first highway accident. A Idaho car ran into a Nebraska car. The woman looks like she may be dead and the man is in bad shape. (The husband died the next day.) The girls that were riding with me have went back to school. Dan and Daze are eating good and seem to be doing real well again. 11:48: On our way again. Its hot this afternoon-means some more rain tonight. 1:06: On the edge of Ogallala. The saddle club is all decked out as Indians to lead us in to town. 1:50: We arrived at Ogaliala fairgrounds. We had dinner with the chamber of commerce this evening.

May 20: Cloudy. Looks like rain. Dan and Daze ate and drank good this morning. We were supposed to leave at 6 and here it is 6:24 and still waiting. The road is all uphill today. 9:45: We pulled out for lunch. My horses aren't acting too good. I'm afraid I won't be able to keep them.

Well, today started a new month for us on the trail. 11:16: Finally on our way after lunch. Ben is having trouble getting his mules into motion. 1:28: Arrived at camp at F. Grapes ranch. We are supposed to have snow tonight. This is the first day we haven't went through a town.

May 21—6:30: Ready to go. Daze is pretty lame this morning. She has a new shoe on her left front hoof. Dan hasn't eaten at all this morning. Guess I'll have to see about a new team. No sooner said than done. I have a new team for today, Button and Bows. 7:29: We are heading north and west. The new horses are right on the ball, but a little light for the wagon, but would make a good buggy team. 8:38: Ash Hollow. Stopped to water the horses. 9.03: On our way north. 9:51: Crossed the North Platte river. 10:19: Lewellen (pop. 510). 10:52: Stopped for lunch and fed the animals. We were each given a book of songs. 12:00: We are on our way to Oshkosh 11 miles away. 12:02: Mrs. Pelling is riding with me this afternoon. 1:38: The Oshkosh Riding Club is coming out to meet us. 2:22: Arrived at camp. Here comes Tex (wagonmaster). He has traded off Dan and Daze for a team of mules. I feel real bad about them.

May 22: I have my harness all adjusted to fit my mules. I will call them 58 and 58 until Janell gets here to name them. It rained all night and still raining. 7:00: We still haven't pulled out yet. I can hardly wait to see what Janell thinks of the mules. 7:70: We are leaving Oshkosh. The new team didn't care much about taking off but two boys lead them in their collars. 10:47: I suppose it will take a few days for the mules to get used to us and us to them. 11:42: It's still raining and we're headed west again. 12:05: Lisco. 1:43: Pulled into camp at the Rush Creek ranch along the North Platte. I just finished greasing the wagon so I'll be

ready for morning.

#### Poison in Your Water-No. 124

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Record an article appearing in the Grand Rapids (Mich.) Herald of May 4, 1958, entitled "Pollution in State General Hazard":

POLLUTION IN STATE "GENERAL" HAZARD— BAD DRAINS BLAMED

Lansing.—"Pollution of county drains, with a resultant health hazard, is quite general in Michigan," Milton P. Adams, executive secretary of the State water resources commission, said Saturday.

The problem was spotlighted 10 days ago when the WRC conferred with officials of the village of Woodland and the Barry County

drain commissioner.

State health department officials described a very serious health hazard in Woodland because of a polluted open drain behind eating places. The drain commissioner had been asked in May of 1956 to take action, but admitted he had accomplished nothing.

"Septic tanks, many of which are improperly installed, usually cause the pollution problem in Michigan," Adams said. Cleanup action generally depends upon county drain commissioners who, like the one in Barry, are hesitant to act.

In many sections of Michigan soil conditions are not suitable for average installations, because heavy soil requires a much larger tile field, for which space often is lacking.

Mariette, with a population of 1,500 against Woodland's 425, solved a similar problem. Sewage was going into a country drain behind business and residential property, and \$87,600 in Federal funds was allocated toward a \$400,000 treatment project which is almost completed.

Benton Township of Berrien County is putting in a sewer system to clean up a Woodland-type problem. A complaint was received recently by the WRC after pollution of drains at Brown City. Breckenridge and Hemlock have polluted drains. Fowler, with Federal aid, is enlarging disposal facilities to clean up drains.

Adams pointed out "a lot of septic tanks lack tile fields and run directly into drains."

Bangor Township of Bay County, with its Lennox Park area, is an example of long standing—that problem was referred to the State Health Department by the WRC in 1952, and remains to be cleaned up.

Saginaw County's Bridgeport Township is another problem on the WRC's unsolved

The fringe area surrounding citles often has public health hazards. Mount Morris and Grand Blanc are examples in Genesee, where work has been started toward a multimillion-dollar countywide disposal system involving 14 units of government. A site has been secured and engineers are drawing plans.

The Heyboer drain in Paris Township, of Kent County, was polluted so much the WRC threatened legal action against the drain commissioner. A report at the last WRC meeting was to the effect that a study showed only a dozen sources of pollution in the Home Acres area, instead of maybe 200 that were suspected before the survey.

Federal funds are helping solve the pollution problem in Michigan. A continuation is expected to be voted by Congress.

Michigan got \$2.8 million for the last 2 years. Out of 77 applicants, that sum was allocated to 30 governmental units. Maximum grant is \$200,000, and Muskegon, which recently opened bids for enlarging its disposal plant, is expected to be the first to qualify for that amount.

Woodland, with a defective application, sought \$30,000 toward the \$97,740 eligible portion of its proposed disposal system. Treatment plants and interceptor sewers generally qualify for Federal aid. Priorities are determined on the basis of financial need and seriousness of the pollution problem.

Other Federal grants have gone to Coloma, Saugatuck, Evart, and Elberta for new sewage treatment systems, and to Grand Rapids and Traverse City for expansion programs.

## Chairman McCone Analyzes Nuclear Test Ban

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. HOSMER. Mr. Speaker, a lucid report of Atomic Energy Commission Chairman John A. McCone's penetrating analysis of U.S. and free world stake in the nuclear test ban issue has been written by Los Angeles Times European correspondent, Waldo Drake. McCone's statement was made late last week at Geneva where he attended several of the

negotiating sessions. The Drake story is as follows:

A-TEST BAN MUST CURB RUSS ARMS, SAYS MCCONE

GENEVA, June 13 .- Chairman John A. Mc-Cone said here today that he and his colleagues on the Atomic Energy Commission are as anxious as other Americans to consummate an effective agreement with the Soviet Union to suspend nuclear weapons tests.

But he warned it would be folly for the United States to sign a treaty which would enable the Soviets to proceed undetected with development of so-called tacical nuclear weapons which might be disastrous for the free world.

McCone made this statement as he departed for Paris to discuss with Gen, Lauris Norstad, NATO's supreme allied commander, NATO's decision to move elsewhere in Europe 225 U.S. Air Force F-100 fighter bombers from 3 airfields in eastern France unless Fresident De Gaulle revokes his ban on nuclear weapons on French soil,

He indicated that while transfer of a few hundred aircraft was not in itself vital to Europe's security a continued ban on stationing of nuclear weapons in France might cripple the entire NATO shield against Soviet aggression.

McCone said that France's attitude is made more important by yesterday's disclosures by the Berkner Committee that muffling techniques might make it impossible to detect underground explosions in development of relatively small nuclear weapons.

He said that the United States does not know how far the Soviet Union has developed its ability to muffle underground explosions against outside detection.

"Our experts agree that very important weapons development could be made by underground tests, muffled against detection," he said, "so that if the United States stopped such tests and the Soviet Union did not, they might make very significant advances particularly in small tactical weapons. have no desire to pursue nuclear weapons development if we are sure that no one else is continuing their development.

#### BASIS OF SECURITY

"But," said McCone, "since security of the United States is built around nuclear weapons rather than around enormous masses of men, we must be sure that we are not going to be surpassed by covert develop-ments"

He said the United States must keen this danger in mind despite Premier Khrushchev's declarations that since small tactical Weapons are not worth developing the Soviet Union is concentrating on perfection of large nuclear weapons.

McCone has just completed 2 days of con-versations with Secretary of State Herter and with Ambassador James Wadsworth, Chief of the U.S. delegation, which, with the United Kingdom's delegation, has been trying for 7 months to complete agreement With the Soviet Union on suspension of nuclear weapons tests.

#### SOVIET STATEMENT

When he arrived in Geneva he was greeted by a statement from the Soviet delegation chief, Semyon Tsarapkin, that McCone is one of a group of American scientists and military leaders who do not want an agreement to stop nuclear tests.

McCone said today that while his talks with Wadsworth have convinced him that the Soviet Union is willing to sign a test ban treaty he is not sure how effective such a treaty would be in view of the Berkner Committee report that underground explosions could be muffled against detection by eixsting seismographs.

"I am in favor of suspending all nuclear test explosions by agreement," he said, "because I feel that if this were done an initial

Anniversary step would have been made to create an atmosphere of understanding which might lead to more effective steps to slow down the armaments race and to relieve fear throughout the world that a war of incredible proportions might break out.

#### DETECTION STATIONS

"Any agreement, though, must be safeguarded by reasonably dependable detection systems. The United States cannot agree to any suspension system that will not effectively safeguard our future."

"The United States is prepared to permit installation of detection stations and to permit on-site inspections by international teams when instruments indicate that explosions might have taken place.

"But the Soviets have not agreed to this," continued McCone, "and until they do agree to it we cannot say that a detection system will be dependable."

He said that because there are a number of natural events such as earthquakes and falling meteors whose disturbances in earth and atmosphere cause the same phenomena as nuclear explosions, an effective on-site inspection is essential.

On-site inspections could be made both by ground examination and by flights of aircraft carrying instruments.

#### THREE ENVIRONMENTS

There are three environments in which nuclear explosions can take place:

- 1. Explosions in atmosphere from ground level up to 40 miles.
- 2. High-altitude tests in which nuclear devices might be shot off as far as hundreds of thousands of miles in space with results telemetered back to earth.
- 3. Underground tests which give the United States the most concern since the Berkner report has indicated that their explosions can be so shielded that they are not detectable by seismic instruments.

#### SERIOUS PROBLEM

McCone explained that while lower altitude tests could be detected with a system of satellites, a dependable detection of "muffied" explosions presents a "serious if not insurmountable" problem.

At Geneva the Soviet Union has indicated agreement to study high-altitude tests detection but has steadfastly refused to discuss underground tests except on a basis of outmoded data agreed on by a three-power scientists' conference at Geneva in August,

Tests made since then in Nevada by the United States have indicated that the difficulty in detecting underground tests would be at least four times as great as agreed at Geneva last year and perhaps far greater.

#### RUSSIAN REFUSAL

The Russins have so far refused to accept new United States data as a basis for discussing numbers of detection stations throughout the world and makeup of their personnel. Nevada tests last fall-indicated that a detection net of 180 stations around the world would be inadequate.

A report of Geneva experts predicted that this network would have 90 percent probability of detecting and identifying nuclear explosions of five kilotons or greater. Later United States data has indicated these stations could only effectively identify explosions of 20 kilotons and greater and that the system's effectiveness might be reduced 100 times by muffling explosions.

McCone will leave Paris tomorrow night for Washington for discussions with defense authorities.

EXTENSION OF REMARKS

## HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Committee on Juridical Institutions of the Catholic Association for Interna-tional Peace commenting on the 10th anniversary of the North Atlantic Treaty Organization:

NATO'S TENTH ANNIVERSARY

(Statement by the Committee on Juridical Institutions, June 9, 1959)

The 10th anniversary of the foundation of the North Atlantic Treaty Organization has been the occasion for an almost unanimous vote of confidence for its achievements and prospects by responsible stu-dents of contemporary international relations. It is eminently appropriate that the Juridical Institutions Committee of the Catholic Association for International Peace

join in this vote of confidence.
As a military arrangement NATO has been, on the record, a marked success. It has held the boundaries of the non-Communist world in Europe, boundaries which were very unstable in 1949. Indeed, the shield of NATO has become a sine qua non of the defense arrangements of the free world while at the same time serving as a model for similar arrangements in other areas. The progress achieved in the NATO system with respect to interallied cooperation and the development of coherent strategy and tactics for defense against communism is by now well known. In fact, it is often remarked that the greatest proof of the efficacy of NATO is to be found in the persistent efforts of the Communists to break it up, efforts which, as we know, are

increasing daily.

In the political sphere, NATO as dramatically widened the basic combination of allies—the United States, Great Britain, and France-to encompass 15 states. It has brought together former enemies and it has survived serious contemporary disputes between its members, as in the case of the Cyprus controversy. More important than the peaceful solution of such differ-ences, NATO has clearly begun to develop the characteristics of an institution for the transaction of serious International business The combination of free criticism followed by acceptance of compromises which has marked its debates, notably over the use of tactical nuclear weapons, shows promise of achieving that mixture of representation and responsible decision making which differentiates an effective organization of any kind from a mere collection of uncoordinated entities. Out of this process has emerged something which may turn out to be the greatest contribution of the organizationthe NATO way. The NATO way is that intangible psychological habit of cooperation which cannot be accurately defined or evaluated, but which is, nevertheless, clearly identifiable as an indispensable basis for fruitful international action. As late as 1945 the wartime cooperation of the United States and Great Britain was halled as remarkable. In 10 years of the most difficult efforts to maintain an esprit de corps in face of the frustrations of containing Communist imperialism, NATO has achieved a comparable unity, in spite of difficulties of language, temperament, and national outlook.

We should not forget, moreover, the achievements of the NATO powers in the field of international law. The problems raised by the continued presence of foreign troops in the member states when they are technically at peace with the Communist world have been unprecedented. The solution in large measure of those problems through the development of the status-offorces agreements system has been a singular contribution to international law while, at the same time, resolving many difficulties of constitutional law within each member state.

As an international organization, therefore, NATO has achieved in the fields of international security, diplomacy, international administration, and international law most of the things which the Catholic Association for International Peace Committee on World Order and Subcommittee on Juridical Institutions in their joint policy state-ment of May 1949 ("The United States and the North Atlantic Pact") hoped it would achieve. In large measure, it has filled the breach left by the collapse of the original United Nations security system resulting from the reflection of East-West conflict in the Security Council. Moreover, NATO has vindicated the faith of the framers of the Catholic Association for International Peace statement of 1949 by remaining within both the spirit and the letter of the provisions of the United Nations Charter for collective self-defense.

This is not to say that NATO does not have room for improvement. There is a constant problem of maintaining the determination of all Members to keep the "Shield" strong. It is sometimes difficult to persuade a member state that it must forfeit ephemeral advantages promised by independent action in order to contribute to the staying power of the organization as an ever-present, ever-ready defense system. States which are grimly determined in the fact of a threat such as the Berlin crisis tend to lose their interest when the Kremlin shifts its tune to a more mellifiaous strain. As in the United States, the temptation to sacrifice defense for budgetary considerations is also ever present. Thus, the real strength of NATO's forces, while enough to give an aggressor pause, is far below realistic levels, and there is some question as to whether its chain of command has yet been sufficiently simplified to permit prompt and effective action.

As we consider the overall picture of NATO, however, it may well be that its greatest contribution has been and will be its realization of a higher unity within the area which comprised a good deal of ancient Christendom. It was from this Christian community that the institutions of modern international law and organization largely developed, In a world where respect for international law and organization is retarded by deep ideological rifts, there appears to be good reason to turn to this community for inspiration and progress in building a true international juridical order. Jacques Maritain has warned us that it is illusory to reach for a higher level of unity among governments until we have that psychological, indeed, spiritual, unity among human beings which must always precede a successful political community. We may hope that NATO, in community. We may hope that NATO, in addition to its services as an international security organization, will contribute increasingly to the attainment of such a higher spiritual unity in the free world.

## Pawn or Sovereign?

EXTENSION OF REMARKS

#### HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Washington Post and Times Herald of June 9, 1959:

PAWN OR SOVEREIGN?

President Eisenhower put the best face on the unavoidable need to raise interest rates on Treasury bonds and the ceiling on the Federal debt. But while it is true in a broad sense that returning prosperity and the attendant competition for savings is the cause of the difficulty in which the Treasury finds itself, there is still little room for self-congratulation in a situation which finds the Government obliged to pay so relatively dearly for long-term borrowings.

It is simply a case of the piper having done his work and having to be paid. All the congressional breast-beating in favor of cheaper money cannot alter that situation. Bond rates and the debt limit must be raised if the Treasury is to operate in a rational manner, and we trust that when the opportunities for exploiting the lamentable public ignorance on money matters have been exhausted Congress will do what must be done.

Necessary as it is to face up to the tight money market and the inadequacies of the present Federal revenue structure, this does not of course mean that all inquiry as to how things got this way needs to be suspended. To the contrary, Congress could improve them the occasion by examining

pended. To the contrary, Congress could improve upon the occasion by examining the economic causes—instead of aggravating it by trying to assess political blame. It ought not to be difficult to show that

It ought not to be difficult to show that the Government has been limping along on a revenue base ill-suited to the rapidly rising demands of defense, of mutual security, and of a more costly, highly urbanized society. The scant surpluses and frequent deficits of the Government since World War II, which have intensified the debt management problem, have resulted from attempts to get by on the cheap, and from a failure to recognize that a larger portion of the national product must be diverted to urgent public purposes.

At the same time, unrealistic thrusts at inflation such as the dublously balanced 1960 budget and the jawbone attack on administered prices—together with inattention to the inflation-oriented tax structure—all have tended to demoralize the bond market and boom common stocks. Until a more balanced and promising assault on the price spiral is launched, the rising competition for savings may continue to plague the Treasury. One increase in interest rates will not by itself solve the problem for good.

The disturbing thing about the President's message is not what he asks, for he asks only what is inescapable. It is that he tends to paint the Government as the more or less helpless victim of the swift currents of the private economy. We submit that the Government needs to do far more than merely struggle to stay affoat. The financial waters need to be controlled and moderated and provision made for more ample storage

against drought, if we may borrow the language of the engineers. The Government's task, it seems to us, is to assert more vigorously the public need for Federal expenditure, and for a higher rate of capital formation, through a tax and budget policy geared to the reality of these times.

#### Trinity Power Battle Rages

EXTENSION OF REMARKS

## HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. UTT. Mr. Speaker, under unanimous consent, I wish to insert a publication issued by the International Brotherhood of Electrical Workers Local 1245, AFL-CIO, setting forth their favorable position on the partnership development of the power resources at the Trinity division of the Central Valley project:

#### TRINITY POWER BATTLE RAGES

The fight over whether there will be all Federal or joint development of construction and operation of the power facilities on the Trinity River project is now entering the critical stage. This session of the Congress probably will settle the issue one way or the other.

The joint development (partnership) bills died in committee last session although 17 of the 30 House Interior Committee members in the last session, wrote to the Congress asking that no moneys be appropriated for Federal construction of Trinity power facilities until Congress got a chance to act on the Secretary of the Interior's recommendation supporting Pacific Gas & Electric's offer to construct the power facilities and purchase the falling water for generation, thereby making a substantial saving to the Government.

This year, identical bills, H.R. 5549 and H.R. 5521, were introduced in the House which provide for joint development of the project and add a recapture section which provides that:

"The United States shall have the right upon not less than 2 years' notice in writing given by the Secretary to the company, to take over, at any time after July 1, 1967, or after the date on which the San Luis project begins operation, whichever date is earlier," by paying the company "its net investment therein not to exceed the fair value of the property taken."

These bills have not yet been acted upon but proponents of all Federal Trinity are seeking appropriations for Federal construction of the power facilities in spite of the fact that Congress hasn't even had a chance to consider private development of Trinity power with the initial attendant savings of some \$60 million to the taxpaying public.

At hearings held in Washington on May 6, 1959, Business Manager Ronald T. Weak-ley appeared before the Subcommittee on Public Works of the House Appropriations Committee and delivered a strong statement in favor of joint development and in opposition to appropriations for all Federal development of Trinity.

Subsequently, at hearings held in Sacramento on May 12, 1959, held before the assembly water committee, Business Manager Weakley appeared in opposition to Assembly Joint Resolutions 23 and 25 which would memorialize the Congress to reject the joint development (partnership) plan and proceed with appropriating moneys for all Federal development of Trinity.

Weakley's statement follows:

"I am appearing here in opposition to Assembly Joint Resolutions 23 and 25 which would memorialize Congress to reject the joint development proposal for construction and operation of the Trinity River project.

Our local union represents some 15,000 utility workers in both private and publicly owned utilities working and paying taxes

in 47 of California's counties.

Our members in the private utilities work under collective bargaining agreements covering wages, working conditions, and other benefits as a result of certification by the National Labor Relations Board.

The legal and responsible application of sound contractual industrial relations has provided continuous service to the millions of people in our service area, unmarred by strikes or interruptions due to labor-man-

agement conflict.

Private construction and operation of the power facilities on the Trinity River project will protect our right to collective bargaining and will, we believe, save money for our already overtaxed members and their families.

A large block of power made available to municipal utility districts and local agencies will provide a means of further expansion into the power business. When this happens in California under present law, our members lose the right to collective bargaining and legal contracts.

Public agencies engaged in the power business, particularly in the distribution and customer service phase, generally do not allow, and in fact usually prohibit, the right of free organization, collective bargaining,

and the right of contract.

In 1957 and currently in this session, we have sought and are seeking laws designed to provide for legal collective bargaining in municipal utility districts. Major opponents to these measures were and are the representatives of public agencies engaged in the power business.

Under existing conditions, our bitter experience shows, the right to contractual coverage in such matters as effective organization, grievance procedure, safety provisions, wages, working conditions, and other employee benefits are materially weakened for utility workers providing service under pub-

lic agency operation.

We represent some employees in the Sacramento Municipal Utility District. We have managed to elevate and to maintain decent wages and conditions there, but are denied the protection of a legal collective bargaining agreement, and this is a burning desire on the part of our members employed in the Sacramento Municipal Utility District.

Many public power agencies are unorganized and have comparatively poor wages and working conditions due to antilabor employment practices in many such California

agencies.

We fought, as did our fellow members in our public agencies, a bitter fight against proposition 18. Yet, we have worse laws presently on the books affecting public power agency employees.

Power agency employees.

We will continue to oppose any expansion of this unfair treatment and any projection.

ect which will further it.

We find that private development will provide additional needed employment for our members and protect the right to free collective bargaining under Federal law.

Federal development and power marketing will, our experience shows, lead to the expansion of unfair treatment of utility workers through loss of rights enjoyed by the rest of labor.

Now, as to the partnership principle. This type of joint development, we note, is nothing new in California. In fact the legislature is presently considering a number of such proposals in various forms in various areas. If these California projects are satisfactory, we see no reason why joint development of the Trinity River project is not satisfactory.

Here too, we shall oppose any further expansion of local public power projects where our rights are impaired, even though they may not be a major political controversy such as Trinity, and we shall seek any needed legislative provisions necessary to protect our

people

Again on principle. We note that some of our leading California exponents of public power are quietly but effectively attacking the fundamental principle of the reclamation laws—the 160-acre limitation. If we are viewed as a selfish interest when we try to protect the rights of a minority group of workers, how about the big land owners who are using some of these public power enthusiasts for a real selfish purpose?

We had a taste of this same thing on the minimum wage legislation. We know who wants to grab the water and who wants to keep agricultural workers in an economic

straitjacket.

The members of our union are also citizens and taxpayers. We are just as concerned as other citizens regarding proper and beneficial utilization of our natural resources. We want adequate flood control, wildlife protection, irrigation water, reasonable power rates and reasonable taxation.

However, underwriting tax free public power agency bonds as against private tax paying investment is, we believe, a bad bargain for all of us. After these agencies are set up, we find that instead of Federal power being used to pay for water development, these agencies get power at below cost to the extent that all of the taxpayers are paying for subsidies to a favored few customers.

We believe it is time to reappraise the whole concept of public power. It is understandable that when private capital is unable to undertake a given power project, that the

Government should do so.

We fall, however, to understand why an unfair tax policy should be adopted just because some would like to nationalize the power industry.

I make no brief here for the power companies. They are regulated on a State and Federal basis and can stand on the record so far as providing the capital and developing the power to meet the needs of California's tremendous postwar expansion.

Most basic American industries are not subject to Federal and State regulations covering the private electric light and power industry. Beyond mere regulation, our industry is subjected to local, regional, and, if some groups like the American Public Power Association could have their way, nationalization of the electric power industry.

Should this principle of public ownership be applied to oil, steel, coal, automobiles, and other basic American industries, many people, including our colleagues in the unions which represent them, would raise the roof.

Very few people seem to care about what happens to utility workers who serve the people under public ownership. This gradual denial of rights enjoyed by other workers is highly resented by our skilled workers who render important public service no matter how great the discomfort or personal danger.

Our members have a big stake in this matter. Millions of dollars involved in future pension rights are at stake in that the

whole picture of future employment can be changed overnight should public preference agencies further invade the business of our employers.

Last year, I testified before the House Subcommittee on Irrigation and Reclamation in favor of joint development of the Trinity River project. The bills were not reported out for consideration by the Congress although Congress by its own action required this action in order that it might legislate on the matter before appropriating money for the construction of the power facilities, according to my understanding.

We still believe that Congress should act on current bills which would provide private capital and get on with the job rather than tack on millions of dollars to the project cost out of our already tremendous tax

load.

To sum up, our members, by resolution, have directed me to support the principle of joint development of Trinity for their protection both as free workers and as taxpayers.

On the matter before this committee, our union respectfully asks that you consider the foregoing remarks in support of our opposition to Federal construction, operation and transmission of the power facilities of the Trinity River project and further, our opposition to the specific bills on the matter now before your committee."

The policy of local 1245 on the Trinity issue is being implemented as committee opportunities occur at whatever level and in

all pertinent legislative bodies.

## Up With the Ceiling

EXTENSION OF REMARKS

## HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, the Ways and Means Committee is presently debating the request of the administration for removal of the ceiling on the interest rate that can be paid on the long-term borrowings of the Federal Government.

There have been discussions of this

There have been discussions of this matter here and in the other body. Before Members get too far off base in these discussions, I would commend to their attention a very excellent editorial appearing in the June 9 edition of the St. Louis Post-Dispatch:

#### UP WITH THE CEILING

No matter how many speeches are made in Congress about greedy bankers and the delights of an easy money market, in the end it will be hard for House and Senate to find any practical alternative to the administration plan for lifting the interest celling on Government bonds.

As with the ancient dream of eating one's cake and having it too, the hope of simultaneously enjoying the best of two possible worlds has a strong grip on some Senators and Representatives. They would like to enjoy both the full employment of boom times and the low-interest rates of depression times. Who wouldn't? But up to now nobody has been able to figure out a safe way of doing both at the same time.

Easy credit is a consequence of expression of underemployed resources, and relatively tight money is the price that usually must be paid for good times. Though it is proper for the Government to do everything possible to mitigate the effects of tight money, making credit fairly available to all sectors of the economy, no way has yet been devised of generally depressing the price of credit during a boom without adding inflationary pressures.

Nor has anybody figured out a practical, noninflationary way by which the Govern-ment can segregate itself from the influences that affect credit for everybody else. When the Treasury borrows money, it must compete with other borrowers. If the other borrowers can and do pay higher interest rates than does the Government, the public in peace-time is not going to rush its money into Government securities no matter how many patriotic appeals are addressed to it.

These circumstances have now caught up with the Treasury to such an extent that more savings bonds are being cashed each month than are being bought. The price of outstanding Government bonds has fallen to the point where an investor can get a higher interest yield by buying Government issues already on the market than by subscribing to new issues at the present 31/4 percent interest celling. Facing the need to refinance \$76 billion worth of securities within the next few months, the Treasury cannot persuade long-term investors to tie up their money in Government bonds unless it can pay somewhat higher interest rates.

What are the alternatives? The Federal Reserve System might be ordered to support the price of Government bonds, as it did during and after the war. But this is a proved way of creating inflationary pressures, since every dollar thus put into support buying adds something like \$6 to the money supply. Or the interest ceiling could be left where it is, thereby forcing the Treasury to refinance maturing long-term debt with short-term securities on which the interest ceiling does not apply. That, too, would be an engine of inflation-in effect, a disguised way of inflating the money supply at a time when it should be restrained.

Nobody likes the fact that removing the interest ceiling will increase the cost of carrying the public debt. But this factor has been exaggerated. It is true that the taxpayers now pay close to \$8 billion a year in interest on the debt as against only \$5.7 billion 10 years ago. But it is also true that the cost of carrying the debt is now less than 11 percent of the total Federal budget

as against 14 percent 10 years ago.

We hope the administration does not feopardize the strong case it can make for lifting the interest ceiling by overplaying the sanctity of a free money market. modern Government cannot leave itself at the mercy of irresponsible traders who seek only private gain, and modern voters will only private gain, and modern voters will not permit it to do so. Government must influence credit just as it must influence other sectors of the economy on behalf of full employment and a justly shared prosperity. But it cannot change the facts of life by flat, and it is a fact today that under the present interest ceiling people with money would rater put it into something else than Government bonds.

Scholarships Urged To Create "Enlisted Man's Elite" and Save Military Technicians

EXTENSION OF REMARKS

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RecORD, I include the following excerpt from the testimony of William A. Douglass, a constituent of mine and the president of Careers, Inc., before the Subcommittee on Manpower Utilization of the Armed Services Committee. Mr. Douglass' remarks, in my judgment, deserve the careful consideration of all of the Members.

SCHOLARSHIPS URGED TO CREATE "ENLISTED MAN'S ELITE" AND SAVE MILITARY TECH-NICIANS

(Testimony of William A. Douglass, president of Careers, Inc., before the Subcom-mittee on Manpower Utilization of the House Armed Services Committee, May 19,

Mr. Chairman, gentlemen of the Man-power Utilization Subcommittee, my name is William A. Douglass. I am associated with Careers, Inc., a vocational publishing firm with headquarters in New York City. I want to begin my remarks today with thanks to you for letting me come before you. For several years I have followed the work of the Post Office and Civil Service Subcommittee for Manpower Utilization. It is a welcome sight for those of us who spend our lives in this field to see the ever growing concern of Congress.

I am sure that this committee must deal with the continuing loss by the armed services of skilled men, many of them trained at the expense of those same services. Here is costly turnover. In more generalized assignments, the armed services are more than competitive with pay scales for civilian life. It is the gifted person who has not been recognized. Nor can this person be bought. Even special pay has not stopped the exodus Virtually all engineers and scientists in Federal laboratories are already civilians; the technicians grade may soon follow suit. Is it impossible for the uniformed services

to appeal to good men?

I most assuredly must answer, "No." To me it is a pity that the fiction was ever allowed to become fact that engineers in the employ of the armed services should not be proud to wear the uniform of their employer. I flew down here yesterday next to three German officers, all experts in rocketry, off to Redstone for 4 months of exchange study with Army leaders such as Werhner von Braun. These men were in uniform, obviously the pride of their service. How can our services build similar rapport and pride of association amongst technical men when their leaders are civilian?

As I noted earlier, the uniformed technician grades are in grave danger. Here are the skilled products of service schools, the assistance of whom is so vital to full utilization of engineering talent. In few other enlisted fields is there such a cost of training, I believe, and such a cost of turnover. Special pay grades alone have not provided the answer. I think a fair give and take between employer and employee can turn the tide here and that it is not yet too late to do something. This in outline is what I propose for your consideration.

In Europe I am told the technician has long been recognized as one of a professional class. His education is an end in itself. In this country too often these days the technical institute is ignored in favor of the college. The 2-year specialized course is passed up by many who should have gone no farther but who have done so thanks perhaps to a GI bill and the myth that a college degree is the key to some different world of privilege. In Europe a typical engineer is surrounded by 6 to 12 technicians; the result a fabulous working team. In this country the more normal picture in too many companies is at best one technician for each engineer. The result is that our already scarce graduate engineers must greatly dissipate their expensive talents by performing technicians' work.

Let the armed services recognize the technician with a competitive program for qualified high school graduates through which the services would pay for 2 years education plus board allowance with guarantee of assignment at top enlisted grade for 4 years upon graduation. And let the reenlistment incentive be generous for those whom the services would like to keep. Here is a privilege for the best of technicians sponsored by the armed services. It is the knowledge on the part of the public that so-and-so got his job in the service as a privilege and not as an obligation which will make all our men in uniform be proud of their chosen careers.

Old Glory Speaks-Flag Day, June 14

EXTENSION OF REMARKS

## HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News in commemoration of Flag Day, 1959:

OLD GLORY SPEAKS-FLAG DAY, JUNE 14

(By Harry H. Schlacht)

I am "Old Glory." On June 14 I shall be 182 years old. I am the banner of hope and freedom. I am the symbol of national unity.

Let me tell you the story of my glory. "In the beginning God created the heaven and the earth." It is the first sentence of the first chapter of Genesis. It is the greatest story of all times. It is the story of the Lord's creation.

And God said: "Let there be light." And slowly out of the East came the first red and white rays of the morning sun. And then he made the stars. He set them in the blue sky where they shone softly as the first night fell over the earth.

They were the red, the white and the blue. They were the symbols of God's thoughts. They were enshrined in the minds of our forefathers out of which was born our Star

Spangled Banner.

I was hallowed by heroes from Bunker Hill to Iwo Jima. I symbolize justice, mercy, and charity. I stand for toleration of all men, of all creeds, of all races. I make no dis-tinction and recognize no distinction. I have been carried across the continent attuned to the songs of the plowshare and the laughter of children. I have been planted on the high pinnacle of American faith.

I have waved amid the solitude of the seven seas. I have flown across the plundered cities and blood-dried battlefields of Europe. I have made tyranny tremble and freedom rejoice. I am the soul of the Amer-

ican people.

Wherever I float, there are the glories of mankind. I speak in accents more stirring, in tones more touching, than the swelling notes of a grand organ, or in the ecstasies of the four magic strings. I am hailed with tears of joy. I am hailed with songs of de-Hverance.

I tell no story of crushed liberties or violated rights. I spring neither from the sorrows of the oppressed nor the sufferings of the conquered. I herald the noble purposes of a mighty people. I represent one people, one nation. I am the pledge of the present. I am the promise for the future.

So long as men follow the covenants of God. So long as they worship at the shrine of liberty, so long as they treasure the priceless privileges of freedom, so long as the principles of truth, justice, and charity remain deeply rooted in the human heart-I shall continue to be the enduring banner of the United States of America.

Tam Old Glory.

## Spotlight on Pornography

EXTENSION OF REMARKS OF

#### HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article by John C. O'Brien, printed in the New World June 12, 1959, entitled: "Spotlight on Pornography."

The other day I had the pleasure of joining the distinguished gentlelady from Pennsylvania, KATHRYN E. GRANA-HAN, by submitting a companion bill to her original proposal which would impose considerable restrictions against the use of public mails for the dissemination of obscene and pornographic

literature.

My companion measure has been given the number H.R. 7709. I am indeed proud to join Representative GRANAHAN in an effort to stem the mounting tide of literature being disseminated throughout our country by those who would undermine the morals of your young people. I think that Representative GRANA-HAN is to be commended for bringing this very serious problem to the attention of this Congress and I hope that the House of Representatives will give speedy consideration to the corrective measures proposed in this legislation.

There is no question in my mind that, from the mail I receive from my district, the American people are becoming more and more alarmed at the deplorable material that is being mailed, particularly to teenagers throughout the country. I feel that Congress must take effective measures to stop this traffic in obscene and pornographic literature before the situation becomes a national scandal.

I am introducing in the RECORD today column written by John C. O'Brien, titled, "Spotlight on Pornography," which appeared in the New World on June 12. I believe Mr. O'Brien's analysis of this problem, and particularly the statistics which he has compiled in his column, should contribute very much toward a better understanding by the Members of this House of the enormity of this problem.

I hope my colleagues will take the time to read this penetrating analysis by Mr. O'Brien and better understand how urgently corrective legislation is needed to stamp out this heinous and

predatory practice. I fully subscribe with the views of Mr. O'Brien as expressed in this column:

SPOTLIGHT ON PORNOGRAPHY (By John C. O'Brien)

A Subcommittee of the House Post Office and Civil Service Committee, directed by Representative Kathryn E. Gronahan, of Pennsylvania, has been throwing a spotlight on the widespread distribution through the mails of obscene and pornographic material.

But testimony by Postmaster General Arthur E. Summerfield and others about the enormity of this traffic, beamed mainly at boys and girls, has received only meager notice in the daily press. Some editors of the liberal schools, in fact, seem to be out of sympathy with the investigation, viewing it as another threat to freedom of expression.

In his testimony, Summerfield, who has sought diligently to keep the mails clear of indecent matter, noted that the Post Office Department had been subjected frequently to attack and ridicule by those who hope to profit personally from unrestricted mailings, or by those, who, confusing liberty with license, unwittingly give them assistance.

That those who profit from the traffic in obscene and pornographic materials should seek to discredit the Post Office Department by raising the cry of censorship should surprise no one, for this traffic is big busi-

Since the Second World War, commercialized pornography has grown by leaps and bounds. It is estimated that \$500 million is realized annually through mail-order sales of such material.

Complaints are flooding the Post Office Department at the rate of 50,000 a year from clergymen, parent-teachers associations, school principals, and alarmed parents. Last year alone the Postal Inspection Service investigated 14,000 complaints, of which about two-thirds came from parents who had intercepted lewd materials addressed to their children.

On the basis of the complaints received, the Postal Inspection Service estimates that from 700,000 to 1 million children will receive invitations to depravity through the mails this year.

Until last year, the Federal authorities were handicapped in their efforts to prosecute mail-order purveyors of pornography by court decisions that prosecutions could be brought only at the original point of mailing. But last year Congress enacted a law permitting prosecution at the point of actual destination. Under this law three men were recently indicted in Detroit for distributing obscene material through the mails in that city, although the material originated on the west coast.

The Post Office authorities, however, believe that new and stiffer legislation is needed. And it is expected that the subcommittee headed by Representative GRAN-AHAN will recommend such legislation after completing its investigation.

Declaration of the Spanish Democratic Opposition, June 1959

> EXTENSION OF REMARKS OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, the voice of the democratic opposition to the Franco dictatorship in Spain grows

louder. The first weak protests have become resonant cannon blasts. The "fire in the ashes" has become a strong and healthy flame.

This month in Madrid 13 political groups and workers' unions voted to adopt and subscribe the following "Declaration of the Spanish Democratic Opposition." The declaration sharply points up the continuing cruelties of the existing regime yet announces the refusal by the subscribers to join this month in a general national strike called for Thursday, June 18, by the Communist Party.

Under leave to extend my remarks in the RECORD I include the declaration and call to the attention of this House for special note point 6, section A. The

ashes are flaming.

DECLARATION OF THE SPANISH DEMOCRATIC OPPOSITION

In view of a catastrophic economic situation, increasingly difficult living conditions, shameful corruption of the public administration and the total lack of the guarantees for the most elemental human rights recognized in all Western countries, unrest, meariness, and indignation are spreading throughout the whole country. The dictatorship has neither improved its policies nor softened its repressive methods. It continues its abuses, always trusting in the efficacy of the watchword "Franco or communism." The brutal repression has only been softened at times through pressure from abroad.

The Spanish people and the public opinion of the free world ask themselves whether or not the inadmissible dilemma "dictatorship of Franco or Communist dictatorship," to which Francoist propaganda alleges, will face up to reality. Francoists, as well as Communists, make every effort in their propaganda to maintain and extend doubt, confusion, and fear, all of which may have catastrophic consequences for Spain and

democracy.

The time has come to put an end to ambiguities and confusions. For this purpose it will be necessary for Spain and the free world to know that anti-Communist political groups, organized secretly, exist in the nation and that they constitute the true democratic opposition. It is necessary that they know those groups do not constitute an absurd proliferation of small parties without real force, but that they respond to the actual currents of European political thought. These groups are increasing their contacts, which are soon going to culminate in the creation of an organism to centralize and coordinate all political action against the present regime.

The accord among the groups of democratic opposition will be based upon the following points of general agreement:

- 1. Total opposition to the actual regime and the Spanish political situation.
- 2. Complete and unequivocal acceptance of democracy as basis for the future regime of the nation.
- 3. Solemn repudiation of violence as means of resolving political differences, and for this reason, overcoming of the effects of the civil war and of all distinction between victors and vanquished.
- 4. Total independence and clear distinction between the policies of the democratic opposition and the Communist Party.
- 5. Adherence to the United Europe which is coming into outline day by day, and to any steps in that direction which have been made and may be made.

6. Decision to collaborate united now to hasten the fall of the dictatorship, and in the near future to get rid of all that which should be removed; to repair the destruction caused to the nation by 20 years of irresponsibility and, above all, to build the foundations for a definitive and genuine understanding of all Spaniards within the frame of an authentic democracy.

It must also be made evident, and as it pertains to the present moment, that the profound national dissatisfaction is becoming more manifest and grave in the working classes, which are suffering the constant increase of prices accompanied by freezing of wages, and at times also a diminution of their increase as a result of the lack of work

incomes, as a result of the lack of work.

The Communist Party, taking advantage of the general discontent and the catastrophic economic situation, has called for a general national strike for June 18. The democratic groups, without in the least decreasing their firm opposition of the regime, have resolved not to support such a strike

for the following reasons:

(a) Regardless of the profound unrest, especially in the working classes, it is not considered that the present moment is the most appropriate to make known the protest of the Spanish people, particularly when an aggravation of the situation is foreseen in the immediate future. The possible success of the strike, moreover, would give an erroneous impression of the strength of the Communist Party, whereas this strike would in reality reflect the desire of the Spanish people to demonstrate as soon as possible their combined reaction against the Francoist dictatorship, We are very well aware that a failure of the planned Communist strike will benefit the Franco regime. However, it is impossible for the democratic opposition to collaborate with the Communists and to facilitate them a success which would be of profit only to themselves and not to the Spanish people.

(b) The democratic groups now abstaining refuse to ask the working class to collaborate in this strike and to face now the hardships of the repression and the resulting firings (so much desired by many employers in difficult economic situation), when success of the strike is doubtful and doubtful also the positive effects which would result from such an action. However, they will propose to the country a national movement of peaceful protest at a time in which this

action can be sure of success.

(c) The democratic groups, for obvious reasons, cannot support an initiative which is solely Communist. Any other attitude, in addition, would only result in harm and loss of prestige to the Spanish Democratic opposition

The political groups and workers' unions which adopt this attitude and subscribe to this declaration are the following:

Movimiento Socialista de Catalunya (Catalonian Socialist Movement).

Union Democrata Catalana (Catalonian

Democratic Union). Sindicalistas Cristianos (Christian Syndi-

calists).
Partido Socialista Obrero Espanol (Spanish

Partido Socialista Obrero Espanol (Spanish Socialist Workers' Party).

Union General de Trabajadores (General Workers' Union) (UGT). Confederacion Nacional de Trabajo (Na-

Confederacion Nacional de Trabajo (National Confederation of Labor) (CNT).

Izquierda Democrata Cristiana (Christian Democratic Left).

Union Espanola (Spanish Union-Monar-chist Right).

Partido Social de Accion Democratica (National Party of Democratic Action).

Solidaridad de Obreros y Empleados Vascos (Solidarity of Basque Workers and Employees). Accion Nacionalista Vasca (Basque Nationalist Action).

Liberales (Liberals).

Agrupacion Socialista Universitaria (Socialist University Association). Madrid, June 1959.

## Mutual Security: An Outdated Program

EXTENSION OF REMARKS

#### HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. BARR. Mr. Speaker, the voters of Marion County, Ind., did not send me to Congress with instructions to ignore the financial responsibility of the United States to the rest of the world. In that part of Indiana we have an acute awareness of international problems. We should have—we make about 10 percent of our money from world trade. But, on the other hand, my voters certainly did not send me to Washington to squander their tax dollars on a program that is outdated—that no longer is designed to mee world problems.

After World War II the United States launched the Marshall plan and then started our mutual security program. These proved enormously successful, and today we can look with considerable pride at West Germany, Great Britain, France, Italy, Holland, Belgium, and Japan. These nations with our help have staged an astounding recovery and today are probably stronger than at any other time in their histories. In fact they are so financially strong that it is high time that they start sharing part of the crushing load that the U.S. taxpayer has borne for many years. To date the United States has invested about \$82 billion in the Marshall plan and our mutual security programs. I believe that this enormous sum has been a good investment, but now it is time to call in our partners in the free world to say, "How about a hand?"

In 1946 the Congress wisely estab-shed through the Bretton Woods lished through the Bretton Agreement the International Monetary Fund and the World Bank. The Monetary Fund is designed to help nations through short-term financial difficulties. The World Bank is designed to help free nations develop their resources through long-term loans. In these institutions the United States has joined with 67 other free nations in a great international pool of cash and know-how. These institutions have been operating now for 13 years with an outstanding record of success in helping the free nations of the world get on with their economic problems of development, trade, and growth.

My first legislative job in this Congress was to defend on the floor of this House the legislation designed to increase the capitalization of the Monetary Fund from \$9 billion to \$14 billion and to increase the capitalization of the World Bank from \$10 billion to \$20 billion. Our share of this increase amounted to \$4,700 million. In the next few weeks I hope to support in this Congress the creation of an Inter-American Bank in which we will have an investment of another \$400 million. So in this session of Congress I will have actively supported \$5 billion in funds designed to meet our financial responsibility to the world.

This is where I stop. I will vote to pick up our share of the chips in any joint movement with the rest of the free world. I will not vote to saddle this Nation with a perpetual obligation to develop and to protect the world single-handedly.

#### More or Less Personal

EXTENSION OF REMARKS

## HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. FORD. Mr. Speaker, our colleague, the Honorable Phil Weaver, of the First District, Nebraska, was a very constructive and extremely conscientious and most able member of the Defense Department Subcommittee on Appropriations. Although this was Phil Weaver's first year as a member of this 17-member group he did an exceptionally fine job and in succeeding years he will contribute more and more in helping to make our national security program sound and fully adequate.

On Monday, June 8, the Lincoln Evening Journal, on the editorial page, carried a fine article on the excellent speech Phil Weaver made on the defense appropriation bill for fiscal year 1960 at the time the House of Representatives was considering this vitally im-

portant legislation.

The article is as follows:

More or Less Personal

Judging from his statement on the floor of the House, Representative Phil Weaver of Nebraska's First District has done his homework well as a rookie member of the House Subcommittee on Defense Appropriations. This vital group accounts for a little more than half the total expenditures of the Federal Government.

Like other members of the subcommittee.
Weaver addressed the House on proposed defense spending. While he presented the combined views of the subcommittee, his explanation was especially clear and logical-

#### WEAVER AND DEFENSE

The House committee is recommending just short of \$39 billion for defense in the next fiscal year. Even for this figure, Weaver said, "we are not buying total, impenetrable defense." This would not be possible with 10 times that amount, he said.

However, Weaver contended, "it provides a defense system which we can afford, and which will afford us the maximum amount of protection and striking force for every dollar spent." He gave this view of defense stratery:

"The only way we have found by which we can offset the Communist might and the Communist ability to create total destruction is by being able, ourselves, to create total destruction. This, in reality involves a dreadful race with each other and against time. It requires our being willing to ex-pend our energies, our time and our natural resources and national treasure.

On specific defense items, WEAVER made it clear that the long-range trend in missiles is away from expensive permanent installations such as the Atlas launching sites planned near Lincoln and Omaha. The accent is moving to smaller, but more mobile, missiles.

The most significant new development, WEAVER said, is the submarine-launched Polaris missile. The fact that it can be fired from a submerged position makes it, "if such a thing is possible, an invulnerable weapon." Increased emphasis is proposed for this mis-

More funds, too, are recommended for the Air Force to develop air-to-surface ballistic missiles. This would "remake our bombers into launching platforms for guided missiles and, if the systems work out satisfactorily, our bombers can strike from a safe range

Mobility is the key also in boosting spending for the Minuteman missile. This is a solid fuel missile capable of being launched from a flatcar or barge. Minuteman lacks some of the carrying capacity of Atlas or Titan but more than makes up for it in mobility and economy of production, Weaver noted.

While plans will go ahead for pad-launched missiles such as Atlas and Titan, they have the disadvantage of being "sitting ducks," he said.

In antiaircraft plans, work will be concentrated on the Nike-Hercules, such as is planned for the Lincoln area. This has proved its worth time and again. The competitive Bomarc, on the other hand, is being cut because it is no defense against ICBM's and its development has lagged considerably.

Navy emphasis is swinging even more to atomic submarines and antisubmarine weapons. To help provide for this, a Navy request for a new aircraft carrier was eliminated. Any future carriers should be of the atomic type so that it will not require refueling.

Said Weaver: "We must not build something that is out of date when we start." Certainly that is a sound yardstick for measuring the worth of new defense weapons.

Administration Hands Banks 15 Billion "Free" Dollars-S. 1120, Vault Cash Bill

> EXTENSION OF REMARKS OF

## HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. FLYNN. Mr. Speaker, last week I joined the ever-growing number of Congressmen who are expressing their deep concern about, and strong opposition to, bill S. 1120, commonly known as the vault cash bill. In my talk of June 5, I set out a chart showing how the banks of America, who sell Government bonds, last year and this year, and probably for some time to come, are completely avoiding the payment of income

taxes to the Federal Government-and are not only avoiding the taxes, but are making a tidy profit in addition thereto. over and above profits made by those banks which pay their taxes and hold the 21/2-percent bonds. I pointed out that the interest rate increase of about 2 percent on the national debt came about because the Federal Reserve System and the Federal Reserve bank went on strike against the United States and refused to support the bond market of the country. This forced the U.S. Treasury to increase the interest rate on bonds in order to secure buyers. The high interest rate increase on current bonds brought down the value of bonds so that Government bonds with 10 years before maturity are worth only \$82 on the hundred. This affects widows, orphans, trust funds, and institutions who invested their money in Government securities so that they would have a stable investment which could be cashed in at full value in time of need.

I further pointed out that the increased interest on the public debt because of this 2-percent increase in interest is close to \$6 billion a year, and these are inflationary dollars, because the public gets nothing more for them than they received previously. It also increases the taxes that the citizens of this

country must pay.

I rise now, Mr. Speaker, to point out that the \$6 billion which the holders of the bonds receive, in additional interest from the public Treasury will be further increased if this Congress adopts the President's proposal of removing the interest limit. For each one point of interest that the Treasury adds to its bonds, the people of the Nation will be forced to pay out annually during the life of those bonds 3 billion inflationary dollars, in addition to those already being paid. I point out, Mr. Speaker, that this is but a small part of the huge increase which the banks within the fold of the Federal Reserve System gained from their strike against the people of America. The increase in interest on the public debt forced up the interest rate on all private, business and municipal debts of this Nation by a corresponding 2 percent. This means that the banks are extracting from our citizens individually, from the municipalities for bond issues which are paid by the individual citizens in the form of taxes-and from business institutionsan additional interest that probably runs ten times what the increase in interest on the national debt runs. This increased interest at even 41/4 percent is a fantastic instrument in the revenue it produces for the banking fraternity and also the fact that it completely releases banks, through the devices above mentioned, from paying any Federal income taxes to the Government for a several-year period.

I want to point out, Mr. Speaker, that the banks last year secured from this Congress \$10½ billion and were permitted and did, for the most part, under Federal Reserve Bank rules issue approximately 7 dollars for each dollar received. These were inflationary dollars. They were printing press dollars backed by the credit of the United

States. This year, under the vault cash bill, with the Federal Reserve Bank having only about \$25 billion of U.S. bonds and other securities, the member banks are asking that the Congress make it possible for the Federal Reserve Bank to give the member banks without consideration and free of tax, either income or gift tax, \$15 billion worth of these securities. This, they are asking, from a Government that is more deeply in debt than at any time in history-from a Government which is unable to balance its budget and from a Government which is currently being asked to increase its debt limit by \$12 billion.

Mr. Speaker, the two-time honored methods of controlling inflation are either by the Federal Reserve bank increasing the interest rate or by increasing the reserve of member banks. The Federal Reserve bank recently increased the interest rate and now proposes instead of increasing the required reserves of the banks to give the banks 15 billion inflationary dollars. These will feed inflation.

Let me call your attention to what will happen. Each bank will have the right to issue \$700 for each \$100 it receives and in total, will thus issue \$105 billion worth of new money. This will be in addition to the new money issued last year. This will be \$105 billion worth of inflation. So that instead of the Federal Reserve Bank controlling inflation it will be feeding inflation to a greater extent than ever before in the history of this country. This country will not be through with the giveaway to the banks even after the Federal Reserve System pays out this \$15 billion, for the possibility exists, which may well become a fact. that this country will be forced to continue for the next 25 years to pay these same banks the added sum of \$5 billion per year.

Here is the way it will work. This Government will refinance about half of its public debt by 1962. The Treasury and the President are asking for the interest ceiling to be removed so that debt can be refinanced on a long-term basis. There is no interest ceiling on shortterm financing which includes Government obligations maturing within 5 The Treasury Department must. therefore, plan on engaging in long-term financing over about 25 years which will place the interest burden on our children as well as ourselves. The banks, upon receiving the \$15 billion, will print \$7 for every \$1 received and will end up with \$105 billion. They can use the money to buy \$105 billion worth of the new longterm bonds that the Treasury will issue in refinancing the public debt on a longterm basis. If we remove the interest ceiling, these will undoubtedly be 5 percent bonds and the interest on them will exceed \$5 billion per year until maturity which will probably be 25 years. This means, Mr. Speaker, that we start out by giving the banks \$15 billion without consideration or even any tax. The banks use this money, plus the credit of the United States to print paper money bearing the seal and name of the United States, to the extent of \$105 billion. This money issued on the credit of the United States is then turned back to the U.S. Treasury in return for 25-year 5percent Treasury bonds-bonds, Mr. Speaker, which require the people of America to pay annually to the banks as interest thereon a sum in excess of \$5 billion. This means that over a 25-year period, which will be the life of the bonds, this country will have paid to the banking fraternity of this Nation the total sum of \$140 billion. All of this money will have been paid to the banks without the banks having invested 1 cent of their own money. All of the money involved will be money that was originally owned by the United Statesmoney which was given to the banks and on which they collected interest.

Mr. Speaker, if the Federal Reserve Bank canceled this \$15 billion in bonds at the present time and if the Congress would pass a bill which I introduced in the House requiring the Government to retire the public debt at the rate of 2 percent a year, which at 2 percent a year would be approximately the same amount per year that this Government will pay in interest on the money above mentioned—in 25 years, the Government will have reduced its debt to approximately one-half of what it is today.

Mr. Speaker, I point out that the member banks of the Federal Reserve System who have failed to support the bond market of the United States are in no way entitled to a \$15 billion giveaway from the U.S. Treasury, and that to give the banks this money will be a crime against every citizen, every business institution and every municipality paying taxes to the U.S. Government.

#### Commencement 1959

EXTENSION OF REMARKS

## HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. McDOWELL. Mr. Speaker, one of the more moving commencement addresses which it has been my pleasure to read was delivered recently by Harry Golden, author of the current bestseller, "Only in America." It was delivered before the graduating class of Myers Park High School, Charlotte, N.C., on June 2, 1959.

I include it here as part of my remarks: COMMENCEMENT ADDRESS, CHARLOTTE, (N.C.) MYERS PARK HIGH SCHOOL, JUNE 2, 1959

(By Harry Golden, Charlotte, N.C.)

On a recent lecture tour of the west coast, I was given a party by some friends and among the guests were Ozzle and Harriet Nelson. During the course of the evening, I had an inspiration. I took Mrs. Nelson aside and asked her where her son Ricky was at the moment. She said "Both boys are at home," and I told her that she can do me a big favor, that I had an important commencement speech to make in my hometown before the big high school and that I needed a good "opening." I asked her to please ask Ricky to come over and let me

just shake his hand. Harriet Nelson is a kind and understanding woman and within 5 minutes in come David and Ricky. We had a long quiet talk about books and then I shook Ricky's hand and so here is the hand—I haven't even washed it yet.

It is a great honor to be here. I have made some 102 speeches since last October, speeches before church groups, and fraternal and social-action societies, and I am not trying to go overboard when I say to you, in all sincerity, that this is the most important speech of all and for two very good reasons. First, because it is before one of the four or five most important institutions of my own city and second, because it is a commencement address before an audience of some 350 high-school graduates and their parents and friends. And this great honor is heightened by the fact that you specifically voted for me to appear here tonight.

Whenever I go around the country I am confronted with the evidence that the American dream is not an idle myth, that you can still sell 300,000 copies of a hard-cover book which does not have obscene pictures or four-letter words in it, and that the high school of my own city would invite a man to speak their commencement address who they know is not given to the usual platitudes of the occasion; platitudes which include such things as, "Today I am a man," or "Go forth and conquer," or "Graduation is only a commencement," and so forth. And yet this does not mean that you will necessarily remember anything of world-shaking importance out of my commencement address

When I graduated from the East Side Evening High School of New York in 1919, I remember that the commencement speaker was an Annapolis man who had been in the first graduating class. He had salled with Admiral Dewey into Manila Bay in 1898. While I was writing this speach I tried to remember what this speaker had told my class but I could not. All that stands out in my mind is a fellow looking trim and smart in his blue commander's uniform, and one phrase. He told us that, before Dewey had beaten the Spanish Fleet, Manila was spelled with two I's. But Admiral Dewey had knocked the 'I' out of Manila.

I wonder if this is to be my fate. I am willing to bet that all you will remember about your commencement speaker 30 or 40 years from now will be the same joke I remembered about my commencement speaker. One of you undoubtedly will be a com-mencement speaker, and if you've forgotten the joke about Ricky Nelson you'll have to make a new one up, and originality is all to the good. I suspect you will forget what I have to say to you. You see, you are the toughest audience any speaker has to face. It is simply terrifying to stand up and speak to a body of graduating seniors. I say this advisedly. When you asked me to be your commencement speaker I expected to meet the toughest audience of my career. You are all smarter than I am. All of you see things more clearly because you are more willing to accept them. You are stronger than any adult in this room. Some of you already, and all of you, within the next month or next year or next 5 years, will make a decision that would leave me and all of my fellow adults weak and nervous. You are going to decide what to do with your lives while the rest of us are wondering what we did with ours.

I will not presume, therefore, to tell you what to do with your future. You will know better than I that the world which my contemporaries and I have left you is not the best world to make this decision in. The world that the Annapolis commander left me was a better one than I have left you, but we'll skip that. There's no sense in crying over it. You have the problem of making your own way in the world and you

also have the great problem of being the scapegoat of the moment. Yes, you are the scapegoat of the moment.

Primitive man was walking up the hill with a dead beast across his back. He was taking it back to camp. Beside him was his son or his brother or his father. They had been hunting together. Suddenly, primitive man took the dead animal and put it on the back of his companion and immediately felt a great sense of relief. He had shifted the burden, even though he had not vet developed sufficient thinking power to asso-ciate the shifting of the burden and his sudden sense of relief. There have been many scapegoats in history. When there are ideas which confound you, when formulas do not seem to be working out, when you lose confidence in yourself, you look around for someone to whose back you can shift the burden. And so the folks look for a scapegoat; Jews, Negroes, and particularly fellows with unpopular ideas; and it is not always the minority. It may surprise you who represent the most native born white Protestant society inthe Western World, to know that once white Christians were-scapegoats, too. Not only in Nero's time but right here in America. They burned Catholic monasteries in Massachusetts; they killed Baptists in Virginia, and you Methodists and Presbyterians had to build your early church with a fireplace so that when the Anglican sheriff came to investigate, you could hide your prayerbooks and say that you were merely visiting friends.

And now we have a new scapegoat, the teenager. To ease the pain of our own frustration, to justify our own shortcomings, and our own failures, we have shifted the burden to the teenager and we think we can now rest easy. But it is only an illusion. The other day in our own North Carolina Legislature a fellow introduced a bill to allow the teacher to spank the students. A Daniel come to judgment. New York and Michigan have been toying with the same bit of nonsense. And so we are doing everything to help create for ourselves two illusions; first, that we are doing something noble, and second, that we do not have any responsibility in the matter. This is a stupid procedure, which you will learn in college when you begin to study the history of human behavior. You will find this basic truth behavior. You will find this basic truth that we, all of us, are the results of the con-ditions to which we were exposed. Some day you graduates will be clergymen and doctors, and businessmen and teachers, and you will be these things because of the classmates you met, the friends you made, the people who came to your home and the language and ideas you heard expressed. of us is a reflection of the society which surrounds us, and the entire teenage culture, where it has given us concern, reflects the frustration, the tension, and the rootlessness of our highly mobile adult world. A spanking law will not solve it any more than you can cure cancer with an aspirin tablet. goes much deeper and it reaches down to the rootless world we have created in the wake of our tremendous industrialization.

You are 15 years old and you live in Harlem in New York and you hear your mother and father enter into a conspiracy, they are conniving-you hear your mother per to your father, "Let's tell the renting agent we are Spanish not Puerto Rican, and you thereby cut the teenager off from history and tradition and a sense of belonging, and you must belong. You must belong to something. So the teenager goes downstairs and gets himself a black-leather jacket with the word "Pirates" on it and now he belongs. He belongs to something, and he transfers to the "Pirates" all the loyalties and devotion which rightfully belong to the clan; the family, the church, and the community. Or you live in the South and you've never seen your father

except in overalls and you've never seen your mother except in an apron coming from some other home and a car pulls up in your dirt-littered alley and a voice says, "Tell Maggie not to come tomorrow, we are going away;" or "Tell Maggie she'll find the key under the mat," and Maggle is your mother, and now what do you want this teenager to do, jump for joy? He has been deprived of dignity and this is the most tragic of all afflictions. A human being can go without food longer than he can go without human dignity.

And this human dignity involves your own future. I tell you these things because you will one day be the leaders of this society—you will be the lawyers, and the civic leaders and you must remember this human dignity idea above evertyhing else. You will some day look into a mirror and ask yourself, "Do I have a mature mind?" and I quote to you from all the great minds that have left us the heritage of the English-speaking civilization, that there is only one way you can answer that affirmatively; you have a mature mind only when you rerespect new ideas, when you respect all your neighbors, and when you respect all your neighbors, are spect ideas and unless you respect your neighbors.

And keep your eye on the book burners and the book censors. They are your greatest enemies. Mankind has advanced only when it succeeded in fighting off its book burners and book censors. Ideas, Remember the primacy of ideas. In first-century Rome you couldn't walk a hundred yards without seeing two or three handsomely uniformed legionnaires. The big blonds from the northern forests had already acquired the right to serve as Romans; and like all immigrants, they out-Romaned the Romans. It was a gigantic empire with tremendous political and military power. Then along came a little baid-headed Jew from the East who didn't even have pockets in his pants. You call him St. Paul and this St. Paul had a book and an idea and because he had a book and an idea, he conquered the whole empire lock stock and barrel.

empire, lock, stock, and barrel.

When a society begins to fear ideas it means that the nation has lost confidence in itself and that it can no longer meet the challenge of the world. Some day in college you will read a book by an Englishman named Buckle. It is called the "History of Civilization" and he speaks of Spain, which in the 15th century was afraid of ideas and she burned all the books, and says Mr. Buckle, "There she sits, with the most fertile soil in the world-a torpid mass." When you can no longer stand ideas think of this torpid mass in relation to America, because America is not geography. I was never Impressed with the song "America, the Beau-There are finer fields of "amber grain" in the Soviet Ukraine and we have no mountains as beautiful as the Swiss or Bavarian Alps, and we do not have ports as majestic as Rio de Janeiro or Napies. So what is America? America is an idea, "O, say, can you see by the dawn's early light" and what do you see-a flag, yes, but also a symbol of human dignity, a symbol of a respect for ideas, a respect for people, and a respect for ourselves.

And one more word about this "teenage problem." We had it in my day and we called it "flaming youth," and some of the folks wanted to revive the whipping post then, but the kids who jumped into the theater alsie to dance to the clarinet playing of Benny Goodman were the same kids who walked through the jungles of Guadalcanal and made the daylight air raids over the Rumanian oil fields and helped save the world for some of us spanking-law enthusiasts.

And now thank you. To the graduating class let me be so bold as to pronounce an old Irish prayer:

"May the hills rise up to meet you, May the wind be ever behind you, And may God hold you in the palm of His hand."

## Why Medical Care Costs Concern the Senate

EXTENSION OF REMARKS

## HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Wednesday, June 17, 1959

Mr. McNamara. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article written by Mr. George E. Connery, relating to an interview with the Senator from Oregon [Mr. Morsel concerning an investigation of hospitals and Blue Cross in Washington, D.C., entitled "Why Medical Care Costs Concern the Senate."

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Modern Hospital, May 1959] Why Medical Care Costs Concern the Senate

#### (By George E. Connery)

(As chairman of a subcommittee investigating hospitals and Blue Cross in Washington, Senator Wayne Mosse, in this Modern Hospital interview, says the inquiry might become nationwide, and airs his views on the costs of health care.)

Senator Wayne Mosse, Oregon Democrat, loves a fight and he can't understand why other people don't always feel the same way. "When it's over you have more facts on the table and you have a much better chance of getting something done," he explains.

Now he is wading into an issue that may develop into a long-range argument with doctors and hospitals over the financing of medical care costs.

Technically, the question at the moment is a relatively narrow one—whether the Commissioners of the District of Columbia (Washington's "city council") should appoint a majority of the board that controls the District of Columbia area's Group Hospitalization, Inc. (Blue Cross). The Senator is chairman of a subcommittee that is looking into the matter.

But actually the issue is not that limited geographically. National attention seems to focus on most situations in which Senator Mosss becomes involved, and this is no exception. Furthermore, if the Washington hearings produce information of broad significance to medical care costs, Senator Mosss, through his membership also on the Labor and Public Welfare Committee, could swing out into a national investigation.

"Certainly that's a possibility," he told the Modern Hospital, "but it's not the only possibility. Foundations and other organizations outside Government might take some action, too."

Senator Mosse is one of the Senate's foremost authorities on constitutional law and legislative procedures. He has promised that hearings will be conducted strictly by the book, that he will show no preference. And no one who knows him would doubt that.

Yet he is not a legal automaton; he has some strong views on the responsibility of the Federal Government for getting proper health care to all the people at prices they can afford. For this reason it is important to understand the beliefs that have projected him into a prominent position in hospital-medical legislation.

#### ADVOCATES FORAND BILL

He is the Senate's most articulate advocate of the Forand bill, and has introduced an identical measure in his Chamber. This is a proposal to raise social security taxes to finance hospitalization for the aged and other beneficiaries of the system. It is being vigorously opposed by the American Medical Association; American Hospital Association's opposition is something less than vigorous.

He doesn't see any way short of State or Federal subsidies to bring hospital and medical charges within the reach of all the population.

He is not in the least awed by the political strength of the medical profession and hospital people. "Organized medicine is against me almost all the time. But they haven't done much damage. All I have to do is make a few speeches on the subject of medical costs, and line up a few facts, and I don't have to worry."

Yet, to him it is not paradoxical that it was his vote on the Senate Labor Committee that for 3 years kept the Wagner-Murray-Dingell socialized medicine bill bottled up

"I was against socialized medicine then and I'm even more opposed to it now," he says. "Actually, the doctors ought to realize that it's liberals like me who talk up to them who are their only real friends and who are the only ones who can save them from Government control."

Senator Mosse, a former law teacher, can point specifically to the Constitution of the United States as his guide in almost any controversy that arises.

In this situation, he quotes the preamble: "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, \* \* do ordain and establish this Constitution for the United States."

"The principles of government must be implemented," he insists. "The general welfare, the promotion of the general welfare, is a duty and a responsibility of the Congress.

"This also means checking any power that is inimical to the welfare of the people. I am anxious to protect medicine's legitimate rights, but I'm not going to let the doctors or the hospital people write their own laws or stop us from writing the proper laws.

"Like all other laws, laws affecting medical care and medical costs and research and public health are laws for all the people, not just laws for the doctors and the hospitals. They are not going to be allowed to dictate laws that apply to the whole population, no more than labor is going to be allowed to write the labor laws that apply to the whole population.

"The doctors can't write their own ticket down here.

"In many of these situations the trouble comes because people—and members of the Senate included—are not able to apply abstract principles to concrete problems. The Constitution says plainly that the Congress is to promote the general welfare. This is our source of authority to pass laws that we think will improve the medical care the people are getting. But many people can't see that relationship and that obligation.

"In more specific terms, the health of the American people is a great source of wealth. The Government cannot sit idly by and see it destroyed."

The Senator, naturally, doesn't accept the argument of organized medicine that rapid progress is being made in bringing good medical care to all the people.

#### SHOULD BE NO VARIATION

"I am not satisfied that the equality of health treatment is being attained. There is no reason why in our times there should variation of medical care based on families' various economic positions."

The Senator's opinion that health legislation and medical care are important issues with the people was reinforced, he said, by the results of an informal survey taken by

his office early this year. The Senator's newsletter had reached a circulation of 60,000. It was an expensive operation, and besides he suspected that there were too many people on the list who shouldn't be there, and that there were wrong addresses, etc. So a "sudden death" notice was sent out. If the readers didn't return the enclosed form within a certain time their names automatically would go off the mailing list. Also, on the form there was a space just labeled "Comments."

Of those who wrote any comment, Senator Morse said, a preponderance were concerned over the high cost of hospital and medical care. Why did costs have to be so high? Why were health insurance rates always going up? How do you get the money to pay for a long illness? The usual questions, of course, but their volume was surprising. Only one other subject-worry about a warproduced anywhere near as many questions as did medical care costs.

This was a straight, unrigged response. No subjects were suggested, nor were any even listed on the form.

#### NO ROOM FOR DOUBT

If the Senator had any question about whether he was moving into an important field, one in which the people's concern was vital, that question was now removed.

"I was intrigued by the fact medical costs and war fears resulted in far more comments than all other subjects combined.

"Why these two? I think it's an expression of basic insecurity in the face of illness and war. In either case, the individual family has little or no control over its fate. There are two major and frightening spectersnational devastation through an enemy attack and personal devastation, financial and physical, through an attack of illness."

The record over the last year shows Sen-ator Morse is driving ahead in his investigation, and that, eventually, he probably will have all the facts spread out on the table where he wants them.

The first District of Columbia hearings last summer were prompted by announce-ment that Group Hospitalization, Inc., would raise its rates by about 42 percent. Senator Morse called on all interested parties to explain.

In opening the session, the Senator re-marked that he was fully aware that the problem had "far broader aspects" than the raise in rates. "This deals with the whole question of the direct and indirect rights of citizens in the field of medical care. And may I say for the benefit of the medical profession that this is something the American people are going to be confronted with more and more, year after year."

Later, in questioning one of the District Commissioners, the Senator again took a look far ahead when he said: "Whatever information we have to get we are going to get, because I think this is the proper place to point out that the American people in the years ahead, I think, are going to expect their Government to see to it that the health of the people of this city receives adequate care at reasonable cost."

The Commissioners then explained that they wanted Congress (which must pass all laws for the District) to pass a bill to give them authority to name a majority of the board members (hospital and medical appointees now have majority) to keep close and constant check on Group Hospitalization's operations, and to approve or disapprove rate changes.

Group Hospitalization's spokesmen put up a strong defense—there had been only three prior rate increases in 25 years, and two reductions; the group lost almost a million dollars the previous year; 65 percent of its expenses are wages and salaries.

The increases went into effect in the fall, and it might be the subscribers were more understanding of costs than the Commissioners and the Senators, because last year there were 5,000 fewer cancellations than in the previous year.

#### CALLED FOR NEW IDEAS

That hearing settled nothing. After a lull of several months, Senator Morse announced that hearings would be reopened early this session. Also, to keep the fire burning, he challenged the District doctors to get busy on the problem, to accept their responsibilitles, and to come up with some new ideas.

That elicited a sharp reaction from the District of Columbia Medical Society in the form of a statement written in obviously restrained rage. It said in part:

"It can probably honestly be said that we as a society have been seriously studying such problems (as medical care) a much longer time than most people who are at present loudly proclaiming that the doctors must supply the answers to the causes, and find the solutions of the high cost of medical

"All we want for ourselves is reasonable compensation for the years of education, the staggering expense of the same, the proficiency we have acquired through long hours of dealing with the sick, the constant night vigil of study, and attending at considerable expense medical meetings and postgraduate The main compensation we receive is the satisfaction of helping suffering humanity, but we, too, must live and rear and educate our children."

Then, with rage translated to satire, the editorial continued:

"We know that we and other physicians and scientists are partly responsible for the high cost of medical care in that we have developed expensive diagnostic procedures and therapeutic modalities to cure sick people quickly that were not known 50 or even 25 years ago. On the other hnad, we are not responsible for the alarming inflation that has caused our efforts to be so costly. We respectfully submit that the latter is the main problem for our politicians and statesmen to solve."

It is unlikely that Senator Morse, inured by years of long-range and short-range exchanges with doctors, was much impressed.

His reaction was a change of pace, for which he is noted.

#### HE THANKED THE COMMITTEE

Ignoring the charges, he thanked the society for its cooperation, and with his letter enclosed a copy of another letter he had sent to a publication. The latter said in

"I intend, and I am sure that my colleagues on the subcommittee intend, in this inquiry to be guided by a major principle which should be at the basis of any congressional inquiry. That principle is simply to determine what the facts of the situation are in order that a firm record may be made which can serve as a basis for legislation which is in the public interest. "It is not our intention to 'pillory' any individual or group of individuals. At the same time we have the duty and responsibility of making as thorough a study as we can in order that the relevant factual material can be placed upon the public record. We will follow where the facts lead, and the legislative product will reflect what

That appeared a reasonable and a moderate approach. But it should not be interpreted as a change of heart. WAYNE MORRIS still is convinced that the people are not getting the health care they should, and that it is the responsibility of the Federal Government to move in rapidly and forcefully and correct the situation.

He is still standing firmly on his creed, as expounded when he introduced his version of the Forand bill.

"It is simply economic nonsense to continue to assume that our older people, hard pressed in the best of health to make ends meet on the shrinking purchasing power of the pension dollar, can squeeze enough extra dollars from this meager income to meet the mounting cost of really adequate health protection. Clearly they cannot.
"Let us not wait upon an administration

that is decades behind the times in recognizing and coming to grips with social and economic problems. The Congress has the primary obligation to consider this legislation, to perfect it, and then to enact it."

Yet, when asked more about his views on

the Forand-Morse bill, the Senator said:
"This may not be the way to do it. Maybe there is another way. But at least we should get down to concrete facts."

Remember, he's the one who for 3 years kept the socialized medicine bill off the floor of the Senate. And he would do that

#### Federal Financing Reforms

EXTENSION OF REMARKS OF

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. CURTIS of Missouri. - Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

#### FEDERAL FINANCING REFORMS

The administration hasn't officially presented to Congress its recently discussed proposals for reform in the area of debt management, but it is difficult to see how Congress could justify refusing its reported re-

The plan is said to include the modification or removal of three needless obstacles to the financing of the Treasury's needs. would call for an increase in the debt ceiling to perhaps \$290 to \$295 billion. The present temporary ceiling of \$288 billion is scheduled to revert on June 30 to \$283 billion. At that time the level of the debt as now indicated will be \$285 billion.

The administration, it is understood, will seek at the same time a raising or complete removal of the present unrealistic 41/4 percent maximum rate of interest at which Government securities may be offered. The third change it will seek is a rise in the present ceiling of 31/4 percent on savings bonds. Because investors and savers can obtain higher rates elsewhere, the volume of savings bond redemptions has been running ahead of purchases now for some time.

More important, if the Treasury is to enjoy the flexibility it requires in the sound financing of the public debt, is the termination of the prevailing absurd maximum interest rate of regular Government security issues. In the light of present yields this makes it impossible to issue new securities with maturities above 5 years. When the Eisenhower administration came to office it found that of a total marketable debt of \$266 billion the average maturity was 5 years and 4 months. At the present time the average maturity has fallen to 4 years 8 months.

So far this year the Treasury has been able to raise \$1.5 billion of its overall financing of \$28.1 billion on a long-term basis. Nevertheless, it cannot expect to continue indefinitely the inflationary policy of financing its needs predominantly through the banks. No unnecessary obstacle should be maintained that would prevent it from resorting to the long-term market when the situation presents itself.

Address Delivered by Hon. Sumner G. Whittier, Administrator of Veterans' Affairs

EXTENSION OF REMARKS

#### HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Wednesday, June 17, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Hon. Sumner G. Whittier, Administrator of Veterans' Affairs, and a splendid citizen of Massachusetts, before the annual meeting of the President's Committee on Employment of the Physically Handicapped, on Friday, May 8, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Text of Remarks by How, Sumner G. Whittier, Administrator of Veterans' Affairs, Before the Annual Meeting of the President's Committee on Employment of the Physically Handicapped, Friday, May 8, 1959

An Administrator of Veterans' Affairs wears many hats. In the course of any typical day, you can find me switching hats at least half a dozen times—as I turn from medical problems to insurance problems, to pension problems, to rehabilitation problems, to construction problems, to employee problems, to my own problems of trying to find time for a bite of lunch.

But two of my favorite hats are those I am wearing here this morning. One is as chairman of an ad hoc committee on building entrances. The other is as a member of an ad hoc committee on vending stands.

Now, those two titles actually tell you very little about these committees. They ought to be retitled "Opportunity Committees"—for their purpose is to expand the God-given rights of opportunity for the handicapped men and women of this land of America.

A man in a wheelchair sits at the foot of a stately marble building. Its broad stairway rises up, up, up—a majestic base for the pillared structure. But what good is the stairway, or the building itself, to the man

sitting pensively in his wheelchair? How can he enter, without the strong arms of some good-hearted passerby? How can he conduct his business there? How can he work there?

The Committee on Building Entrances—Robert Goodwin, Director of the Bureau of Employment Security; Mary Switzer, Director of the Office of Vocational Rehabilitation, and myself—has addressed itself to this problem, to the restoration of this phase of opportunity. If a building is to be available to the public, it should be available to all the public, those in wheelchairs, with braces on their legs, with walking difficulties included. This is a basic proposition of equal opportunity.

A man without sight wants a little business of his own—nothing much, just enough to keep body and soul together. Fortunately, the framework of opportunity does exist—the Randolph-Sheppard Act which encourages the operation of vending stands by the blind in public buildings.

But it takes more than an act written on the statute books of the United States to broaden opportunity for the blind. The words of the law must constantly be translated into action—into more vending stands for increasing numbers of blind men and women seeking new lives of independence.

And so the Committee on Vending Stands—Assistant Secretary of Commerce George Moore as chairman, Mary Switzer and myself as members—was created to work with this problem, to expand the vistas of self-employment for the blind.

What have these two ad hoc committees achieved in the year or so of their existence? Thanks to the guidance and good counsel of General Maas and the staff members of the President's committee; thanks to the dedicated efforts and sound thinking of our associates back at their respective agencies; thanks to the enthusiastic support displayed by all with whom we conferred or came in contact—a great deal was accomplished.

And behind all the accomplishments lies a message of hope for all of us engaged in any way in creating fuller opportunity for the physically handicapped of this Nation—if we set our minds to a problem; if we attack it with all the enthusiasm and vigor at our command, we can solve it. Only let us never throw up our hands in despair and moan, "this is too big for me." Any problem can be cut down to size, if only there be confidence in our hearts and clarity of vision in our minds.

Now let me put on my hat as chairman of the ad hoc Committee on Building Entrances, and give you a brief report of prog-

At the committee's first meeting, we decided to concentrate not only on easy access, but easy use of necessary facilities once a handicapped person enters a public building. Shortly afterward, Dr. Dwight York and other VA staff members prepared what I think is a landmark document; "Tentative Guide: Facilities in Public Buildings for Persons With Ambulatory Impairments."

Here we had something tangible, something practical, to offer those we contacted—and many groups, organizations, agencies and individuals were contacted in the months that followed.

The results?

The Public Buildings Administration of General Services has issued a directive to its field offices throughout the country which states, and I quote: "All new Federal buildings shall provide easy access of wheelchairs to the first floor entrance lobby. Where entrance steps are unavoidable, ramp and handrall must be provided."

The Capitol Architect—he's the final authority on building design of all Federal buildings in the District of Columbia—has

given his full support. A new House Office Building is going up across the street from the Capitol, and its architects have agreed to change the plans so that handicapped persons can gain easy access.

The American Standards Association is considering this very afternoon a committee recommendation that it issue permanent standards for facilities for persons with ambulatory disabilities.

Agencies of the Federal Government have given wide circulation to the guide, with strong recommendations that it be followed. The Bureau of Employment Security, for example, sent out 3,500 to public employment offices throughout America.

At my own agency, guides were distributed to every VA office and hospital in the land. Our design standards for VA hospitals have been amended to include every suggestion in the guide, plus more of our own.

The Department of Health, Education, and Welfare has adopted features of the guide in all its plans for construction.

And even our good neighbor Canada heard about the guide, and asked for copies for all those engaged in designing its public buildings.

Meantime, requests for the guide continue to pour in—from agencies of the U.S. Government; from State and local governments; from private organizations; from individuals.

And I believe it is not the guide that has caught on—but the idea behind the guide. For here, in a few simply written pages, with a few simple drawings and diagrams, is a passport to opportunity.

passport to opportunity.

Here is a means of demonstrating that when America talks about equality of opportunity, she means it.

The guide, too, is a fitting tribute to one man who has devoted his entire life to fighting for easier access to public buildings for the handicapped—Hugo Deffner, of Oklahoma City, who, only 2 years ago, appeared at this annual meeting to receive an award from the President of the United States as Handicapped American of the Year.

At this point there will be a slight pause between the acts as I take off my hat as chairman of the Committee on Building Entrances and don another as member of the Committee on Vending Stands.

When this Vending Stand Committee delved into the matter of vending stands for the blind, two facts stood out unmistakably.

One was that Congress, by law and legislative history, has made it eminently clear that it wanted blind persons to have preference in operating vending stands on Federal property. And don't ever forget—this will of Congress is, in actuality, the will of the people of America.

The other fact was that the main responsibility for action rested in two Government agencies—the General Service Administration and the Office of Vocational Rehabilitation of the Department of Health, Education, and Welfare.

So the committee decided to meet with the Administrator of GSA, and present him with a number of recommendations.

One was the GSA revise its instructions to make absolutely clear, beyond the slightest tinge of doubt, that whenever a vending stand can be operated by a blind person, it should be operated by a blind person.

Another was that someone should be designated to each GSA region to have the specific responsibility for seeking out new opportunities for the blind to operate rending stands.

A third was that GSA architects make it a routine practice to consult with State licensing agencies when new buildings are being designed, to plan for the inclusion of vending stands.

And a final recommendation was that here in the District of Columbia, all interested agencies get together to develop a dynamic vending stand program that could well serve as model for the rest of the country, to show what can be done when the will burns brightly in our hearts.

Well, the meeting with the GSA Administrator took place, and he assured the committee of the full support of his fine agency. Actually, it was the first of many productive meetings with representatives of GSA and OVR, hammering out a plan of action.

The action was soon in coming. The Commissioner of the Public Buildings Service of GSA sent a directive to all regional commissioners, urging them, and I quote, to "search actively for additional locations where vending operations may be conducted by the blind."

Further, the regional commissioners were directed to submit tentative objectives in terms of additional stands to be approved within 6 months. And at the end of the 6-month period, they were asked to send in another report, showing how much progress they have made in meeting their objectives.

And so the vending stand program is moving ahead, and this is heartening news not only for the blind, but for all America. For this is yet another demonstration that we Americans do more than pay lip service to the idea of equal opportunity for all; we practice it.

Now let me remove my hat as member of the Committee on Vending Stands, and say just a word wearing no hat at all—as Sumner Whittier private citizen

ner Whittier, private citizen.

There is something about this annual meeting of the President's committee, something about serving on these two ad hoc committees, that sends through me a genuine surge of pride at being a citizen of the United States of America.

Here we are, joining hands to engage in a tremendous single effort—the best and keenest minds in labor and in management; in medicine and in rehabilitation; in Government and in private enterprise; in all areas of American life.

And what is the nature of this tremendous effort? Is it to serve some king, some potentate, some mighty ruler? It is not. It definitely is not.

It is to serve the blind and the lame and the halt. It is to serve the handicapped, our fellow-creatures on this earth. It is to serve them as we would be served.

This is the truth of America, where all men are created equal—the handicapped included; where all men are endowed by their Creator with certain unalienable rights, among them life, liberty, and the pursuit of happiness—the handicapped included.

This is the land of the free. And if some of our neighbors are not free; if they are shackled by their disabilities, we have joined hands, under this great cause that unites us, to set them free.

This is my pride. And I know that it is also your pride.

Green Discusses the Advice of the Pope on Communism

EXTENSION OF REMARKS

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. DENT. Mr. Speaker, every now and then some Member of Congress makes a worthwhile contribution in our eternal fight to keep reporting and editorializing within the bounds of reason and some semblance of truth. Such an article is the contribution I now make to the RECORD.

The report comes from the Rising Sun Times dated Thursday, May 28, 1959.

Congressman WILLIAM J. GREEN, JR., of Philadelphia, pointedly and vividly covers the subject involved in a forthright and unmistakable manner:

[From the Rising Sun Times, May 28, 1959] REPORT FROM YOUR CONGRESSMAN: GREEN DISCUSSES THE ADVICE OF THE POPE ON COMMUNISM

(By William J. Green, Jr.)

On occasion I read New Republic, which is a self-confessed liberal weekly. Now its liberalism does not include freedom from religious bigotry. Harvard professor of history, Arthur M. Schlesinger, Jr., one of the writers came out with some anti-Catholic cracks several months ago. Now its editorial writer, known only to the reader by his initials is puzzled that the Pope would advise Catholics everywhere to vote against communism and commie candidates.

This displays a woeful lack of understanding of the war against communism. For a magazine which sees all and knows all, it is astounding that this liberal journal, by its own admission, should fail to recognize the many facets of the battle waged by the Marxists. The multifronted war included attacks on the military, diplomatic, economic, and religious organization of the free world.

Dictators cannot allow a God in the public consciousness. Both the Declaration of Independence and Lincoln's Address at Gettysburg show our dedication to the Almighty. How you look up to Him is strictly your business. But even American coins bear the simple statement, "In God we trust."

New Republic questions the propriety of the Pope influencing individuals to vote against communism. I say he should be joined by all the religious leaders on all the continents. For one definite facet in our struggle against communism is the realm of religion, And it involves all religions equally. For the battle is religion versus irreligion—not just the Pope against Khrushchev. It is God versus the antigod of all who follow Marx. Of course, Catholics everywhere have had a dramatic demonstration through the American Embassy in Hungary granting sanctuary to Josef Cardinal Mindszenty.

Buddhists have seen their Dali Llama flee for safety across the Thibetan border. Worship has been stopped in many of the satellite nations behind the Iron Curtain. Again this order of the Pope is consistent in the fight of free people to look up to God as they understand Him. The Founding Fathers made that an American prime right, communism denies this right.

#### The Peg and the Kindling

EXTENSION OF REMARKS

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Wall Street Journal of June 15, 1959:

THE PEG AND THE KINDLING

The past few days have brought into the open an attitude on the part of a number of influential lawmakers that is both disturbing and dangerous. This is an evident desire to return the Federal Reserve System

to the business of pegging the Government bond market.

The scene was the House Ways and Means Committee, before which Treasury Secretary Anderson and Federal Reserve Board Chairman Martin testified; they are scheduled to return today. Both men appeared in support of the President's request that Congress remove the present ceiling on the interest rates of Government bonds maturing in more than 5 years, as part of a legislative package to assist the Treasury in its debt-management difficulties,

The proposal ran into a drumfire of criticism from the Congressmen, and criticism also is abundant in the Senate. Democratic lawmakers in particular are talking about all sorts of alternatives, all involving Federal Reserve purchases of Government bonds for the purpose of boosting their prices and, hence, supposedly holding down their interest rates in the open market.

This trend is serious for two interrelated reasons. One is that the effect would be to destroy the independence of the Federal Reserve Board. The other is that the effect would also be inflationary.

Why should the Federal Reserve Board be independent of the executive branch? Though at present we have an administration and a Secretary of the Treasury that are opposed to inflation, the natural inclination of any Treasury is to borrow cheap. And when the Treasury has the Federal Reserve under its thumb, it is in a position to enforce a cheap-money inflationary policy.

we shouldn't need much extensive reminding of this. The Reserve was dependent and was peggling the Government bond market through World War II and right up to early 1951. By then even the Truman administration, for all its inflationary bias, had to concede that an independent Reserve was essential for the national financial health.

But is pegging the market in fact infiationary? It must be, because it tends to make more and more of the public debt equivalent to cash. It is thus almost a direct creation of new money, and it can be a psychological stimulus to still more deficit financing. The World War II-1951 experience shows this, for it was a period of serious infiation.

As for going back to pegging now, Mr. Martin put the case bluntly. "This cannot be done without promoting inflation." He questioned whether the Reserve could successfully peg the interest rates over a long period; even if it could, he said the inflationary costs would be high and would "eventually lead to a severe collapse."

And ironically for the cheap-money faddists, the upshot would almost certainly not be the low interest rates for which they profess to yearn. This is because, to paraphrase Mr. Anderson's remarks, as inflationary pressure mounted borrowers would be encouraged to borrow as heavily as possible so as to repay in eroded dollars, while lenders would cut back for the same reason, intensifying the pressure for higher rates.

"To stem this tide," he said, "Federal Reserve banks would have to buy more and more Government securities and thus create more bank reserves an provide a basis for further inflationary credit expansion."

What the administration is proposing, instead, is not to push up interest rates all along the line, as the critics charge, but to let longer-term Governments compete in a market in which rates have already risen—and in the process put debt management on a more orderly and less inflationary basis.

But there is more to it than that, as both Mr. Anderson and Mr. Martin emphasized. The biggest upward pressure on interest rates in recent months has been the Government itself and specifically the financing of its huge deficit this fiscal year.

So if the lawmakers really want lower interest rates they had better stop toying

with a peg that could kindle more inflation. The thing to do is to put out the fire of rising spending, deficits, and debt.

## Message From the Dominican Liberation Movement: Sic Semper Tyrannis

EXTENSION OF REMARKS

#### HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following telegraphic message which I received from Mr. Alfonso Canto, delegate coordinator in the United States for the Dominican liberation movement. It is a copy of the message which was sent to Acting Secretary of State Douglas Dillon. I repeat my prediction that Trujillo will be deposed before the end of 1959. Sic semper tyrannis.

NEW YORK, June 15, 1959.

Representative CHARLES PORTER, House of Representatives,

Washington, D.C .: Have this date sent following message to Hon. Douglas Dillon, Acting Secretary of

State, quote: "Throughout the Dominican Republic the men and women of our nation are in arms. They are rising against the dictatorship which has profaned our land for a generation. Everywhere Domonican citizens are taking ultimate action against the Trujillo tyranny. In Santo Domingo the word has been given, and the forces of freedom are moving.

"The national revolution of the Domini-

can people has begun.

"The world is now witnessing the final stages of the Trujillo tyranny and the end of the agony of the Dominican people

which has last 30 years.

"The Dominican liberation committee, which speaks in the name of the Dominican liberation movement representing all of the national interests of the oppressed people, calls upon the United States of America to recognize in the action which is now in progress the true expression of the free spirit of an oppressed people and the determination of this people to live in dignity and freedom in the society of freemen.

"For too long have we endured Trujillo's tyranny with its crimes committed against the individuals and the social institutions of our people, the outrage against the Dominican Republic is coming to an end, and the hearts of freemen everywhere should be lifted in prayerful hope that the struggle will not be needlessly prolonged nor sense-

lessly bloody.

"In the name of the Dominican people we salute the Government and the people of the United States and urge that you hasten to recognize the spirit and the mo-tives of our legitimate aspirations. We hope that the loss of life and destruction of property will be minimal.

"We pray that the barbaric practices which Trujillo has employed can be quickly stopped so that in his expiring hours murder, arson, rape, and the unique tortures which are Trujillo's contribution to the degradation of mankind will cease to add to the irreparable scars on our country and on the conscience of mandkind.

"We appeal to you, and through you to the American press and the American people, to exert every legal and moral power at your command to be with us in our stand for liberty. For us this is a matter of the indivisible fight for freedom against all tyrannies, and in this we are striking a blow for the honor, the dignity, and the freedom of all people everywhere.

"We intend to keep the U.S. Department of State advised of the progress of the Dominican liberation movement and will seek an opportunity to meet with you at the earliest possible time.

"Alfonso Canto,

"Delegate Coordinator in the United States for the Dominican Liberation Movement."

#### Poison in Your Water-No. 122

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Roanoke, Va., Times of July 24, 1958, entitled "Raw Sewage Put in River, Engineer Says":

RAW SEWAGE PUT III RIVER, ENGINEER SAYS

Raw sewage from the Salem area has been dumped into Roanoke River near the metering station west of Roanoke, the city's consulting engineer on sewage reported yester-

Louis R. Howson of the Chicago firm of Alvord, Burdick & Howson also said he understands that the metering station (where the quantity of sewage is recorded). and the sample collection are not under the control of the city of Roanoke. He called this arrangement unsatisfactory.

City Manager Arthur S. Owens, asked about the bypassing of raw sewage, said the practice

is under investigation.

The city's sewage treatment contract with Salem and Roanoke County fixed a charge of \$30 per million gallons of sewage. The rate goes up under certain conditions.

Howson's comments were in a report on the city's outgrown sewage treatment plant and recommendations for its expansion.

The engineer was here some weeks ago and made a survey of the plant and interceptor lines. He said that, upon visiting the metering station where the Salem sewage flow is recorded, "we noted that a quantity of sewage was being bypassed into the river.

Howson said it was estimated that 500,000 to 1 million gallons were dumped daily.

Referring to control of the metering station and sample collections, Howson said, "It would seem that it would be to the best interests of the city to at least have joint control of the measuring and sampling of the sewage from Salem and also of the control of the bypassing to the river."

The engineer said, "Any bypassing of raw sewage to the river at this point carries entirely through the city of Roanoke and, of course, tends to defeat the purpose of the interceptor system which is to collect all sewage in and above Roanoke." •

He believes that an 8-day interval between samplings of BOD (biochemical oxygen demand) is too infrequent to derive an average

BOD load for the month. Records kept on the 8-day frequency of samplings show that the BOD strength of the Salem sewage has varied from 300 parts per million to 74 parts per million, Howson said.

#### Area Redevelopment Bill, S. 722

EXTENSION OF REMARKS OF

#### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Solomon Barkin, secretary-treasurer of the area employment expansion committee of New York, which deals with S. 722, area redevelopment bill, House revision:

> AREA EMPLOYMENT EXPANSION COMMITTEE, New York, N.Y., June 16, 1959.

Re area redevelopment bill, S. 722 (House revision).

Hon, THOMAS J. LANE,

MY DEAR CONGRESSMAN LANE: We are all elated at the marked recovery in our economy which has reduced our national unemployment to 3.4 million persons. Unfortunately, these improvements have not substantially reduced the number of chronically distressed communities in the United States or the unemployed in them. The reason for this deficiency is quite apparent. The distress in these communities has resulted from reliance on an industry or plant which has not shared in the recovery, or is now closed, or improved productivity which has substantially reduced employment requirements. Unless their economies are redeveloped, they are unlikely to benefit from the national economic upturn.

In your district there is such a chronically distressed labor market which would qualify for benefits under the area redevelopment bill, S. 722 (House revision). As of May 1959, there were 179 urban labor markets so classified in addition to 663 rural counties which would become eligible for benefits under the rural redevelopment provisions of this bill. Among the 179 urban areas are 32 major labor markets, 132 smaller, and 15 very small labor markets. There are other areas which would also qualify but the data now available are insufficient to make such a determination.

In at least two States practically all communities are in this distressed category and in a considerable number of States a substantial proportion of the State's total working population resides in these areas. The State with the largest number of urban distressed labor markets is Pennsylvania with Other States with 10 or more urban labor markets which are chronically distressed are Massachusetts, 14; Michigan, 14; New York, 12; West Virginia, 11; Kentucky, 11; Illinois, 10; and North Carolina, 10.

The total civilian labor force in these chronically distressed labor markets is now 10 million or one-seventh of the country's

total work force.

Full economic recovery is not feasible in this country until programs such as are pro-vided by S. 722 (House revision) are initiated to help redevelop the economies of these distressed labor markets of this country.

Sincerely yours,

SOLOMON BARKIN. Secretary-Treasurer.

# Appendix

In Such an Age

EXTENSION OF REMARKS

## HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. BEALL, Mr. President, I ask unanimous consent to have printed in the Appendix of the Record selected excerpts from an address titled "In Such an Age, by our greatly respected Senate Chaplain, Rev. Frederick Brown Harris, D.D., before the Woman's Society of Christian Service, of Center Street Methodist Church, of Cumberland, Md., at a luncheon meeting at the Shrine Club, Cumberland, on June 11, 1959.

The address, Mr. President, is filled with interesting and thought-provoking material. We, here in the Senate, are accustomed to hearing Dr. Harris' inspirational prayers at the opening of each daily session, but seldom are we priviledged to hear or read a major speech by him, such as that which he delivered at Cumberland last week.

I commend it to our reading and study. There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

#### IN SUCH AN AGE

(By Rev. Frederick Brown Harris, D.D.)

It is a joy to come from the Capital City to this city of capital, and from the big buzzing confusion-which is the U.S. Senate these days—to the quiet of the Cumberland

Just now I happen to be reading the Journal of John Wesley for 1759, 200 years ago. Only yesterday I came across this entry: "Yesterday many came considerable distance-found God to be both a God of the hills and the valleys, and nowhere more present than in the mountains of Cumber-land." And, so today as we drove through land." And, so today as we drove through the lovely countryside of this State on our way to this fair city, beautiful for situation, and on this June day gazed on verdant woods and templed hills that phrase, "The Moun-tains of Cumberland," was in my mind as those hills loomed ahead.

Somehow I felt a kinship with the intrepid evangelist, whose journal I am reading, and who for more than a half century not on cushioned tires, but on horses' hoofs traveled up and down England in what has been described by a secular historian as, "The most amazing story of human exertion ever penned or endured."

Somehow I think John Wesley out of all our Methodist phraseology of today would like best the name of the organization under whose auspices we have met—The Woman's Society of Christian Service. Did he not call the growing groups of people called Methodists societies? The aim of these groups formed all over England was to cultivate the spiritual life of the members and to set them at practical tasks of the kingdom. Cetrainly we can say of our wom-

en's societies what Woodrow Wilson once said with regard to the conferences which Wesley called in those first days, "They were councils of campaign. They did have long plans in view as their enemies suspected and they have had a long and honorable place in the statesmanship of salvation."

When he heard I was to journey to the mountains of Cumberland, one of the two outstanding Senators from your historic State whose home is not far from this city-Senator J. GLENN BEALL-of whom I am very fond and who is not only an excellent Senator, but always a thoughtful and gracious friend, came to me to express his deep interest that I was to have privilege of visiting a city for which he evidently has a big place in his heart. He spoke of the loveliness of this part of "Mary-land, My Maryland" and of the wonderful people who dwell in this section of the historic free State. He asked me to take with me his cordial greeting to the Woman's Society of Christian Service of Center Street Church and to the city, itself, which I am happy to bring.

Those who serve under the white dome of the Capitol, and you who serve here through the channels of the Woman's Society of Christian Service, are privileged to live in an age on ages telling. Angela Morgan has captured the thrill of such a day in her lines:

"To be alive in such an age, With every year a lightning page-Turned in the world's great Wonder Book. Oh age of strife, oh age of life, To be alive in such an age."

If we were to attempt in any way to analyze our age apart from the fact that it is the age of the split atom, with all the dread implications of that discovery, we would be compelled to say that it is a time of world revolution. That means that teeming millions everywhere, under all skies, are reaching out often violently, demanding a more abundant life.

We do not regret that. In America at its best we have nothing that we do not desire for the whole world. This so-called world revolution is, after all, largely the harvest of the seed of democracy and Christianity,

But side by side with that revolution there is a heinous system of chains and enslavement endeavoring to pervert and utilize that legitimate revolution for their own evil ends. I refer of course to atheistic communism.

We must always be on the alert to remember that peace is one of the words in the inverted and perverted dictionary of

What, in their book, is liberation we call regimentation. What they call an election, we call a coercion. What they call peace, we call appeasement. And as my dear friend, Schator Vandenberg, used to say, "Appeasement is surrender on the installment plan." The late great American, John Poster Dulles, with inflexible determination, made it clear to the world that America is not interested in peace but that she is tremendously interested in a just peace, and that is something else.

Of course we all yearn for the final fulfillment of the Old Testament prophecy, When the lion and the lamb shall lie down together, but we want to make mighty sure that when that time comes the lamb will not be inside the lion.

In such an age we desperately need new Paul Reveres to ride up and down the pleasant lanes and foads of American prosperity, to constantly remind us that eternal vigilance is still the price of liberty Our American heritage is not like an heirloom to be automatically handed down to new generations as they come. It is something that must be relived, reinterpreted, and rewon, with every generation.

In such an age it is for every one of us

the highest privilege and duty to give the best that is in us, against the wrong that needs resistance, and for the right that needs assistance, and to the future in the distance,

and the good that we may do.

As we repeat the phrase, "In Such An Age," with what lurid adjectives that word "such" is freighted. As we listen to descriptions of our times from platform and pulpit, radio and television, and in numerous publications.

It is interesting and significant to note the labels that the contemporaries of each century have pasted upon the gateposts of their times. The prophets of Israel were nearly all past masters at coining dismal labels for their particular day as they thundered their warnings. For instance, Isaiah declared in his age, "it is a time of darkness and sorrow." Strange to say, that is very similar to the label that leaders in every century have sug-gested is characteristic of their times.

Away back in my college days Henry Van Dyke wrote a little volume entitled "The Gospel for an Age of Doubt." That, you see, was his label for that day. Across the years I remember that he suggests in that book that an appropriate coat-of-arms would be three bishops dormant and an interrogation

rampant.

As we stand at the walling walls of our troubled times, they seem as full of dis-counting labels as the highway billboards are of screaming advertisements. Some of these labels are very pessimistic. Let us admit that there is plenty of black paint for our use in portraying our America in such a age. In spite of rather rosy figures, for instance, regarding church membership and church at-tendance in the present day, it still remains true that moral delinquency is so debauching, spiritual illiteracy is so appalling, secularism is so blighting, and money poured out for strong drink, and softening luxuries is such a mighty torrent contrasted with the tiny trickle for character building enterprises and agencies, that it is no wonder that thoughtful students of history are reminding us that the symptoms which characterized the life of Rome shortly before the fall are ominously like those of mighty America in this age.

I come of course as you know from the city of chanceries. But this is a time to remember that not in the chanceries of the nations, but in the hearts and minds of individual men and women, are the issues of life and death. If what we call our civilization is to be saved—that is, the parts of it that are worthy of being saved—it will be saved not by fanning fires of hatred for dictators abroad, or by any social panaceas for our ailing social order. It will be saved by individuals-thousands of them, tens of thousands, hundreds of thousands of individual men and women whose own lives are as the candles of the Lord and whose attitudes to other people, across all lines and gulfs, make them a part of the solution rather than a part of the problem.

At a recent banquet I attended—the sort of an affair at which the speeches usually contain little but the froth of trivialitiesthe speaker for that occasion had a pertinent message. He talked about the "u" dustry, the "u" in business, and the "u" in education. It was soon apparent that he was not talking about the letter "u," but the essential "you," in the things that matter most. While he spoke, I (as a preacher) began to think of the "U" in United States, the "u" in church, the "u" in club, and there flashed through my mind a verse that I heard many years ago:

> "Yet fear I deeply too, That death will seek and find me 'Ere I keep life's rendezvous."

There is enough in that to stab our spirits broad awake. We cannot miss the date with death-some day death will find us. Across the years men have tried to find the fountain of perpetual youth but they have never discovered it. How true that the paths of glory lead but to the grave. We cannot miss that but the solemn and sobering thing is that we can miss the date with life itself. We can go through what we call life, partaking of its joys and sorrows, its triumphs and defeats, and then at last go through that little black door we call death having missed life almost completely.

It was Galsworthy who said of one of his

characters, "He had experienced everything else but life itself." Ibsen, the dramatist, wrote to a youth who was facing his own rendezvous with life a letter which contained advice which any of us might well take to heart. Here is one sentence from that letter: "There is no way in which you can benefit society more than by coining the

metal you have in yourself."
How true. One of the most dangerous of psychological tricks is to get folks surveying problems that belt the earth while, at the same time, they forget the principal problem which is themselves. D. L. Moody, the great evangelist, speaks for us all when again and again he declared that he had more trouble with himself than with any other person he had ever met. All the water in the sea cannot sink a ship unless it gets inside the ship. All the evil in the world cannot defile a person unless it gets inside the mind. All the selfish crookedness and corruption now being revealed by congressional committees cannot contaminate you unless it gets inside your skin and corrodes your own soul.

It begins to appear that the insistence of such men as John Wesley, and Jonathan Edwards, on the paramount importance of first saving our own souls as the order of spiritual priority was not as selfish as some modern social engineers have made it out to be. Why? Because we cannot give what we have not got. We cannot work any utopian plan without the utopian man. There are three fatal fallacies that in such an age keep us as individuals from the promised land we might enter. Fallacies that spoil the music of life and in our resolutions keep us up in the "whereas, whereas" and away from the brass tacks of "Therefore, be it resolved."

The first is the fallacy of the negative, or being sure only of what one is against. In this bewildered and baffled day never were so many against so much. But affirmation is 10 times stronger than denunciation. This is surely a time to accentuate the positive. The thing that will prevail at last over regimented tyranny, with its ball and chain, is a vibrant, positive democracy in which we believe more strongly, and love more deeply, than we hate totalitarism.

The next fallacy to avoid is a plague in such an age is the tyranny of things. There are those in prominent places, in

all parts of America, who with blinded eyes and hobbled feet, grope down a narrow gorge and call it life, ignoring the insight of the Master Teacher, the Man of Galilee who declared, and declares, "A man's life consisteth not of the abundance of things which he possesseth."

The third fallacy we must avoid, if we are in any adequate way to serve the present age, is the fallacy of the elsewhere. Good Book says, "The eyes of the wise are before him; the eyes of the foolish man are at the ends of the earth." Being interpreted, that means just what it saysthe eyes of the wise are before him and he sees the possible glory, the hidden splen-dor, the potentialities of the place where he is. The eyes of the foolish man are always scanning the horizon for some signs of a glory he thinks he has missed at home.

Russell Conwell gave his lecture on "Acres of Diamonds" thousands of times. He made more than a million dollars out of that one message. It ought to be said, of course, that he did not keep \$1 for himself—he gave it to the cause of Christian education. But the message of that famous lecture which thrilled and opened new vistas for multitudes who listened was that the "acres of diamonds" for which we all yearn are not half a world away but in our own backyard if we will but dig for them. And so, in such an age escaping these fallacies that face everyone of us, let us highly resolve that we will put into the fugitive fragments of every day such quality of work, and such enriching human relationships, as shall make us unashamed when the day is over and all the days are done.

## Oregon Dunes National Seashore Proposal an Assist for Tourist Business

EXTENSION OF REMARKS OF

#### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. NEUBERGER. Mr. President, my home State of Oregon enjoys a great deal of economic benefit and business prosperity from its tourist trade. This is only a natural result of the fact that the boundaries of Oregon encompass some of the continent's finest scenic and recreational areas.

It is my belief that these values can be enhanced by further development and protection of certain unusually attractive tourist meccas. I have no qualms about confessing this is one of the motivations for my sponsorship of legislation to establish the Oregon Dunes National Seashore Area. The 23-mile section of Oregon's coast which could be included in this proposed park development is one of only four in the entire United States which the National Parks Advisory Board has found worthy for such national recognition.

I note with pleasure that two outstanding Oregon newspapers-the Port Umpqua Courier and the Oregon Statesman-have affirmed my own belief about the desirability of establishing the Oregon Dunes National Seashore Area. These newspapers are edited by two of the most able newspapermen in my home State, and I consider their endorsements of the project of great value. I ask consent to have printed in the Appendix an editorial entitled "Will National Seashore Increase Tourist Trade?" from the Port Umpqua Courier, which is edited by Mr. William M. Tugman, and an editorial from the Oregon Statesman en-titled "Dunes Park," which is edited by former Oregon Gov. Charles A. Sprague.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

WILL NATIONAL SEASHORE INCREASE TOURIST TRADE?

[From the Port Umpqua Courier]

The Port Umpqua Courier supports the proposed Oregon Dunes National Seashorebetween the Umpqua and the Siuslaw, Reedsport and Florence—in the belief that all vital community and industrial interest can be safeguarded and because such a development will provide a balance now lack-ing in the economy of this area. This conclusion is based on what we think is some pretty sound reasoning:

1. Even if we achieve the pulp and paper and wood processing payrolls for which we hunger, our economy in this coastal area

will still be one sided.

2. Our agriculture offers many neglected opportunities, but with full development is it still limited.

3. Recreation and the service industries which wait upon its needs offer our best chance for growth and full development.

Present tourist traffic in this area can be measured fairly accurately by attendance at State parks. In 1958 Honeyman State Park near Florence chalked up 344,456 visitors; Umpqua Lighthouse State Park dropped from a peak of 284,628 in 1957 to 274.885—a direct result of the poor season at Salmon Harbor and the lack of overnight camping facilities.

For national parks-and there are 29 of them in all parts of the United States, some of them quite remote and difficult to reachthe average attendance was 747,300, more than twice our present highest figure.

(For the national park system, not counting monuments, battlefield, etc., etc., the total was 20,903,139).

Here are some significant figures on attendance at major national parks:

	1958	1957
Crater Lake	333, 893 1, 428, 497 3, 168, 944 1, 181, 523 1, 181, 523 80, 227 348, 335	330, 499 1, 306, 340 2, 943, 732 864, 849 864, 849 71, 260 324, 206

Oregon Caves are only a national monument with limited attractions.
 Cape Hatteras is still in the initial stages of develop-

There is every reason to believe that the Oregon Sand Dunes, with its infinite variety of all-year-round attractions would soon become one of the most heavily attended parks in the entire national system. Here we have perhaps the greatest variety of things to do in the United States.

A young man from Florence visited us the other day to ask a number of questions (presumably because the writer happens to be the chairman of the Oregon State Parks Advisory Committee):

Question. Will the national parks take over Honeyman?

Answer. At the Reedsport hearing the question was asked and answered quite frankly there would be no need to change the ownership of management of Honeyman. Question. Why don't the State parks take over this whole dunes area, except, of course, the lakes?

Answer. We now have 168 State parks, 10 million users last year, a budget of only \$1.-800,000, every penny of which must come out of State highway revenues. What would we use for money?

Question. How can we be sure the national parks would do a good job when they do a sloppy job of what they have now?

Answer. Their 1959 budget gives \$79,756,000 for operations. The administra-tion bill proposes at least \$15 million to acquire only three seashores. The Forest Service has often been short of money for its recreation facilities, but the national parks are specialists in this field. It is our belief that the national parks should have all national recreational projects, except those in remote forests, and the Forest Serv ice should concentrate on management of all Federal timber. Departmental rivalries have sense, says it must come. For funds, our State parks are not in the same league with the national parks. It would be utterly impossible for us to develop the dunes.

Question. Will benefits outweigh losses in the area?

Answer. That question has been answered quite satisfactorily in the hearings. Congress has the power to pay tax offsets over a period of years. In the towns adjacent to the Great Smokies tourists spend some \$28 million a

year (1956 figures).

There were many other questions in this friendly discussion, but we feel that they have been answered and that in the final legislation, stipulations can be written in which will safeguard against any changes of policy in future administrations. For such industries as this area is capable of sustaining there is ample room in the adjacent towns. Homeowners during their lifetime can remain where they are without let or hindrance in use of their property.

There is absolutely no reason to fear that a park will prevent the development of the port of Siuslaw or the port of Umpqua, or that it will prevent the development of whatever industries our resources in this area can

sustain.

There is every reason to believe that the national seashore will bring millions of tourists to this area the year around, that it will provide a balance in our economy we can-not obtain in any other way. It will put an end to many real estate promotions and speculations. Over a period of time, which we shall not live to see, it will restore to this area much of its primitive beauty and glory.

Thirty years ago-before Highway 101 was built-we had the privilege to tour this whole area. We were not being sentimental when We said recently that Highway 101 has not improved the country, or even added to its

real prosperity.

(We attended a meeting in Florence one time over Kyle's store, when \$600 was raised in 5 minutes to help build a passable grade up the North Fork. We will venture to say You couldn't raise \$600 in Florence or Reeds Port today for any major public project with-

out a lengthy struggle.)

The national seashore will not make everybody rich. But if it provides a balance in our economy it will reduce some of the staggering poverty which exists in all of our communities today. In a good season Salmon Harbor is estimated to spread \$2 million in direct and indirect benefits through this area. If we can double or treble our tourist trade we will double or treble those benefits.

#### [From the Oregon Statesman] DUNES PARK

Bill Tugman is convinced the Oregon coast can have a national park and at the same time develop its industries. He sees no real conflict in the proposed park of the dune region and development of industries. As he writes in his Port Umpqua Courier:

There is every reason to believe that the national seashore will bring millions of tourists to this area the year round, that it will provide a balance in our economy we cannot obtain in any other way."

The Statesman agrees. A national park along the coast would draw more tourists to Highway 101 than a new bridge at Astoria. The people around Florence who are fighting the park are taking a shortsighted view of its possibilities for local gain. Detailed plans for the proposed park are being prepared by the National Park Service and will be available when the congressional hearing is held some time this fall.

#### The People's Share in America

EXTENSION OF REMARKS OF

## HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. JAVITS. Mr. President, a recent survey by the New York Stock Exchange, the results of which were published in this morning's New York Times, brings before us in bold figures the fact that here in the United States our industry. our resources, our commerce, and finance increasingly are being owned not by the select few but by the great mass of Americans-that we are in the process of developing a people's capitalism. One out of every eight adults-and the greatest proportion are those in the middleincome group; the largest number of stockholders is in the \$5,000-\$7,000 income group. The Communists boast that the basis of their appeal is the Marxist theory of government ownership of the means of production. It is certainly hoped that the peoples of the Communist countries will note that in the United States through the evolutionary processes of our people's capitalism, not only are the means of production being owned by more and more rank-and-file Americans, but their individual prosperity and the prosperity of the country have grown remarkably as well-pinning the lie to the Marxist pronouncement of the inevitable collapse of capitalism.

Mr. President, I ask unanimous con-sent that the article may be printed in

the Appendix of the RECORD. There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 18, 1959] NEW SHAREHOLDER CENSUS SHOWS ONE ADULT OUT OF EIGHT OWNS STOCK

America's stockholder population continues to grow apace. Early this year it stood at 12,490,000 individuals, compared with an estimated 8,630,000 in 1956 and 6,490,000 in 1952. The latest figure is contained in a shareowner census conducted by the New York Stock Exchange. The 1953 and 1952 surveys were also made by big board in collaboration with Alfred Politz Research, Inc.

Keith Funston, president of the Exchange yesterday described the rapid growth in stock ownership as a quiet economic revolution that is reshaping America, Mr. Funston noted that more than 1 million people a year were becoming stockholders. "The reyear were becoming stockholders. "The re-sult," he said, "is a total shareowner population that was not anticipated before 1965." One adult out of eight is a shareowner.

#### PROFILE IS GIVEN

The new census gives a profile of investors by income, sex, age, occupation, education, and the like

The survey shows, for instance, that the average shareowner has a household income of \$7,000, compared with \$6,200 in 1956. This 12-percent rise is about the same as that in the average family income for the Nation as a whole. Almost half of all share-owners are in the \$5,000-to-\$10,000 bracket; 23 percent have household incomes above \$10,000 a year.

Women shareowners outnumber men 52.5 to 47.5 percent. Housewives-4 million strong—now constitute the largest single group of stockholders. In all, 6,347,000 women and 5,740,000 men own stock.

The median age of shareowners is 49, 1 year older than in 1956. Ownership occurs most often in the 55-to-64 age bracket. The 45-to-54 and 65-and-older groups rank next.

Some 32 percent of all shareowners fall into the managerial and the professional categories. Each of these groups showed a gain of nearly 1 million since 1956. Clerical and sales workers constitute the next largest occupational group. Farmers and farm laborers are the smallest. About half of all shareowners have had some college educa-

#### NEWCOMERS DESCRIBED

In addition to providing data on the overall stockholder population, the census provides a composite portrait of new shareowners since 1956.

The average new shareowner is 35 years old; 47 percent are in the 21-34 age bracket. The median income of the newcomers is \$6,900, and almost a third are in the \$5,000to-\$7,000 income range. Women outnumber men, 56 to 44 percent, among new investors. Summarizing the findings of the census,

Mr. Funston commented:
"This growth places an even greater re sponsibility on the securities industry. We must do everything possible to insure that new shareowners—many of them inexperi-enced at investing—understand the risks involved in stock ownership and approach the business of investing in a well-informed and prudent manner.'

## Statement of Gov. Herschel C. Loveless, of Iowa, Before Senate and House Government Operations Committees

EXTENSION OF REMARKS

## HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. SMITH of Iowa. Mr. Speaker, the Intergovernmental Relations Subcommittee, of which I am a member, commenced joint hearings with the Schate Committeee on Government Operations on H.R. 6904, H.R. 6905, and S. 2026. The purpose of these identical bills is to establish a permanent Advisory Commission on Intergovernmental Relations.

We were very fortunate to have with us as the first witness at the joint hearings Gov. Herschel C. Loveless, of Iowa. Governor Loveless has been greatly in-

terested in problems of intergovernmental relations, and his knowledge of this subject is demonstrated by his thoughtful and well-reasoned statement on the need for an advisory commission as an instrument for closer intergovernmental cooperation.

I should like to bring this outstanding statement to the attention of all

Members of the House:

STATEMENT OF GOV. HERSCHEL C. LOVELESS, OF IOWA, BEFORE MEMBERS OF SENATE AND HOUSE GOVERNMENT OPERATIONS COMMIT-TEES. JUNE 16, 1959

Mr. Chairman, members of the committees, I am privileged by this opportunity to tes-tify before you this morning concerning the proposed establishment of a permanent Advisory Commission on Intergovernmental Relations, as provided for in H.R. 6904, H.R.

6905, and S. 2026.

The statements concerning the need for this legislation that have already been made by Senator Muskie, Senator Case, Congressman Fountain, and the other distinguished sponsors of this measure have been admirably clear and convincing. I do not flatter myself by believing that I can add anything of startling originality to these statements and to the impressive report submitted by the Intergovernmental Relations Subcom-mittee. My purpose, rather, is simply to try to bring to you a viewpoint that I feel to be fairly representative of the State of Iowa. This viewpoint has been formed from my own personal experience in municipal and government and from consultation with those department heads of our State government who have had the most extensive experience with shared responsibility

Whenever a new governmental agency is proposed—particularly a board or commission—there are always those persons who throw up their hands in holy horror and say: "What, another one?" Quite frankly, I am one of those persons myself.

But where the need for a specific service exists, and there is no other agency meeting this need, then I feel we must relax our rule-of-thumb prejudice against new commissions. As you all know, a number of important studies have been made of intergovernmental-relations in recent years. As I read the record, these studies-especially the work of the Kestnbaum commission and the House Intergovernmental Relations Subcommittee-strongly establish the existence of this need. I have no hesitancy in telling you that my experience on the State level in Iowa bears this out.

The people of the State of Iowa are jealous-and rightly so, I think-of the prerogatives of State and local government. They would say a fervent "Amen" to the statement in the subcommittee's report which accepts, "as a guiding principle the belief that strong local self-government is essential in a democratic society."

But even if one were a radical exponent of States rights-which most of our people are not-this would not be a valid reason for opposing the establishment of this permanent Advisory Commission you are considering today. An ounce of knowledge is worth a ton of prejudice in protecting the legitimate interests of sound local government. At the present time, there is no clearinghouse of information, no agency that can supply detailed and authoritative data on the complex intergovernmental relationships under our Federal system. In my opinion, the proposed bipartisan Commission would serve an extremely useful purpose to State and local officials, and would actually provide an effective means of protecting their prerogatives.

We are not, at this functure, debating the merits or lack of merits of shared responsibility programs. These programs we al-ready have, and they are big and complex. They are costly, of course.

I do not, for a moment, believe that the people of our State are foolish enough to believe that Federal money is free money. We realize that we pay our share of govern-

mental expenditures on all levels.

But in the existing framework of intergovernmental operations, who can estimate the saving to the taxpayer of a closer co-ordination between Federal, State, and local governments, the elimination of duplications, and the exploitation of the vast potential of united effort?

Coordination is an urgent need between the agencies of government at any level. It is an equally urgent need between the

levels of government.

The proposed Federal Advisory Commission could serve an invaluable function in encouraging and pointing the way for increased coordination. And I feel sure that such a service would result in substantial economies for the long-suffering taxpayer.

We live in a time of bewildering change and complexity. Almost every new public problem that arises—radiation hazard, for example-involves government at all levels. An impartial agency is needed to encourage cooperation rather than division between Federal, State, and local governments, if we are to meet these new problems with maximum effectiveness.

A further important educational service could be provided in the clarification of the functions of the various levels of government for public information. Every thoughtful person is concerned these days, I believe, with the widespread indifference among our people concerning public affairs. This indifference is due in part to their loss of confidence in the value of their individual effort. Our individuality tends to be swallowed up in bigness-big scientific achievements, big business, big labor, and, of course, big government. A clarification of the functions of government on the various levels would. I think, tend to offset this indifference. It would help restore the individual citizen's sense of identity in the relation to government, and this, in turn, would tend to re-store his faith in the worth of individual effort. In my opinion, a better knowledge of intergovernmental relationships on the part of the general public would be of distinct value to the functioning of our de-

In Iowa, during the past couple of years, a great part of my effort has been directed to the job of bringing about better coordination between the various agencies within the State government. Now we are shifting our emphasis on closer teamwork between State and local agencies. Many of our most serious problems in such areas, for example, as law enforcement, welfare, education, and conservation will. I am confident, be greatly helped by breaking down barriers and promoting mutual understanding. Such situations between officials working in different levels of government develop because of lack of communication and insufficient knowledge of each other's problems. The obvious answer is for the representatives of the various levels of government to get together and resolve their differences. I believe the proposed Advisory Commission could provide an excellent medium for bringing together representatives of State, Federal, and local government under the most favorable circumstances possible.

In Iowa, our 58th general assembly has rather recently adjourned. As I look back over this session, I am thoroughly convinced that more accurate and comprehensive information on intergovernmental problems-

grants-in-aid, for example-would have been of the greatest help to our legislators. We urgently need a clearinghouse for such information, and the proposed Advisory Commission could serve as such a clearinghouse.

During debate in this legislative session. one well-meaning legislator opposed a Federal shared-responsibility program that was under consideration on the basis that it might cost the State \$6 or \$8 million. The highest informed estimate the departmental experts could arrive at for this program was \$600,000. An official source of informa-tion was needed to confirm the figure. A well-drawn county reorganization bill was defeated on the grounds that it would infringe on the authority of local government. The proponents of the bill did a good lob of presenting the measure, but if they could have cited comparative facts and figures on county reorganization, identifying the source of the information as an authoritative, impartial commission on intergovernmental relations, I believe the outcome in the case of this particular legislation might have been

I believe that almost everyone would agree that one of the vital needs in all strata of government is for longer range planning. Conditions change so rapidly, we need to look ahead in both our legislative and administrative programs. Short-range, temporizing programs are apt to be costly and inefficient. Yet it is difficult to sell long-range programs to State legislatures and even to departmental heads. Many problems could be averted in such fields of shared responsibility as public welfare, employment security, and public health, if we would use a little more foresight.

H.R. 6904 and its companion bills propose that the Advisory Commission would encourage discussion and study at an early stage of crucial public problems that will be of mutual concern to all levels of government in years ahead. This service, I am convinced, would have a favorable influence on both efficiency and economy in government

operations.

Through the years I have noted that congressional committees strive very diligently to obtain State and local viewpoints for reference in arriving at legislative decisions. The fact that you have invited me here today attests to your desire to give fair consideration to regional opinion. It strikes me that the proposed Advisory Commission might be a logical medium for providing information to committees of Congress on State and local government views on intergovernmental problems. As I understand it, the Commission would also have facilities, as proposed, to make available technical assistance to congressional committees in assessing the overall effects of legislative proposals on State government. The Commission could encourage coordination of grant programs and the elimination of contradictory or conflicting grant formulas from program to pro-

A typical area in which there is a tremendous need for an exhaustive, unbiased survey is the field of residence requirements in public assistance programs. This matter is of vital concern to every State and county in the Nation, as well as to the Federal Government. As you may know, the Governors' conference has appointed a committee to study certain aspects of this problem and formulate recommendations for establishing more uniform and equitable residence requirements between the States. of many vitally important phases of intergovernmental responsibility in which the proposed Advisory Commission could usefully function to the benefit of all concerned.

Excellent and far reaching though the work of the intergovernmental relations subcommittee has been, it has, as its report

indicates, covered only a part of the vast field of intergovernmental relationships. Its work was largely concentrated on Federal grants-in-aid programs. But in the preface to the subcommittee's report, it is pointed out that there are also many nongrant areas, including regulatory activities, law enforcement, water and other natural resource policies, and the management of public lands and military installations.

The Kestnbaum Commission, for its part, made a more general evaluation of intergovernmental responsibilities and relationships under our Federal system. I believe it should be obvious to anyone familiar with the subject that these two great studies, monumental though they have been, have only scratched the surface of the vast and changing field of intergovernmental relations

The refinement of the science of intergovernmental relations, I am firmly convinced, is an important key to the future success of Government under our Federal system. To compete with totalitarian nations, who command certain efficiencies, however repugnant their philosophy may be to us, we too must develop new methods of obtaining economy and efficiency in our democratic system. Studious efforts to improve coordination and eliminate duplications between the levels of government—both in regulatory functions and in meeting human needs—will, I am convinced, do wonders toward obtaining these results.

Of course, today, as heretofore in our democracy, our problem is a dual one. We do not propose to sacrifice any of our basic liberties under the Federal system in our zeal to make Government work more efficiently. But, as I have stated earlier, I am convinced that the true prerogatives of State and local government can best be preserved by constant study and reevaluation of the appropriate roles of each level of government in the complicated pattern of intergovernmental relations.

Additional studies performed by temporary commissions and ad hoc committees cannot do the job. The face of Government changes too rapidly. A permanent, impartial agency, equipped with the necessary resources, is required for this important work. I submit to you that the proposed Advisory Commission on Intergovernmental Relations is the logical answer.

The privilege of appearing before this distinguished body and the courteous reception you have accorded me serve to strengthen my faith in the ability of the various levels of our Government to work together for the common good. Thank you.

#### Manipulation of Interest Ceilings

EXTENSION OF REMARKS

#### HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. DULSKI. Mr. Speaker, after serious consideration of the special message to Congress from President Eisenhower, calling for abolition of the legal ceiling on Government bond interest rates and the increase in the debt ceiling, I am convinced of the need for the separation of the two items for consideration and feel that every possible avenue of approach should be explored before crashing the interest ceiling barrier which has served our Nation so well

for 40 years, through wars, inflation, and depressions and recessions.

The present tightening of credit has been a deliberate, manmade effort to drive up interest rates, with the cooperation of Wall Street, the bankers, and the Federal Reserve Board.

The Federal Reserve System was organized to aid the fiscal activities of the Federal Government. The Federal Reserve Board has the weapons such as open market operations, the discount, the reserve requirement, to establish interest rates at any level, up or down. It can modify its present policy and moderately support the prices of Federal bonds at low interest rates, to enable the Government to borrow long term money without breaking the 4½-percent ceiling.

When Government, through the constitutional right of Congress to regulate the value of money, ceases to regulate it by surrendering to the economic royalists, we are then crossing the thin wavering line between liberty and tyranny.

This point is a good spot and a good time for a start toward returning to the Congress of the United States its constitutional independence and integrity as a policymaking body by reversing the process of concentration of economic power in the hands of a few—to defy those who are attempting to destroy the safeguards which stood us well for 40 years.

Our national debt is concentrated in the hands of big bankers who are demanding the necessary nourishment of increased interest rates. This debt is primarily a compilation of war debts. It is unfortunate that as a matter of social justice, that men, against their will, are required to serve as soldiers, and wealth, on the other hand, is not conscripted to serve on an equal basis.

Raising of the interest ceiling is a poor way to turn off the faucet of bank credit from adding its flood of monetary purchasing power to feed the existing inflationary spiral. It is taking money out of the pockets of all of the people in order that it may find its way back into the pockets of a few of the people. It will decrease the real incomes of all persons receiving fixed incomes through pensions, prices will be higher, each dollar will buy less. It will divert investment funds from private enterprise and subsidize and enrich wealthy bondholders. If interest rates rise, businessmen will borrow less, and produce less goods and employ less workers. It will create a large cyclone cellar of taxexempt Government bonds which will hit the citizens in the pocket and the pocketbooks as a method of legalized embezzlement by artificial manipulation of interest ceilings without any clear mandate or necessity. It will drive up the cost of homes, hospitals, schools, and roads, and feed the upward cost spiral of Government financing.

Are we in Congress going to be men, or rubber stamps? Are we going to be a meek and willing partner to this pyramiding of the public debt? Are we going to place this heavy burden of increased money costs upon the backs of our citizens?

There is a fundamental principle of fiscal policy involved in this matter of interest rates that should be met head on with candor and courage, and I for one urge the retention of the current interest ceiling as the soundest policy that we can follow.

Colorado-Big Thompson Project Completed as Final Powerplant Goes on the Line

EXTENSION OF REMARKS

## HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to the attention of my colleagues a recent announcement by the Bureau of Reclamation of completion of the Colorado-Big Thompson project.

The citizens of Colorado and especially those of the Second Congressional District that I represent are extremely grateful to benefit from this great project.

The Colorado-Big Thompson is truly an American reclamation showcase. Its multipurpose nature has not only transformed once barren and unproductive land into a leading producing area, but has also provided Colorado with low-cost power and expanded recreational facilities.

The American taxpayer can be justly proud of his investment in this project, an investment I want to make clear to all that is returning to the taxpayer every dollar invested. In addition, the people of the United States are benefiting through vastly increased production and for greater taxes thus returned to the U.S. Government:

COLORADO-BIG THOMPSON PROJECT COMPLETED AS FINAL POWERPLANT GOES ON THE LINE

The Colorado-Big Thompson reclamation project, one of the major irrigation developments undertaken by the Federal Government, reaches completion this month.

Its final facility, a 4,500-kilowatt hydroplant, is being readled for operation before July 1, Secretary of the Interior Fred A. Seaton announced today. The project has been providing irrigation water for upward of 720,000 acres of land since 1954.

The new powerplant, known as the Big Thompson plant, is located at the mouth of the Big Thompson Canyon about 9 miles west of Loveland. The plant operates only on a seasonal basis. Its output will be added to that of five other project powerplants which, in turn, are interconnected with other reclamation hydrofacilities in Wyoming and Colorado and serve users in those States and western Nebraska.

The Colorado-Big Thompson project accomplishes a diversion of surplus waters of the Colorado River drainage into the basin of the South Platte River, of which the Big Thompson River is one of the main tributaries, Commissioner of Reclamation Floyd E. Dominy explained.

Water is transferred via a 13-mile tunnel under the Continental Divide to supple-

ment previously existing but inadquate irrigation supplies for farmland in northeastern Colorado. The diversion is expected to aver-

age 257,700 acre-feet annually.

The water conservation and use plan includes a network of reservoirs on the western side of the mountains to capture and regulate the spring runoff, which was previously going to waste, and transfers the surplus runoff to eastern slope reservoirs by means of pumping plants, powerplants, tunnels, and siphons.

"This is an immensely complex system of engineering works that emphasizes the need of the water-hungry West to put its water resources to maximum use," Dominy said. "It also emphasizes the importance of longrange planning. This project has been talked about and under investigation for over half a century. It has been under con-struction for more than two decades. Some

of this long stretchout resulted from the war years."

Drought was a major factor leading to the approval of the project by Congress.

Since before 1900, the residents of the South Platte Valley had been looking westward, where a large quantity of water was flowing unused to the Gulf of California. They needed the water, but lacked the ability to surmount the mountain barrier.

In 1933, while drought ravaged the land and economic depression was causing broad unemployment, citizens' organizations obtained a preliminary engineering survey which became the basis for an authorization by Congress for a Bureau of Reclamation

study of the potentialities.

The Bureau began its study in 1935. The project was approved 2 years later, and construction of Green Mountain Dam and powerplant on the Blue River began in 1938. This initial feature, forming a storage and replacement reservoir, on the Colorado River side insures western slope water users a supply of water during diversion of Colorado water and provides electric power for

The first minor water diversions occurred in 1947, and the first major diversions in 1954, another year of drought. At that time, eastern slope water resources were virtually exhausted, and even though not all the distribution system was completed, emergency use of project water resulted in a savings of \$22 million in crops. The following year, crops worth an additional \$17 million were saved because of project water.

The last of the 130 miles of canals was completed in 1956, enabling service to the full area of serviceable lands. In 1958, the lands irrigated by both within-basin and project water produced crops valued at \$71 million. The crop value per acre was \$99.

The area is an important producer of sugar beets, beans and vegetables. Along with beet tops and pulp, much of its cereal grains-mostly barley, corn and oats-is converted through livestock feeding into meat products.

Project costs total \$159.5 million, all of which will be repaid to the Federal Treasury, from payments by the irrigators and from power revenues. Northern Colorado pioneered in the organization of a water conservancy district, formed to levy ad valorem taxes on real property within the benefited area and thus spread the repayment burden.

The district also represents the irrigation and municipal water users and has begun fulfilling its obligation of annual payments. Municipal and industrial water is supplied under contracts with 10 important cities and towns in northeastern Colorado. Power revenues have been accumulating since 1943. Through June 30, 1958, the power system net revenues totaled \$15 million, of which \$9 million was interest payment on the construction cost.

The Colorado-Big Thompson project system includes 15 major dams and dikes, almost 35 miles of tunnels, 784 miles of transmission lines, 41 substations and switchyards, and 3 pumping plants.

Green Mountain, Willow Creek, Granby, and Shadow Mountain Reservoirs on the west, and Horsetooth and Carter Reservoirs on the east, are the principal components of the total storage capacity of nearly 1 million acre-feet.

Powerplants, in addition to the Big Thompson plant, are the Green Mountain, Marys Lake, Estes, Pole Hill, and Flatiron. The installed capacity aggregates 183,950 kilowatts, which delivers about 690 million kilowatt-hours annually, mostly to rural cooperatives and municipalities, and supplies an annual project pumping load of about 70 million additional kilowatt-hours.

Recreation has proved to be an important benefit of the project, which is on both sides of Rocky Mountain National Park and is in one of the most scenic sections of the Colo-

rado Rockies.

The National Park Service, administering the Shadow Mountain National Recreation Area made up of Lake Granby and Shadow Mountain Lake, reported 1.5 million visitors there last season. Another million fisher-men and others used Horsetooth and Carter Reservoirs.

These and the other bodies of water on the project have led to large commercial investments in recreation facilities.

#### Tribute to the Boy Scouts of America

EXTENSION OF REMARKS OF

#### HON. ALEXANDER WILEY

Thursday, June 18, 1959

Mr. WILEY. Mr. President, we recognize that, in building a stronger America, a major challenge is that of developing the most valuable resource of our Nation-that is, a free, creative, educated, and forward-looking people with high ethical and moral standards.

Today, I wish to pay tribute to one of the most significant organizations which have helped to strengthen the fiber of the American citizen: The Boy Scouts of America. Since its incorporation in 1910, and its chartering by Congress in 1916, the Boy Scouts have rendered superb service in building the youth of this Nation. The leadership of the Scout movement has comprised the very best type of Americans. Since 1910, almost 241/2 million boys have enjoyed the advantages of Scout membership; and many of our most outstanding leaders of today, in every field of endeavor, have been dedicated Boy Scouts. When the number of adults who have served in this splendid program is added to the total, it comes to almost 30 million Americans.

Approximately 35,000 boys have qualified for Eagle rank in the Scouts, and almost 25 million merit badges have been earned during the 49-year period they have been in existence. Currently, the number of Cub Scouts, troop members, and Explorers total more than 4.950,000.

We here in America have every reason to be proud of the Boy Scouts and their

achievements in helping to mold the characters and bodies of our youth into outstanding examples of patriotic manhood. We have learned to expect great things from Scouts and Scout leaders; and we have not been disappointed.

Recently, I was pleased to receive from Mr. Rebel L. Robertson, the director of public relations of the National Council of the Boy Scouts of America, an invitation to submit a statement to be used in the Scouts' forthcoming golden jubilee year. In celebrating 50 years of tremendous contributions to the welfare of the country, the Scouts theme for the golden anniversary year in 1960 is "For God and Country." It was indeed a real pleasure to prepare a commendatory statement indicating my impressions of what this youth movement has done for the good of our land. Mr. President, when I speak about our youth, I mean our youth who have to handle the responsibility of sustaining America in the days ahead. And, as someone has said, that is some job.

Today, I was happy to receive a copy of the fine publication Boy Power, which briefly reviews the splendid way in which the Boy Scout program is helping to build the kind of citizens and leaders our Nation will need tomorrow.

The program of the Boy Scouts includes a wide variety of training and opportunities, including vocational preparation, physical fitness, citizenship, and enjoyment of the finest kinds of recreation, as well as special activities in a wide variety of fields, including of wisconsin agriculture, aeronautics, chemistry, in the senate of the united states astronomy, athletics, and others.

In recognizing that this is the kind of voluntary effort, participated in by both youth and adults, we need, in order to build a stronger country, and because I recognize that this effort needs encouragement and expansion, I request unanimous consent to have excerpts from Boy Power printed in the Appendix of the RECORD.

There being no objection, the excerpts from the magazine were ordered to be printed in the RECORD, as follows: BOYPOWER THAT COMES FROM A PROGRAM WITH A PURPOSE

The power and worth of Scouting comes from what it does to the boy. A Cub Scout shows his concern by rescuing a bird which has fallen from its nest. A Boy Scout influences his school chums to give another boy a fair break. An Explorer courageously tackles a tough job and carries it through.

Each is strengthened by Scouting's code of ideals, its program of skills, its emphasis on fitness and teamwork. Multiply these little incidents by millions and you get some small idea of the power that comes from the influences of the Scouting programs at work in the lives of boys.

All these experiences provide values for boys, values growing out of program and activities carried on by volunteers in an atmosphere of growing mutual respect and helpfulness.

The ideals of the Cub Scout promise, the Boy Scout oath, and the Explorer code influence the atmosphere in which these boys live and dream and work. They give purpose and direction to a boy's growth.

CUB SCOUTING FOR BOYS 8, 9, AND 10 YEARS OLD

Boys 8, 9, and 10 years of age get together in their home-centered Cub Scout den meetings week after week, under the supervision of their den mother and den chief. The Cub Scout den is a small neighborhood group of boys who like to be together and who are beginning to learn to get along with other people and to find out more about their world.

All during the week the Cub Scout enlists his own father and mother to work with him on his various Cub Scouting achievements. Thus, home life is built more solidly and family teamwork is enriched.

The solidarity of the family team and the pride of accomplishment of the boy are further strengthened at the Cub Scout pack meeting where the parents and Cub Scouts of the various dens gather each month. Through this participation of parents and sons the threads of pride and teamwork tie together the various neighborhoods of a community, to the end that the resources of the community may be brought into action to help the individual boy to grow.

BOY SCOUTING FOR BOYS 11 YEARS OF AGE AND OLDER

When a boy becomes 11 years old he may become a member of a Boy Scout troop. He may continue in the troop until his 18th birthday when he may become eligible to be an assistant scoutmaster.

When the boy joins a troop he becomes a member of one of the patrols of the troop. A patrol is often described as a vest-pocket democracy. Under the direction of the patrol leader, one of the boys chosen by the members of the patrol to be their leader, the group becomes one of the units of operation in the troop.

Patrol pride and morale are built as the group works together in the adventure of hiking, in pitching camp, and in cooking in the open. Many kinds of activities are carried on by the patrol, and as it grows stronger, the leader and individual members grow. The patrol is a group in which boys develop skill at choosing, planning, and working together-and in helping others.

At troop meetings and on hikes and in camp, members of patrols grow stronger through competing, learning new skills, and through developing pride in accomplishment and competition.

Many older Scouts continue their relationship with the troop, year after year, growing into positions of leadership as they gain experience and skill. Thus the troop is strengthened to provide valuable experience in leadership and management for boys and young men

If at least 14 years of age and in the ninth grade or higher, or 15 years of age regardless of grade, the boy may choose to become an Explorer.

THE NEW EXPLORING PROGRAM: BOYPOWER-SOON TO BE MANPOWER

The new Exploring program for older boys and young men-after 4 years in prepara--was carefully launched during the fall of 1958. A most careful period of research, survey, analysis, and preparation had preceded the release of the new program for boys of high school age. Such outstanding national research organizations as the Survey Research Center of the Institute for Social Research at the University of Michigan, aided in the development.

By the year's end thousands of keymen related to Exploring in councils all over American had received training to equip them to go forward with the new Exploring program. program, fully implemented with books, pamphlets, visual aids, and national pub-

The new program of Exploring-scientifically built on the expressed needs and interests of young men-filled with challenge and positive value, was thus launched for the young men of America.

Strengthened with this added resource to help young men rise above the limitations that sometimes prevent their fullest possible development, the Boy Scouts of America is now equipped to enter more significantly than ever before into the lives of those many thousands of young men.

These are the types of activities that explorers specialize in: aeronautics, agriculture, plorers specialize in: aeronautics, agriculture, antiques, aquatics, archaeology, archery, architecture, art, astronautics, astronomy, athletics, atomic energy, auto mechanics, band, bird study, boating, botany, camping, canoeing, chemistry, chorus, conservation, cycling, dramatics, electronics, emerging gency service, engineering, falconry, fishing, forestry, geology, handicraft, hi-fi, hiking, horsemanship, hunting, Indian lore, marks-manship, medical, model building, mountain climbing, nature study, orchestra, orienteering, pets, photography, public speaking, publishing, radio, religion, rockets, science, seamanship, sports, stamp collecting, television, zoology.

THE BOY POWERPLANT: YOUR SCOUT COUNCIL

The purpose of your Scout council and 531 others like it is to serve America. councils serve large cities and small towns and open country area-communities, people, homes, families, boys-nearly 5 million them. Councils render such service through power, energy, planning, programing, and scheduling.

#### VOLUNTEERS

Most of all, the council makes effective the work of volunteers. Manpower. Men with vision. Men with influence. The council is made up of men who build effective budgets, men who emphasize health and safety factors, men who feel deep concern for the values that come to boys through participating in camping and outdoor activities, men dedicated to organizing additional units so effectively that they will enrich boy life and provide satisfaction to adults. The council mobilizes and gives direction

to the work of men who organize units, men who serve as commissioners, men who serve as merit badge counselors; men who serve in these and in dozens of other ways in every council in America. The outreach of their influence cannot be estimated.

The Scout council-your Scout councilis the powerhouse that guides hundreds of volunteers as they work in harmony in serving—all to the end that boys grow to be more able men, more alert, and more determined to live and work for God and coun-

There were 1,332,341 volunteer adults registered on December 31, 1958. Of these 124,549 were unit leaders; 300,872 were den mothers, and 762,967 served as committee members and in other capacities.

In order to serve these Scouting volunteers and to make their work more resultful and more satisfying, 3,471 men serve as professional leaders in Scouting.

#### Proposed Establishment of Senate Committee on Veterans' Affairs

EXTENSION OF REMARKS OF

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my affirmative statement to a special subcommittee of the Senate Committee on Rules and Administration urging the establishment of a standing U.S. Senate Committee on Veterans' Affairs.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR RICHARD L. NEUBERG-ER IN SUPPORT OF RESOLUTIONS TO ESTAB-LISH A SENATE STANDING COMMITTEE ON VETERANS' AFFAIRS, SUBMITTED TO A SPECIAL SUBCOMMITTEE OF THE SENATE COMMITTEE ON RULES AND ADMINISTRATION

Mr. Chairman, I wish to commend the Senate Committee on Rules and Administration for establishing a special subcommittee and holding hearings on the four Senate resolutions, sponsored by 35 Members of the Senate, which would establish a standing Committee on Veterans' Affairs in the Senate.

Such a committee is long overdue, and it seems only fair that veterans' legislation receive careful and sympathetic consideration in a committee which devotes itself exclusively to veterans' affairs.

Since I have been a Member of the Senate. in January 1955, I have joined in sponsoring with my colleague resolutions to establish such a committee. This year well over a third of the Members of the Senate have joined in sponsoring resolutions to establish a Senate Committee on Veterans' Affairs.

Jurisdiction over veterans' affairs is concentrated in a single standing committee of the House of Representatives. This arrangement has worked well. The House Veterans' Affairs Committee is able to consider the great number of legislative proposals dealing with veterans.

In the Senate, jurisdiction over veterans' legislation is spread among several committees, which must necessarily deal with many other important matters in other fields. Due to the press of committee business, veterans' legislation is often sidetracked in favor of the regular committee business.

Federal funds for veterans' services and benefits in the 1960 budget total \$5.1 billion, 6.6 percent of the entire Federal budget. The fourth largest expenditure of our Federal Government is for veterans, with only defense, interest on the debt, and agriculture receiving a greater share of funds. The vast score of the Federal veterans' program and funds expended demand a Senate committee which can devote full time to these matters.

The nearly 23 million war veterans and their dependents who are affected by the veterans' services and benefits program are entitled to have legislation considered by a Senate Committee on Veterans' Affairs.

For the committee's consideration I ask that a table be included with my statement showing the number of veterans of all wars, deaths in service, number of living veterans and dependents on compensation and pension rolls as of December 31, 1958. These figures were supplied by the Veterans'

Includes 935,000 with service in both World War II and the Korean conflict.

Persons who served in more than one war are counted as participants in each.

\*Includes approximately 90,000 former members of the (peacetime) Regular Establishment who are receiving VA disability compensation.

\* Includes 16,217 parents of deceased former members of the (peacetime) Regular Estab-

\*Includes 14,302 widows of deceased former members of the (peacetime) Regular Estab-

Includes 10,524 children of deceased former members of the (peacetime) Regular Establishment.

The proposal for the establishment of a standing Committee on Veterans' Affairs is not a new one. It was recommended in 1946 by the Joint Committee on the Organization of Congress, the famous La Follette-Monroney committee. Neither is the proposal for such a committee a partisan rec-ommendation. The four Senate resolutions to establish such a committee are sponsored by members of both political parties. also has the strong support of all major veterans' organizations.

It seems only fair to me that veterans' legislation should be considered by a single committee which can devote full time to these matters affecting such a large number of our citizens. The committee members would be familiar with veterans' problems and needs and could give sympathetic and prompt consideration to proposed legisla-tion, protecting both the interest of the Nation and the veteran.

Now that the hearings are being held, I urge the Senate Committee on Rules and Administration to report to the Senate a resolution to create a standing Senate Committee on Veterans. I believe that all the Members of the Senate should have an opportunity to vote on this important question.

#### Surplus Property for Education, Health, and Civil Defense

EXTENSION OF REMARKS OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD I include a report from the Department of Health, Education, and Welfare which shows that \$5,846,383 in real property and \$73,369,750 in personal property were made available to the States for education, health, and civil

defense purposes during the months of January, February, and March 1959.

The report also indicates the allocation of the property by States for the period.

It is fortunate that the surplus property mostly originating in the military departments can be put to such meritorious use at the present time when our institutions are in great need of assistance. Making this property available is, in a sense, a dividend to the taxpayers who bought the property in the first place. The Special Subcommittee on Donable Property of the Committee on Government Operations is in constant touch with this program and I am pleased to note that there has been a steady growth in the allocation of property since the amendment of the basic act, by Public Law 61, in 1955. The Honorable John S. Monagan, of Connecticut, and the Honorable ROBERT R. BARRY, of New York, serve with me on this special subcommittee.

The above-mentioned report follows:

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, Office of the Secretary, Washington, D.C.

Surplus property for which the Federal Government paid \$79,216,133 was made available to the States for educational, public health, and civil defense purposes during January, February and March 1959, by the Department of Health, Education, and Welfare. Real property accounted for \$5,846,383

and personal property for \$73,369,750. Secretary Arthur S. Flemming announced the totals in making his quarterly report to Congress on the Department's surplus prop-

erty program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies and civil defense organizations of State and local govern-ments, and to eligible nonprofit health and educational institutions exempt from Federal taxes. Regional Offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Property transferred to the States includes such items as school and hospital building sites; buildings suitable for college dormitory or faculty housing; motor vehicles; hospital, school, and office furniture; hand and machine tools; motion picture projectors; laboratory equipment; and school and office

supplies.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property made available for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions Jan. 1 through Mar. 31, 1959 (acquisition cost), in accordance with sec. 203(0), Public Law 152, 81st Congress, as amended

## The Complex Problem of Intergovernmental Relations

EXTENSION OF REMARKS

## HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

. Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the statement of the Honorable Ben West, mayor of a great southern city, Nashville, Tenn., and presented to the Senate Committee on Government operations and the Intergovernmental Relations Subcommittee of the House Committee on Government Operations by the Honorable Robert Jennings, its city attorney and Mayor West spoke on behalf of the American Municipal Association. His statement dealt with the complex problem of intergovernmental relations. Although a young man, he is now serving his third term as mayor of Nashville, a thriving and growing city of nearly 200,000 souls, which is surrounded by an area of nearly 200,000 people and this great community is in the heart of Tennessee. The experience of Mayor West in intergovernmental matters is wide and varied and his considered statement on the subject, as presented to the joint committee by city attorney Jennings, is worthy of the most profound consideration. Mayor West is a former president of the American Municipal Association.

The statement follows:

Mr. Chairman, members of the committees. My name is Robert Jennings. I am the city attorney of Nashville, Tenn. I appear before you today as a representative of Mayor Ben West of Nashville, former president of the American Municipal Association, and with your permission I would like to read into the record Mayor West's statement:

"My name is Ben West. I am the mayor of Nashville, Tenn.

"I am testifying before you today in my capacity as mayor and also to lend support to the views expressed by Mayor Celebrezze of Cleveland, Ohio, who testified before you earlier this morning on behalf of the American Municipal Association.

"As you know from Mayor Celebrezze's testimony, the American Municipal Association is firmly on record in favor of the establishment of a permanent commission on intergovernmental relations. I should like to have you know that I am fully in accord with the position of the American Municipal Association as expressed by Mayor Celebrezze.

"The last time I appeared before the House Subcommittee on Intergovernmental Relations was in Chicago in October of 1957. The subject of the hearings was Federal-State-local relations. I recall that I specifically recommended to the subcommittee at that time that a permanent advisory commission on intergovernmental relations be created to 'make the establishment of better intergovernmental relations its exclusive concern and goal.' I would like to have the committee know that I haven't changed my mind since then, and I am very pleased to see this legislation being proposed. I was also impressed by the fact that the recommendation to create such a commission was unanimously approved by the full membership of the House Committee on Government Op-

"At the time of the Chicago hearings I beleve I expressed my views in some detail
as to why I thought the establishment of a
permanent commission on intergovernmental
relations was both advisable and necessary.
After having reread my statement, I find
that my views have not changed appreciably
and, in fact, I do not believe that were I
to testify again today on the same subject
that I would change a word.

"However, since my appearance before the House subcommittee in Chicago, I have accumulated some additional and valuable experience in working to improve relationships between levels of government.

In 1956 the American Municipal Associa-

In 1956 the American Municipal Association and the American Association of State Highway Officials with the cooperation of the Bureau of Public Roads and the assistance of the Automotive Safety Foundation established a Joint Committee on Highways. I have had the honor of serving as the cochairman of the committee since its inception. Working with this committee has been for me a real practical exercise as to how to go about achieving improvement of relationships between the local, State and Federal levels of government.

To be sure even after some 3 years of reasonably constant and dedicated effort, we still differ with our friends at the State and Federal levels about certain aspects of the highway program but we have made considerable progress, and we hope to make more in developing a more effective and efficient national highway system.

As one example of the kind of success we have had, I would like to call to your attention the fact that we have just recently pub-

lished some fairly definitive guidelines on the highway program to help both local and State officials develop balanced highway systems with due recognition for the unique transportation problems posed by cities and by increasing urbanization. The develop-ment of these guidelines was the result of 3 years hard labor brought to fruition just this last year at a conference held in Sagamore, N.Y. The summary of the proceedings of this conference constitute the guidelines I referred to and is being widely utilized by local and State officials alike. It has been officially recommended and endorsed by the Bureau of Public Roads. I have arranged to have each of you presented with a copy of the Sagamore conference proceedings, and I am sure you will find it a very fine example of how improved intergovernmental relations can really pay off.

The successes of our joint committee and the fine cooperation we get from the Bureau of Public Roads and other interested groups, however, does not in any sense mean that this kind of activity can substitute for the work we would expect to be accomplished by the permanent advisory commission we are discussing here today. As a matter of fact, I believe from my own experience it does just the opposite.

We have had a small taste of success and we are anxious for more. Also, despite all we have accomplished we are far from being satisfied that even in the matter of highways that we have achieved the level and kind of mutual understanding we need to eventually obtain.

We definitely do need an interested forum to observe what we have done and to give currency to our achievements and to promote similar activity in other areas. We are convinced from our own experience that good relationships between levels of government can be established and can be maintained. We are convinced that the existence of slch good relationships can add immeasurably to the efficiency and success of any program whose operation involves more than one level of government. In short, we are convinced that this sort of accomplishment means better programs and better government.

We think the creation of a permanent Commission on Intergovernmental Relations will prove helpful and effective in strengthening the ties between the three levels of government and in the development of better and more effective methods of solving the broad problems that continued urban growth pose for municipalities, the States and the Federal Government,

#### Competition in Commercial Banking

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. MULTER. Mr. Speaker, this Congress has been and will be called upon to deal with considerable legislation concerning money problems, banks, and banking. If we are to legislate intelligently on any subject, the maximum knowledge is essential.

With that in mind, I am pleased to direct our colleagues' attention to a very fine factual compilation. It is the address of the Honorable L. A. Jennings, U.S. Deputy Comptroller of the Currency, delivered by him at the annual

convention of the Pennsylvania Bankers Association on May 27, 1959.

It follows:

COMPETITION IN COMMERCIAL BANKING

I am both honored and pleased to have the privilege of participating in the program of your association and to speak to you on the subject "Competition in Commercial Banking."

The theme of today's session of your convention is the banker's relationship to government. I think my subject is in harmony with the theme from the standpoint that commercial banks are carefully regulated and closely supervised by 49 (it will soon be 50) State and 3 Federal bank supervisory agencies, yet they are highly competitive among themselves, with mutual savings banks and with all of the nonbank types of specialized financial institutions.

Because of the public policy factor, banking is not accorded the freedom that most other businesses and industries enjoy. Commercial banks, in meeting competition, must act within the framework of banking laws, usually restrictive in character, and give careful thought to public policy considerations.

The need for governmental regulation frequently applies to those industries which hold a monopoly on their particular type of business or product in a given area. We think of the telephone companies—free of local competition, other utility companies which individually serve large areas, and transportation companies which operate exclusively over certain routes. Obviously, regulation of the activities of such companies is essential in protecting the public interest.

Regulation with respect to their activities is, of course, concerned largely with rate structures so as to guard the public from overcharges and abuses that could grow out of an unrestrained monopoly or near monopoly. However, regulation of these industries goes even further than that. Utility rate structures are set at levels which will not only protect the public, but in addition, assure in a large measure that a fair margin of profit will accrue from their operations.

At the same time some such industries are assured of what might be called a captive clientele—those customers who reside or are established in the area served. Commercial banks, on the other hand, must operate and compete within closely regulated limitations on their activities and under ceilings on loan interest rates established by the laws of the several States. Theses statutes and regulations provide no assurance of profit.

During the past 4 years, I have had occasion to become familiar with the details of approximately 400 proposed bank consolidations, mergers, and cash absorptions. It was necessary to weigh the probable competitive effects of each proposed merger or similar transaction. When the basic facts suggested such action, the competitive aspects of the proposal were thoroughly examined and considered.

From time to time I have been impressed by the apparent lack of awareness on the part of individuals in all walks of life, and including a few Government officials, of the many facets that comprise the competitive life of a commercial bank. It is not my purpose today to discuss the reasons motivating, and the pros and cons of bank mergers.

My only purpose is to walk with you down the various avenues of competition which are traveled by commercial banks. As commercial bankers you rub elbows every day, often to the point of high friction, with many or all of these same forces of competition. I wish to make it very plain that it is not my purpose to be critical of any of the financial institutions which compete against commercial banks. I shall be factual in commenting on the competition afforded by other types of financial institutions, and hope that no one will prove to be sensitive or allergic to cold facts.

Mr. Webster defines competition as "The effort of two or more parties, acting independently, to secure the custom of a third party by offering more favorable terms." In order to compete successfully, a commercial bank must provide, above all, an experienced and competent personnel. It must provide competitive interest rates for loans and, if possible, deposits, a full range of banking services, and convenient facilities, that will attract and hold public support against able and effective competitors.

At the same time, it must be operated soundly and profitably. Its maximum interest rates on savings and time money are established by Federal or State laws at rates below those of its competitiors for savings funds, but higher than some of the commercial banks can afford to pay. The commercial bank must pay substantial Federal income taxes. The character and composition of its asset structure must be maintained within the boundaries of progressive yet adequately conservative deposit banking standards. It must observe many restrictive laws and regulations.

Member banks of the Federal Reserve System with 84 percent of commercial bank deposits are the basic instrument used in the application of monetary policy by the Board of Governors of the Federal Reserve System through maintaining legal reserve requirements in the form of nonearning cash assets. These commercial banks must sacrifice earnings and bear the burden of expanding and contracting credit so that all, including their competitors, may benefit from a flattening out of the hills and valleys of our economic life.

Commercial banks must maintain an appropriate measure of liquidity. This is essential to assure their ability to meet deposit withdrawals upon demand. Failure on this score constitutes an act of insolvency—withdrawal demands must be met. Adequate capital funds must be maintained to permit the undertaking of risks, inherent in the business of lending and investing, with the funds of depositors.

These policy, legal, monetary, restrictive, or protective measures serve as a sea anchor in times of economic stress. They serve as an anchor during normal or growth periods to the competitive efforts of commercial banks, particularly for the funds of savers, in relation to mutual savings banks and the several nonbanking types of specialized financial institutions.

When President Lincoln approved the National Currency Act on February 25, 1863, there were slightly more than 1,500 commercial, savings, and private banks in the United States. In 1882 there were 7,302 commercial banks with total deposits of \$2.8 billion.

By 1904 the number of commercial banks had grown to a total of 18.844 with total deposits of \$10.4 billion. This represented one bank for every 4.344 people. The banking laws at that time were relatively broad; however, as the economy of the Nation grew and the need increased for a better coordinated banking structure and greater flexibility in currency powers, further legislation became advisable.

In late 1913 Congress enacted the Federal Reserve Act. By 1921 the number of banks reached the highest point in our history, 30,800, and from then on began to decline as a result of failures, consolidations, and voluntary liquidations. Competition flourished. Many towns with economies scarcely

adequate to support one bank profitably were served by two or more banks.

Practices and policies which proved to be unsound were adopted to enhance earnings or to attract business from competitors. Fifty-five hundred bank failures occurred during the "roaring twenties" from 1921 to the end of 1929.

It is important to note that during this same period, 1921 to 1929, the new bank chartering policies of State and Federal bank supervisory authorities were seemingly as competitive and unsound as those of some of the banks they supervised. Thirty-three hundred and fifty new banks were chartered between 1921 and 1929.

Thus the economic forces tending to cure a severely overbanked condition in the Nation through failure of unneeded and weaker units were largely offset by the issuance of new charters. Between 1930 and the end of 1933, 6,500 additional banks closed their-doors.

At the end of 1933, the total number of banks had dropped from the high point of 30,800 in 1921 to less than half, 14,440. Other even more important causes were involved, but it is crystal clear from this sad history that banking can not soundly exist under conditions of unwise and unrestrained competition.

During the early years following the bank holiday, the demand for credit began to increase. New types of credit demands developed. Some bankers, in retrospect, were too conservative, but who can blame them after the difficult experiences of the depression and the bank holiday.

Bank supervisors, I am positive, were similarly too conservative during this period. The inclination to take even a reasonable risk had been temporarily—I repeat—temporarily—dulled. Federal agencies were created to make, participate in, guarantee, or insure various types of loans regarded as having risk characteristics not acceptable to banks without governmental support.

Banking steadily strengthened its position, and expanded explosively in deposits and U.S. bonds during World War II. At the end of the war the pent up demand of individuals for consumer goods and homes and just about everything else under the sun immediately became a force of major significance and importance in banking and the entire economic life of the Nation.

The postwar period up to the present time has been one of major change in the competitive forces confronted by commercial banks. The demand for loans has been almost insatiable. Since January 1, 1950, the loans of commercial banks alone have increased from \$43 billion to \$100 billion.

Yet during this same period other types of lending institutions have forged ahead with as great or even greater strides. The competion for deposits and loans, and for the privilege and profit of serving the financial needs of every segment of the economy has been intensive and keen.

I do not believe, however, that commercial banks have permitted their competitive efforts to be characterized by unrestrained, unwise, or unsound policies and practices. To a minor extent some of this has occurred and is occurring, but in the main it has been held, within reason, although liberally tempered by, shall I say, an undulled willingness to assume risks.

Commercial banks do not enjoy an exclusive preserve in any field of credit. Their closest aproach to this status is in the field of short term credit to commercial and industrial concerns. Constant and aggressive work is necessary to maintain or extend their participation in all of the recognized lending areas.

Commercial banking must expect continued and increased competition from all of the other types of financial institutions.

There will be not letup on this score. Let us now consider the various competitors of commercial banking and how they compete.

Federal and State-chartered savings and loan associations are zealous and highly effective competitors for the funds of savers and for real estate mortgage loans. During the past year the 13,124 insured commercial banks increased their savings deposits \$2.2 billion; 6,300 savings and loan associations increased their share accounts \$6.1 billion.

At the end of December 1958, they held nearly \$48 billion in share accounts or withdrawable balances. Their loans amounted to \$45.6 billion. Ten years ago the share account holders numbered 8,850,000. By 1958 the number had increased to 23 mil-

lion, a gain of 160 percent.

Their competitive efforts are not confined simply to a local trade area. Some associa-tions go far afield to attract funds by mail. One sees advertisements in the newspapers of eastern and mid-western cities of associations domiciled usually in western States offering share account dividends up to 5 percent. Unlike commercial banks limited to 21/2 percent or 3 percent maximum legal interest rates on savings deposits, there are no legal limitations on their dividend rates. As mutual associations, they may add earnings to reserves for bad debts without payment of Federal income taxes so long as surplus and reserves are less than 12 percent of the aggregate share accounts. They are not required to maintain reserves as an instrument of monetary policy.

On the average, they maintain fully invested positions in real estate mortgage loans which greatly enhances their earnings in relation to those of commercial banks. As a specialized type of financial institution with their major investment in real estate mortgage loans, normal administrative costs are less than those of all-purpose commercial

banks.

Because of a favored earnings position, they can and do spend substantially more on advertising.

Regardless of the branch laws governing State-chartered savings and loan associations, federally chartered institutions may be authorized by the Home Loan Bank Board to establish branches in all of the States. In a relatively recent decision of the Court of Appeals for the District of Columbia commercial banks were held not to be local thrift and home financing institutions within the meaning of the Home Owners Loan Act and, therefore, had no standing to question the right of the Federal Home Loan Bank Board to charter a new savings and loan association.

The multiple advantages of savings and loan associations place them in a strong position as a competitor for the funds of savers. In this field, they hold a majority of the trump cards. After paying dividends, Federal Savings and Loan Associations increased their surplus and reserve funds 15 percent from retained earnings in 1957.

After the payment of taxes, national banks earned 9.15 percent on capital structure and reserves in 1957. After the payment of dividends that averaged about 4 percent, the retained earnings of national banks increased their capital structures and reserves 5.2 percent.

There are now 18,750 Federal- and Statechartered credit unions in the United States—double the number 10 years ago. They have nearly 11 million members— triple the number 10 years ago, and the total of their withdrawable balances or share accounts is estimated at \$4.3 billion, 61/2 times more than 10 times more than 10 years ago. About 15,000, or 80 percent, of the credit unions are located in manufacturing plants. Employees of such plants account for 90 percent of the total membership.

Credit unions hold 8 percent of the Nation's consumer installment credit, 17 percent of all personal loans, and 6 percent of all automobile loans. They make real estate mortgage and other secured loans, cash payroll checks in some cases. In many in-stances the participant credit union members receive life insurance equal to double the amount of their shareholdings. Some credit unions provide credit life insurance.

Credit unions pay no taxes since they are exempt from State, Federal, and local taxes on their property, franchise, capital, reserves, surplus, and income.

The dividend rates paid on funds of participants range from 4 percent to 5 percent. After paying dividends, Federal Unions increased their surplus and reserve funds 25 percent from retained earnings in 1957. Their share accounts are not insured and it would appear that the spokesmen for the credit union movement do not desire insurance. For the most part they operate in space provided by the companies whose employees make up their membership. They are now an effective, aggressive, and the fastest growing competitor for the funds of savers. Their loan activities are substantially broader than those of savings and loan associations. They are a competitive force of growing consequence.

Life insurance companies are competitive with commercial banks on a nationwide basis chiefly for intermediate and long term loans to commerce, industry, and agriculture. Policyholders have increased from 78 million to 112 million in the past 10 years. The policy reserves have more than doubled since 1946 and amounted to nearly \$88 billion in 1958; \$37 billion of this amount was in real estate mortgage loans, an additional \$4 billion in other types of

loans.

Many bankers have told me that their strongest competition today in the corporate field is the high yield on short-term obligations of the U.S. Government. The high yields are attractive to the officials of large corporations having excess funds, to central banks of foreign countries maintaining reserve accounts in the United States, to savings and loan associations for a portion of their liquidity reserve funds, and to some individuals who have drawn their demand balances down to minimum figures short of incurring service charges.

Very recently a bank having total deposits

of several hundred million dollars made a full-scale survey to determine the amount of funds it would otherwise have on deposit except for the competitive impact of Government bond yields. It discovered that an amount equal to 20 percent of its present total of demand and time deposits had been short-circuited from its deposit totals into U.S. obligations by the attractive rates. At the end of 1958, 32 percent of corporate cash assets of \$53 billion were held in U.S. obligations. This is indeed rugged competition.

The 518 mutual savings banks, largely

located in the Northeastern United States, had total resources of \$37.4 billion at the end of 1958, up from \$20 billion since 1948. An increase of \$2.3 billion occurred in 1958. Loans of \$23 billion were largely real estate mortgage credits. As mutual institutions they occupy, the same favorable Federal in-come tax position as savings and loan asso-During 1958 the insured mutual savings banks (resources \$30.2 billion) allocated \$125.6 million to reserves, undivided profits or surplus while paying \$511,000 Federal income taxes. Insured commercial banks paid income taxes of \$1.2 billion during 1958 while paying dividends and adding to reserves and undivided profits from net earnings after taxes of \$2.1 billion.

Mutual savings banks are easily able to pay higher rates for savings funds than commercial banks. The services provided by them cover a wide range in some States. quote from an advertisement of a mutual savings bank in Connecticut:

"For all your family banking needs-safe deposit boxes, night depository, savings accounts, Christmas and vacation clubs, save by mail, collateral loans, savings bank life insurance, travelers' checks, personal money order checks, personal loans, automatic loan privilege, mortgage loans, mortgage insurance, home improvement loans."

Once again, this is rugged competition for commercial banks seeking the deposits of savers at 2, 21/2, or 3 percent rates, and sometimes unable to afford even those rates.

There are in excess of 8,000 finance and personal loan companies in the United States operating approximately 19,000 offices. They held loans of more than \$17 billion at the end of February 1959; \$13 billion was in consumer credit loans, the remainder largely commercial credit including a substantial amount of automobile floor-plan paper.

It is estimated that between 30 and 40 percent of the funds used in connection with the \$17 billion of loans were borrowed by the finance and personal loan companies from commercial banks. The competitive effect of the operations of these companies on commercial banks is, to this partial extent, re-

duced or nullified.

Many of the offices of finance and personal loan companies are open for business on Saturdays, several evenings during the week, and almost all from 9 to 5 each weekday. Just last month the Nation's second largest sales finance company (Universal C.I.T. Corp.) announced plans to make repair and modernization loans to homeowners. At the present time this lending field is served in an important way by commercial banks which hold about 75 percent of the \$2.1 billion of such loans outstanding. Mutual savings banks and savings and loan associations hold most of the remainder. It would seem probable that other sales finance companies will enter this field.

Needless to say, the finance and personal loan companies have been important competitors for consumer commercial, and personal credit for many years. They will continue so, and very likely in an even broader and more effective way.

Corporate pension and profit sharing plans

are becoming increasingly competitive with commercial banks despite the fact that commercial banks frequently act as trustee for the plans. Bankers from various areas of the country have told us that a sizable number of corporations now borrow from their own pension or profit-sharing funds, thus depriving their banks of the loans.

At the end of 1958 there were 48,000 Treasury approved pension and profit-sharing plans, many of which were funded. The impact of the growth in retirement fund accounts on the economy was noted by the Securities and Exchange Commission in a

very recent report.

The Commission reported that at the end of 1958 the resources of corporate retirement trust funds totalled \$22.1 billion, the reserves in insured penison plans, \$15.5 billion. The combined total of \$37.6 billion reflects an increase of \$4.3 billion since the end of 1957.

The deposit banks of the Nation, commercial and mutual savings, and the nonbank types of specialized financial institutions, have for many years rendered outstanding service to the U.S. Treasury Department through fostering the sale of savings bonds, and handling their issuance and redemption, frequently at a loss to their respective or-

They have done this despite the fact they too were competing for savings funds, the commercial banks at rates less attractive than those offered by savings bonds. At the end of December 1958 the cash value of E and H savings bonds in the hands of investors was \$42.6 billion. Our deposit banks and the nonbank types of specialized financial institutions deserve the thanks of every citizen for their outstanding service to our Government and their willingness to disregard the conflicting competitive considerations that are involved.

There are about 40 Federal agencies and their instrumentalities which have authority to make, guarantee, and insure loans. Based on fairly recent estimates, they hold \$22.7 billion of direct loans, and guarantee or insure \$59.8 billion of additional loans.

Banks and other lenders hold the \$30.7 blllion of loans insured by the Veterans' Administration and the \$23.4 billion insured or guaranteed by the Federal Housing Administration. For the most part the direct loans of these agencies—\$9.5 billion, Agriculture; \$4.7 billion, Housing; \$3 billion, Export-Import Bank; \$2.5 billion, International Cooperation Administration—are not the type of credits desired by banks.

Other than in a very negligible and unimportant way, I do not consider Government lending agencies in general are competitive with commercial banks. If they are competitive in some areas, such as the Production Credit Corporation, banks are believed to be in a position to compete effectively if they are so inclined.

The various competitive elements I have mentioned combine into a potent force that is reckoned with daily by commercial banks. However, I have not mentioned the strongest competitive force of all—the fierce and unending struggle that goes on between commercial banks for every type of banking business.

This is not limited to the two or more banks in a single town or city. A recent survey made in a city with a population exceeding 500,000 revealed that of the 50 largest banks in the Nation with total deposits of \$61 billion, 41 of them were actively soliciting business in that city.

I shall not spend your time outlining the techniques employed by commercial bankers to strengthen the competitive impact of their banks. You are a sophisticated group. I am certain you are well ahead of me in this particular field and already know about techniques adopted yesterday that we in the Comptroller's office have not yet heard about.

Commercial banks compete with one another and with many other types of financial institutions, near and far. They accept risks of a nature unlike those faced by many other businesses, regulated or not. Their net profit depends on the ultimate successful collection of outstanding loans, as well as on the interest yield. If they are to be adequately competitive, they must pursue a policy of progressive and warranted credit liberality and the assumption of reasonable risks. This is not a simple thing to do. It is easy to veer too far into ultra-conservative fields, or permit the competitive urge to lead into fields of unsound credit liberality that are of benefit to neither the borrower nor the lender. Commercial banks must be alert to every need for banking service and provide it in a manner that will merit the support of public opinionor lose the business and profit to a competitor.

I think commercial bankers are doing a difficult job very well. They are able to compete effectively in the major banking fields with the very important exception of attracting savings funds. Here they are steadily and even rapidly losing ground to savings and loan associations, credit unions, and mutual savings banks. This is true largely because of a drastic Federal income tax differential in favor of the mutual asso-

ciations which enables them to outcompete the commercial banks in the all important rate of return paid to the saver. Unless and until this competitive imbalance has been adjusted and the tax differential substantially or wholly eliminated, commercial banks must continue to occupy an inferior position in seeking to attract the funds of This is an Important weakness in the commercial banking system, particularly for the many thousands of small banks that have always been nearly 50 percent savings in their deposit and loan composition. If relief is not forthcoming, their well-being is bound to suffer. Moreover, many medium- and large-sized commercial banks hold proportionately large amounts of savings deposit. Almost all commercial banks have need for savings funds in conducting their lending operations in the consumer. mortgage, and term loan fields. May the early future see an easing or correction of this major banking problem.

I have not commented on the numerical, locational, and serviceable adequacy of commercial banks and the relationship of these factors to competition among the 13.514 commercial banks and their 8,789 branches. That is another story. It is my opinion, however, that the public interest is being well served on these important points.

I sincerely believe competition will be adequate in banking provided its management and policies are in the hands of bankers operating within sound and equitable statutory guide lines. Inequitable regulation by Government is, in my judgment, the shortest and most direct route to a breakdown of the advantages which accrue to all of us through banking competition.

Thank you.

#### Amending Mutual Security Act of 1954

SPEECH

## HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. BENTLEY. Mr. Chairman, this is the first amendment to reduce the overall authorization by any specific amount. The administration request for direct military assistance in section 101 of the bill was for \$1.6 billion; that is, direct grant military assistance. The committee, in its wisdom, reduced that figure by \$160 million to the figure \$1.44 billion, which is the figure in the bill now before you. My amendment would seek to reduce it by an additional \$140 million, and I might add, parenthetically, this is a lesser cut than the amount which the committee reduced it, to a new figure of \$1.3 billion, which would be approximately \$300 million in direct grant military assistance below the budget request.

Now, if the members of the committee are interested in knowing what countries receive direct grant military assistance, there is a very handy little map on page 9 of the committee print which shows all of the countries listed for direct grant military assistance, including, the members will note, practically all of the countries of western Europe.

Now, for further convenience, I would like to suggest that the members might be interested in reviewing in yesterday's Congressional Record certain remarks I made and certain tables I included on page 9877, which show the percentage of total national income spent on defense by many of these western European countries as compared with the percentage of total national income which these countries spent on so-called welfare expenditures.

These tables and the accompanying article were taken from the most recent issue of the U.S. News & World Report. We find some very interesting things. We find that Britain, for example, which has been receiving direct grant military assistance spends 7½ percent of her national income on defense and 10 percent on welfare. We find that France spends 6.8 percent on defense and 15 percent on

so-called welfare programs.

The tables are there for Members to examine if they see fit. But what does it mean? It means that we are still continuing a program of grant military assistance to countries which, as was brought out in the debate yesterday, have greatly increased their gold and dollar reserves and are well able to purchase military assistance should they require it. It means that we are continuing to give military assistance to countries whose burden of defense is much less than our own, whose taxpayers' burden is much less than that of our taxpayers. But at the same time we are directly helping subsidize their own welfare programs for the benefit of their own people, on which welfare programs they spend a much larger percentage of their national income than does this country which only spends 5 percent on its welfare programs.

It further means, Mr. Chairman, that by continuing to assist these countries in their military programs we are thereby also assisting them to devote a larger part of their industrial potential to build up industries which, as we all have good reason to know, have been and still remain very strongly and fiercely competitive with us in the world markets, not only in the export field but even here at home

I am not against these countries competing with us. I am not against the building up of their gold and dollar reserves. I am saying this, that these countries of Western Europe in particular are well able and should be required to purchase much more of the military hardware which we are now giving them and which I hope, if my amendment prevails, they would have to purchase if they wish to assume the levels of defense that we and they deem appropriate for the defense of Western Europe.

Mr. Chairman, this is not a radical cut. It is a cut less than that which the committee made. It brings the figure down to \$1.3 billion. If anyone wants to examine the minority report, and reflect upon the tremendous amount of unspent

and even unobligated funds that remain in the pipeline in this program, it would be helpful. I suggest the program could well absorb the cut and that we should pass this amendment.

Mr. DORN of New York. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman.

Mr. DORN of New York. Can the gentleman explain why we are giving military assistance to Cuba as illustrated by that diagram the gentleman referred to on page 9?

Mr. BENTLEY. No; I cannot explain why we are giving military assistance to Cuba. Perhaps a Member of the majority may be happy to answer that particular question, but I remind the gentleman that, according to the map, Cuba is included along with a great many other countries.

#### Amending Mutual Security Act of 1954

SPEECH

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, I would like to comment on two subjects: first, on a point made by our friend from Indiana. I am sure we would all like to be able to set a termination date on this program. Also on our farm program, which costs us more each year than MSA. When would the gentleman like to stop our aid to farmers in Indiana or in Minnesota: 2 years from now? Three years from now? Five years from now? We cannot wind up farm programs until some of the problems are solved. We would like to set a termination date for our American Indian programs, too. We have been at them for 175 years or more. I do not know any way that we can set a termination date until we get the problems solved. We have tried this, that, and the other in attempting to solve our international problems without war, and we are constantly trying to improve the programs, but we cannot now put a termination date on these efforts in the kind of world in which we

Mr. HAYS. I favor terminating the farm program and Benson simultaneously.

Mr. JUDD. We had before us last week a modified wheat program which its proponents said they recognized did not have all the answers, but that we simply had to have a program to try to cut down the wheat surpluses even though it might cost the taxpayers more money for higher supports. The House, including the gentleman from Ohio, voted for the program. Does anyone believe it will be the last?

Mutual security, like the \$39 billion for our Armed Forces, is one of those things which we all wish we could end now or know we could end, say, 3 years from now. But can anyone set a termination date now on which our enemies will lie down, roll over, and give up? I do not know how to predict that. And to say now that we are going to end our program on a given date can only encourage them to redouble, not reduce their efforts. It would defeat our own interests.

Now, the other point, a while ago there was discussion about the International Development Advisory Board, and I think we ought to have in the Record the names of the members of that Board. There are 13, and by law they are to represent broadly, business, labor, agriculture, public health, and education. It is an independent board. It was set up by the Congress to study this matter from the standpoint of the whole country and of all the particular interests mentioned. The membership is as follows:

Harry A. Bullis, Chairman, Minnesota, chairman of General Mills, Inc. Chairman requires Senate confirmamation. I can assure the House that anything Mr. Bullis manages will be very well handled, indeed.

Agriculture: Allan B. Kline, Illinois, past president, American Farm Bureau.

Business: Mrs. Olive Ann Beech, Kansas, president, Beech Aircraft Industry.

Business: Harvey S. Firestone, Jr., Ohio, chairman, Firestone Tire & Rubber Co.

Economic development: Edward S. Mason, Massachusetts, professor of economics.

Education: Clark Kerr, California, University of California.

Labor: Lloyd A. Mashborn, California, general president, Wood, Wire & Metal Lathers International Union.

Press: Richard H. Amberg, Missouri, publisher, St. Louis Globe-Democrat. Press: Peyton Anderson, Georgia, pub-

Press: Peyton Anderson, Georgia, publisher, Macon Telegraph and Macon News.

Public administration: Leonard B. Jordan, Idaho, former Governor of Idaho.

Public health: Lowell T. Coggeshall, Illinois, dean, Division of Biological Sciences, University of Chicago.

Science: Edwin B. Fred, Wisconsin, president emeritus, University of Wisconsin.

Venture capital: Robert W. Purcell, New York, chairman, International Basic Economy Corp.

I think the Congress was wise to authorize such a board of citizens to ride herd on this program, to reappraise, reevaluate, criticize it, and suggest readjustments wherever it believes they are needed.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JUDD, I yield to the gentleman from Iowa.

Mr. GROSS. I wonder how this Government was able to get along without an International Development Advisory

Board for all the months that it did, from August 3, 1957, to August 28, 1958? Mr. JUDD. The gentleman is one of

Mr. JUDD. The gentleman is one of the sharpest critics of the program, and maybe if we had had this board functioning all the time, there would not have been quite so many things that the gentleman thinks are wrong with it.

Mr. GROSS. Does the gentleman admit there is something wrong with this foreign-aid program?

Mr. JUDD. Yes, indeed, I have referred to them several times.

Mr. GROSS. I did not think the gentleman would admit there was anything wrong with the program.

Mr. JUDD. We have been working for months to dig them out and try to correct them.

Mr. GROSS. I thought everything was lovely and the goose was hanging high.

Mr. JUDD. I do not think you have heard a member of the Committee on Foreign Affairs say that this program could not be improved, or did not need improvement. We have said that what the program is designed to do is absolutely necessary and the thing for us to do is to get on with the job—only do it better.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentleman from West Virginia.

Mr. BAILEY. I would like to call the gentleman's attention to line 11 on page 12, under "General and administrative provisions," subsection (c):

Notwithstanding any other provision of law, foreign currencies available to the United States for utilization under this or any other act may be utilized by the President, in his discretion, for science and research, including the translation of scientific books and treaties.

I want to remind the gentleman that he voted only last Friday against a coal research bill here, but he is perfectly willing to allow a provision of that kind to remain in the bill.

Mr. JUDD. This provision does not cost the taxpayer any new money. The purpose is to make it possible to use foreign currencies which we have accumulated abroad in the sale of our commodities, for such things as translating scientific books and documents written by foreign scientists. The day sputnik appeared in the sky, a lot of Americans asked, "How did this happen and we not know about it?" Well, we had not been translating Russian scientific journals. They had predicted this would happen. 6 months before. Where we have foreign currencies that cannot otherwise be used, is it not sensible to use them to make available for American scientists and engineers, the scientific studies that are being reported in foreign scientific journals? The purpose is to help American scientists and engineers, to help our own country.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentleman from Pennsylvania.

Mr. FULTON. Mr. Chairman, may I say to the gentleman from West Virginia

that the gentleman from Pennsylvania was one of the strongest supporters of the bill to establish a Coal Research and Development Commission.

Mr. BAILEY. Nevertheless that section is still in the bill, and I am going to

move to take it out.

## Federal and State Aids to Small Business Firms

EXTENSION OF REMARKS

#### HON. RICHARD L. NEUBERGER

OF OREGON-

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. NEUBERGER. Mr. President, Prof. Edward W. Reed of the School of Business Administration at the University of Oregon, has compiled a most useful compendium of Federal and State measures recently enacted for aid to small business. Because this synthesis can be so helpful to small business borrowers in the Nation generally, and in my own State of Oregon in particular, I ask unanimous consent, Mr. President, that it be printed in the Appendix of the Record. For the information of my colleagues, Edward W. Reed is professor of finance at the University of Oregon.

The article by Professor Reed was published originally in the May 1959 issue of the Oregon Business Review, under the title "Federal and State Measures for Financial Aid to Small Business." The Oregon Business Review is published on a monthly basis by the University of Oregon Bureau of Business Research.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL AND STATE MEASURES FOR FINANCIAL AID TO SMALL BUSINESS

(By Edward W. Reed, professor of finance, University of Oregon)

The financing of small business has long been a problem in America. Large and long-established businesses are generally able to obtain equity capital and long-term funds from the sale of stocks and bonds through organized capital markets. Small firms have, however, had difficulty in obtaining funds through the capital markets, and, if they are able to do so, the cost is almost prohibitive. A study made by the Board of Governors of the Federal Reserve System early in 1958 indicates that adequate credit is available to small business from banks and private sources; but recent testimony in Congress regarding the financing of small business points to the inadequacy of facilities for providing long-term loans and equity capital.

This problem has been partially met over the years by local industrial foundations and in more recent years by State development credit corporations. Congress has struggled with the problem for the past several years, and during the last ression enacted legislation designed to promote and encourage the long-term financing of small business. This legislation had three phases: (1) The Small Business Administration was made a permanent agency with increased lending power and a reduction in the maximum interest rate it may charge borrowers (the Small Business Administration was es-

tablished as a temporary agency in 1953 for the purpose of making short and intermediate loans to small business); (2) the tax obligations of small firms were lightened; and (3) the Small Business Investment Act was enacted to make funds available to specialized investment companies. In this article we are concerned primarily with the latter legislation.

The Small Business Investment Act is unique in that greater emphasis has been placed upon private enterprise and local initiative than on direct Government aid. The act is designed to augment ownership capital indirectly by providing for Federal along with private funds to investment companies, which in turn will invest in and make loans to small businesses. It is hoped that this legislation will result in the organization of small-business investment companies, which will attract large amounts of private capital and channel them into the small businesses throughout the country which have need for additional capital.

Small-business investment companies may be organized under the general incorporation laws of the various States. If, however, the Small Business Administration determines that such companies cannot be chartered under State law and operate in accordance with the purposes of the act, they may be chartered by the Small Business Administration under Federal law. However, they must be chartered under State law after June 30, 1961, when the chartering authority of the Small Business Administration will terminate. By that time States will have had an opportunity to provide for the formation of such smallbusiness investment companies and the chartering function by the Small Business Administration will therefore be unnecessary. Termination of chartering authority by this agency will have no effect upon the continuing activities of any of the smallbusiness investment companies previously

A minimum of 10 stockholders may organize a small-business investment company under Federal law. These stockholders may be individuals, partnerships, corporations, insurance companies, and financial institutions, including banks insured by the Federal Deposit Insurance Corporation. Insured banks, however, may not hold shares in such companies and in amount aggregating more than 1 percent of their capital and surplus. There is no requirement regarding the minimum or maximum amount of stock that a stockholder must or can hold. Theoretically, one stockholder could supply virtually the entire amount required to start a small-business investment company. A bank, for example, with a capital and surplus of \$15 million could organize such a company as a subsidiary; in fact, this has already been done.

A small-business investment company must have a paid-in capital of at least \$300,-000 before commencing business. At least half of this must be provided by the stockholders; the remaining 50 percent may be invested by the Small Business Administration in the form of subordinated debentures. Subordinated debentures are evidences of long-term debt which rank ahead of common stock but behind other indebtedness in case of liquidation. The \$150,000 secured from the Small Business Administration cannot exceed a term of 20 years and will carry an inteerst rate of 5 In addition to the \$150,000 provided by the Small Business Administration as a part of the original capital, an investment company may borrow an amount equal to 50 percent of the paid-in capital and surplus from the same source. This loan will also carry an interest rate of 5 percent and will have a maturity of 20 years. Thus it is possible for the stockholders to derive \$300,-000 from the SBA in the formation of a

small-business investment company with assets of \$450,000. Small-business investment companies will also be able to borrow from private sources and will probably borrow up to \$4 for every \$1 of capital and surplus. The \$150,000 loan from the SBA is authorized to encourage the formation and growth of small-business investment companies until they have been able to build up sufficient capital of their own.

Small-business investment companies will be, it is hoped, of assistance to small business by making long-term loans and by purchasing convertible debentures. Loans can be made to both incorporated and unincorporated small business concerns which have need for funds for sound financing, growth, modernization, and expansion. Loans may be made directly or in cooperation with other lending institutions on an immediate or deferred basis. Loans are limited to a maturity of 20 years unless an extended maturiay, not exceeding 10 years, will aid in the orderly liquidation of such loans. The rate of interest charged by the company on loans will be established by the company, but cannot exceed the limit set by the usury law of the State in which it is incorporated. If there is no legal limit, a limit will be established by the SBA.

Small business investment companies may make capital available to small business by the purchase of convertible debentures. These debentures will bear a rate of interest established in the same manner as are loans. Debentures may be callable on any interest payment date upon 3 months' notice at par plus accrued interest. They may be convertible at the option of the company or a holder in due course into the stock of the small business concern. Before, providing capital in this manner, the small business investment company may require a small business concern to refinance any or all of its outstanding indebtedness so that the investment company will be only holder of debt. The small business concern must also agree not to incur further indebtedness without the approval of the small business investment company and to give the company an opportunity to finance such additional indebtedness. A business concern securing capital from a small business investment company in this manner is required to become a stockholder in the investment company in an amount equal to not less than 2 nor more than 5 percent of the capital provided. The amount that a small business investment company may lend to any one small business concern is limited to 20 percent of its combined capital and surplus. unless otherwise approved by the Small Business Investment Division of the Small Business Administration.

The Small Business Investment Act created a fund of \$250 million to be made available to small business investment companies. These funds will have to be repaid in time. This mount of money will act as a revolving fund to be made available to other investment companies as it is repaid. There has been widespread public interest in this new legislation, and a number of individuals, banks, and other financial institutions have applied for charters to establish small business investment companies. Nineteen of these applicants have been asked to proceed with their organization even though licenses have not been completely approved. licenses have been issued. The companies that have already received a license are the First Minneapolis Investment Co., and the Citizens & Southern Small Business Investment Co. of Atlanta, which is an affiliate of the Citizens & Southern National Bank. Though there has been some interest expressed in Oregon, no investment companies have been chartered. Most of the interest has been in Portland, where two groups are seriously considering the formation of a company.

In addition to the funds that are made available to small-business investment companies. Federal funds are also available for a specific purpose to State and local development companies that are already in operation. The Small Business Administration is authorized to make loans to State and local development companies for plant construction, conversion, or expansion, including the acquisition of land. These loans may be made directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis. Such loans are designed to assist an identifiable small business concern and are limited to \$250,000 for each identifiable small business, such as one cannery or one foundry. These loans are made for a period of 10 years plus such additional period as is estimated may be required to complete construction, conversion, or expansion. However, this period may be extended for an additional period not to exceed 10 years if such renewal or extension will aid in an orderly liquidation. In agreements to participate in loans on a deferred basis the Small Business Administration's participation is limited to 90 percent of the balance of the loan outstanding at the time of disbursement. The authority to make such loans to local development companies expires June 30, 1961. There are at the present time 17 local development companies in Oregon which could take advantage of this provision of the Small Business Investment Company

The Small Business Administration is also authorized to make loans to State development companies exclusively. The funds that may be advanced to State development companies will be made in exchange for obligations of such companies, and the amount available is limited to an amount equal to the amount borrowed by it from all other sources. These loans will be made for a period of 20 years at 5 percent interest and the funds may be used for any acceptable purpose.

During the recent session of the Oregon Legislature a law was enacted which permits the formation of State development credit corporations, which when organized will be eligible to take advantage of some of the provisions of the Small Business Investment Company Act. The objective of the Oregon act is to promote the industrial, agricultural, and recreational development of the State. A corporation organized under this statute will have the authority to borrow money from various sources, including individuals, financial institutions, and the Federal Government and to lend funds and purchase shares in business and industrial corporations in need of financial assistance. It will also have the power to hold, lease, and transfer property. Such a corporation may be organized by nine persons for a capital of not less than \$25,000. In addition to the stockholders, provision is made for membership in the corporation. Members of the corporation may consist of such financial inttitutions as commercial banks, trust companies, savings and loan associations, mutual savings banks, insurance companies, and union health and welfare funds. These members will have no voting rights, but may lend funds to the State development credit corporation. Banks, trust companies, savings and loan associations, and insurance companies may lend an amount equal to 3 percent of their capital and surplus to the credit corporation; mutual savings banks may lend 3 percent of their guaranty fund; and union health and welfare funds may lend up to 3 percent of their funds. Those members who agree to lend to the corporation will be called upon to lend when the needs arise and the call will be prorated among the members on the same proportion that the maximum lending limit bears to the aggregate maximum lending limit of all members. The credit corporation is required to set aside 10 percent of its net earnings in a surplus account each year until this surplus amounts to one-half of its stated capital for losses and contingencies. State development credit corporations organized under this act are exempt from the corporation franchise tax and the State income tax.

The act permits the State bond commission to invest moneys from the various funds under its jurisdiction in the bonds of State development credit corporations. However, not more than 3 percent of each fund may be invested. State development credit corporations will be examined by the division if audits of the office of the secretary of state.

The act states that the department of planning and development "shall encourage and promote the formation of State development credit corporations where it determines that their formation is in the public interest." The department may also consult with, advise, and give technical assistance to persons interested in organizing such credit corporations.

Whether or not the program will be successful will depend on many factors. Basically, the success will depend upon the enthusiasm expressed on the local level for such a program, and the provision of a portion of the capital required. It seems that a certain amount of civic pride and responsibility will be necessary for the operation and success of a small-business investment company. In addition to this very important factor is the level of management of the small-business investment companies. It will be management at the local level that will evaluate the requests for financial aid and extend credit and equity capital rather than just another agency located in Washington.

In Oregon a small-business investment company could be formed under the general incorporation laws of the State. The recently enacted legislation permitting the formation of a State credit corporation was not absolutely necessary: however, there are certain advantages in this legislation. In the first place, the legislation places the State legislature and the Governor on record that they recognize the long-term financing problems of small business and are hopeful that someone will do something about it. Second, the legislation permits certain financial institutions which will serve as a source of funds and possibly very valuable advice to take part in a program that has as its objective the industrial, agricultural, and recreational development of the State. Third the legislation also permits the State bond commission to invest a portion of its funds in a program designed to help small business. Fourth, the legislation creates an organization that can take advantage of that portion of the Federal law which permits a State credit corporation to borrow from the Small Investment Division of the Small Business Administration an amount equal to all of its other borrowing. Finally, the State legislation permitting the creation of State credit corporations opens up more avenues for funds than is found in the creation of a small-business investment company.

Both the Federal legislation and the State act offer a tool to private investors to earn a return on their funds as well as to help small business; then programs should eventually result in increased incomes and profits, the basic ingredients of a higher standard of living. It is certainly a new frontier in small-business financing.

The Friendly Mountain State, West Virginia, To Celebrate Its 96th Anniversary

EXTENSION OF REMARKS

## HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. RANDOLPH. Mr. President, the friendly mountain State of West Virginia will celebrate an anniversary on Saturday, June 20—its 96th.

Ours is the State with the highest average altitude of any of all those in the eastern portion of the United States. As many of my colleagues know, West Virginia offers spectacular scenery and is famous for its historic sites and outstanding facilities for recreation. There are numerous evidences that a prehistoric race of mound builders inhabited our area—one which the Indians used extensively as a hunting ground, even as colonial America knew it as a buffer against the marauding red men. Then, too, West Virginia was a prized pawn of the War Between the States and was the only State born of that conflict.

The rhododendron maximum or "great laurel" is the State flower, being a shrub of the heath family and is distinctive for its large evergreen leaves and délicately impressive pale pink and white blossoms.

The cardinal, the male of the species having a rich scarlet coat with topknot and mask shaded with black, is our State bird.

Official animal of West Virginia is the black bear, whose habitat in the State has been reduced to approximately 12 counties in the eastern mountain sector.

The State tree is the sugar maple which produces delicious maple syrup and excellent wood for furniture.

Our State motto, "Montani Semper Liberi"—Mountaineers Are Always Free—depicts the sturdiness of our people, who are an appreciative citizenry especially conscious of the contributions made by former distinguished West Virginians.

We know that we will face challenges in the future, just as our forebears confronted them, and as we meet them to-

We are aware, too, that our progress in the future will depend upon the resoluteness of the manner in which we attack, and the degree to which we are successful in solving, the problems which will demand our attention.

But, Mr. President, we will accept the challenges of the future and overcome our problems because there is widening determination that West Virginians shall work together for a better West Virginia.

In this connection, on May 15, 1959, I had the privilege of addressing the Junior Chamber of Commerce of West Virginia at Clarksburg, near my native community of Salem. On that occasion,

I suggested the adoption of the slogan, "We Are Working for a Better West Virginia," by organizations throughout the State. It was adopted by the progressive young men of that body and was prominently displayed yesterday, June 17, on the lead float sponsored by the West Virginia Junior Chamber of Commerce in the parade at Buffalo, N.Y., where the national junior chambers are in annual convention.

It is significant that the organization of junior chambers from our State gained the distinction of having the leading position in the national parade as a consequence of having been the State group which made the greatest rate of membership and organizational

progress last year.

That it should have been these aggressive young men who were the first of the major statewide groups to officially adopt and prominently display the slogan, "We Are Building A Better West Virginia," certainly augurs well for the

spirit of future purpose.

We are proud of and place great hope in the young business and professional leaders in our State. But we are not in any degree unmindful or unappreciative of the distinguished West Virginians of the past, or our present senior citizens who have contributed and still are giving much of their time, talent and resources to the recording and preservation of our heritage.

Among those of our leading contemporary West Virginians who have made extremely salutary contributions to historical factuality and the recording thereof is the Honorable Phil Conley of Charleston-businessman, community leader, author, historian, publisher, and a former representative of this country's Government in important missions

abroad.

On the eve of the 96th anniversary of our native State, I deem it appropriate to request unanimous consent of the Senate to have printed in the Appendix of the RECORD Phil Conley's article entitled, "Seven Great West Virginians," and the text of an address he delivered in West Virginia a few days ago on the subject, "The Birth of West Virginia."

There being no objection, the article and address were ordered printed in

the RECORD, as follows:

SEVEN GREAT WEST VIRGINIANS (By Phil Conley)

In selecting seven most distinguished men to discuss briefly, I have chosen one from each of seven different lines of endeavor and occupation. Among military leaders I am sure all will agree with me that Stonewall Jackson, the great soldier and strategist of the Southern Confederacy, is our most notable leader. I could have selected General Jessee Lee Reno of Wheeling, a conspicuous general in the Union Army who, like Jackson, lost his life in the cause which he espoused; or Andrew Summers Rowan, of the Spanish-American War, the man who carried the "Message to Garcia": or General John Leonard Hines. Chief of Staff of the Army in World War I, who took General Pershing's place when he retired as head of the U.S. Army; or General Mason Patrick, who was the first Chief of the Army Air Service; or Admiral Julian Latimer, who was Judge Advocate of the Navy during World War I. However, in my opinion, the most eminent military leader from this State is Thomas J. "Stonewall" Jackson.

Jackson was born in Clarksburg. spent a good portion of his early years at what is now known as Jackson's Mill, in Lewis County. He attended West Point Military Academy, where he distinguished himself as a student. He served in the Mexican War. It was in this struggle that he met Robert E. Lee, whom he later served in the Civil War. He was for a time an in-structor in the Virginia Military Institute at Lexington, Va. While he was a professor at that institution, Civil War was declared, Although Jackson deplored the conditions of slavery, he offered his services to the Southern Confederacy. He was made a major in the Engineering Corps, but was soon transferred to colonel of volunteers and later made brigadier general. In the famous Battle of Bull Run, General Bee, in rallying his men, exclaimed: "See, there stands Jackson like a stone wall." From that time he was known as Stonewall Jackson. He was killed by his own men when a party which he headed, returning to camp at Chancellorsville, was mistaken for Federal troops. He died before he was 40 years of age, after having distinguished himself as one of the greatest military strategists this country has ever produced.

Among inventors, I have selected James Rumsey, the man who invented the steamboat. Although Rumsey was born in Maryland, he spent most of his life in West Virginia at Berkeley Springs, where he had a store, and later at Shepherdstown, where he did most of his experimenting with his "a crazy man who boat. He was called wanted to run his canoe with a teakettle." I could have selected as an inventor Dr. Dolbear of Bethany College, who experi-mented with the telephone. For a long time he had suits in the courts contesting Alexander Graham Bell's claim to the invention of this instrument. Or I could have chosen Dr. I. N. Nicklin of Middlebourne, Tyler County, who 4 years prior to the invention of the telegraph by Dr. Morse, designed a machine which would give messages over wires for some distance. But I believe that the outstanding inventor who lived in West Virginia was James Rumsey.

There is undisputed evidence which proves conclusively that James Rumsey's boat was the first one to move by power generated in steam boilers. He discussed this matter with George Washington, and there is a note in Washington's diary which shows his interest in the boat constructed by Rumsey. While Rumsey was working at Shepherdstown, John Fitch came there under an assumed name and soon thereafter began work on his plans for a steamboat. On December 3, 1787 a great crowd of prominent people gathered on the banks of the Potomac and for 2 hours watched James Rumsey's boat travel back and forth on the river. It is reported that when it started, General Gates exclaimed: "My God! It moves." Among others to see the boat move at that time were General Dark, Capt. Abraham Shep-herd, Maj. Henry Bedinger. Newspapers in Virginia carried informative articles about

Rumsey went immediately to Philadelphia, where the Rumseyan Society was organized with Benjamin Franklin as its first On January 1, 1788, he published a pamphlet describing his experiments with the steamboat. This was the first printed publication of a West Virginian. The Society sent Rumsey to London with letters from Franklin, Patrick Henry, and other celebrated Americans. Here he built a new steamboat about 100 feet long, and made a successful trip on the Thames in December 1792. He met Robert Fulton, who launched the well-known Claremont in the Hudson River in 1807. Rumsey suffered an attack of apoplexy in London and died. The world has given credit to Fulton for inventing the steamboat, but that credit is due our distinguished West Virginian, James Rumsey.

Among outstanding educators from West Virginia, I could have given highest credit to Alexander Wade, the man who introduced the grading system for rural schools; or to Dr. Milton Wyllie Humphries, who, for many years, was a brilliant professor in the University of Virginia; or to Dr. Henry Ruffner of Charleston, who was for many years president of Washington and Lee University.

But I have chosen as my subject for this classification Booker T. Washington, the man who became internationally known as a leader of the Negro race. He was born a slave in Franklin County, Va. He claimed that his first recollection was his childhood days with his mother and several children in a one-room cabin which had a dirt floor. At the close of the Civil War he came with his mother and brothers and sisters to Malden, W. Va., where his stepfather had work in the salt factory. Although Booker was only a boy 9 years of age, he was com-pelled to work. For some years he labored in the mines and in the salt factory. was very ambitious to study. His mother secured an old spelling book for him. He tried to study, but with little success. About this time a private school was established in Malden. He was privileged to attend the school for a short time. When he enrolled he noticed that other children had two names. He had always been called "Booker," and when the teacher asked him what his name was, the only name he could think of was "Washington."

While working in the mines he heard some Negoes discussing a school in Hampton, Va. He made up his mind then that he wanted to attend this school. Soon after this the wife of Gen. Lewis Ruffner wanted a servant. Booker applied for the job and was given \$5 a month. Mrs. Ruffner became interested in the boy and helped him with his studies. He put together a few dollars and started Hampton Institute. His life there was filled with hardships, but he finally succeeded in graduating from that famous school. He came back to Malden and taught school for 2 years. He then was asked to teach at Hampton. From here he went to Tuskegee, Ala., where he established the most famous school for Negroes in the world. For many years he spent about half of his time traveling from place to place over the country lecturing for the benefit of his school. Critics have rated him as possibly the greatest orator this country has ever produced. He was a personal friend of Presidents and a leading businessman of the country. When he visited Europe he was entertained by kings, queens, and other royal Andrew Carnegle referred to him as "Moses" of the Negro race, and also said that two men by the name of Washington would always be remembered in the history of the United States, one as the father of the white race, the other as the father of the Negro race.

From the outstanding statesmen of West Virginia, I could have chosen Francis Pierpont, Governor of the Restored Government of Virginia; Joseph E. Kenna, U.S. Senator, whose statue is in Statuary Hall; Waitman Wiley, our first U.S. Senator; Newton Baker, Secretary of War under Wilson; John Barton Payne, Secretary of the Interior under Wilson; John W. Davis, candidate for President in 1925, or many others. However, I have chosen William L. Wilson, who was born and reared in Jefferson County and Who distinguished himself as a scholar, member of Congress, and member of Grover Cleveland's Cabinet. Mr. Wilson attended school in Washington, served in the Southern Confederate Army, taught in Columbian University, now George Washington University, and then practiced law for some years in Charles Town, W. Va. He was chosen president of the West Virginia University, served that institution 1 year, and resigned to take his posi-tion in Congress. He served his district for 6 terms as Congressman. While he was in Congress he was the author of the famous Wilson tariff law which became effective during the administration of Grover Cleveland. When Grover Cleveland was nominated in Chicago for his second term of office, Mr. Wilson was permanent chairman of the convention. He was then selected by Cleveland as Postmaster General of the United States. While in the office of postmaster, he originated and put into effect the rural free delivery The first route in the United States system. was out of Charles Town, W. Va. He later became president of Washington and Lee University. Here he distinguished himself as an educator.

From a list of theologians there are a number of names which could be chosen, such as Dr. C. R. Brown, who until recently was dean of the School of Divinity of Yale University, or one of the seven bishops of the Methodist Church-Morris, Edwin and Matt Hughes, Anderson, Claire, Hamilton, and Grose. But instead of these I have chosen the name of Alexander Campbell, the man who founded a great religious denomination, the Christian Church. Although he was not born in West Virginia, but in Ireland, he spent most of his life in Bethany, where he established one of the outstanding denominational colleges which exist now in the United States. He was the first president of a college who demanded that all students study the Bible as a textbook. He founded the religious denomination on the theory that the Bible should be taken as the code or book of laws for the guidance of the members. Numerous articles and several scholarly books were written by this great orator, minister, and educator. Possibly no other movement in West Virginia has had such wide effect as that one started by Alexander Campbell in the little town of Bethany. The church he organized has become internationally known and has influenced millions

Among journalists, West Virginia has produced some prominent thinkers and writers. One of the men who distinguished himself by his numerous magazine articles was Porte Crayon, whose real name was Gen. David H. Strother. There are other notable writers and journalists, but in my opinion the outstanding journalist West Virginia has produced is Archibald W. Campbell, editor of the Wheeling Intelligencer before and during the Civil War. He graduated from Bethany College in 1852 and came to Wheeling where, at 25 years of age, he took charge of a little newspaper. It was at that time the only Republican newspaper in the State of Virginia. Mr. Campbell was a fearless, outspoken man. He believed that slavery was a curse, and at the risk of personal injury he denounced the institution in the columns of his paper. He never received the credit due him as one of the leaders in the movement to create the new State-West Virginia. Many names appear in the pages of history as leaders in the movement, but Campbell may rightly be called the father of West Virginia. Through the columns of his newspaper he influenced public opinion for the movement, and he persisted in demanding that the new State be organized. President Lincoln's Cabinet did not approve, and the great President was inclined to veto the measure. At a critical period Campbell sent Lincoln a telegram which influenced him to sign the enactment.

This editor also distinguished himself in the Republican convention in Chicago in 1880, when Senator Conkling, of New York, tried to force Grant's renomination for third term as President of the United States. Conkling introduced a resolution demanding that every person present should abide by the decision of the convention. When the roll was called, the answers were "aye" until the clerk came to West Virginia and there were three "noes." Conkling became angry and denounced these men, whereupon Campbell arose and said, "I will never come any convention and agree beforehand that whatever may be done at that convention shall have my endorsement. Sir, as a free man whom God made free, I always intend to carry my sovereignty under my hat. I never intend that any body of men shall take it from me." As a result of this speech Garfield, of Ohio, requested that the resolution be withdrawn, and subsequently Garfield was nominated and elected President. Before he was killed, Garfield selected Mr. Campbell as Ambassador to China, but the papers were never signed. This man never held office and never received the credit that was due him as an outstanding leader in West Virginia.

In selecting a businessman I might have chosen Senator Camdon, who had much to do with the development of central West Virginia; Mr. Alvan McCauley, at one time president of the Packard Automobile Co.; C. W. Kittle, who recently died holding the position of president of Sears, Roebuck, & Co., the largest mail order house in the world; Isaac T. Mann, who exerted great influence in developing coal in southern West Virginia; M. L. Benedum, who has discovered more oil fields than any man who ever lived, now a noted philanthropist, and many other distinguished West Virginians.

I chose, however, a man who was born in Maryland and who came to West Virginia when quite young, Henry Gassaway Davis. Mr. Davis began work for the Baltimore & Ohio Railroad Co. when a mere lad. He was promoted to different positions and, as conductor of passenger trains running into Washington, he had the opportunity to meet a great many leaders at that time in our national life. He was the first railroad superintendent to work out a plan for running trains at night. People laughed at him but he persisted, and the first train to run at night was from Cumberland, Maryland to Baltimore. It had a lantern on the front of the engine.

Mr. Davis became a member of the State legislature, later a State senator, and was the first Democratic U.S. Senator from West Virginia to serve two terms. He was also selected as candidate for vice president on the Democratic ticket with Judge Alton B. Parker. He built the Coal & Coke Rail-road which operated through an extensive territory in central West Virginia. He was responsible for the building of towns and for the operating of coal mines. He had vast interests in lumber and oil and gas developments. He was a philanthropist, gave freely to charitable, civic, and educational movements. The towns of Davis and Gassaway were named for him. Davis and Elkins College bears his name, also Davis Child's Shelter and Davis Park in Charleston. Before he died he was familiarly known as West Virginia's "grand old man."

Ann Jarvis of Grafton originated Mother's Day, and this grant lady will live in memory as another outstanding West Virginian.

#### THE BIRTH OF WEST VIRGINIA

#### (By Phil Conley)

West Virginia's birthday will be observed on June 20. Just 96 years ago on that day, 35 small girls in red, white and blue dresses, welcomed the first governor of the State, Arthur Ingraham Boreman. The place was Wheeling at high noon. The girls represented the States that had been admitted, West Virginia being the 35th. On that day the Confederate forces under Gen. Robert E. Lee, the gallant soldier of Virginia, were marching a short distance from where the first inaugural ceremonies were being held. They were on their way to the fateful battle of Gettysburg, the decisive struggle in the fratricidal conflict.

The only change in the map of the United States after the War Between the States was the division of Virginia. The formation of West Virginia was not caused by the war, but the war gave the people west of the Alleghenies an opportunity to do something they had desired for many years; namely, become an independent State.

In 1773, Benjamin Franklin was the leading spirit in a movement to form a 14th colony, Vandalia. The capital of this colony was to have been at Point Pleasant; George Mercer was to have been the governor. The Revolution stopped this attempt. In 1776, a petition was presented to the Continental Congress to create a new State, Westsylvania. In 1816, a proposal was made to the Virginia Assembly that the State be divided into northern and southern sections. Other attempts were made at various times but without success.

Let us review briefly the historic events leading up to the actual creation of West Virginia. When Governor John Letcher of Virginia assembled his legislature in extra session in 1861, and forced a secession convention, practically all of the delegates from west of the mountains opposed the movement. The representatives of the eastern section called a mock election to ratify the action of the secession convention.

When the delegates returned to western Virginia, several protest meetings were held. The first one of importance was at Clarksburg where 1,200 people assembled on April 22, 1861. John S. Carlile, who had just returned from Richmond, was the leader of the meeting.

The principal action of this meeting was to issue a call for a convention to be held in Wheeling on May 13, 1861. Delegates from the counties in this territory were invited to attend this convention to consider and determine upon such action as the people of northwestern Virginia should take in the present fearful emergency.

When the convention was called to order in Wheeling, Carlile, in an impassioned address, demanded that the delegates form a new State. He had prepared a resolution for this purpose. An attempt was made to storm the convention. A parade was started with adherents carrying banners inscribed in large letters "New Virginia Now or Never."

After 2 days of bitter and acrimonlous

After 2 days of bitter and acrimonious debate, Campbell Tarr, chairman of the committee on State and Federal relations, brought in a report which was designed to satisfy both factions. It denounced the ordinance of secession and urged all citizens to vote against it at the election to be held on May 23. Further, the report recommended that another convention be held in Wheeling on June 11, in the event Virginia voted to secede from the Union.

At the election on May 23, the ordinance of secession of Virginia was ratified by the people in the eastern section of the State. Then followed the second Wheeling Convention on June 11. Arthur I. Boreman was chosen president of the convention. Delegates from 31 counties were present. Subsequently, representatives from four more counties arrived, making a total of 77 members.

After bitterly denouncing the Legislature of Virginia for illegally calling for a vote on the subject of secession, the delegates adopted a "Declaration of the People of Virginia." It was a sort of assertion of independence. To this declaration the members solemnly affixed their signatures in much the same way that the patriots had signed the

Declaration of Independence in Philadelphia

on July 4, 1776. On June 15, the convention unanimously adopted "An Ordinance for the Reorganiza-tion of the State Government." Five days later, the convention proceeded to the elecof a Governor and other officers. Francis H. Pierpont was elected Governor of the restored State of Virginia. The members of this convention took the position that this new organization was the real Virginia; that the section east of the mountains under Fletcher had withdrawn from the Union and therefore was not to be recognized as a part of the United States. That they reflected the will of the people is proved by the fact that of 44,000 votes cast by people in what is now West Virginia, only 4,000 were for secession. However, sentiment was divided, as is proved by the fact that 32,000 men joined the Union forces and about 8,000

joined the Confederate forces.

The restored government of Virginia established a capital at Wheeling. Two U.S. Senators were elected by the legislature—Wattman T. Willey and John S. Carlile. It was a difficult task to start a new State without money and in a time when sentiment was so evenly divided between the North and the South. However, Governor Pierpont and Peter Van Winkle, a member of his counsel, signed personal notes for \$10,000 to take care of the expenses for the first few weeks. The Governor sat behind a plain table in a bare room in Linsley Institute. He sent troops to Weston where they selzed some \$40,000 that had been deposited in the bank by the State of Virginia for the erection of an insane asylum.

Soon after the reorganized government of Virginia had been established, a movement was started to form a new State. Farsighted men knew that if and when the war was won by the Federal forces, Virginia would be restored to the Union and the people living west of the Alleghenies would be in the same situation they were in prior to secession.

Consequently, upon the reassembling of the convention on August 6, 1861, discussion was precipitated immediately relative to the formation of a new State. After nearly a month of discussion, a resolution was adopted which provided that people living in the restored government of Virginia should vote on the question of the formation of a "State of Kanawha." The election was called for the fourth Thursday in October. At the next meeting of the convention the delegates voted to call the new State West Virginia because many of them wanted to retain the name of the former State.

The result of the vote for the formation of a new State was a surprise even to those who were most outspoken in favor of the plan. In Kanawha County the vote was 1,039 for the new State and 1 against. In some counties there was not a single vote against the new State. The official vote was 18,408 for the new State and 781 against it.

On May 29, 1862, Senator Willey presented the memorial to Congress from the restored government of Virginia praying the admission of West Virginia as a separate State.

The United States Constitution provides that no new State can be formed from the territory of another without the consent of the former.

The bill was passed by the Senate on July 14, 1862, and by the House of Representatives on December 9. On the evening of December 31, 1862, the last day on which the bill could be signed, a delegation of prominent West Virginians, headed by Congressman Jacob Beeson Blair, of Parkersburg, called on the President. After some discussion in which the President told them that half of his Cabinet were for the bill and half were opposed, he remarked that he held the ace up his sleeve. He said he was not making ap-

pointments for New Year's Day, but that he would see them if they cared to come to the White House the next morning. Mr. Blair arrived at the White House early. There were no servants about. He saw a door on the side porch open, and he walked in. He found President Lincoln in a small room trimming his whiskers. After greeting him, the President took him to an adjoining room, pulled open a drawer and remarked that there was the ace he referred to the night before. The bill creating West Virginia was there signed "A. Lincoln."

On April 20, 1863, Lincoln issued a proclamation that West Virginia would become a separate State 60 days thereafter. On May 9, 1863, a convention was held in Parkersburg. At that time candidates for State offices were selected. They were elected by a vote of the people shortly thereafter. They were: Arthur I. Boreman, of Wood County, the first Governor; Samuel Crane, of Randolph County, auditor; Campbell Tarr, of Brooke County, treasurer; J. Edgar Boyers, of Tyler County, secretary of state; A. Bolton Caldwell, of Ohio County, attorney general.

On June 20, 1863, just 96 years ago a week from next Saturday, those men took the oath of office as officials of West Virginia, in a temporary capital at Wheeling. And the State became the 35th State in the Union.

At the last session of the West Virginia Legislature, a bill was passed which provides for a West Virginia Centennial Commission to be comprised of 15 members. This commission is already at work making plans for our 100th birthday to be celebrated on June 20, 1963.

#### Problems of American Merchant Marine

EXTENSION OF REMARKS

## HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. MAGNUSON. Mr. President, the arrival in Cleveland recently of the first vessel to transit the St. Lawrence Seaway inspired an editorial writer of the Cleveland Plain Dealer to voice some sound views with respect to the need for and the problems of the American merchant marine.

I ask unanimous consent that the editorial in question be printed in the Appendix of the Record. With meetings scheduled for next week here at the State Department, at which representatives of the leading maritime nations of Europe will press their belief that the United States should withdraw from world shipping activities in their favor, such thinking as represented by this Plain Dealer editorial deserves the most thoughtful attention.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, May 7, 1959]

HAIL TO THE "EXTAVIA"

The universal fascination of shipping fastened itself upon Clevelanders over the weekend with a fervor almost as ardent as that being generated by our Indians.

From early Saturday on, the lakefront doings drew gawkers and sidewalk skippers in ever-increasing numbers. Thus the seaway already is proving to be something we correctly anticipated—a topnotch tourist show.

Seaway contagion will break out again today with as much or more excitement attending the arrival of the first ship last Tuesday. Scheduled for early evening arrival is the spruce Extavia, a 7,800-ton freighter of American Export Lines. She'll be the first of America's ocean flag fleet to hit port, and the biggest ship here yet.

The Plain Dealer's own salute to the Extavia will be a clock and plaque, a symbol of the importance we attach to the Nation's

merchant marine.

We hope too that the chamber of commerce and the city port officials will muster up matching enthusiasm. There's much to be gained from showing Cleveland's newcomers how glad we are to have them.

In a very real sense, we all have a vested interest in *Extavia* and the other Americanflag vessels which will visit Cleveland. As taxpayers, we help pay her crew's salary—through maritime subsidies.

Thus Extavia puts the focus on how our merchant marine is faring as a whole. And the picture, despite Extavia's gaudy new coat of paint, hardly is bright.

Why, you may ask, get so excited? Just use foreign bottoms; they can haul goods

cheaper.

That's a blunt, albeit not necessarily accurate, answer. During every major war we've learned—but not all of us—the fallacy of such reasoning.

of such reasoning.

First, you get pinched out of shipping if an emergency arises. Maritime nations in times of stringency always give priority to their own needs, quite naturally.

their own needs, quite naturally.

The second reason is obvious. An adequate merchant marine constitutes a key military auxiliary; it simply has to be kept alive and healthy for national security.

Yet our merchant fleet is now close on the verge of block obsolescence. So much of it was built during World War II. We are badly lacking in fast vessels which, by their speed, can counteract to some extent the cheaper labor under foreign flags.

The question of ship replacement is now a sore point in Congress. An orderly, minimum building program would provide for 20 new craft this fiscal year. Yet only 11 have been ordered so far in 1959, hardly enough to keep the vital shipyards alive and kicking. Nor does the administration think the budget will stand more.

Conceivably the seaway will prove so great a spur to business that a shipping shortage will develop and we'll be forced to speed up construction. But an emergency program means greater costs in the long run. Moreover, it will be several years before the Seaway's bounties become sufficiently fruitful.

Steady replacement construction is the sound answer, if American shipping is to maintain a sound bottom.

Massachusetts Labor Council, AFL-CIO, Urges Maritime Commission To Name Next Nuclear-Powered Merchant Vessel After the Late Former Secretary of Labor, Maurice J. Tobin

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD. I wish to include the motion adopted by the Greater Boston, Mass., Labor Council, AFL-CIO, which has been communicated to me in the attached letter from President John J. Horan and Executive Secretary Stephen E. Mc-Closkey:

MASSACHUSETTS LABOR COUNCIL

AFI-CIO.

Boston, Mass., June 15, 1959. Congressman Thomas J. Lane,

House Office Building.

DEAR CONGRESSMAN LANE: At the regular meeting of our organization held on June 10, 1959, a motion was introduced and unanimously adopted urging the U.S. Maritime Commission to name the next nuclear powered merchant vessel to be constructed after the late former Secretary of Labor, Maurice

The Greater Boston, Mass. Labor Council, AFL-CIO, representing more than 250,000 organized union members, is calling upon the Parent AFL-CIO and all State and local labor organizations throughout the United States to join in a national movement to perpetuate the life and memory of the late Maurice J. Tobin for his efforts on behalf of the organized worker during a long and distinguished public career.

The late Maurice J. Tobin is affectionately remembered as a friend of labor who served the people of Massachusetts as mayor and Governor, and the people of the Nation as Secretary of Labor in President Truman's

Cabinet.

We are calling upon the Massachusetts congressional delegation to spearhead the drive in Washington to have the next nuclear-powered vessel named after the late Maurice J. Tobin, and to have construction of the vessel scheduled for the Fore River Shipyard in Quincy.

This would be in keeping with Maurice J. Tobin's deep interest in the shipbuilding industry in Massachusetts, and would serve as a fitting tribute from the Bay State worker to the memory of a great statesman of

Massachusetts.

Maurice J. Tobin, who rose from a newsboy to the Cabinet of the President of the United States, represents the highest and finest traditions of America, and his success story has served as a model for countless youths in the city of Boston who have been encouraged to set their sights at the highest level, regardless of their economic station

We urge, therefore, that this posthumous honor be conferred on the life and memory of Maurice J. Tobin for the very great con-tribution he has made and the dedication of his life to the community, State, and Nation.

Sincerely yours,

JOHN J. HORAN,

President.

STEPHEN E. McCloskey, Executive Secretary.

Mr. Charles Weissman, Wilkes-Barre Philanthropist and Civic Leader, Again Honored

> EXTENSION OF REMARKS OF

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the Wilkes-Barre Times Leader of June 11, 1959:

[From the Wilkes-Barre Times Leader, June 11, 1959]

HONOR TO MR. WEISSMAN

The award of a citation to Charles Weissman, founder of the American Auto Stores, by the automotive division of the United Jewish Appeal at the annual dinner in New York last night put the national and international spotlight on the local businessman and philanthropist again.

Although Mr. Weissman has been honored many times, here and elsewhere, usually the role is reversed. He is one of those individuals who prefers to be found on the

giving or doing end.

But there are occasions when Mr. Weissman inevitably finds himself being singled out for distinction by way of acknowledgment of his generosity and service to worthy causes. He has been a part of so many projects that it is difficult to keep up with him.

The pace he continues to set is amazing.

The United Jewish Appeal long has been one of his pet charities. He has been linked with it so intimately that his name is almost as familiar to New York and Jerusalem as

to Wilkes-Barre.

Locally, Mr. Weissman belongs to the whole community. For almost a half century, he has labored for brotherhood and the betterment of the area. It would be difficult, if at all possible, to place an estimate on the value of his personal service and his monetary gifts to the community. Other areas echo local experience and gratitude.

There is only one Charles Weissman, and it is Wilkes-Barre's good fortune to have him.

## A Proposal To Encourage Student's Purchases of Musical Instruments

EXTENSION OF REMARKS OF

# HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. BRADEMAS. Mr. Speaker, this week I have introduced in the House of Representatives a bill, H.R. 7725, to remove the 10 percent excise tax on all musical instruments costing \$150 or less.

This legislation is aimed at encouraging the purchase of low-cost musical instruments by students for use in elementary, high school, and college music courses.

Mr. Speaker, today the study of music is accepted as a normal part of the educational curriculum of American boys and girls, and I feel we should do all we can to encourage young people with talents in the field of music to play musical instruments.

I should like to emphasize that although music instruction in one form or another is required in most elementary schools and is an elective course in most high schools, students who purchase their own instruments are under the existing law obliged to pay the 10 percent excise tax.

Instruments purchased by schools, however, are exempt from this tax.

I should like also to point out that 93 percent of the sales of band and orchestra instruments in the United States are made to parents; students, private teachers, schools, and religious and characterbuilding organizations. More than two-thirds of these sales are made by or for students. Furthermore, Mr. Speaker, more than 80 percent of all musical instruments manufactured are purchased for educational purposes. I am particularly aware of the problem facing young people interested in music because Elkhart, Ind., which is located in my district, is one of the great centers of the band instrument industry in America.

The figures I have cited were compiled in a recent survey by the National Association of Music Merchants, and I believe they indicate the need for a revision of the law to reduce the excise tax on musical instruments for the many young people who study music in our country.

Mr. Speaker, I hope very much that Congress will adopt my proposal.

#### Amending Mutual Security Act of 1954

SPEECH OF

#### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. ALGER. Mr. Chairman, I move to strike out the last word.

(Mr. ALGER asked and was given permission to revise and extend his remarks.)

Mr. ALGER. Mr. Chairman, I want to commend the gentleman for his balanced budget amendment and join with him in his effort. I find it hard to believe, as some have said, that an amendment to force spending within a balanced budget will be so unpopular that no one will vote for it. That is not what I have been hearing around here this year. I am appalled by the fact that the Congress is permitted by the Ameriacn people to go along unrestrained, without a constitutional limitation on the Federal power to tax, spend, and borrow-which is an amendment that I have been for since I have been here. But specifically as to this foreign aid bill, I will tell you what this amendment would do in a hurry in this Congress. We all know that some of this foreign aid is necessary. This amendment would force us all to take a look at foreign aid in relationship to all Federal spending. Before we left this Congress, we would appropriate whatever money was necessary for foreign aid, made possible by subtracting from some of the large welfare programs, that we all know we are afraid of politically. We could save enough money to put into foreign aid, if we but wanted to do so. We could indeed, if we wanted, provide foreign aid funds within a balanced budget. There should be no opposition to an amendment that demands

a balanced budget.

Mr. Chairman, the gentleman from Texas had some other remarks to make and I will be glad to yield to him, if he would like to give us some more information on the amendment that he has offered

#### Amending Mutual Security Act of 1954

SPEECH

## HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. DOWDY. I want to thank the gentleman for yielding me a few minutes more time.

Mr. Chairman, I qualified my statement that I did not expect my amendment to carry by saying that the courage to vote it up was not present here. It should be adopted, and that qualification to my statement that it would not be carried was if the courage is not here. Have we in the Congress failed to learn the great lessons of history? No nation was ever saved by bribery or mercenairies. Has a generation of "spendniks" come to power in America? Has this generation of ours failed to learn what happens to people who are irresponsible with money? Congress has got to quit trying to avoid facing up to financial fundamentals and so has the administration. If this program is so all fired good and Congress wants to put it over, the money can be raised by increasing taxes and by cutting down on some of the other expenditures. I just do not think it is that good.

Mr. HAYS. Mr. Chairman, will the

gentleman yield?

Mr. ALGER. I am glad to yield to

the gentleman.

Mr. HAYS. I just wonder if the gentleman, either one of the gentlemen. would admit that one way of increasing our tax receipts would be to do away with the 271/2 percent oil depletion allowance?

Mr. ALGER. The answer is that we cut down on some of the Federal Government's welfare programs and wasteful spending that we are now engaged in, cut out duplication of Government agencies which every man and woman present in this Chamber understands is certainly true.

Mr. DOWDY. Mr. Chairman, will the

gentleman yield?

Mr. ALGER. I yield. Mr. DOWDY. Mr. Chairman, I can conclude my remarks pretty quickly, but first in reply to the gentleman from Ohio I want to say that I am unwilling to take money away from any group of Americans to give away to foreign governments.

A few days ago in requesting a greater national debt and advocating increasing the interest that is paid on the national debt, the President said

The achievement of a fiscal position that allows our revenues to cover our expenditures as well as to produce some surplus for debt retirement will improve substantially the environment in which debt management operates.

This Congress can assure that ideal fiscal situation and position here in this country by adopting my amendment

I thank the gentleman from Texas for vielding to me.

Mr. ALGER. I join with the gentleman from Texas and commend him on the statement that he has made.

American Legion Views on the Pension Bill, H.R. 7650

> EXTENSION OF REMARKS OF

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. TEAGUE of Texas. Mr. Speaker, the national legislative director of the American Legion, Miles D. Kennedy, has written a very lucid explanation of the pension bill, H.R. 7650, which the House passed on last Monday and which is now pending before the Senate Committee on Finance. I believe Members will find this interesting and informative:

[From National Legislative Bulletin, June 12, 1959]

A New Pension Bill, H.R. 7650

On Wednesday, June 10, H.R. 6432 went into the wastebasket. In its place a new proposal was introduced. It is H.R. 7650. Yesterday the new bill was reported by the House Veterans' Affairs Committee and may pass the House of Representatives on Monday, June 15. This speedy action is not to be misconstrued as a sneak method of getting the bill on its way to avoid opposition. Actually, the new bill is the culmination of months of conferences-proposals and counter proposals, in which the American Legion took a most active part. While we are disappointed that all our points could not be gained, we are pleased that the total first year's value of the bill is about three times greater than the administration's initial proposal in H.R. 6432, \$308 million against a little over \$100 million.

In addition, the bill would accomplish death pension parity for the widows and or-phans of veterans of World War II and the Korean conflict on the same basis as authorized for widows of World War I. The American Legion has sought this legislation for many years and we are delighted that finally such inequity appears headed for erasure. This in itself is most desirable legislation.

Now, before we discuss the new bill, let's take a look at what we have in the pension program generally, and what our objectives were as we took our proposals to Congress in January.

#### PRESENT PENSION PROVISIONS

Today veterans of World War I, World War II, and the Korean conflict who meet the service requirements may be eligible for non-service-connected disability pension at monthly rates of \$66.15, \$78.75, or \$135.45, depending on degree of disability, age, or continuous period of disability. Unemployability because of disability is also a requirement, and net income from other sources is a bar if the amount exceeds \$1,400 for veterans without dependents, or \$2,700 if they have one or more dependents.

Widows of World War I veterans who met the service requirements are eligible for death pension at the rate of \$50.40 monthly providing they are within income ceiling limitations which are the same as stated above for veterans, and if they have been married to and cohabited with the veteran for 5 years or more at the time of his death, or for any period of time if a child was born of the union. A qualified widow, with one child, receives \$63 per month with \$7.56 for each additional child.

Widows and orphans of World War II and the Korean conflict veterans are not generally eligible for non-service-connected death pension. They qualify only if the deceased husband and/or father had, at time of death, a service-connected disability for which compensation would have been payable if 10 percent or more in degree disabling, or if he was receiving (or entitled to receive) compensation or retirement pay based upon a service-connected disability. Income ceilings, marriage requirements, and monthly rates are the same as for World War I widows and orphans.

Orphaned children of a deceased World War I veteran, and without other parent, are eligible for death pension as follows: child, \$27.30 monthly; two children, \$40.95; three children, \$54.60, with \$7.56 for each additional child, all funds equally divided. The children are also limited to \$1,400 annual income from earned or unearned sources. Orphans of veterans of World War II or the Korean conflict are not entitled to death pension unless the parent meets the service-connected disability requirements set forth in the preceding paragraph.

#### OUR PENSION PROPOSALS

The Chicago National Convention approved Resolution 331 which asked modification of existing pension law to: Increase monthly rates to \$75, \$90, and \$150 in lieu of present rates cited earlier; elevate income ceilings to \$1,800 and \$3,000, and liberalize the disability and unemployability provision at age 65 so that age alone (plus income ceilings) would become the criteria for pension eligibility. Bills to carry out these objectives were introduced in Congress.

In Resolution 471 the convention requested congressional action to increase compensation and death pension rates for widows and orphans. Bills to accomplish this were also introduced.

Death pension parity for widows and or-phans of veterans of World War II and the Korean conflict was reaffirmed at the same convention by adoption of Resolution 39. Bills to accomplish same were also introduced.

No hearings on our proposals were sched-uled by the House Veterans' Affairs Committee because of the President's statement in his January 19 budget message to the effect that the Administrator of Veterans' Affairs had been directed to submit a pension bill to Congress. Nothing would have been gained by hearings in advance of the submission, which was accomplished on April 15 and which was introduced on the same date. It was H.R. 6432.

As reported in an earlier Bulletin, the National Executive Committee unanimously rejected H.R. 6432, and adopted a resolution (No. 65) which authorized National Commander Preston J. Moore to resume conferences with executive and legislative leaders with a view toward building an acceptable program out of the ruins of H.R. 6432.

In the resumption of discussions on this subject it soon became evident that some of the provisions of our pension legislation proposals met with stonewall resistance both in Congress and in the executive branch. They would not yield on a straight increase in rates and income ceilings, nor on liberalization of eligibility at age 65. Neither would they agree to "across the board" increases for widows and orphans.

All this left the pension situation in pretty much of a compromise or nothing basis because there was practically no hope that Congress would consider our bills, or that the President would sign same should

Congress pass them.

On the basis of these developments the national commander and our Washington staff entered into last-ditch negotiations with White House and congressional representatives which resulted in the introduction of the new bill, H.R. 7650. A basic principle of the measure is that pension aid is directed in greater proportion to those veterans and dependents needing it the most. At the same time the pauperistic rates and conditions of the first bill, H.R. 6432, are improved sufficiently to remove the taint of a charitable handout, thus retaining a measure of dignity in the time-honored pension system for the veterans of our wars and their dependents.

As we discuss the provisions of the new bill keep in mind that statistics indicate that over 1,100,000 veterans and dependents will be aided, either by increased rates or by coming on the rolls for the first time such as those previously denied because of incomes greater than \$1,400 or \$2,700 per year, and the potentially eligible widows and orphans of veterans of World War II and the Korean conflict. A breakdown follows: 854,406 beneficiaries now on rolls would get increases; 72,039 now barred by income cellings would be added, plus 205,684 widows and children of deceased World War II and Ko-

rean conflict veterans.

Important, too, are the facts that the proposed bill is not designed to be effective until July 1, 1960, and that it does contain a savings clause which provides that those now on the rolls, or those coming on the rolls by virtue of disability or death occurring prior to July 1, 1960, are not affected unless it is to their advantage to elect the benefits in the new bill.

GENERAL PROVISIONS OF H.R. 7650

Veterans without dependents or not reasonably contributing to same:
Other resources (annual income):

Per m	ionth
\$0 to \$600	\$85
8600 to \$1,200	70
\$1,200 to \$1,800	40

Veterans with dependents or reasonably contributing to support of same: Other resources (annual income):

	Per month		
\$0 to	\$1,000 \$1	00	
\$1,000	to \$2,000	75	
\$2,000	to \$3,000	15	
(NOTE	A If the veteran is in need	of	

regular aid and attendance the rates are increased \$70 per month.)

(Note B.—In determining annual income, where a veteran is living with his spouse, (and a veteran shall be considered as living with a spouse, even though they reside apart, unless they are entranged) all income of the spouse which is reasonably available to or for the veteran except \$1,200 or 50 percent of such income, whichever is the greater, shall be considered as the income of the veteran, unless in the judgment of the VA Administrator to do so would work a hard-ship upon the veteran.)

(Note C.—Net worth limitation. The Administrator shall deny or discontinue payment of pensions when the corpus of the

veteran's estate (net worth) is such that under all the circumstances, including consideration of the veteran's income, it is reasonable that some part of the corpus be consumed for the veteran's maintenance.)

Notes B and C reflect new provisions in the administration of pensions and they would apply in the case of veterans, widows, and children. While limits are not prescribed in the bill, it is assumed that the Administrator would be entirely reasonable in his consideration of these factors.

Income ceilings and rates for widows without children:

Other resources (annual income):

Per m	MONTH	
\$0 to \$1,000	\$75	
\$1,000 to \$2,000	60	
\$2,000 to \$3,000	40	

(Nore.—If there is more than one child the monthly rate will be increased \$15 for each additional child.)

Income ceilings and rates for children alone, or in cases where widow is ineligible for pensions because of remarriage or excessive net worth or income:

Other resources (annual income) - one child: \$0 to \$1.800, \$35 per month.

(Note.—If there is more than one child there will be an additional payment of \$15 for each additional child but the amount due two or more children would be added together and equally divided.)

The foregoing is a general summary of the provisions of H.R. 7650. Keep in mind that the bill has to be approved by both Houses of Congress and then by the President and that it will not be effective until July 1, 1960,

as presently written.

National Commander Preston J. Moore, following introduction of H.R. 7650, sent the following communication to Representative OLIN E. TEAGUE, Chairman of the House Vet-

erans' Affairs Committee:
 "Dear Mr. Teague: This has reference to H.R. 7650, a bill to modify the pension programs for veterans of World War I, World War II, and the Korean conflict, and their widows and children.

"The American Legion is disappointed in the fact that H.R. 7650, which was reported out by the House Veterans Affairs Committee on June 11, 1959, did not meet the recommendations our organization made when I testified before the committee on June 5. I feel that we had submitted a reasonable proposal calculated to meet the minimum requirements of veterans and their dependents,

"The American Legion notes, however, that H.R. 7650 contains a number of suggestions made by this organization. The bill effects a number of resolutions of the American Legion, some of which have been mandates for over a decade. In addition, the bill provides increased pension rates for the great majority of veterans, widows, and children now on the rolls, particularly the most needy; it increases the income limitations, making thousands of persons entitled to pension benefits for the first time; and it fulfills the Legion's long-sought objective of equalization of the death pension requirements for World War II and Korean conflict dependents. For these reasons the American Legion supports H.R. 7650.

"The House Veterans Affairs Committee and its staff merit commendation for the time and effort they have devoted to this difficult problem."

In our next issue we will discuss House action on H.R. 7650 as well as some of the

details regarding the new bill's definitions of income, what is to be counted as such, and what is not. We will also discuss the "savings clause" contained in the proposal. Sincerely,

MILES D. KENNEDY,
Director.

The New Europe

EXTENSION OF REMARKS

# HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mrs. BOLTON. Mr. Speaker, during the course of debate on mutual security various Members have cited certain of the accomplishments under the program and its predecessor, the Marshall plan. Surely all would agree that nowhere have those accomplishments been more visible than in the spectacular resurgence of war-devastated Europe. Today, thanks largely to American private and governmental assistance, Europe stands restored and allied in partnership with the free world.

Writing in the current issue of U.S. News & World Report, Editor David Lawrence has perceptively described the unity of spirit and mutuality of interest existing between America and Europe. As he so properly indicates, Europe's economic reconstruction has given her peoples the confidence and strength essential to the maintenance of a united front against Soviet imperialism.

Believing that Mr. Lawrence's editorial will be of wide interest, I include it to-

gether with my remarks:

[From U.S. News & World Report, June 22, 1959]

THE NEW EUROPE (By David Lawrence)

Returning from a fourth visit to Europe since the end of World War II, this writer brings back impressions of a new and invigorated West.

The strength of a nation or of a group of nations is an intangible and is not always measured by material things. Sometimes the spirit of a people is even more significant than its stock of worldly goods.

The truth is that Europe has not fully recovered from the effects of the last war but is definitely farther ahead, after 14 years of striving for an economic equilibrium, than it, ever has been in a similar length of time following its other big wars.

This time America fortunately has not made the mistake of the 1920s, when we ignored Europe, and particularly Germany, and allowed the economic debacle there to bring on the dictatorship of Hitler. The Second World War, with its terrible losses, might not have occurred if we had projected then a Marshall plan for Europe or if we had put the weight of our moral and physical power on the side of the democracles early enough to head off the Axis alliance.

But, lest it be thought that mere grants of money by the American Government in what has often been referred to as "foreign aid" have alone been responsible for Europe's present comeback, attention should be drawn to the vast amount of American private capital that has been boldly ventured overseas and has contributed so much to world recovery.

Thus, as revealed in an article in the June 1 issue of this magazine, nearly \$300 billion have been sent abroad from the United States in the last 10 years. American purchases of foreign goods account for \$190 billion, while \$27 billion have been invested overseas by American citizens. Government loans and gifts total approximately \$75 bil-Private donations and organizations like CARE have provided \$7 billion to help feed and clothe the destitute.

What has most of this money been used for? To purchase the latest American machinery and equipment, to rebuild industries and cities, and to create the necessary reserves in gold for the further development

of business and trade.

Europe looks better, the people seem better dressed and happier than a decade ago. For Europe has hope and confidence now. has a feeling of security in that its more for-tunate partner, spared the devastation of bombings, has wisely come to the rescue.

America can be proud of its accomplishment. Our policy has been not merely one of good sense toward Europe but in our own self-interest. The world is more than ever interrelated on the economic side. A continuance of economic chaos in Western Europe following World War II would have

imperiled America's own progress.

Perhaps the outstanding fact about the European situation today is that, despite the interminable threat generated by Communist imperialism, unity of spirit and mutuality of interest is strongly imbedded in the minds of Western peoples. There are. to be sure, debates over methods and formulas. There are differences of interpretation about current developments and a wide variety of plans on how to deal with the Soviets. But when the Kremlin makes the mistake of overstepping the bounds in any important controversy, there is in the West an instantaneous restoration of a common front.

In some respects the situation is like the 1930's. The voices of appeasement are often heard. The same old arguments are made that "summit" meetings and four-power conferences are desirable nowadays, if only to get a clarification of the intentions of our potential adversary. Unfortunately, sometimes the West thereby puts itself in a cringing position, waiting for the aggressor to consummate his acts of aggression.

Infiltration of the Western countries by Communist propaganda continues as Moscow probes for the weak spot in the Western armor, political distintegration from within. But again the spirit of a free people seems somehow, through its free press and radio and its parliamentary debates, to maintain national resoluteness. On the whole, the public in all the Western countries is alert

to the Soviet game.

The mood, moreover, is one of caution and restraint. There is patience and calmness. There is confidence that democracy will win out against totalitarianism, though the struggle may be long and at times exasperating. The partnership with America was never more important to the free peoples of

If war comes, the West is ready. We can, if necessary, inflict an incredible amount of destruction. The Soviets know this. So the struggle now is on the psychological and economic fronts-and the reconstruction of Europe on the economic side has given the peoples of the free countries the very confidence and strength they have needed to present a united front against those who threaten the peace of the world. Invulnerable unity among the free nations is the key to the prevention of another world war.

#### Unrest in Latin America

EXTENSION OF REMARKS OF

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article by Mr. Henry Raymont, a correspondent for United Press International specializing in Latin American affairs:

(By Henry Raymont)

WASHINGTON, June 15 .- A lull in the sudden violence that shook Latin America last week has given officials here an opportunity to assess political and economic trends in that vital area of the free world.

For different reasons, there was bloodshed in Ecuador, Nicaragua, and the Dominican Republic. Political turmoil broke out in Argentina, Colombia, Haiti, Paraguay, and Peru.

The shadow of economic crisis enveloped Brazil and almost all other Latin American Republics whose exports of agricultural and mineral products have steadily declined in value in overstocked world markets.

To veteran observers there was no doubt that the area as a whole is undergoing an acutely painful stage in the evolution from an agrarian and partially underdeveloped society into meeting the political, social, and economic demands of the modern industrial

A United Press International survey showed that United States and Latin American officials generally agreed on the origins and

meaning of the recent events.

But there were divergent views on the cure for the rash of revolutions and violence that periodically shake the tranquillity of the continent and which leads critics to regard the area as a region of banana republics.

U.S. officials concerned with Latin American policy fear that these periodic flareups obscure a gradual but undeniable progress toward political freedom in the 20 Latin

American republics.

They point out that in a continent once dominated by uniformed dictators now only a few of these relics of the past hold real

While they concede that the economic situation is bad, they were encouraged by the stabilization programs undertaken by Argentina, Chile, Colombia, Ecuador, and Peru. After a period of austerity these programs will lead to a period of sound economic expansion, the officials predicted.

Only Brazil apparently continues to pre fer inflationary policies on the grounds that tough curbs at this time would be politically dangerous and would retard the exploitation of natural resources, they pointed out.

Most Latin American diplomats here agreed that the hemisphere as a whole has made big strides toward the principles of political democracy and representative government. But they were less confident about the economic outlook.

These diplomats believe the ultimate solution to Latin America's problems lies in a sweeping, U.S.-supported development program such as Brazilian President Juscelino Kubitschek first envisioned in his plan known as Operation Pan America.

The plan, launched a year ago following

Vice President RICHARD M. NIXON'S riot-torn tour of South America, subsequently was toned down and adjusted to the State Department's more gradual approach to Latin America's economic ills.

The overriding reasons for these difficulties are the fall in world commodity prices and inflation. Oversupply of agricultural and mineral commodities which make up the chief earning power of Latin America accounts for the price decline. Financing of government deficits by printing money and politically motivated wage increases in some countries feed the inflationary trend.

Many of the countries that have recently shaken off dictatorships found their problems compounded by the political disruption they inherited. As Cuba, Venezuela, Colombia, and Argentina have found, the disappearance of a despot does not mean the end of all problems.

Traditional and new political parties were suddenly confronted with the need to win an electorate which for years had been subjected to the demagoguery and vain promises of the dictator. Concessions had to be made to power-wielding groups, often in conflict with a sound economic policy.

In addition, outstanding professionals and students who refused to knuckle down to the totalitarian rule chose freedom abroad and did not return. As a result, many of the new democracies are facing a lack of trained manpower to fill key government positions.

The Communist Parties in Latin America are taking advantage of this situation. In almost every instance of violence registered in recent weeks there were reports of Communist agitation.

Several Latin American governments have taken steps to curb Communist activities in the face of growing evidence that a concerted move may be afoot to exploit the ferment in their countries. But there is no certainty whether this is just the beginning of a new Communist effort that may go underground in defiance of legal restrictions.

#### Gratitude

EXTENSION OF REMARKS OF

## HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. REECE of Tennessee. Mr. Speaker, on April 5, 1959, Hon. George E. Stringfellow, of East Orange, N.J., the imperial potentate, A.A.O.N.M.S., delivered a sermon for the Friendly Sunday School Class of the Marvin Methodist Church, Tyler, Tex.

I read this sermon with a great deal of interest and I think it is something that should be made available to the people generally, and I am presenting it for the RECORD.

Mr. Stringfellow is a businessman who has a deep interest in people and although he is a successful businessman, he feels that a businessman has a collateral responsibility in fraternal and civic affairs. His position as imperial potentate has given him great opportunity to be of service in these capacities.

We are fortunate in having a George Stringfellow and if we had a thousand George Stringfellows, America would be a still better place.

The above-mentioned follows:

GRATITUDE

(Sermon preached by Imperial Sir George E. Stringfellow, of East Orange, N.J., imperial potentate, A.A.O.N.M.S., before the Friendly Sunday School Class of Marvin Methodist Church, Tyler, Tex., April 5, 1959)

Good morning, ladies and gentlemen, I bring you the greetings of the Imperial Divan of the Shrine of North America. I bring you the greetings of the board of trustees of the Shriners Hospitals for Crippled Children and I bring you the greetings of the 830,000 Shriners of North America which I have the privilege in part to represent.

I am highly complimented to be asked to speak to the Friendly Sunday School Class of Marvin Methodist Church, one of the largest and one of the oldest Sunday school classes of men in America. This class has had the sterling leadership and has been presided over by the Honorable Galloway Calhoun, 33d degree, past grand master of Masons of Texas, past imperial potentate, A.A.O.N.M.S., and president and chairman of the board of trustees of the Shriners Hospitals for Crippled Children, for more than a quarter of a century. He has had a hand in feeding hungry souls as well as straightening crippled bodies for a long period of time, and he is looked upon by his associates as one of God's noblemen in every respect.

When Dr. Calhoun asked me to speak here this morning to this large gathering, I was reminded that a few years ago I was invited to conduct the last service in a church in Newark, N.J., before the summer vacation. When I reached the church to conduct the service I observed on the bulletin board in front of the church this notice: "Dr. George E. Stringfellow will conduct services today and then the church will be closed for 6 weeks". I hope so much that my appearing here this morning will not prompt the elders and the deacons to close the Friendly Class for any period of time.

The text of my talk this morning is taken from St. Luke, chapter XVII, verses 15 and 16: "And one of them, when he saw that he was healed, turned back, and with a loud voice glorified God and fell down on his

face at His feet giving thanks."

While traveling from Galilee to Jerusalem. Christ saw 10 men partitioned off, ill with leprosy. Lepers then, as now, were set apart to prevent the spreading of the disease. On recognizing Christ, the men ill with leprosy called to Him in unison, "Master, have mercy The Saviour's heart was doubtless touched by this plea and Christ said, "Go show yourselves to the priest." The Gospel narrator continues, "And it came to pass that as they went, they were made clean." In present day language, cured.

One of the 10, cured of leprosy, threw himself at Christ's feet and glorified God

in a loud voice. He gave thanks to Christ.

Indicating his disappointment with the other nine, whom he had cleansed (cured), Christ asked, "Were there not 10 made clean? Where are the nine?" Having been freed of their affliction and set free, wouldn't you think they too would have offered thanks to Christ before they engaged in revelry?
The patience that Christ evidenced in His

dealing with ingrates never ceases to astonish us. Yet even the patient Christ cried out at the ingratitude displayed by

the nine depicted in today's text.

The point I would stress is that only 1 in 10 evidenced gratitude to Christ for setting him free.

References in Scriptures to gratitude are replete. They are found in almost every book of the Bible. The Psalms, probably written about 250 years before Christ, are literally songs of thanksgiving, and because the Bible is the mirror of life, the ingratitude of man is also recorded painstakingly in its

many ugly manifestations.

The New Testament records that Christ frequently and publicly express His thanks to God. Christ set an example for gratitude and thankfulness when He expressed thanks to God for being the beneficiary of His wisdom. Christ set an example when He gave thanks at the Last Supper and Christ set an example when He thanked the Father for the raising of Lazarus. Christ set a great example for us to emulate. Let us all be generous in expressing our gratitude to our benefactors.

Marcus Cicero, the great Roman orator and statesman, born 100 years before Christ, said, "A thankful heart is not only the greatest virtue, but the parent of all virtues."

A thankful heart is something which can

be cultivated. Let us do it.

Lucius Seneca, the Roman philosopher whose doctrine was that "virtue is the highest aim in life" and who was a contemporary of Christ, said, "He that urges gratitude, pleads the cause both of God and man, for without it we can neither be sociable nor religious." Let us by a show of gratitude "plead the cause of God and man."

One rarely finds happiness emanating from an ungracious and ungrateful heart. is why ungrateful men are usually unhappy men. Most of the present-day unrest, feeling of uncertainty, and insecurity is caused by ingratitude. That is a challenging statement but I submit that historical facts support it. The present world outlook would be improved enormously by an occasional "thank you". What is true of our relationship with each other is equally true with the relationship between nations.

John Wilson, celebrated Scotch essayist and poet, known by the pen name of Christopher North, long maintained that nations have manners and that their manners were generally bad. With that thought in mind,

let us look at the current scene.

Is it not a fact that the bad manners of the men of the Kremlin are to a large degree responsible for world unrest? Is it not a fact that whenever they cannot have their selfish way, and their way is the Godless way, they call us uncomplimentary names and indict us for horrible crimes of which we are innocent. Do they not remind us of a thief who snatches a pocketbook and runs with the crowd and yells thief to avoid detection?

We gave the Soviet more than \$11 billion in World War II to help her defeat Hitler. We gave the Soviets much of our industrial know-how. Our cooperation has made the Soviet immeasurably stronger than she otherwise would have been without it. Yet they are today showing bad manners. temper, and resorting to detestable falsehoods in their efforts to discredit us and enslave the free peoples of the world. This is done under the guise of promoting democracy and giving people more liberty while at very moment snuffing out what little liberty there exists among the people under their heel. And I would remind you this morning that two out of five of the people of the world are today under the heel of the Communist dictator.

Gratitude and readiness to say thank you stem from good home training. is there that we are taught the basic principles of decent living. Remember when as little tots we accepted a gift, how our parents admonished us to say, "Thank you." I often wonder where all those little boys

and girls have disappeared. It would seem that some of them have grown into boorish, Ill-mannered, uncouth adults, and have thus degenerated into ingrates.

No one will ever fully know the amount of good will is accomplished in the world by the simple expression of "thank you." Gratitude is just as much a sign of a noble heart as ingratitude is the mark of a mean and sour soul. Graciousness cannot be im-posed from without; it springs from the innermost self. In our daily contact with others our acts of kindness and thoughtfulness are frequently ignored and buffed. We often find ourselves saying, sent a present to that person a long time ago and he never even acknowledged it." Such thoughtlessness is sometimes hard to forget. Even the patient Christ had difficulty in forgetting ingratitude. If we would merit a place close to the throne of God we must earn that place. We must glorify God and thank Christ for his compassion.

One must spread good will among all segments of the human family. One must put into daily practice the basic principles of home breeding and good manners by expressing at every opportunity to our neighbors and to the nations of the earth and to God our sentiment of appreciation and our sentiment of gratitude. We should from time to time as ourselves, "Am I repre-sented by the nine ingrates or do I stand with the grateful one who fell at Christ's feet and offered thanks?"

#### Economic Roundelay

EXTENSION OF REMARKS OF

# HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of June 4, 1959:

ECONOMIC ROUNDELAY

It just goes on and on. Last week the United States signed an agreement to lend Sudan \$10 million to finance a new cotton textile plant in Khartoum. If the United States has \$10 million it doesn't need, we suppose this loan can be justified. At least the Government thinks so because it coupled news of the loan with the statement that Sudan has neither exported raw cotton to the United States nor imported Americanmade textiles.

So, to the extent that a \$10 million textile plant can supply her needs, Sudan is being helped to become self-sufficient. Some 1,500 Sudanese will find employment, native cotton will go to the mill and Sudanese customers will no longer look to foreign trade for the textiles they need.

It adds up to a neat little package and the United States can be proud of alding the industrial development of a backward nation. Nevertheless, the world surplus of cotton textiles will be increased by the output of a \$10 million mill. Suppliers of Sudan will be compelled to look elsewhere for markets or cut production. The United States may not be directly affected but somehow, somewhere along the line we have an idea our domestic textile industry will be feeling the slack when Sudan begins proLouis M. Brown, President of Eberhard Faber Pencil Co., Man on the Run Toward Future

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that was featured in the New York Times of Sunday, June 14, 1959, which highlights the president of the Eberhard Faber Pencil Co., Mr. Louis M. Brown, and sets forth the future planning of the company under the able direction of Mr. Brown. This internationally known firm has a large facility in my congressional district employing several hundred people and it has proved to be a most welcome addition to the depressed economic area of Luzerne County:

PERSONALITY: MAN ON THE RUN TOWARD FU-TURE—BROWN WRITING BIG PROGRAM FOR OLD PENCIL CONCERN—AUTOMATION AND NEW MARKETS FIGURE LARGELY IN PLAN

The Eberhard Faber Pencil Co. is marking its 110th year by making news on several fronts. Behind the news is a dynamo of a man who has spent most of his business life with the well-khown pencil manufacturer.

He is Louis M. Brown, president since 1952, a man who bubbles over with wide-ranging plans and enthusiasm for the future. Among

plans that have materialized:

Eberhard Faber has just established a toy and games company, with many of the products linked in one way or another to its varied line of some 3,200 pencils, crayons, and pens.

The company is busy on a corporate acquisition program, seeking, as Mr. Brown put it in an interview some days ago, "to acquire companies, in lines allied and not allied, and we are making progress in the right direction."

"We expect some day to go public," Mr. Brown confided. "However, that's news for the future. We have no time schedule on our program. We are merely pointing that

way."

Mr. Brown was interviewed on the run between planes. In the city for the day from Eberhard Faber's new plant just outside Wilkes-Barre, Pa., he was filling a packed 3 hours with a succession of talks with sales executives, shipping people, suppliers, and a host of others.

#### CONSTANT TRAVELER

On the schedule was a quick trip to Colombia and to Mexico to look over possible plant sites. After that he was due for busy stopovers at the Wilkes-Barre headquarters and the New York selling office, with a trip to Europe coming up just afterward.

"The big market for the future is in the underdeveloped countries," he remarked. "The thirst for knowledge requires writing instruments, and that's what we supply."

What was the situation on selling in foreign countries, then, and what was the outlook for expansion abroad?

"World markets are gradually being closed," Mr. Brown replied, "and we have been making royalty arrangements with local manufacturers. And meanwhile we are pushing ahead in our research laboratory to find new marking devices and new uses

for them—notice we don't just use the word 'pencils'—and all sorts of other products. Right now 40 to 45 percent of our products are not writing instruments."

Mr. Brown held up one of his products, the familiar Mongol in yellow dress, a pencil known throughout the world, and asked:

"Did you know that in the Philippines the word 'Mongol' means write? And demand is very good in Mexico, too. As a matter of fact, you could name one country after another where the customers are ready and waiting for inexpensive writing instruments.

"Trouble is, there are artificial trade barriers that prevent pencil manufacturers from distributing as many as the people want and could afford to buy."

#### MEETING RESTRICTIONS

A question was put as to whether there was any way of getting around the restrictions on imports from American manufacturers.

"What we've been working out," he replied, "is a variation on royalty agreements with local manufacturers in individual countries. For the present, that is about the best way that can be devised. We have franchise plants in the Philippines and in Argentina and our own plants in Germany and Canada. The German plant, incidentally, is part of the American organization, with no relationship at all to any German concern."

Was the ballpoint pen a factor in the company's growth?

Mr. Brown indicated what appeared to be a pencil of conventional appearance.

"See this? This is a ballpoint pen in a conventional wooden case. We expect big things from this. Eberhard Faber owns the basic Biro ballpoint patents jointly with the Parker Pen Co. We didn't do so well with it first time out, but this time we feel we have the problem of a quality product at an economy price really licked. We have introduced 26 models of wood-cased ballpoints for the office, industrial and business use, and for school and the home, and the reaction so far is everything we had been expecting."

Automation? Big factor, or not?

"You should see pencils being made. It's a fascinating series of operations, from raw wood and graphite and metal and enamel colors to the finished pencil.

"It used to be wholly a hand operation, and many in the industry still make pencils that way. We use every new development that speeds up output and holds prices down. We use a good deal of machinery, but we're not quite ready for a fully automated process from start to finish just yet.

from start to finish just yet.

"Most of our packaging, however, is done
by machine. The ballpoint manufacturing
process is closer to automation than the
pencils. That's because the pencils take
quite a few more steps in manufacturing."

Are pencils more or less seasonal items?

"Very much so. We sell on a seasonal basis, but we know pretty well what the seasons are, so we can manufacture on a regular basis. We have about 500 employees in Wilkes-Barre, and 150 more at the rubber plant in Newark, and about 50 busy on selling. As we introduce more and more automation we look for the total of employees to go up rather than down, because the total volume will go up."

Mr. Brown paused, then added:

"A portion of the rubber plant, by the way, is being moved over the next few months from Newark to Wilkes-Barre. Then all the assembling and packaging will be in one place.

"There's a trend toward decentralization in the industry, but we find it more advantageous to keep the various parts of the production setup together." BASIS FOR ENTHUSIASM

What was the basis of the enthusiasm over the outlook? Wasn't a pencil sort of a standard item that couldn't very well be improved?

"Not at all. That was the old thinking, and that's what held us back. This business is changing, just like any other, and it was exactly the belief that a pencil was a pencil, and only a pencil, that held us back."

The concern has been a family-held organization for four generations, with its origin going back three generations more in Germany. The American concern and the German parent have been separate organizations since a split in 1890.

Mr. Brown, who was born in Atlanta in 1896, has spent most of his business life with Faber, and he is the first non-Faber who was raised within the company to serve as the

president.

Great difficulties started for the company in 1945 with the accidental death of Eberhard Lothar Faber, then 52 years old, the third generation of American Fabers to direct the company.

When Mr. Brown became chief executive

When Mr. Brown became chief executive officer in 1952 he set out on a rebuilding program of major proportions. In the last 7 years he has been credited with making strides as significant as in the 103 years that went before.

When he makes notes—he is not much of a doodler—he likes to use a well-sharpened Eberhard Faber pencil.

Dean of Oregon Publishers, Amos E. Voorhies of Grants Pass, Celebrates 90th Birthday

EXTENSION OF REMARKS

HON. CHARLES O. PORTER

OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, Publisher Amos E. Voorhies of the Grants Pass Courier has watched his newspaper grow from the weekly Rogue River Courier to the daily Grants Pass Courier. For nearly 62 years Mr. Voorhies has observed the Oregon newspaper scene and been an instrumental part in recording the history of the State.

In 1957 he received the title of dean of Oregon publishers at the 35th annual meeting of the Oregon Press Association in Eugene.

Amos E. Voorhies was born in Michigan. He came to Oregon in the fall of 1891 and worked in Portland. In 1895 he was named foreman of the weekly Oregon Observer in Grants Pass. That publication went out of existence, due to a general business depression, but a bit later Amos Voorhies was asked to come back to southern Oregon and take over the Rogue River Courier with Mr. C. S. Price.

His influence in the publishing world is considerable. His interest in that field continues. He spends many hours each day at work, preparing his weekly column and supervising preparation of the Grants Pass Courier's 75th anniversary edition which will be published in

Under leave to extend my remarks in the RECORD I include two articles from the Grants Pass Courier of June 6, 1959: [From the Grants Pass (Oreg.) Courier, June 6, 1959]

Amos Voorhies, Dean of Publishers of Oregon, Marks 90th Anniversary

Receiving congratulations on his 90th birthday anniversary today was Amos E. Voorhies, dean of Oregon publishers, with a record of almost 62 years as publisher of the Daily Courier. In partnership with the late C. S. Price, Mr. Voorhies assumed operation of the newspaper on July 1, 1897, when it was a weekly publication known as the Rogue River Courier.

Since that time, "Boss" Voorhies, as he is known to scores of Daily Courier employees and former employees, has been at his desk almost every working day. He still spends several hours in his office each day, compiling material for his Saturday column, which includes news items from each decade since 1899; filling photographs which have been published in the paper; and supervising preparation of the Daily Courier's 75th anniversary edition, which is scheduled for publication in 1960.

With his wife, Lulu, Mr. Voorhies makes his home at 421 Northwest B Street, where he

has resided for 59 years.

Organizations in which he has held membership for a half-century or more include Bethany Presbyterian Church, 64 years, 50 as clerk of the congregation; Grants Pass Lodge No. 84, A.F. & A.M., 56 years; Royal Arch Masons, 50 years; Melita Commandery, Knights Templar, 50 years; Shrine, 50 years, first as a member of Alkadar Temple and later as charter member of Hillah Temple; Benevolent and Protective Order of Elks, 50 years, first in Ashland and later as charter member of Grants Pass Lodge No. 1584; Oregon Press Association, 59 years, president in 1935; and National Editorial Association, 53 years.

He is a member of the Southern Oregon Chapter, Sons of the American Revolution, of which he was president in 1945-46, and Sons of Union Veterans. He is one of the two living charter members of the Grants Pass Rotary Club, which he served as president in 1935.

Mr. Voorhies has been secretary and director of the Oregon Caves Co. for 35 years, and has held membership in the California Press Association and the California Newspaper Publishers Association for 29 years.

"Boss" Voorhies received the title of dean of Oregon publishers at the 35th annual meeting of the Oregon Press Association in Eugene in 1957, and was awarded a life membership in the local chamber of commerce at the annual dinner in 1948.

At the 1950 annual conference of Oregon Publishers, Mr. Voorhies was one of 11 publishers of the State who were awarded gold keys for having received the Voorhies Award, of which the local publisher was recipient in 1938.

Amos Earle Voorhies was born June 6, 1869, on a farm near Greenville, Mich. After moving to Stanton, where they resided for 10 years, the family returned to Greenville, where Mr. Voorhies was graduated from high school with the class of 1888. He worked as clerk in a grocery store for a time before turning to the field which was to be his life work. His first newspaper affiliation was made in 1891 when he worked as an apprentice without pay in the office of the Greenville Independent, a weekly newspaper.

The future Dally Courier publisher came to Oregon in the fall of 1891, and worked as apprentice for several Portland job printing offices before joining the force of the Portland Sun. When that paper failed, Mr. Voorhies came to Grants Pass in 1895 as foreman on the weekly Oregon Observer.

A general business depression brought about the loss of the Oregon Observer position, and Mr. Voorhies was planning to return to Portland, when, through the advice and financial backing of southern Oregon friends, he entered partnership with C. S. Price and took over the struggling Rogue River Courier.

Mr. Voorhies has been associated with William B. Smullin of Eureka, Calif., in radio station KUIN and KGPO-FM, now radio KAGI and KGPO-FM, for the past 20 years, and in KBES-TV of Medford, KOTI-TV of Klamath Falls, and KPIC-TV of Roseburg, since those stations were started, 3 to 5 years ago.

Associated with Mr. Voorhies in operation of the Daily Courier newspaper plant and other business enterprises with which he has become associated through the years are his son, Earle E. Voorhies, and his grandson, John E. Voorhies. Fourth generation of the family is represented by 6-year-old Sandra, daughter of Mr. and Mrs. John E. Voorhies.

The 90th birthday anniversary observance this evening will be marked by a small party for relatives and a few close friends of "Boss" Voorhies at the home of Mr. and Mrs. Earle Voorhies, 1504 NE Ninth Street.

An informal party was held in his honor at the business office of the Courier Publishing Co., Friday afternoon, employees doing the honors and "Boss" Voorhies cutting and serving the cake.

[From the Grants Pass (Oreg.) Courier, June 6, 1959]

ANOTHER HAPPY BIRTHDAY, BOSS

Happy birthday, Amos E. Voorhies, whom we, the employees of the Courier Publishing Ço., respectfully and lovingly call Boss.

It is given to but few men to reach the 90th milestone of living and to continue more than hale and hearty for a person of that many years. May you so continue as long as your life span may be extended.

It would be impossible to enumerate the good things of your life; it would be equally as difficult to chronicle the good things you have been instrumental in bringing about for the welfare of your fellow man.

Suffice it to say, then, in this instance, that you—and that includes the things you have accomplished—are an inspiration to all of us to keep on keeping on and strive to do the best within our power, absolutely the best, because of inspiration of you and others like you who have accomplished things by so doing.

# Notice of Hearings on Proposed Legislation on Functional Discount Bills

EXTENSION OF REMARKS

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. CELLER. Mr. Speaker, as chairman of the Antitrust Subcommittee of the House Committee on the Judiciary, I wish to announce the commencement of hearings on proposed legislation now pending before that subcommittee. The proposed legislation consists of the following bills: H.R. 848, introduced by Mr. Montoya; H. R. 927, introduced by Mr. Rogers of Colorado; H.R. 2788, introduced by Mr. Osmers; H.R. 2868, introduced by Mr. Donohue; and H.R. 4530, introduced by Mr. Donohue; and H.R. 4530, introduced by Mr. Reuss.

These bills would amend the Robin-

son-Patman Act so as to provide for the mandatory nature of functional discounts under certain circumstances.

Hearings will be held on Thursday, June 25, and Friday, June 26, 1959, at 10 a.m., room 346, House Office Building.

All persons who wish to appear and testify at the hearings on these bills, are requested to notify Mr. Herbert M. Maletz, chief counsel, Antitrust Subcommittee, room 230, Old House Office Building, telephone Capitol 4–3121, extension 4853, as soon as possible, and in any event, before the close of business on June 22, 1959.

#### Kearns Offers Labor Bill

EXTENSION OF REMARKS

# HON, WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. AYRES. Mr. Speaker, I am privileged to introduce into the RECORD an editorial which appeared in the Meadville Tribune of Tuesday, June 16, 1959, pertaining to the Kearns labor bill now under consideration by the House Labor Committee. I had the privilege of speaking in Meadville, Pa., in CARROLL KEARNS' district, a couple of years ago. and had the pleasure of meeting the distinguished publisher of the Meadville Tribune, Mr. Robert S. Bates. Personally. I would like to take this opportunity to congratulate Mr. Bates for his fine editorial on the potential of the Kearns bill, H.R. 7265:

#### KEARNS OFFERS LABOR BILL

Whatever kind of a labor reform bill is passed by Congress this year—if one is adopted at all—it probably will not fully satisfy either labor, management, or the general public. The Senate bill, which is preferable to none, is criticized in some quarters as being too weak and its bill of rights is opposed by labor as too restrictive. Appalled by the disclosure of corruption

Apparent by the disclosure of corruption in the labor-management field, the public demands reforms, and labor agrees that legislation is needed to help it clean house. The argument is, What kind of legislation? Because the bills considered this far have run into so much opposition that adoption of any kind of a reform measure is endangered, perhaps Congress should take a closer look at Representative Carroil D. Kearns' proposal as a possible compromise.

The Kearns bill undoubtedly is tougher than the measure labor wants and less strict than what labor's opponents want. But it is not a punitive bill and, because it places housecleaning responsibility directly on the shoulders of union members, labor may find that it could live with it.

Like other reform proposals, the Kearns bill makes extortion, picketing, and embezzlement of union funds criminal acts. It bars exconvicts and Communists from office and forbids employer loans or payoffs to union officers or employees of labor organizations. It also has a bill of rights with guarantees for union members but with recognition of the right of unions to bar from membership persons it believes undesirable.

The new approach in the Kearns bill gives union members the initiative for reform. Independently audited financial reports are

required to be made, not to the government, but to union members, who are sufficiently informed to question them. Because court proceedings often are costly and impractical, KEARNS would have charges against labor officials follow the unfair practice procedure of the National Labor Relations Board whose membership would be enlarged. The Board would take over investigation and prosecution of cases on charges filed by members whose identities would not be disclosed.

The bill, requiring a secret membership vote within 7 days of beginning of a strike, would ban secondary boycotts. Its restrictions on organizational picketing would be far less stringent than some other

proposals.

The Kearns reform bill appears to be one that would not restrict legitimate union activities while it would give individual members the ablity to protect their own rights. Tougher than some suggestions, more moderate than others, it should be considered by legislators because of its middle-of-theroad approach.

# The Legacy of Lewis and Clark

EXTENSION OF REMARKS OF

# HON. FRANK CHURCH

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. CHURCH. Mr. President, it was little more than a century and a half ago that the astute and farsighted President, Thomas Jefferson, dispatched Meriwether Lewis and William Clark to explore the great American wilderness beyond the Mississippi. The result of that tremendous and courageous undertaking gave the United States a solid claim to the Oregon section of the country.

On this same trek to the Pacific. Lewis and Clark were the first white men to cross and explore part of my own State of Idaho. Today, a new highway is being punched through the magnificently scenic Bitterroot Mountains along the same general route followed by the explorers as they entered Idaho; it has appropriately been named the Lewis and Clark Highway.

As is well known, this year the State of Oregon is observing its centennial. As part of the national salute to his great State, the distinguished and talented junior Senator from Oregon [Mr. Neuberger! has written a fascinating account of the Lewis and Clark Expedition, which appears in this month's issue of Think magazine. I commend it to my colleagues and all others interested in one of the classic adventures of all time.

I ask unanimous consent to have this dramatic and significant article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LEGACY OF LEWIS AND CLARK (By Senator RICHARD L. NEUBERGER)

In this 100th year of membership in the Union for my native State of Oregon, we Americans are eyeing the limitless vistas of outer space. Hope and fascination attend these stirring observations. Already our satellites travel in far orbit around the earth. A few even have passed beyond the earth's ken. On some eventful night, the pioneer spacemen actually may soar out into the cosmic distances which surround our terrestrial home. They will be exploring the ultimate mysteries of the universe.

Yet, fragmentary though may be our knowledge of such incredible sweeps of sky and infinity, it is still greater than that known about their itinerary by the first Americans to trek overland to Oregon, which in 1959 is conducting extensive celebrations as it observes the centennial of its

The names of the leaders were Meriwether Lewis and William Clark. So prodigious was the feat they accomplished, without map or chart, that the very phrase "Lewis and Clark" has become practically synonymous with exploration. In the spring of 1804 their faces were turned toward a trackless wilderness, then more of a riddle than is outer space to us today. No civilized person of any nation knew any verified facts at all about the domain which lay between St. Louis, at the junction of the Mississippi and Missouri Rivers, and the hazy shores of what many then called the western ocean-and which we know as the Pacific, mightlest of earth's seas.

Thomas Jefferson, third President of the United States, had just bought Louisiana Territory from France for an eventual total of \$27,267,622. All at once, part of the realm to be traversed by Lewis and Clark had become American territory, and yet it was territory that no American ever had looked upon. Lewis and Clark were headed into a blank expanse on the map of North America. Their President had bought a package yet to be opened. And it covered a fabulous area of about 1 million square miles; this was 5 times the size of France, the nation that had

At St. Louis, geography ended and legend began. Many solid citizens feared that Lewis and Clark would come to their deaths amidst jagged peaks of broken glass. this because Indians whispered of the Shining or Rocky Mountains, which seemed to dent the sky? A few people insisted that Lewis and Clark would drop off the edge of the world for the roundness of our globe was not then universally accepted. Prehistoric monsters snorting fire and brimstone were said to inhabit the solitudes which Mr. Jefferson had purchased. The President himself possessed no specific information to refute these disturbing rumors, but he felt confident that Lewis and Clark could explore the great wilderness beyond the Mississippi and form a line of communication from sea to sea.

Much of this confidence stemmed from his knowledge of the men who were to lead the expendition, particularly his 29-yearold private secretary at the executive mansion, Meriwether Lewis. U.S. Government personnel was spread thin in those days. The President had to draw on the most intimate member of his own staff to head the most important exploring, party in American history. Lewis was quiet, determined and taciturn. There was about him a brooding intensity which countenanced no failure or turning back. Jefferson felt if anybody could unlock the inner secrets of the North American continent, this was the man to do it. He had known Lewis since the latter's boyhood in Albemarle, Va:

Because the President proposed that Lewis choose an alternative commander, to take his place if he should fall, Lewis selected his best friend and military companion, William Clark. This 33-year-old artillery lieutenant was almost the direct opposite of Meriwether Lewis. Clark was talkative, exuberant and outgoing. He was the extrovert of the expedition, Lewis the somber intellectual. Clark passed up the officers' mess to eat with his men. He called generals and Indian scouts, alike, by their first names. Despite the fact that one was an Army captain and the other a lieutenant, Lewis assured Clark that his status in the expedition "shall be equal to my own." This pledge was never violated. During 21/2 years of lonely ordeals in the wilderness, there is record of neither quarrel or tension between this remarkable pair of leaders.

Economy was a genuine watchword when the struggling new Nation was trying to stabilize its finances. So, in spite of perils ahead, no surgeon accompanied the expedition. Lewis took a refresher course in first-aid and simple remedies from the illustrious Dr. Benjamin Rush of Philadelphia, and that was it. Congress had allowed only \$2,500 for supplies. This barely paid for arms and trade goods. They would have to live off the country, because a mere \$224 could be invested in rations. Members of the party were enrolled in the U.S. Army at \$5 a month for privates, \$8 for the three sergeants and \$50 apiece for Lewis and Clark. This was not as parsimonious as it seems, for all had been promised parcels of rich land upon their return. Homestead acreage was a prime source of wealth on the old frontier. Lewis and Clark had their pick of many recruits-blacksmiths from Kentucky, adventurers from Virginia, carpenters from Pennsylvania, farmers from Vermont, voyageurs from across the border in Canada. It was not hard to enlist 29 members.

Watch them as they row up the languid Missouri in May of 1804, the flag with 15 stars flapping symbolically overhead. Clark is accompanied by his stalwart Negro servant, York. Lewis' big Newfoundland dog, Scannon, occasionally scampers along the wooded shore. Pvt. Peter Cruzat strums a lively folk tune on his battered fiddle. With these argonauts, as they voyage into the unknown, go the hopes of the little country along the Atlantic seaboard for eventual dominion over vast portions of a continent. The British, too, have been probing westward in the direction of the legendary great River Oregon, which may also be the Columbia. Explorers carrying the Union Jack, like Simon Fraser and Alexander Mackenzie, would like to navigate its turbulent reaches ahead of Lewis and Clark. And in his kitbag Lewis carries a letter of credit in President Jefferson's own handwriting, drawn on all American counsels in foreign parts. The President had ordered Lewis, if the Indian tribes proved too menacing on the outbound journey, to "seek a passage 'round by sea in such vessels as you may find on the western coast.'"

From the beginning, the journals of the two leaders were packed with new lore about animals, shrubs, and trees. They described the antelope, black-tailed deer, prairie dog, wild upland goat and elk. Between dawn and dusk, they counted on a single day 52 separate herds of bison. These covered the prairie like a moving cloak. Clark and a mountain man named George Drouillard nearly lost their lives to a 600-pound bear which absorbed five or six musket balls before it died. This was not the harmless little black bruin of New England. Ursus horribilis, the frightful bear, Captain Lewis called the discovery. Today we know this massive creature, with reddish-brown fur

and pitchforklike claws, as the grizzly.

Near the present location of Sioux City,
Iowa, Sgt. Charles Floyd died agonizingly of what Lewis described as colic. From the symptoms listed in the journals, it may have been a ruptured appendix. All of them suddenly realized what it meant to be far from the United States without a doctor in the party and only \$55 worth of medicines.

By popular vote, grizzled Patrick Gass, of Irish descent, was chosen to succeed Floyd as a sergeant. For the first time Americans had voted in the immense realm they would

one day rule by the ballot.

Winter's snows found them 1,600 miles up the Missouri not far from where Bismarck, N. Dak., stands today. They spent the winter among the friendly Mandan Indians. Here Lewis and Clark acquired an interpreter, a shiftless halfbreed named Toussaint Charbonneau. This incident might never have reached the pages of history had it not been for Charbonneau's Indian wife, a lithe 19-year-old Shoshone with dark eyes and darker braids. Sacajawea had been stolen from her people and made a slave girl. Lewis hesitated to take along a woman on the expedition. Still, he needed the interpreter. He also made note of the fact that Sacajawea's people were said to live back of the high ranges. Perhaps she knew the way westward.

When the spring of 1805 released the plains from the clutch of snow and ice, they continued up the Missouri. On May Lewis sighted majestic mountains on the far horizon. Never before had an American seen such peaks in his native land. That night, in the glow of the dancing campfire, the captain's introspective view were confided to his journal: "I beheld the Rocky Mountains for the first time. I reflected upon the difficulties which this snowy barrier probably would throw in my way to the ocean. I thought of the sufferings and hardships of myself and party in them. This in some measure counterbal-

anced the joy I had felt."

His estimate of difficulties was not exaggerated. The Missouri dwindled into three swift but shallow tributaries, which they named the Jefferson, Gallatin and Madison Rivers in tribute to their patron saint and two members of his Cabinet. They sloshed through lcy waters to push the boats up rushing rapids. Their ankles were too numb to feel pain. Finally they could navigate no further. Gorges hemmed in the stream. They had come to the cradle of what Lewis described as "the heretofore boundless Missouri."

With nearly 300 pounds of trade articles and ammunition per man, they needed horses to cross the forbidding ramparts which towered above them. Lewis and three picked companions wandered alone in the mountains, looking for Indians with ponies to barter. At Lemhi Pass, in one of the decisive moments of American history, they met Chief Cameahwait and 60 mounted Sho shone warriors. Lewis had just become the first American ever to cross the Continental Divide. Now he and his three subordinates faced armed Indian braves who never before had seen people of white skin.

Lewis dropped his gun to the ground and advanced with the flag to meet Cameahwait, who came forward on his prancing

"Tabba bone, tabba bone (white man)," Lewis kept repeating. He rolled up his tattered buckskin jacket to show the pale

color of his arm.

Meriwether Lewis, in that instant, represented the vanguard of the advancing Nation which 1 day would dominate the continent and relegate such tribes as the Shoshones to crowded reservations. Cameahwait could have given the signal to Wipe out the four beleaguered strangers and the whole pattern of North American development might have been altered, or, at the very least, delayed. But the chief slid from his horse and embraced President Jefferson's secretary.

"Ah hi e [I am much pleased]," he said. Thirty-eight ponies were obtained from the Shoshones, a trade which became easier after Sacajawea proved to be Cameahwaits' long-lost sister. Yet their sternest hardships

still awaited them-in the endless labyrinth of the Bitterroot Range, sprawling across what is now northern Idaho. Their aged Shoshone guide, whom Clark dubbed "Old Toby," lost the route. The first snows of fall trapped them on the high ridge above the Lochsa Fork of the Clearwater River. Thirty-two adults and Sacajewea's baby often had no more than a brace of grouse to eat during a 24-hour period. Lewis got off his horse and gave the seat to a private with a racking cough. At a chilly meadow which they named "Indian Post Office," they left cairns of frock to guide them on their return journey-if ever they returned. And at last they clambered off the Lolo Trail and bivouacked beside the main stem of the Clearwater, where they hollowed out four huge logs of Ponderosa pine to take them to the sea.

ON TO THE PACIFIC

They shot the Clearwater to the Snake, and the Snake to a massive and surging torrent which could only be the Columbia. They paddled past Indians spearing tons of salmon. They looked up at lordly white volcanic cones that appeared lost in the heavens. One morning Lewis thought he heard the dull boom of artillery. The water had a salty tang. Gulls wheeled in the air. Around noon of November 7, 1805, a dense fog lifted from off the Columbia like the curtain on some mighty stage. They peered intently westward. And there it was, breaking in white-capped splendor beyond the bar-the spume and foam of the ocean which stretched across the globe to ancient Cathay.

For the first time, men carrying the American flag had spanned the continent. Clark scrawled enthusiastically in his diary, "Ocean in view. Ah, the joy. We are in view of the ocean, that great Pacific Ocean which we have been so long anxious to see."

On the fir-dotted grasslands near the ocean, they built the stockade known as Fort Clatsop. Never before had Americans lived on the Pacific's shores. As these words are written, the U.S. National Park Service is building the Fort Clatsop National Memorial on the site of the ancient fort in memory of the valiant party whose winter there helped to establish their country's claim to more than half a continent. when Lewis and Clark were at Fort Clatsop. they did not consider themselves within the jurisdiction of the United States. One morning Clark carved the cryptic record in the bark of a tall forest giant of Douglas-

"Wm. Clark, Dec. 3d, 1805, By land from the U. States In 1804 & 5."

BACK FROM THE WILDERNESS

The vessel which Jefferson had hoped for never anchored off the Oregon seacoast while Lewis and Clark wintered there. But their experiences with the Indians had been mainly amicable and they did not shrink from the homeward trek by land. Ironically, however, the brig Lydia from Boston put into the Columbia's mouth less than 3 weeks after the Lewis and Clark expedition had started up the majestic river at the end of March, 1806. By that narrow margin did they miss a boat ride around the Horn and back to the United States.

As it was, they reached St. Louis on September 23. They had been gone approximately 21/2 years and they had journeyed about 8,000 miles. Because virtually all hope had been given up for them, they could not have been greeted more surprisedly than we might herald a wayfarer back from outer space today. And surely outer space contains no more amazing tales than did the western portion of the North American Continent in the bygone era, before maps ever had been made of what is now

My friend, the late Bernard DeVoto, distinguished winner of Pulitzer Prizes for his writings on the American West, once told me that, if he could have been reincarnated at any period in history, he would have chosen to go along with Lewis and Clark. "Imagine," said he, "at the incomparable

thrill of being first to see the sources of the Yellowstone and the Missouri, to span the Rockies, to drink from the headwaters of the Columbia and to come, at last, to the Pacific from upstream. What other experience in our history could possibly compare with this?"

And, as if to demonstrate that he truly meant what he said, DeVoto's final request asked that his ashes be scattered at Indian Post Office on the Lolo Trail, where still remain the cairns of granite and lava rock which guided Lewis and Clark back across the terrible Bitterroots on their return journey.

My wife and I have stood on the high divide above the Lochsa, beside those fateful and crumbling cairns. A trail threads to them through the alpine meadow. It is the only trail there, so it must be the Lolo of such great destiny. Along that strip of forest duff came the first westbound Americans long ago, hungry and cold and in quest of their way. As I looked at the wavering path. I thought I saw them in my mind's eye, led by the gallant officer from Albemarle, Virginia, who had served his President both in executive offices and hostile wilderness.

And I hoped and prayed that we, in our own era, were worthy of that bygone journey which had accomplished so much for the

United States of America.

# The Hells Canyon Dam

EXTENSION OF REMARKS OF

# HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from the Verendry Electric Co-op, Inc., of Velva, N. Dak., along with a resolution passed by that co-op.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

VERENDRYE ELECTRIC COOPERATIVE, INC., Velva, N. Dak., June 11, 1959. Hon. Senator WAYNE MORSE,

U.S. Senate Building, Washington, D.C.

DEAR SENATOR MORSE: The attached is a copy of a resolution passed at the annual meeting of the members of the Verendrye Electric Cooperative of Velva, N. Dak., held on June 8.

Keep up the good work. Yours truly,

MELFORD HANSON, Manager.

#### RESOLUTION 11

Whereas, the Verendrye Electric Cooperative, Inc., duly assembled in annual meeting this 8th day of June 1959 have long been aware of the good work done by Senator WAYNE Morse of Oregon and are wholly in favor of his efforts in regard to a multi-purpose dam in Hells Canyon: Now, therefore, be it

Resolved, That we urge our North Dakota congressional delegation to support Senator Morse in his efforts.

# Early Settlers of Edwardsville, Pa., Faced Death From Hostile Indian Bands

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Wilkes-Barre Record of Tuesday, June 16, 1959, which narrates, in brief, the dangers and hardships faced by the early settlers of what is now Edwards-ville, Pa., a borough in my congressional district that is currently observing its 75th anniversary:

PIONEERS FACED DEATH BY TOMAHAWK, BULLET

The territory embraced within the present limits of the Borough of Edwardsville is not without early historic interest and the settlers there endured their full share of the romance and tragedy of the Revolution. Their scattered cabins blazed to the torch of the Indian invader and the Pennamite intruder and their blood was shed by the tomahawk of one and the rifile of the other.

Through the center of this territory ran one of the main highways of settlements. Laid out in 1770, and continuing for a period of over 70 years, the old Plymouth Road was the great southern highway. Intersecting the Great Road of Kingston Township, now Wyoming Avenue, it received the traffic from western New York and upper Canada moving southward to lower Pennsylvania,

Maryland, and Virginia.

In early times along this busy thoroughfare by foot, or horseback, in stagecoach or Conestoga wagon, moved a motley throng of men and women. Yankees from New England, settlers from western New York, southerners from North Carolina and Virginia, tribes of various Indians and bands of returning raftsmen, who had at Baltimore discharged their cargoes of grain and lumber gathered along the Chenango and the Chemung.

This road substantially followed the ancient Warrior Path, part of that great southern trail of the Iroquois, which led from Tioga Point by way of Shamokin, as far south as the Tennessee River. Originally the old Plymouth Road began at the ferry on the western bank of the river opposite Northampton Street.

Under the Twin Sisters elms one of which is still standing south of Market Street in the park warwhoops rang out following almost instantly by a volley from hidden Indians. A Mr. Williams, Lieut. Asahel Buck, and Stephen Pettebone were instantly killed. Frederick Follett, the other man, was shot. He feigned death, was hurriedly scalped by one of the warriers, and left for dead.

The alarm was sounded at the Kingston blockhouse a few hundred yards away and a force of soldiers recovered the bodies of the dead. Mr. Follett, who was believed mortally wounded, recovered from his wounds and scalping.

Wyoming Avenue, as it does today, turned at what is now Hillside Avenue and ran over Ross Hill which is now known as Woodward Hill in an almost north-and-south line to Plymouth.

In 1788 the county laid a new road intersecting the Northampton Street Road at the house of Thomas Drake near the site of the Welsh Presbyterian Church, and continuing on the line of the present Main Street to Kingston Corners. Thenceforth the northern and southern traffic passed over this short intersecting road to and from Wyoming Avenue and the old Plymouth Road.

Just south of the Plymouth Road on the site of the paint shop of the Lackawanna Railroad in the present Edwardsville Borough Elihu Williams, the most notable settler in the upper part of Plymouth Township, built his cabin in 1773. He was born in Canterbury, Conn., and two of his sons, Rufus and Elihu Williams, Jr., were killed in the battle of Wyoming.

The rest of the family after the battle fled from Forty Fort and made their way with the other fugitives through the Shades of Death to Fort Penn, which is now Stroudsburg, from whence Mrs. Williams and the children wetn to Connecticut, while the father returned to Wyoming Valley.

# Adlai E. Stevenson Speaks on the Social Responsibility of the Business Community

EXTENSION OF REMARKS

# HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the Record, I should like to insert an address on "The Social Responsibility of the Business Community," delivered on June 6, 1959, before the National Business Conference at the Harvard Business School, Cambridge, Mass., by the Honorable Adlai E. Stevenson:

ADLAI E. STEVENSON SPEARS ON THE SOCIAL RESPONSIBILITY OF THE BUSINESS COM-MUNITY

Alfred North Whitehead said: "A great society is a society in which its men of business think greatly of their function." This is the subject assigned me tonight, and your committe's charge is that I assume the role of critic, saying bluntly what seem to me the obligations, especially the unmet obligations, of the business community to the community at large.

I appreciate fully my danger. A request for criticism is not always to be taken at face value. And I feel as though I were having the traditional steak and onions dinner provided by the warden before the

I have been a businessman's lawyer most of my life and have had some trouble "thinking greatly," in Whitehead's phrase, myself, let alone telling my friends and clients how to think greatly about the future of society. But surely there is serious unease in the Nation and the world and it is time for some thinking. None of us is satisfied with the way things are going. Each of us would like to put our own powers, whatever they may be, to more effective service. And surely the businessman, although he has lost much of his former influence, is still, as Dean Teele has said, "central" in the American and world system.

I think of the prayer of a little English boy in World War II: "God bless mother and daddy, my brother, and sister, and save the King. And, oh God, do take care of yourself, because if anything happens to you we're all sunk." Please don't think that I am equating business and God. I'm a Democrat and you haven't fooled me. But I

think it imperative that business, which is indispensable to our system, take a more objective and influential role in the larger concerns of the new equalitarian society that is emerging here and everywhere in this age of revolution.

My views on the subject of business and politics which you have been talking about all day are simply expressed. I think businessmen are citizens first, individuals always, and businessmen last. You have the same responsibility for the Republic's wellbeing and democracy's survival as anyone else. The means is government, and the machinery of choosing the government is politics. The health of both is the first business of every businessman, like every other citizen. What we need, and better have a lot more of, quickly, is concern for the national interest, and not the selfish interest of business, labor, farmers, or any single economic, racial or religious group.

You have already done yourselves enough damage by putting self-interest first; at least in the public's estimation. A great change has taken place in America in the 50 years, over the impotent protest of the business community most of the time. Business fought bitterly against increasing graduation of the income tax; against the social security program and the minimum wage law; against unemployment compensation and the strengthening of collective bargaining; against enlarged housing and educational programs; against TVA and other natural resource developments; against farm price protection; against foreign aid. But I won't go on. fact is-without arguing the rightness or wrongness of any of these positions—the judgment of the community is that American business has been wrong and more interested in profit than people, and dollars than ends. Two hundred years ago Jean Jacques Rousseau said: "As soon as public service ceases to be the chief business of the citizens and they would rather serve with their money than their persons, the State is not far from its fall."

But enough of the obvious. The important fact now is that in these times of violent change the world needs to have the American business community reoriented and assured of itself and its direction once again. We have altered the whole physical apparatus of our lives. In the span of about fifty years we have conquered space; split the atom, lengthened life, doubled the world's population and launched the interplanetary adventure.

Yet, although everything is changed, I believe we all sense that our thinking about the aims, scope, and performance of our economic system has not kept pace; that at least in some degree stereotypes, ideology, prejudice, even myths, have taken the place of that reasonable examaination and rational analysis from which no human society ought to be long divorced. So I welcome the opportunity of suggesting some of the larger problems and challenges our economic system has to face which cannot be solved without great thinking. Let me list some as I see them:

1. To my mind our most important problem is the disparity in living standards in the world, measured roughly by average income of \$2,000 per year in North America as against \$100 or less for more than half of the world's population. And the rich are getting richer and the poor poorer all the time.

2. The Soviet-Chinese worldwide economic offensive presents, I think, a greater concern for us than Communist military power. To maintain the balance of power, if for no other reason, the West will have to make a greater effort to provide an alternative to communism as a technique of change and growth in the vast underdeveloped areas.

Brains and sensitivity are as important as money.

3. How are we going to provide the huge social capital requirements at home for education, housing, health, urban renewal, resource development, etc.?

4. Can we control inflation without caus-

ing a depression?

I could go on; but I hope this brief list of our larger concerns suggests two things: That the priorities, the values, the philosophy, and emphases in our society must be adjusted to some tough realities. Can it be done in peacetime? I don't know. But I do know that to do it is the very top responsibility of business, yes, and labor, and all the rest of us, too.

The other point my view of our real priorities makes clear is, I think, that we cannot meet these relentless foreign and domestic challenges without sustained eco-

nomic growth.

I hope I don't sound melodramatic, but in my judgment the American system is on trial for its life. And a realistic reexamination of our economic system and its state of readiness is a responsibility business and industry cannot, must not, evade or postpone.

What do we see? The Marxist attack has changed its direction in the last generation. Today the Communists can no longer base their fundamental attack upon the poverty and misery once tolerated in our system. On the contrary, Mr. Khrushchev has proclaimed catching up with America to be his main domestic aim—a curiously bourgeois ambition, surely, for the leader of world revo-

The new Marxist line is that free enterprise economies cannot, by their very nature, grow steadily or hope to keep pace with communism's surging advance of 7 percent or 8 percent a year. "We will bury you," says Mr. Khrushchev, not under hydrogen missiles but under a flood of production which will finally prove to the Russian people and to the world at large that "we can do everything you can do better," and do a lot of things in addition which you cannot do at all

This is the new challenge, the challenge of the competition of sustained growth secured by government direction. The Communist performance since the war-both in Russia and China-is formidable enough for us to take the challenge seriously. We can no longer take our own productive, scientific, and technological superiority for granted.

The fact that the Russians are catching up in production, and increasing economic assistance, is also increasing the attraction of Communist principles in the decisive underdeveloped areas. And it may do something else; having assumed our superiority for so long, for the Russians to overtake us in the economic sphere will be a greater shock to the American people than sputnik, and leave us confused, uncertain, and even more vulnerable to half truths and false prophets, Just when what we need to hear above the cacophony of politics and business as usual is the clear, clean, astringent note of the trumpet.

But to return to economic growth: Of course we can't accept the challenge on Russia's terms. Straight production statistics are meaningful in parts of the world where margins are so small and living standards so low that growth is the first necessity. But our standards are almost twice as high as Russia's. The challenge to us is rather to look at our needs and see whether in fact we ought to aim at greater growth. If we have demonstrable human needs unsatisfied and are in some way inhibited in our determination to grow to meet them, then the Com-munists' challenge—that they and they only know how to grow rapidly and indefinitelybecomes relevant.

Is this the case? I believe it is.

Our need for a better rate of performance springs from three facts. The first is the fact of Communist pressure. The largest single load our economy bears is the defense budget. Nor is the Soviet challenge only military. Their program of trade and sid Their program of trade and aid to underdeveloped areas will increase as Soviet growth releases more resources for their campaign to win the uncommitted and strategic areas. Our basic research, too, must be accelerated, if we are not to see Russian teams winking at us from every planet.

Another spur to growth is our rapidly expanding birth rate. We are growing by about 2 percent every year, an increase as large as India's. This wave first hits our homes and cities, then our schools and at last our labor force where, when combined with a 3 percent increase in productivity, it will call for more jobs at a rate approaching 5 percent a year.

The third point is our long backlog of undone tasks left by the depression, then the World War, and then the Korean war—old schools, old hospitals, old houses, blighted city areas, rural slums, water supply. Each year increases the backlog. Estimates put our needs for public services of all kinds a figure as high as \$9 billion. Possibly it is

These, then, are the hard facts—the facts of change and of great new demands-which seem to me to warrant stern reassessment of our economic aims, stern reappraisal of our attitudes-and, I would hope, a solemn determination to attain a rate of growth of 3

percent or 4 percent annually.

In one sense America has less difficulty in answering this call than any other nation on earth or in history. In terms of the physical components of growth—materials, manpower, installed capacity, managerial capacity, and technical skills-we have all of them in vast amounts and any we do not have we can import.

The conflict arises when we consider how the growth is to be accomplished.

It may be that the task of plotting the economy's broad course needs some strengthening of the President's Economic Advisers or possibly the substitution of a National Economic Advisory Council with members drawn from the main interests in the economy. But we have already seen-in such crises as the Korean war-that production can be greatly expanded in our economy, once we decide to do it. The task of achieving a smaller but steadier expansion is certainly not beyond our powers.

It is here, however, that we meet the first of the real obstacles to any general agree-ment on a policy for growth. It is obvious that inflation is a real danger and policies for dealing with it successfully offer one of the greatest challenges to democratic statesmanship. Unhappily, the exaggeration, misstatement and fallacy which beset the discussion of this issue often make it an exer-

cise not of reason but of ideology.

In the first place, let us be clear, we are not spending ourselves into bankruptcy and we are not on the verge of a runaway infla-tion. To suggest that we are shakes people's confidence further and encourages the inflation against which it is supposed to warn Tell enough people that their currency losing value and they will do all the things-speculating in the stock market, getting into real estate, getting out of government bonds—which help to accelerate inflation. Although there has been little price inflation for more than a year now, Government financing is acutely embarrassed and our gold is draining away.

Another common theme is that the value of the dollar has fallen by more than half in the last 50 years. But over the same period the economy has grown fourfold and the vast majority of Americans have many

more dollars. It is growth, startling growth, that has raised our living standards to their present unequaled height. Those who fear inflation to the point of stopping growth might be able to maintain the present living standard. But they would insure it grew no

A5275

Perhaps the most encrusted bunch of fallacies cling around the idea that only Government spending is inflationary. But in a state of accelerating demand there is no mystic difference between public and private expenditure. A Government order for a tank or a private order for a tractor have an identical effect upon the demand for steel. machine tools, skilled labor, and so forth. Either public or private bidding can cause an inflationary movement. The Government sparked growth—and inflation—in 1950 because of the Korean war. Private industry sparked growth—and inflation—in 1955 by expanding investment.

Yet the hardy old idea persists that all public spending is bad and all private spending good. But the crucial question clearly is: What is the money being spent on? Oliver Wendell Holmes summed it up when he said: "With my taxes I buy civilization." Education, personal security, a decent urban environment, and, today, survival in a threatened world-are these not more vital than the hairdos, the cosmetics, the drinks and tranquilizers, the chromium encrusted cars. and amusements which belong to the area of

private, spending?

In America more is spent per head on advertising than on education. A starlet can earn in a month 5 years' salary of a school-The movie theater is more magnificent than the courthouse, shining new cars stand beside gutters often choked with refuse of a careless, wasteful people, Multiply your own instances. I do not think you will find all the extravagence on the Government side. In fact, as Professor Galbraith has reminded us, the private sector is so well stocked that we have to go to unparalleled lengths of persuasion to keep goods moving and persuade the public to develop wants they never knew they had.

It seems a little ludicrous to first hand over such vital human needs as security, education, and a wide range of welfare services to the public purse because they are so vital, and then proceed to starve them simply because they are public.

In other words, inflation is not caused simply by Government spending or simply by private spending. Before the First World War, when there were no large taxes, no large Government spending, no deficits, no debts and no unions to speak of, the average increase in inflationary pressure was just over 2 percent a year. This average is higher than in the last decade if you exclude 1950 and 1955. But then, if you exclude those years, you also get very little growth. We have achieved fairly stable prices recently; but at the cost of stagnancy. Incidentally, we have had stable prices with a \$13 billion Government deficit. If private production falls off by over 20 percent, Government obviously can spend a lot before all the slack is taken up and pressure begins to mount again.

It is not certain that we can enjoy-all together-growth, price stability, and no Government controls. It is possible that sometime we shall have to choose. The conservatives offer us sound money, but don't add that we may have to be content with, say a 1 percent rate of growth. The liberals offer us a 5 percent rate of growth, but discount the risk of a 2 to 3 percent annual inflation.

It is not my purpose or responsibility here this evening to propound an answer. The answer should not be left to the politicians. It will come, if it comes at all, from the people, from the groups, politicians represent.

So far the only business answer to the stubborn problem of stable growth is to rely on slacks and recessions to shake out prices But in this last recession, some prices, particularly in industries of highly organized labor and imperfect competition, continued to go up. Nor do slack times do very much to make good the backlog of public needs. Above all, by recession we export the instability of capitalism for all to see. Rhodesia and the Congo have had to endure close on a 50 percent fall in their copper prices, and political troubles are not unrelated. In short, the remedy of recurrent recession is no remedy and causes other maladies as

We could, I believe, restrain the pressure on prices generated by the full use of our resources if we were ready to exercise some self-restraint on wage and price increases. Other democratic communities have done it. In Holland and Sweden, the trade-union movement agreed on at least two occasions to accept lower wages at a time of international pressure on the country's balance of payments. Germany's price stability during the period of rapid growth after 1948 was due in part to the restraint shown by German

But if restraint is not forthcoming from the parties involved, what then? Are we helpless, with so much at stake? If you don't come up with some better answer than recurrent recession you will grievously embarrass capitalism, and the public will, acting through government. And that answer

will be more government, not less.

And here we enter another ideological minefield which you businessmen largely planted and I want to say a word about. It is the old, familiar claim that any government supervision spells socialism and the

ruin of free enterprise. Socialism is the public ownership of the means of production, and no one is proposing that. But as we use the word it seems be any government authority we don't like. Of course, things we like-tariffs, subsidies, mail concessions, support prices, tax writeoffs, depletion allowances, and Government aids to particular groups—are rarely denounced as socialism, except per-

haps by the group's competitors.

It all reminds me of the engaging cynic who said that "the truth and the facts are sometimes different." And I take sharp issue with the prevalent idea that business and Government-which is only the agent of the community at large-are inherently antagonistic. They are not; their proper in-terests are necessarily one and the same. A far sighted Government policy, designed to strengthen our country, improve our education, rebuild our cities, extend our services, and insure a steady growth in our productive capacity, far from being the enemy of private enterprise, is the precondition of capitalism's successful competition with

Actually only once has private enterprise been in danger of extinction in America. That was in 1929 when without taxes, big Government, big deficits, or big unions, it all but killed itself. Its prestige was vastly increased by the bursting growth of the Second World War. And after the Government-sparked expansion of Korea, we got not socialism but four or five of the best years private enterprise has ever had, and even a Republican administration. Similarly, European enterprise was rescued from the stagnation of the twenties and thirties by a plan launched here at Harvard by a American, George C. Marshall. As a result, socialism has receded in Europe and public ownership is being abandoned even by Socialists.

Intelligent Government action is not, I say, the enemy but the essential complement of effective private enterprise and the more imperative when we are confronted by

the central planning of the Soviet Union.
And while we are "thinking greatly," am going to do a little hoping greatly, that in the future the attitudes of business will not be entirely determined by preexisting prejudice and incendiary rhetoric about the American way of life, while the Soviet way of life creeps across the earth. For if government's functions are growing, so are the complexities of our life, the crowding up of country and our involvement in the world. A Jeffersonian dream that "the best government is the least government" belongs to a century when America was iso-lated and empty. Today it could leave us defenseless before a challenge neither Jefferson nor any of the Founding Fathers could have possibly foreseen. On this commence-ment day is it too much to ask business to help us graduate from the 19th century, to throw off the semantic shackles of the dear. dead past and get into position to meet the full scale of the real and rising attack upon our way of life?

This risk seems to me all the more dangerous in that the most penetrating and subversive attacks in history always come up, as it were, on the blind side, in the area where rigidity and complacency and blind belief have taken the place of thought and questioning and adaptability. Under the Manchus, no Confucian gentleman would concern himself with the scientific nonsense of the alchemists. The formidable increase in Western power based upon science and technology was disregarded because science was held in such low repute. Significantly, today it is precisely by the bold use of government that the Communists challenge us most gravely, spending more proportionately upon arms and aid and education and research, because government can so allot the nation's resources. We shall not change this challenge simply by rejecting the instruments at its disposal. Many of us dislike the thought of government as passionately and irrationally as the Confucians rejected science. Perhaps this is the very reason why we should be ready to give it a long, new look.

I don't ask you to agree with all I've been saying. I realize that one man's cliche can be another man's conviction. And surely there will always be sharp disagreement about the relation of government and citizens, corporate or individual. But the rule in today's world is that man's larger interest is everywhere breaking in upon his immediate short-term interest and overriding it. This applies to business, just as to the other concerns of people. This is the logic of a unifying, contracting world, where time and distance become daily shorter; and if we deplore it, we still cannot turn the tide back.

In the business world, it is not the rise of big government that gives you problems you never had or never faced up to before. It is the forces that bring big givernment about which in reality you face. This is a big world. We have big enemies. The interests in our own country-of management and labor-are big, too, and could well become "overmighty subjects" and restore the confusion and enmity of the old feudal monopolies. In all this, government big enough to meet its responsibilities is a condition of survival. We live, day in, day out, with the great challenges of the world at large and the great perplexities at home of a vastly increasing population. We must not be afraid of and we can't get along without government built to their scale.

Because you are now more dependent on this environment, in which rugged individualism is an illusion, you will increasingly have to resolve your conflicts on the basis of what is best for that environment. Or, to put it bluntly, what is best for society. Like it or not, the business of the modern

corporation is society. And smaller busi-nesses, which are less obviously concerned with the whole life of their stockholders and suppliers, workers and customers, will increasingly find that their business, too, is

We hear it suggested that businessmen are inept at politics. But on the basis of recent evidence, so am I. So I will avoid that trap and merely suggest that the intellectuals and the politicians, not the businessmen. have taken the lead in shaping national thinking on public affairs. Why is this the case—If indeed it is the case? Have you, in a sense, abandoned the field? Have you put comparable labor of thought into the shape of American society? Or were you consulting your lawyers and your lobbylists and your public relations officers on how to argue your side of the case, and complaining because someone else was creating a bad public image of American business?

I don't need to say here how much the society needs the talents of the business-He has a gift for realism. His ideas are constantly tested by action, and he never gets far away from the practical. His motive is fundamentally optimistic. rare capacity to resist adversity, and to keep comig back to the job until it is somehow done. He has drive and courage, when they are aroused and the incentive is good.

It's the incentive that counts, of course Ours is an incentive system, which is the businessman's way of saying this is a system of individual men and women who are not compelled, but who choose to do what they wish to do. But there are many kinds of incentive. Your incentive, after all, is what you decide it will be. It can be profit. It can be power. It can also be the satisfaction of making a humane mark on your time, of building a better life for the people and the community around you. These are incentives, too, if you will make them so. They are also values that society desperately needs. And they are values which people in distant places, who have more to do with our destiny then we like to think, hold higher than we always have.

America, for the first time in history, has built a productive system operated for the benefit of all the people, speaking by and large, and not for the privileged few. sidering the tenacity of privilege down through the centuries, and the many areas where it still holds unequal sway, this is an achievement on the heroic scale. The builder of this new type of system was business. But business didn't think it all up. The American political system gave it its sense of direction, and there were sometimes terrible strains as the two pulled against each other.

It may well be that the very limitations which now restrain the old abuses of the business system are the milestones of a new order of accomplishment for business. Instead of struggling chiefly with problems of production and profit, a farsighted philosopher could see you struggling chiefly with problems of conscience and the purposes of mankind. And who will argue that this is a lower form of human activity?

Let me conclude with the thought that American citizen-businessmen, in spite of all their frustrations, have more power than you think in the new society. In a world where higher standards of living are the great liberating force, everyone wants what you in the American business community, taken at your constructive best, have to offer.

History, after all, does not consult us about the challenges she presents. Those which create the most havoc are invariably those which conflict most sharply with existing prejudices and preconceptions. Yet these, too, once overcome, can also become the greatest spur to invention and advance. We have not achieved in our country yet a Utopia so perfect that all further modifications of ideas and institutions are inconceivable. It is just possible that history, helped on by Mr. Khrushchev, is giving us just the nudge we need to see ourselves, our economy, our tasks, and our ideals in a new light.

Twenty-eight years ago, Alfred North Whitehead spood before an audience here at the Harvard Business School and talked of the role of what he called the business mind. "Mankind is now in one of its rare moods of shifting its outlook," he said. And in this new perspective, "the motive of success is not enough. It produces a shortsighted world which destroys the sources of its own prosperity."

Then he came to his point, and the point of this conference here today. "We must not a fall into the fallacy," he said, "of thinking of the business world in abstraction from the rest of the community." And he defined the aims of business in this epic phrase: "The general greatness of the community."

That says it.

A Federal Advisory Council To Assist in the Growth and Development of the Fine Arts in the United States

EXTENSION OF REMARKS

# HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, I am very pleased indeed that my bill H.R. 7656, to establish a Federal Advisory Council on the Arts, was favorably reported by the Subcommittee on Special Education of the Committee on Education and Labor, and that this was done unanimously on June 10, 1959.

Everyone concerned with the cultural status of our country is deeply indebted to the members of this subcommittee and its able chairman, the gentleman from Alabama [Mr. Elliott].

The passage of this legislation by the Congress will be, as the New York Times said editorially the other day "a proclamation of our Government's faith that our people understand the value of the arts in a modern state."

I include the New York Times editorial endorsing the historic step of the Subcommittee on Special Education, and the text of H.R. 7656:

[From the New York Times, June 17, 1959]

A COMMISSION ON THE ARTS

The ancient notion that government must have nothing to do with the arts has been fading away slowly in the United States. We do not yet devote Federal moneys to support literature, painting, music, dance, and theater at home, but we have accepted the principle that the Government should provide funds to send our artists abroad. We have learned that through art we can state the democratic case eloquently.

The arts at home also deserve Government recognition. We may not be ready to grant them Federal subsidies, though every other government of consequence in the world does its share to sustain national activity in the arts. But it is time that we adopted a proposal, such as approved by a House Education and Labor Subcommittee, to cre-

ate a Federal Advisory Commission on the Arts. The Senate endorsed a similar bill several years ago.

A group of 21 persons representing in fair proportion all the arts would be established and have its home in the Department of Health, Education, and Welfare. The Commission would be available to advise any Federal agency active in the arts, and this advice would be marshaled through committees drawn largely from organizations of creative and performing artists.

Thus the Government would have at its disposal the broadest area of knowledge and competence in the arts. In the creation of programs for such enterprises as the Brussels World's Fair or the coming American exhibition in Moscow, it could plan with the assurance that it was acting on first-rate professional counsel.

The proposed act would be a proclamation of our Government's faith that our people understand the value of the arts in a modern state.

#### H.R. 7656

A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress hereby finds and declares, and it is the policy of the Congress in enacting this Act—

 that the growth and flourishing of the arts depend upon freedom, imagination, and individual initiative;

(2) that the encouragement of creative activity in the performance and practice of the arts, and of a widespread participation in and appreciation of the arts, is essential to the general welfare and the national interest;

(3) that as workdays shorten and life expectancy lengthens, the arts will play an ever more important role in the lives of our citizens; and

(4) that the encouragement of the arts, while primarily a matter for private and local initiative, is an appropriate matter of concern to the United States Government.

SEC. 2. (a) There is hereby established in the Department of Health, Education, and Welfare a Federal Advisory Council on the Arts (hereinafter in this Act referred to as the "Council"). The Council shall be composed of twenty-one members appointed by the President, from among private citizens of the United States who are widely recognized for their knowledge of or experience in, or for their profound interest in, one or more of the arts and who collectively will provide an appropriate balance of representation among the major art fields including music, drama, dance, literature, architecture and allied arts, painting, sculpture, photography, graphic and craft arts, motion pictures, radio, and television; and the President is requested in the making of such appointments to give consideration to such recommendations as may from time to time be submitted to him by leading national organizations in these fields. Each member of the Council shall hold office for a term of six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of the members first taking office shall expire, as designated by the President at the time of appointment, seven at the end of the second year, seven at the end of the fourth year, and seven at the end of the sixth year the date of enactment of this Act. No member of the Council shall be eligible

for reappointment during the two-year period following the expiration of his term. The Council shall meet at the call of the Chairman or the Secretary of Health, Education, and Welfare (hereafter in this Act referred to as the "Secretary"), but not less often than twice during each calendar year. The Council shall annually elect one of its member to serve as Chairman until the next election.

(b) The Council shall have an executive secretary who shall be appointed by the Secretary after consultation with the Council. Within the limits of appropriations available therefor, the Secretary shall provide the Council, its executive secretary, and members of its special committees, necessary secretarial, clerical, and other staff assistance.

SEC. 3. (a) A major duty of the Council shall be to recommend ways to maintain and increase the cultural resources of the United States. A primary purpose of the Council is to propose methods to encourage private initiative in the arts and its cooperation with local, State, and Federal departments or agencies to foster artistic and cultural endeavors and the use of the arts in the best interests of our country, and to stimulate greater appreciation of the arts by our citizens.

(b) To these ends the Council shall undertake studies of and make recommendations relating to appropriate methods, consistent with the policy set forth in the first section of this Act, for encouraging creative activity in the performance and practice of the arts and participation in and appreciation of the arts. In selecting subjects to be studied, the Council shall consider requests submitted to it by the heads of departments. agencies, and independent establishments of the Federal Government. The Council shall make recommendations in writing to the Secretary with respect to such studies; and the Secretary shall transmit such recom-mendations, together with his comments thereon, to the President and the Congress. In the selection of subjects to be studied and in the formulation of recommendations, the Council may obtain the advice of any interested and qualified persons and organizations, and the Secretary may appoint interested and qualified persons to assist the Council in making its studies from among those recommended to him by the Council.

SEC. 4. Members of the Council, and persons appointed to assist the Council in making its studies, while attending meetings of the Council or while engaged in the conduct of studies authorized by this Act, shall receive compensation at a rate to be fixed by the Secretary, but not exceeding \$50 per diem, and shall be paid travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b-2) for persons in the Government service employed intermittently.

SEC. 5. (a) Any member of the Council appointed under this Act, any person appointed to assist the Council in making its studies, and any other person appointed, employed, or utilized in an advisory or consultative capacity under this Act is hereby exempted, with respect to such appointment, employment, or utilization, from the operation of sections 281, 283, 284, and 1914 of title 18 of the United States Code, except as otherwise specified in subsection (b) of this section.

(b) (1) The exemption granted by subsection (a) of this section shall not extend to the following acts performed as an officer or employee of the United States by any person so appointed, employed, or utilized: (A) The negotiation or execution of, or (B) the making of any recommendation with respect to, or (C) the taking of any other action with respect to, any individual contract or other arrangement under this Act with the private

employer of such person or any corporation, joint stock company, association, firm, partnership, or other business entity in the pecuniary profits or contracts of which such person has any direct or indirect interest.

(2) The exemption granted by subsection (a) of this section shall not, during the period of such appointment, employment, or utilization and the further period of two years after the termination thereof, extend to the prosecution or participation in the prosecution, by any person so appointed, employed, or utilized, of any claim against the Government involving any individual contract or other arrangement entered into pursuant to this Act concerning which the appointee had any responsibility during the period of such appointment, employment, or utilization.

SEC. 6. There are hereby authorized to be appropriated to the Department of Health, Education, and Welfare such sums as may be necessary to carry out this Act, including expenses of professional, clerical, and stenographic assistance. Such appropriations shall be available for services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a).

SEC. 7. This Act shall not be deemed to invalidate any provision in any Act of Congress or Executive order vesting authority in

the Commission of Fine Arts.

# Nomination of Lewis Strauss To Be Secretary of Commerce

EXTENSION OF REMARKS

# HON: WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Detroit Jewish News of June 12, 1959, written by Mr. Philip Slomovitz.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

ANTI-SEMITIC CANARD IS DEMOLISHED IN DEBATE OVER STRAUSS APPOINTMENT AS SECRETARY OF COMMERCE

(By Philip Slomovitz)

WASHINGTON .- If anti-Semitism were not such a tragic phenomenon, the mere suggestion that it played a role in Adm, Lewis L. Strauss' nomination by President Eisenhower as his Secretary of Commerce would have been viewed as the hugest jest eyer uttered in the Nation's Capital.

But anti-Semitism, once the weapon of all bigots, now is a badge of shame, and anyone tinged with it cringes. There is the be-lief here, therefore, that the overzealous, who are so anxious for a speedy confirmation of the Strauss nomination uttered the cry of "anti-Semitism" in the hope of getting prompt action, and of warding off a certain

amount of opposition.

How did it all begin? It started with a statement by Representative STEVEN B. DE-ROUNIAN, Republican, of New York, that "It is being impressed upon me constantly that opposition to the confirmation of Lewis L. Strauss, as Secretary of Commerce, is based on religious prejudice. If this is true, it re-volts me as an American citizen."

If this were true, it would revolt all Americans. President Eisenhower said at his press conference that it would be tragic if the anti-Semitic issue were injected in the

discussion of Strauss' qualifications. Senators Jacob K. Javits and Kenneth B. Keat-ing, of New York, both Republicans, denounced the issue, and Javirs said he hoped 'no Senator will let this intrude into the debate.

But Senator Hugh Scott, Republican of Pennsylvania, suggested that it paralleled the Drevfus case of 1894 and said the American people would react as solidly in criticism of the attempt to deny the confirmation of the nomination of Mr. Strauss as the general public reacted to the Dreyfus case when Emile Zola wrote his "J'Accuse." This, in turn, brought forth another protest that the suggestion of such a parallelism was uncalled for.

Adding to the ridiculousness of the injection of the anti-Semitic angle in the debate is the fact that one of Jewry's most distinguished friends, Senator WAYNE MORSE, Democrat of Oregon, is leading the fight against Strauss.

There is unanimity in the effort to de-nounce the injection of such an issue, since at no time was the religion of the nominee ever mentioned. But in the effort to demolish the canard, even so staunch a liberal as Senator Morse seems to have gone off on a tangent.

In his personal statement in the Senate. when the issue first became a subject of public and senatorial discussion, Senator Morse told of an exchange of correspondence he had with Bernard Postal, director of Information of the Jewish Welfare Board and editor of the Jewish Digest. He quoted the following from a letter he wrote to Postal on May 19, 1959-2 weeks prior to the emergence of the anti-Semitic hoax:

"I want to respectfully suggest that it has been my observation there is a tendency among too many Jews to make a false assumption that, if anyone opposes a Jew who is a candidate for public office, it must be because of some prejudice against Jews. The point I want to stress is that the individual candidate, as far as I am concerned, must be judged on the position he takes on legislative and governmental issues. I don't care a hoot about his religion or his race, but, if he takes a stand on issues that, in my judgment, is not in the public interest, I shall oppose him, and my opposition will have nothing whatsoever to do with the matter of his religion or his national ori-

Senator Morse was replying to an inquiry by a Jewish editor, and he might therefore be excused for working on the assumption that there is a tendency among "many Jews" to imply the existence of anti-Jewish prejudice when a Jewish candidate is opposed. That, it is pointed out in many quarters, is walking off on a tangent. In that case, Senator Morse might be suspected of prejudice in his opposition to the reelection of his colleague, Senator Richard L. Neuberger, in his own State of Oregon. But it is doubtful whether such a charge will be made by anyone, not even Senator Neuberger.

The basic truth was uttered by Senator Morse when he stated that he never questioned Strauss' patriotism, but objects to him only on a question of competence.

It is doubtful whether the question of Strauss' Jewishness ever would have been injected in the debate over his confirmation, and the issue certainly is at an end now, after several of the Senators had spoken in condemnation of the very mention of anti-Semitism in relation to the debate.

Yet, the Jewishness of Admiral Strauss was mentioned 7 months before the anti-Semitic angle was injected in the discussions. On October 27, 1958, David Law-rence, in his syndicated column, referring to Strauss' career and to his having held the presidency of Temple Emanu-El of New York for 12 years, wrote that "Mr. Strauss is the first member of his religious faith who has been chosen in more than a decade to the Cabinet of a President of the United States." He continued:

"Though little is ever said about it in public, the politicians usually advise a President to try to have the Catholic, Protesant, and Jewish faiths continually represented in the Cabinet and on the Supreme Court. With the selection of Mr. Strauss, all faiths now are to be found in the Cabinet as well as on the Supreme Court.

"Coming as the incident does at a time when the 'hate' organizations are trying to create antagonisms between different religious groups in America, this appointment is evidenced to the rest of the world, especially the Soviet Union-where the Communist government encourages anti-Semitismthat prejudices of a religious nature are of no concern to either political party in the United States today in the selection of persons to high office.

"The recent attempt to fasten anti-Semitic or anti-Catholic labels on southern Democrats is due largely to mistaken beliefs on the part of those people in the North who are ignorant of the true feelings of the southern people."

Another question, however, has entered into the debate over the Strauss appointment. The fact that he pressed the case against Dr. Robert Oppenheimer, the eminent physicist, became part of the issue. In defense of Strauss, Senator Scorr inserted in the Congressional Record a number of editorials in Strauss' report, and one of them, from the Pittsburgh Sun-Telegraph, acclaimed Strauss for having been "largely responsible in raising the warning flag against Physicist Robert Oppenheimer as a question-able security risk."

In the Strauss debate, on the anti-Semitic issue, it was indicated that Jews are to be found both among the defenders and antagonists of Admiral Strauss. On the Oppenheimer question, there has been a lot of bitterness. The able rabbi of Temple Emanuel of Grand Rapids, Mich., saw fit to reprint in the issue of May 20 of his synagogue bulletin the following statement written by Rabbi Jacob J. Weinstein, of Chicago, several years

"STRAUSS AND OPPENHEIMER: A CONTRAST

"Two Jews faced each other across the table at the hearings before the Atomic Energy Commission. They were Lewis Strauss, Chairman of the Commission, and Robert J. Oppenheimer. Strauss is a selfidentifying Jew. He served for a time as president of Congregation Emanuel of New York and was active in other organized Jewish activities. Oppenheimer never joined a synagogue or in any other way identified himself with the Jewish community. Still, I believe that in the perspective of another 100 years, Oppenheimer will be seen as much closer to the ethical core of the Jewish tradition than Strauss.

"Oppenheimer believes that humanity is above the nation-state. Strauss believes that the nations must be sovereign in the loyalty of the individual.

"Oppenheimer believes that the mind of man must be left completely to pursue the truth and to follow wherever that truth leads. Strauss believes that there must be restraints, if not on the search for truth, then on its accessibility.

"Oppenheimer believes that atomic energy should be publicly (that is governmentally) developed and freely applied to create energy for constructive peaceful purposes. Strauss believes that private industry should be given the initiative to develop atomic energy and make it available only as private enterprise thinks best. Consider his part in the Dixon-Yates affair. brother.

"Oppenhelmer believes that scientific research is international, that the basic findings of nuclear research are universal, that the specific adaptations of fissionable energy to military or civilian instruments are secondary, and that superlority in the details of adaption is not a very crucial superiority. Therefore he is firmly convinced that any world war will be a suicidal war and that it will take colossal faith to believe that the surviving remnant of such a war can sustain a civilized existence.

"Admiral Strauss seems inclined to believe that American know-how in mechanical adaptation is a crucial superiority and should be an important factor in the logistics of the cold war.

"Strauss will undoubtedly be more avidly claimed by the compilers of the lists of prominent Jews and will be grandly exhibited with all his gold braid in the showcases of Jewish "Who's Who. But the spirit of Amos, Isaiah, Jeremiah and Hosea will Oppenheimer as their true recognize

Here is proof of the existence of a difference of opinion among Jews on a specific issue involving Admiral Strauss—the Oppenheimer incident.

On the question of the injection of the Dreyfus case parallelism, the New York Times stated editorially:

"Neither Mr. Strauss nor our country has been served by the suggestion two of his congressional supporters made Tuesday that anti-Semitism has played a role in Senate opposition to his appointment. It is incomprehensible that Senator Scorr should have thought it either wise or accurate to try to draw a comparison between Mr. Strauss' present difficulties and those of Alfred Dreyfus in France more than half a century ago. There simply is no compari-

There is unanimity of opinion that the issue over the religious background of Admiral Strauss does not exist, and that if it does, it hasn't a ghost of a chance of exerting influence upon the actions of the U.S. Senate.

Thus, Michigan's Senator Par McNamara had this to say to the Jewish News:

"The injection of the religious issue into the Strauss nomination proceedings before the Senate has absolutely no basis in fact, to my knowledge, and does an extreme disservice to all concerned. A man's religion is his own business. The only true issue here is whether Strauss is qualified to be Secretary of Commerce, and the Senate, acting under its constitutional mandate, must make this decision. It is very doubtful that, until this matter was raised, many in the Senate knew or cared what his religion

Michigan's Junior U.S. Senator, PHILIP A. HART, told us that he believes "the President has an almost unlimited right to select his cabinet," and that his appointments should not be opposed for political reasons. But he added that in the case of Admiral Strauss "the issue raised is a moral one. What is questioned is the man's reliability, his honesty in presenting facts, his ability to communicate."

Senator HART questioned whether in Strauss the conutry will have a proper source of information. He said the issue calls for examination and that he will study all the facts and will be guided by them in casting his ballot.

It is clear that the Michigan Senators are not influenced by religious issues.

Thus, a silly canard has been completely destroyed in our Nation's Capitol. Many here believe that we have entered a new era-of making it very difficult for bigotry to flourish too long on American soll.

Massachusetts State Senate Resolution Supports Creation of Commission on Intergovernmental Cooperation

> EXTENSION OF REMARKS OF

# HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution of the Massachusetts Senate supporting the creation of a Commission on Intergovernmental Cooperation.

This resolution was delivered to a subcommittee of this Congress yesterday in the old Supreme Court room of the Capitol by State Senator Leslie B. Cutler, of Needham, Mass., one of the great lady statesmen of my home State.

Mrs. Cutler is largely responsible for women jury service in Massachusetts. She has encouraged many outstanding women to enter and succeed in public service. She has become an authority on health, welfare, civil service, and aviation legislation.

I salute her on her important mission to Washington, and all of my former colleagues in the Massachusetts Senate, and thank them for their resolution, which calls for new cooperation between governmental agencies at all levels.

The resolution follows:

RESOLUTION MEMORIALIZING CONGRESS ON THE Adoption of Legislation Providing for the ESTABLISHMENT OF A PERMANENT ADVISORY COMMITTEE ON INTERGOVERNMENTAL RELA-

Whereas there is pending before the Congress of the United States H.R. 6904, introduced by Representative L. H. FOUNTAIN, of North Carolina; H.R. 6905, introduced by Representative Florence P. Dwyer, of New Jersey; and S. 2026, introduced by Senator EDMUND S. MUSKIE, each of which seeks to establish an Advisory Commission on Intergovernmental Relations to bring together representatives of Federal, State, and local governments for the consideration of common problems; to provide a forum for discussing the administration and coordination of Federal grants and other programs requiring intergovernmental cooperation; and to recommend the proper allocation of governmental functions and responsibilities among the several levels of government: Therefore be it

Revolved, That the Massachusetts Senate respectfully urges the Congress of the United States to enact legislation to establish said Advisory Committee on Intergovernmental Relations, as contained generally in the 30th report of the Committee on Government Operations, in order to assure the fullest cooperation and coordination between Federal, State, and local government, and to pro-mote greater understanding in intergovern-mental problems and in the financial problems involved therein; and be it further

Resolved. That an engrossed copy of these resolutions be transmitted to the Subcommittee on Intergovernmental Relations, and that copies thereof be sent by the secretary of the Commonwealth to the Presiding Officer of each branch of the Congress of the United

States and to each Member thereof from this Commonwealth.

Adopted June 10, 1959. True copy. Attest:

> JOSEPH D. WARD, Secretary of State.

Newtown Celebrates Its 275th Birthday

EXTENSION OF REMARKS

## HON, WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. CURTIN. Mr. Speaker, Newtown, a borough in Bucks County, Pa., has recently completed the celebration of its 275th birthday. This community, founded in 1684, is an outstanding example of an early pioneering spirit on the part of its people, which grew and blossomed into a fine borough characterized by a selfreliant type of citizen who met all obstacles with fortitude, resourcefulness, and God-fearing dignity.

In the course of that celebration, a

speech was delivered by the Honorable George T. Moore, Assistant Secretary of Commerce, which was a fine presentation of the ties that bind our citizens of today with those sturdy forefathers.

The speech, so delivered in Newtown on June 11, 1959, is as follows:

I am proud and happy to have been asked to join with the citizens of Newtown to celebrate the 275th birthday of this historic community. But I am humble, too, in paying tribute to those sturdy and God-fearing men and women of early Pennsylvania who pioneered the spirit of independence in the New

It seems to me that the chief value of anniversary celebrations such as this is that they force us to do some important homework. They provide an occasion and an incentive to insure that the wisdom of our forefathers shall not be buried in their tombs.

During the anniversary period I suspect many of you have had occasion to renew acquaintance with some forgotten facts about the early history of Pennsylvania and Bucks County in which Newtown played such an important part.

We Americans are a forward-looking people. and as such seem more interested in today and tomorrow than yesterday. By the same token we have tended to neglect our colonial history in favor of our more definitely national history since adoption of our Constitution in 1789-with Pennsylvania second only to Delaware in its ratification.

Yet it is an interesting and important fact that between the founding of Jamestown in 1607 and the adoption of our Constitution was a period of 182 years—a period 12 years longer than our national life under our present form of government. Let's bring the sta-tistics closer to home. The inhabitants of Newtown were subjects of the British Crown from 1684 to 1776, a period of 92 years. have been citizens of the Commonwealth of Pennsylvania since 1776, or only twice as long. And they have been citizens of the United States of America under our present Constitution only 170 years.

Great changes were going on during those colonial days and the period under the Ar-

ticles of Confederation. These anniversary celebrations lead us to discover what they were, in terms of our own States and communities. And like the young man who was constantly amazed, as he grew older, as to how much his father knew, so we learn the basic lessons about what made America great.

Earlier I noted the founding of Jamestown in 1607. Only 2 years later, 350 years ago, Henry Hudson sailed up Delaware Bay on a voyage of discovery which was to include the New York river now bearing his name. And 75 years after that, William Penn gave you people this opportunity to celebrate in June 1950.

After scanning the fine 275th anniversary booklet, it would be folly for me to vie with its many contributors and local historians in painting a picture of early Newtown. Had I the art and warm imagination of Edward Hicks, painter of the excellent cover picture, I still should not attempt it.

Instead, as a guest in your midst, permit me the freedom to discourse briefly on the intangibles born here, and in other centuries-old American communities, which have left tangible evidence of their enduring quality. I sum them up as a sense of community, a desire for self-improvement and progress, and a faith in man's ultimate destiny as a free spirit in a free world.

First as to that sense of community. Nowhere in the world has the capacity of individual men and women to live and work creatively together been given such free rein. In our pioneer society men and women sought elbow room for the expression of their minds and souls and found it in the world-shaking concept summed up in our national motto, "E pluribus unum."

Our Declaration of Independence, our Constitution with its Bill of Rights, are but the expressions of this great revolution in political life. We value individual differences and feel that our Union is stronger for them. We jealously guard the right of the individual to be a minority of one. We make the test of legitimate restraint on an individual's freedom of action to be a contribution to essential group interests. The state exists for the man, not the man for the state.

With this array of rights we assume certain duties. One of these is to engage personally in the life of the community through many voluntary associations such as the sponsors of this banquet. Over a century ago De Tocqueville was amazed at how Americans were great joiners to promote public causes and community development. He described this quality to his French countrymen thus:

"These Americans are the most peculiar people in the world. You'll not believe it when I tell you how they behave. In a local community in their country a citizen may conceive of some need which is not being met. What does he do? He goes across the street and discusses it with his neighbor. Then what happens? A committee comes into existence and then the committee begins functioning on behalf of the need. And you won't believe this, but it is true: All of this is done without reference to any bureaucrat. All of this is done by the private citizens on their own initiative."

Such individual and voluntary groupings to promote common purposes can be troublesome to other groups and, on occasion to the Government itself. But the price of their suppression—or, more subtly, their neglect—is a weakening of the creative and dynamic development of both the individual and his community and country.

For no one else can fill exactly the place that each of you can fill in the group in which you live. Only you can make just the contribution which your best ability can offer to others. If you default, others take over and something is lost. The extreme of such default is socialism or godless communism, accompanied by dictatorship of a self-perpetuating clique.

Let us not throw away this priceless birthright bequeathed to us by our forefathers for false security offered by self-serving demagogs.

This brings me to the second intangible which developed on this free continent—a desire for self-improvement and progress. The pioneer had this when he arrived, or he wouldn't have come. But he kept it and shared it with others through the help of technology.

Without technology, a million Indians lived in poverty in the same area now occupied by 176 million Americans living in abundance such as the world has never heretofore seen.

Again, it was encouragement of individual initiative and the broadening of incentives which were combined with our democratic philosophy to produce mass markets and mass production to meet the demands. Goods were for the many, not just a favored few—something to remember when we hear some folks deplore our low level of taste and our yen for gadgets. At least we buy what we want, not what some self-appointed ellte thinks we should want.

And again, these desires of plain people can be troublesome to some groups. They spell change, for one thing. The shift from buggies to automobiles put the buggy-whip manufacturers out of business. Compettors can destroy an established business or its profits with better methods, equipment, materials and products. And the free market can create unemployment as well as employment.

But another lesson from our forefathers is that economic, political, or social privileges for the few at the expense of the many are bad. All must be free to develop—and in so doing we create more and more opportunities for better and more satisfying employment in meeting the demands of a dynamic society.

For the final and most significant fruits of our technological progress are a productivity which has made it possible for Americans to produce and consume a third of the world's goods and services with about 7 percent of the world's population and land area.

Let's not throw away this heritage from the men of the 17th and 18th centuries which made it possible for the men of the 19th and 20th centuries to glimpse the day when poverty and disease no longer plague the world's peoples.

Which brings me to the third and final intangible planted and nurtured on these shores before Washington and Jefferson were born: a faith in man's ultimate destiny as a free spirit in a free world.

The men who founded Jamestown and Plymouth and Newtown had a moral guidance and incentive. America to them was not merely a lush piece of unoccupied real estate. It was an idea, not selfishly local or even national, but universal in its promise for mankind.

Abraham Lincoln analyzed for his 19th century countrymen what our 18th century Declaration of Independence meant. "What is asserted," said Lincoln, "was liberty not only to the people of this country but hope for the world for all future time. It was that which gave promise that in due time the weights should be lifted from the shoulders of all men."

This is a far cry from the philosophy of the mere do-gooder with the charity basket for the deserving poor. It is an assertion that, given liberty, man will seek independence and the dignity of self-reliance and voluntary cooperation. It is an assertion that, but for man's inhumanity to man, his high destiny as a child of God, and therefore a brother to all men, can be fulfilled.

With a third of the world free, a third under Communist domination, and a third engaged in a revolution of rising expectations, our course is clear. As individuals, in all walks of life, we must so govern ourselves and our relations abroad that the development of the uncommitted peoples takes place in an atmosphere of freedom and not slavery.

For the apostles of Marx and Lenin throughout the world are out to bury us. They derogate the goals we seek and even the way we seek them. They would convince the third of the world who live in grinding poverty that the future they hope for comes not from themselves but as a gift of government.

But we have the ultimate weapon, if we but have the wit to use it. It was borne here by the earliest immigrants to these shores, established by the Revolution, institutionalized through our Constitution, preserved through our own Civil War and two World Wars, and reasserted in Korea. That ultimate weapon is the promise and practice of freedom and a moral sense of responsibility for sharing it.

I can think of no more fitting way to celebrate the 275th anniversary of Newtown, and to honor its founders and all who have since contributed to its growth and prosperity, than to rededicate ourselves to those principles by which they lived and for which they were willing to die.

They knew that they were not alone. They knew they were building for all men in all ages. For ours is "an eternal house, not built with mortal hands" (John Dryden, 1631-1700),

# What Mr. Farley Believes

EXTENSION OF REMARKS

# HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Alabama Journal of Montgomery, Ala., June 3, 1959:

#### WHAT MR. FARLEY BELIEVES

Rarely has more commonsense and ardent patriotism been packed into four pages of a magazine than are contained in James A. Farley's words in the July Atlantic magazine. Mr. Farley's subject is "What I Believe."

Coming from a man who has been before the public and in politics all his life, and who is so widely known and respected as this man who played the political game fairly but vigorously, his article is a real inspiration.

He believes ardently in the two-party system, though he himself has been a lifelong Democrat. He thinks two well-balanced parties each alert and vigorous in combating the other bring out the best that is in men, and therefore insure the best government.

"Politics," he writes "is the supreme challenge of American life. \* \* \* I regard politics as among the highest and most useful callings open to American youth. It is my further opinion that there is no line of endeavor more mobile, and by this I mean none in which merit rises so quickly to its proper recognition."

He describes the intimate friendship between himself and Franklin Roosevelt which was not broken even when Mr.

Farley parted company with the President

Farley parted company with the President in 1940 on the third-term issue.

"What then is American democracy?" Mr. Farley asks at one point. His answer: "To me, it is the guarantee of an equal chance to every citizen. But an equal chance is a long, long way from forced equality; indeed, it is quite the opposite. I conceive of our democracy as a system by which a person rises or falls according to his own worth, talents, and industry. If this definition is accepted it follows that the American democracy is the only system. the American democracy is the only system which allows for the bloodless rise of an aristrocacy based upon effective function-

As for some of the things which were good and necessary in the panic days of the early Roosevelt administration, "I deplore the entrance into our language, particularly for the young, of the word 'security.' In the first place if this means a safe-conduct pass through life there is no such thing; and in the second, if there is, it is alien to the American spirit."

Throughout his expressions of "What I Believe," Mr. Farley shows the basis of the things which carried him far and gave him as a national party chairman an opportunity to mold events and to achieve historic stature in American life perhaps never be-fore attained by any man who lived and worked and did his duty labeled as a poli-

## Time for Leadership

EXTENSION OF REMARKS

# HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from the Camden Chronicle, Camden, S.C., of June 5, 1959:

#### TIME FOR LEADERSHIP

It is unfortunate our President is not more adept at explaining and defending what we think is his position on inflation.

He has allowed his political opponents to make his insistence on a balanced budget appear to be mere stubbornness, when we are pretty sure he is convinced by now that continuing to spend more than we have is pretty immoral at a time when it takes \$8 billion of the budget to pay the interest on the debt we have already run up. And when his administration is readying a crash program to make U.S. Government bonds attractive enough (via increased interest rates) that people will buy them, we are sure President Eisenhower is as fearful as everyone should be over the continuance of loose fiscal

Questioned at his press conference on the recent assertion of John L. Lewis that the President was on the side of steel management and against the workers, General Eisenhower missed an opportunity to make himself clear, and to cut such self-serving demagogs as Messrs. Lewis and Meany down to boy size. The Presidential reply that his interest in the big capitalist class is very, very little as compared to what I think about the mass of people that do work with their hands and minds and at their typewriters and everywhere else to produce this wealth not only evades the issue of what is best for the whole American people but could mean that he does discriminate in his own mind between those who get salaries and those who get wages.

The President did say that both sides have to exercise self-discipline or this country is in a bad time. He had talked to business men, he said, urging that their products be priced just as low as they can make them. That American business, big and little, has been straining every fiber and making unprecedented capital investments to do this very thing in the fact of steadily and ominously rising labor costs, should by now, be pretty well known.

Americans generally are realizing that the wage spiral, plus foreign competition, and our foreign economic aid have priced American manufacturers out of export markets. This is serious enough to mean the difference between a prosperity and rough going. But a far more frightening fact of life has yet to be faced up to. As matters stand, we are rapidly pricing ourselves out of our own markets as well. Have you noticed those little cars on the roads, or where the bargains in the stores come from?

We cannot believe that the President is so naive as to believe the steel struggle is just another wage dispute or that the spiral can be halted and the brakes put on inflation without cutting Government spending far more than he has ever sought to do.

An economic war is on. It's time for the Commander in Chief to blow the whistle.

#### Poison in Your Water-No. 126

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Decatur, Ill., Herald of August 7, 1958, entitled "Pollution Found In Rural Wells":

#### POLLUTION FOUND IN RURAL WELLS

More than half the well water samples brought in to Decatur Township clerk Ralph E. Brown for testing after heavy summer rains in recent weeks have been returned showing reports of pollution.

Brown, who keeps sample bottles in his office for the purpose, submits the well water samples to the Illinois Department of Public Health for analysis.

Of the 64 tests conducted by the State since the 1st of July, 37 reports were re-turned showing bacteria indicative of pollu-tion present in the water.

The remainder of the 64 shows 23 tested safe and 4 showing some degree of pollution.

Brown blames heavy rains and the resulting surface water seeping into improperly closed wells as the major reason for the large amounts of polluted wells.

He said the polluted wells are scattered, with no one area being especially unsafe.

Brown said unsecure well tops, broken side tiles, loose joints in tiles and nearness to septic tanks or drains are the usual reasons for polluted water.

Brown's office in the county building can supply the proper instructions for disinfecting wells with chlorine or laundry bleach as well as sample bottles for submission to the State.

# The Persecution of the Institut d'Estudis Catalans

EXTENSION OF REMARKS OF

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commentary of the continuing persecution of the Institut d'Estudis Catalans in Spain:

#### THE PERSECUTION OF THE INSTITUT D'ESTUDIS CATALANS

Spain is a strange country, where scientists are tracked and rounded up, and where academic institutions are apt to be persecuted or frowned upon by the authorities. Such a reflection inevitably occurs to everyone who reads the news about the recent developments concerning the Institut d'Estudis Catalans, a universally respected institution of high learning located in Barcelona and existing since 1907.

The "Institut" is a purely scientific organization, whose activities cover all the branches of human knowledge, without local or geographic limitations—several biological, meteorological, and historical facts of universal scope, e.g., having been established for the first time in its publications—but with preferential application to Catalonia and the eastern Spanish regions where the Catalan language is spoken. It is an influ-ential member of the International Academic Union, with seat in Brussels, and its scholarly publications count now by the thousands. Its activities, needless to say, have nothing to do with politics, but because of the fact that its official language is Catalan, that a large part of its scientific work concerns the language and history of Catalonia, and that all of its members are Catalan and faithful to the spirit of Catalania, it has been viewed with disfavor by the present Spanish regime.

During the first 30 years of its life, the "Institut" was subsidized by the provincial and municipal institutions of Barcelona and Catalonia, although it always derived a considerable part of its resources from gifts of wealthy private donors; after the Spanish civil war it was deprived of its official subsidies, of its premises, of its library (famous Biblioteca de Catalunya, known as the best-stocked modern library in Spain), and of a large part of its scientific collections; but since the "Institut" or its members were not accused of any political offense, the present Spanish authorities have never dared to suppress it altogether or to prevent it from car-rying on its private activities. Its sittings have had to be held in private dwellings, but it has gone on publishing scholarly books at an amazing active rhythm for an institution reduced to the resources of private gifts, which are never abundant in Latin countries. The Franco regime has just tried to starve it out of life, and to deter wealthy donors by hints and threats, which have usually been rather indirect; its most effective weapon has been a severe, although secret, prohibition to mention any of the "Institut's" activities and its very name in Spanish newspapers, magazines, and

The only way the "Institut" has found to remain in contact with the public at large has been its yearly festival, held since 1940 in a private home, to which many personalities of Barcelona life and of the foreign Barcelona colony were regularly invited. In spite of all that, the celebration in 1957 of the 50th anniversary of the foundation of the "Institut" drew the enthusiastic appreciation of dozens of foreign academies of the whole world, which sent to the feast an official representative.

It is against the modest publicity afforded by this yearly celebration that the civil Governor of Barcelona, Gen. Felipe Acedo, has moved. On May 15, 1959, the "Institut's" yearly festival was scheduled to be celebrated in the home of a wealthy Barcelona architect. More than 200 personalities had been invited, including Catalan scholars, representatives of the most distinguished and rich Barcelona families, and a good number of foreign nationals residing in Barcelona. The celebration included the reading of the yearly account of the "Institut's" activities by its secretary, scholarly speeches by its presidents and members, Professors Jordi Rubio, Carlos Riba, and Pere Bohigas, and the reading of a historical study written by an eminent member, Prof. P. Bosch Gimpera, the internationally known anthropologist and prehistorian, now in exile.

At the last minute, the Spanish police arrested the secretary of the "Institut" and the architect owner of the building and surrounded the whole block with hundreds of armed police. The invited persons were prevented from going in, called on to identify themselves, and their names were taken. No reason for the prohibition was given, nor was the meeting officially prohibited; it was just prevented from happening by material means. Among the invited people figured several Montserrat monks, the director of the Italian Institute of Barcelona, the French consul general, and several other foreign personalities. The latter insisted in coming into the building, and he declared that he would never have believed such a thing could happen if he had not seen it personally. Of course, nothing of what happened was allowed to be reported in any Spanish newspaper, which did not prevent the fact from being widely commented on in Barcelona. Indignation is general, both in Spain and abroad.

Vouching for the authenticity of these facts is Jose Cuatrecasas, corresponding member of the Institut d'Estudis Catalans, former professor of the University of Madrid.

# "Why I Am Casting My First Vote Republican"

EXTENSION OF REMARKS

# HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 17, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the Record an essay written by Miss Marie Bartholomew of Lemmon, S. Dak., for a contest sponsored by the Perkins County Young Republicans on the subject, "Why I am Casting my First Vote Republican." I would like to call the attention of my colleagues to this prizewinning essay, which reads as follows:

"WHY I AM CASTING MY FIRST VOTE REPUBLICAN"

"Today the world is mourning the death of a great statesman, former Secretary of State John Foster Dulles. Although some were critical of the way in which he handled certain affairs, all agreed that he was a man of great strength. His convictions and courage have won universal acclaim for Mr. Dulles, even from those who stanchly opposed him. It has been over 12 years since an American has received the tributes which European newspapers are now giving Mr. Dulles. The sorrow of countless citizens of this country is profound. These facts prove that leadership of the United States today is of utmost importance.

"No one will dispute the statement that the world is troubled at this time. situations in several places are affecting nations not directly involved as yet. But how long will the West be able to continue to fight this cold war? Too often one hears variations of the declaration, 'We must avoid another war at all costs.' Then in the same breath these individuals advocate a change of government administration. How contradictory. History clearly shows which political party was in possession of the White House at the outbreak of the previous wars and so-called police action. Do they want this part of history repeated? I, for one, do not. I prefer to see in office more leaders like John Foster Dulles, who was so instrumental in avoiding war. His associates are capable of this fait. To maintain their services is one of the many reasons I am casting my first vote Republican."

# World's Population Explosion Spells a Revolutionary Future

EXTENSION OF REMARKS

# HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, June 18, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the commencement address which was delivered last week at the Massachusetts Institute of Technology by Mr. John Cowles, the president of the Minneapolis Star and Tribune. This address by Mr. Cowles is a challenging panorama of the developments abroad which will shape our foreign policy during the next decades.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD'S POPULATION EXPLOSION SPELLS A
REVOLUTIONARY FUTURE

There is certainly no need of spelling out to a Massachusetts Institute of Technology audience that we are living in a revolutionary age, the most revolutionary in all history. We are living in the midst not only of a scientific revolution, but in the midst of worldwide political, social, and economic revolutions as well.

It is increasingly apparent that we as a Nation have not yet adequately adjusted our thinking to the realities that exist in the world today. We are confused and frustrated because we still instinctively cling to many outworn ideas and convictions which may have been valid at some time in the past, but which are not valid under today's new conditions.

One of our highly pressing needs is to clarify our thinking as to what our national goals are or should be, to try to reach a popular consensus of what it is that we as a nation most want in this revolutionary age of global change.

Stripped to its barest essentials, I would suggest that our basic national goal is or should be survival with freedom.

Many Americans, I fear, do not yet fully comprehend the nature and dimensions of the various threats and problems that we face. With gross oversimplification I should like to summarize what I see as the major threats and what I think we as a nation should try to do about them.

WORLD POPULATION IS ZOOMING

First, of all, relatively few people comprehend either the rapidity and magnitude of the current population growth throughout the world or its implications.

This growth in population is the natural result of what medical science and public health measures have done to eliminate plague and pestilence throughout the globe, to reduce infant mortality and lengthen the average span of human life. At the present rate of growth, the world's population, which is now estmated at almost 2.8 billion, will increase in the next 30 or 40 years to 5.5 or 6 billion.

The underdeveloped countries are growing in population at a much faster rate than Western Europe and the United States. Forecasts indicate that before the year 2000 arrives there will be half a billion Africans and nearly 4 billion Asians. China alone will probably reach the billion mark in about 10 years. In this connection you all probably know the wisecrack that an optimist is a person who is learning Russian. A pessimist is one who is learning Chinese.

Although India, for example, is making a valiant effort to step up its output of food, manufactured goods and services, and is increasing its gross national product at the rate of probably 3 percent a year, the population growth in India is about 2.5 percent a year, so the improvement in the per-capita standard of living is extremely small, about 0.5 percent a year. India is running as fast as it can run, but on a treadmill where it is actually making only tiny per capita economic progress.

Or take Egypt. Egypt's population has more than doubled in the 42 years since Nasser was born. Most of Egypt is sandy desert, and only about 5 percent of its area can support life. If the scientists could discover an inexpensive way to take the salt out of sea water, sufficiently cheap to be economically practicable, then perhaps the desert areas could be reclaimed. Only in that way could Egypt ever feed substantially more people than it now has.

#### U.S. POPULATION WILL DOUBLE

The United States now has about 175 million people. The experts estimate that by the end of this century, our American population will approximately double.

Until recently, most people have assumed that a rapidly rising population was desirable; that it was "good for business" and meant more prosperity. A rapidly rising population is good for certain types of business—for the manufacturers of baby carriages or baby foods, for example. But a rapidly rising population is certainly not beneficial in its overall effects.

With a rapid increase in the proportion of the population that consists of infants on the one hand and aged on the other, a steadily dwindling percentage of the population constitutes the labor force to produce the goods and services necessary to supply the increased number of children and aged.

Probably the reason so few Americans are concerned with the upsurge of population either here or in the rest of the world is because of the fact that our population growth since America was first settled has always been rapid, but due in large part to immigration. Because it has been good for us in the past, due to our having had a rich, empty continent to open up and develop, and due to

the fact that most of our immigrants were vigorous young men and women who were promptly added to our active labor force, we have erroneously assumed that population growth in general is an intrinsically good thing.

If we do not in the relatively near future slow down the rate of population growth, the world simply won't have the natural resources to maintain its population at anything like the standards of living to which the people aspire. And in the United States, as well as everything else, we will inevitably have to have far more governmental regimentation and control, and much less freedom of choice.

Anyone who has seen the tens of thousands of people sleeping in rags on the sidewalks of Calcutta or Bombay knows what excessive population means. Unless we want to see the conditions that exist in India and Egypt spread over the rest of the world, the scientists must find some method of simple, inexpensive and effective fertility control. The scientists, through reducing the death rates, have produced this problem. We all must try to see to it that the scientists now have both the resources and the motivation to solve if.

Unless population growth is halted, the underdeveloped countries will not be able under democratic political and economic methods to attain the economic growth that their rising expectations demand. In their desperation they then will, I fear, try the Communist way.

#### A COMMUNIST ADVANTAGE

Although the Western Powers hate to admit it, the Communist form of society, if one ignores the human misery and loss of freedom, does have real advantages for underdeveloped states which wish to make rapid industrialization their one primary goal.

Most of Karl Mark's prophecies have proved completely wrong. Mark thought communism would destroy the free system in advanced countries. It hasn't. Instead, however, communism has unexpectedly turned out to be a quick method of building industry in backward or primitive areas. Russia and China are the proof.

Economic development stems from capital formation, savings invested in capital goods, in machinery and equipment. Rich countries get their capital formation through voluntary savings. Poor countries can't achieve capital formation without compulsory labor and forced savings, squeezed from people who are already living almost at a bare subsistence level.

Communism obviously has nothing to offer the United States and Western Europe. In the underdeveloped third of the world, however, the per capita income of the people only averages somewhere between \$50 and \$60 a year. Here in the United States out of our abundance we save and put into capital formation about twice as many dollars per capita as the total per capita income of the peoples in the underdeveloped areas.

#### AID FROM THE WEST IS NEEDED

The masses in Asia and Africa and Latin America have awakened to the fact that their poverty is neither a natural necessity nor something ordained by providence. The underdeveloped countries are increasingly realizing that in 40 years under communism Russia has developed from a weak, primitive nation to the second strongest industrial power in the world, and they hear glowing reports about the current development of China.

It is sad and perhaps surprising but nevertheless true that even the intellectuals in most of the uncommitted, underdeveloped countries appear relatively indifferent to the moral cost of economic progress under communism, to the agonies that the Chincse

people are experiencing under Communist dictatorship. It is foolish, however, for us to underrate communism's powerful attraction for the underdeveloped countries which put rapid industrialization highest on the list of their national goals.

To reduce the likelihood that most of Asia, Africa, and much of Latin America will slip into the Communist orbit will require. I believe, massive economic aid from the United States and other Western Powers. I don't know what this annual cost in terms of dollars may be. Estimates as to the American share range from \$2 billion to \$3 or \$4 billion a year, over a long, continuing period.

This is, of course, an enormous sum of money, but nevertheless it would be only a fraction of 1 percent of our gross national product, and less than the annual cost of the Marshall plan, which a decade ago saved Western Europe. And if such an expenditure significantly increases the likelihood of our being able to survive in freedom, will anyone contend it would not be well worth its cost?

If we adopt such a program of massive, continuing economic aid it will have to be conducted with boldness and imagination or it will be wasted. We will need some spectacular breakthroughs against poverty. Perhaps in India, for example, where it is now estimated that 75 percent of all energy is derived from burning cow dung, atomic energy plants might be part of the answer.

#### BUT AID ALONE ISN'T ENOUGH

We must realize, however, that economic aid alone won't be sufficient to keep many of the newly independent underdeveloped nations outside the Communist orbit. Many of these new states simply aren't competent to function as democracies because they don't have enough educated, qualified personnel to fill the necessary government positions. Many of the newly emergent countries, French Guinea is a recent example, are tottering on the edge of chaos. Four other African countries have been promised their independence in 1960. These are Nigeria, Togoland, the Cameroons, and Somalia.

Consider for a moment Somalia, on the Indian Ocean in east central Africa. It was an Italian colony until the end of World War II. The people of Somalia have never had a written language of their own. I have not been there, but I am told that probably not more than 40 or 50 Somalians out of a population of a million and a half can read and write any language.

How can one even hope that such a country as Somalia can function as a self-governing democracy after the United Nations mandate terminates next year? How can we expect Somalia to vote intelligently and responsibly in the United Nations, to which it will presumably be elected, and where its assembly vote will equal ours?

Perhaps through the United Nations we might create a large corps of international civil servants to assist emergent nations such as Somalia with their internal administrations. If these men were Scandinavians or Latin Americans or citizens of other small countries, perhaps they could be brought into important government positions without the charge being convincingly made by the Communists that we were attempting to restore colonialism.

In many of these new Asian and African countries, probably the best we can hope for are benevolent dictatorships that will spread popular education and raise standards of living under either American or preferably multination guidance and support

As to the United Nations, we should put the problem of what can be done to improve and strengthen it high on our national priority list. We should realize, moreover, that henceforth it will probably

become increasingly difficult for us to marshal the majority in the United Nations General Assembly that we have been able to in the past. We must also realize that the Assembly's "one nation, one vote" formula bears no relationship to responsibility or power.

We may have to continue to live for many years in a climate of potential mutual nuclear terror before we of the West on the one hand and the Russians and Chinese on the other can eventually agree on some system of universal disarmament under atright inspection and control. This, except for the solving of the population problem, is the most important thing to which we can devote our minds and energies. When we do ultimately reach such an agreement we will have laid the foundation for the beginning of real world law.

#### ARMED POWER VITAL, COSTLY

I take it for granted that in the meantlime, while we will always be ready to negotiate, we will, nevertheless, try to build and maintain a retallatory military power, whatever its cost, sufficiently strong so as to make it certain that no matter how crippled we might be from a surprise nuclear missile assault upon us, we would be able without question to strike back and give Russia a mortal blow. If we build and maintain such an instant retaliatory striking power I don't believe the Russians will, except on the erroneous assumption that we were about to strike them, ever launch a nuclear attack on us.

The new weapons are so fantastically expensive and become obsolete so rapidly that I would guess we are going to have to spend more on our military, probably substantially more, in the years immediately ahead rather than less.

This growing expenditure, wholly apart from the huge additional amounts that Dr. Killian's excellent recent report emphasizes we should spend on improving American education, makes it even more imperative that we accelerate, if we can, our economic growth. More and better education and more and better research, both basic and applied, are, of course, the roads to greater productivity.

The American idea has always been a dynamic idea. Just the maintenance of the status quo, either here or abroad, is not an acceptable answer for the United States. We must move ahead on all fronts. Time is not necessarily on our side. The future is now.

#### INDUSTRIALISM VERSUS ATOM BOMB

You who fortunately have had the benefits of a Massachusetts Institute of Technology education have far more responsibility and a much deeper obligation to help see to it that our country does the things it should do than have those of your generation who haven't had the educational advantages that you have had.

We are at an epochal turning point in world history. For the first time it has now become economically possible, provided we find some means of checking excessive population growth, to distribute within a few generations all the benefits of civilization to all the people on the globe.

all the people on the globe.

The impact of western industrialism on Asia and Africa may well outrank even the atomic bomb in importance when future historians—if there be any—appraise the de-

velopments of the 20th century.

Most of these peoples of Asia and Africa have colored skins. They are unlikely for long to accept our political philosophy or follow our leadership unless we begin treating our own Negroes here as fellow Americans fully entitled to the same heritage of freedom that we whites cherish for ourselves.

And as we approach the age of space travel, perhaps psychologically as important

as anything that has ever happened in man's existence, we must realize that we must first solve the imperative problems that exist right now on this planet, or our children and their descendants will neither survive in freedom nor get to know the universe.

The problems facing your generation are immense, more challenging than any your ancestors ever faced. But you are better educated and so better prepared to solve

Good luck to you.

#### Is This America?

EXTENSION OF REMARKS

## HON, CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. KEARNS. Mr. Speaker, the following letter written by Gordon L. Hostetter, president of the Employers' Association of Greater Chicago, quoting a letter from Teamster Local 710 to Chicago trucking companies has been called to my attention by scores of employers in my district who are outraged at this mandate.

Mr. Speaker, in view of the shocking threat here posed again by Hoffa's teamster unions, there can be no doubt that this Congress must act promptly to meet the issue.

I am very happy that my distinguished colleague on the House Labor Committee, the Honorable EDGAR W. HIESTAND, of California, joins me in this view.

The above-mentioned letter follows:

THE EMPLOYERS' ASSOCIATION OF GREATER CHICAGO. Chicago, Ill., May 1959.

To Our Members and Friends:

Presented herewith is a letter, the like of which has not hitherto been seen in the long and varied attempts of unions to coerce employees into their membership.

For utter and complete disregard of either employer or employee wishes, this letter combines the work of the skilled writer and the ingenuity of the legal practitioner. Lest the full meaning of this letter be lost in the subtlety of its language, this is what the union is saying to the trucking lines:

'We know the law, and the law says we can picket you as an exercise of free speech

"We know, also, that our picket at your door will put you out of business because you will not be able to move goods so long as our picket is there.

"We are under no necessity to sell the union to your employees because you will compel them to join our membership as quickly as the picketing shoe starts to pinch.

There is no occasion for us to use force and violence and risk possible injunction proceedings against us because you. Mr. Employer, will do our job for us. You'll have

"We don't care about what your employees think or want. They will join our union or thye won't work for you.

"We don't care, either, for the supposed constitutional or moral rights of your employees. They lost their rights when the lawmakers and the courts ceased to protect them and delivered their economic destiny into our hands."

Picketing is a simple device. One 2-bucka-day stranger picket, carrying a sign for some union, can literally stop business—any business—in its tracks. If continued, it can destroy the business against which it

Picketing, as a means of advertising a legitimate labor dispute between employer and employees, is an acceptable device to most Americans. When used to effect the ends of a private organization which seeks only its own purposes without regard for the consequences to both employer and employee, it is a monster. As a monster, this picketing thing is stalking up and down in the land, sometimes choking business to death and trampling down human rights when they get in its way.

This monster was spawned in the notion

of lawgivers that unions, unlike other organizations of human endeavor, need no restraint, and that they, above all others, will clean the dung from their own stables. Some will and do, but these need no resort to racket picketing for the fulfillment of

For sheer effrontry and disregard of public opinion, of basic human rights and of the fact that restrictive legislation is even now pending both in the U.S. Congress and in the Illinois Legislature, this letter of local 710 to truckline operators pinpoints

their purposes and programs.

a cynical contempt that should be promptly bashed in the face by legislative action that would forever stop picketing as a gangster gun in the ribs of business and its employees.

Sincerely,
GORDON L. HOSTETTER,
Presid President.

LETTER FROM TEAMSTERS LOCAL 710 TO CHICAGO TRUCKING COMPANIES

Local 710, International Brotherhood of Teamsters, has decided to embark upon a campaign to organize your office and clerical employees. To induce your employees to join this union, we shall begin to picket your establishment on or about the 11th of May, 1959. We assure you that the picketing will be entirely peaceful. We have instructed our pickets not to threaten, intimidate, or coerce anyone. If there is any violation of those instructions, please advise us and we shall see to it that corrective action is taken immediately.

We wish to make it clear to you that local

710 does not at this time represent, and of course we do not claim to represent, a majority of your office and clerical em-ployees. Local 710 does not ask you to recognize it as exclusive bargaining repre-sentative for your employees or, indeed, ask you to recognize it for any purpose at this time. The purpose of our picketing is solely to call to the attention of union members and supporters of organized labor that your office and clerical employees are not members of local 710.

We hope that the demonstration of support of local 710 in its efforts to organize. which this picketing will produce, will persuade your employees to become members of our local union. When they do, they will join the thousands of other employees who are amliated with the great International Brotherhood of Teamsters. In engaging in this picketing campaign, we are speaking for the members of our organization who are employed in businesses like yours and who feel the brunt of the unfair competition of your unorganized employees.

This point we must emphasize. We are not making any demand upon your com-pany at this time to agree to or execute any contract with our union covering any of your employees. Under the law your company is permitted to recognize and bargain

with our local union only after a majority of your employees have authorized the un-ion to represent them. Therefore, even if your company should now or hereafter offer to recognize our union or enter into collective bargaining with us our union would refuse such an offer and we would continue to refuse until your employees lawfully authorize us to represent them. Should your employees desire to join our union, they may apply for membership at the office of local 710, 4217 S. Halsted Street, Chicago, Ill., or ask one of the pickets for a membership ap-plication card which they can fill out and return to him. When we have received ap-plications from a majority of your employees, we will contact your company further.

You should also understand that it is your right under the Constitution of the United States and under the National Labor Relations Act to advise your employees of the economic detriment which you and they will sustain as a result of the withholding of patronage from your concern by union members and sympathizers as long as they remain nonmembers of our union.

You may, in the exercise of your lawful rights, explain those detriments to your employees and urge them to apply for membership in the union and thereby acquire for themselves and for your company the good will of our union and its friends. You may not, and we are sure that you will not, threaten to take economic reprisal against your employees, or grant them benefits, to coerce their choice in this matter. However, we feel sure that if your employees, who have been carefully taught to look to you for leadership on matters affecting their em-ployment, are convinced that it is your sincere desire that they join the union, they will quickly realize that acquisition of union membership at the earliest opportunity is in their best interest.

Yours very truly,

Local Union No. 710,

John T. O'Brien,

Secretary-Treasurer.

#### Opposition to Fair Trade Legislation

EXTENSION OF REMARKS OF

# HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I wish to insert in the RECORD, a copy of a letter from the Vice President of the United States, the Honorable RICHARD NIXON, in opposition to fair trade legislation.

The distinguished Vice President joins a solid front of Government agencies. including the Department of Justice, the Department of Commerce and the Federal Trade Commission, in opposing

Uniform editorial opinion throughout the country is also in vigorous opposition to this measure.

Consumers everywhere recognize this as just another special interest effort to put a hand into their pockets. Economists have said that this measure will cost between \$1.4 and \$12.4 billion dollars a year to the consuming public.

The letter follows:

OFFICE OF THE VICE PRESIDENT, Washington, D.C., May 27, 1959.

Mr. CHARLES F. FORT,

President, Food Town Ethical Pharmacies, Inc., Post Office 2911, Baton Rouge, La. DEAR MR. FORT: Some time has elapsed since you wrote me concerning so-called fair trade legislation, and I want you to know that your letter did not go unnoticed.

I share your view regarding the dangers to our economy involved in this legislation. You may have noted since you wrote that both the Justice and Commerce Departments

have testified against such bills.

In my opinion, fair trade or price fixing is inconsistent in a free enterprise economy. Certainly at a time when we are already greatly concerned with high prices the passage of fair trade legislation would contribute nothing to reasonable price stability or future economic growth.

You may be sure that I appreciate having the benefit of your comments on this mat-ter. I am glad to have this opportunity to

extend my best wishes to you.

Sincerely,

RECHARD NIXON.

# A Young Republican Speaks

EXTENSION OF REMARKS OF

# HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. JOHANSEN. Mr. Speaker, on two propositions the overwhelming majority of American citizens will, I am sure, heartily agree, without regard to partisan differences.

The first is that preservation of the American way of life and system of government requires the continued vigor of the two-party system in the United States and the continued political activity of citizens within the framework and through the medium of these two major parties.

The second is that intelligent, enthusiastic and vigorous participation by the young people of the Nation in the affairs of their government and in the interests and activities of the political party of their choice is imperative to the welfare of the country and of the twoparty system.

On the basis of these two premises, as a believer in the two-party system, as a believer in the vital role of youth in government, and as a Republican, I am proud to report that a young man from the Third Congressional Districtwhich I am honored to represent in Congress-was the winner of a nationwide essay contect sponsored by the Young Republican National Federation, on the subject, "Why My First Vote Will Be for the GOP."

This essay contest winner is David Gibson of Eaton Rapids, Mich., son of Mr. and Mrs. Wayne Gibson, a 1958 graduate of Eaton Rapids High School, and now completing his freshman year at Michigan State University. This week David is attending the Young Re-

publican national convention in Denver, Colio., in recognition of his prizewinning essav.

Under leave to extend and revise my remarks, I include the essay by David Gibson which won first prize in a Michigan contest and thereafter was ranked first among 98 essays in the nationwide competition:

WHY I WILL CAST MY FIRST VOTE FOR THE GOP

The future of America lies with its government. It is the government's responsi-bility to see that the traditions and ideals upon which our country has been based will continue to be carried on, and that the well-being and happiness of all mankind will be promoted and more fully realized. In order to accomplish this, particularly in light of the highly dangerous weapons available for man's use today, our country and the world need leaders with foresight, understanding, and a supreme desire for cooperation and peace.

I am firmly convinced, both by past rec-ords and present actions, that the Republican Party is the one best able and willing to supply such leadership in the future.

The GOP has consistently looked ahead, making decisions which were right for the future of our country, even though at times this cost them their popularity. They have always been willing to sacrifice personal gain for the good of those they governed.

In addition, the Republicans have always followed the belief that Americans have the right to, and would rather, live under than off government. They feel man has the basic right to keep his freedom and dignity, rather than sacrificing it for a guaranteed existence. Thus they constantly promote decentralization of power, and urge every-one to be interested and active in politics.

Also, the GOP shows an interest in all individuals and groups—showing partiality

to none, but an open ear to all.

Finally, the Republicans have always done everything in their power to insure peace and prosperity, not only for Americans, but for all the people of the world. It is because of these reasons that I have

placed my confidence with the GOP. For its desire and ability to attain the goals that I feel are most worthwhile and bene-ficial to mankind, the Republican Party will most decidedly have my first vote.

# Jim Riddleberger Is a Good Man; Greece Is a Good Country

EXTENSION OF REMARKS OF

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FULTON. Mr. Speaker under leave to extend my remarks in the Rec-ORD. I include the following article from the Washington Daily News of June 15, 1959:

THE NEW ICA Boss (By Peter Edson)

New Foreign Aid Director James W. Riddleberger has made his first bow to the House Appropriations Committee after being on the job only a week.

He isn't going to try to carry the full load of getting congressional approval for the President's \$3.9 billion program for next year. He's still doing his homework to learn

what his International Cooperation Administration (ICA) is all about.

But Director Riddleberger's taking over this job is an important development. He is the first professional diplomat to be made

ICA boss. He succeeds a line of business and political types who have been running this show for a year or so at a time, then going back to whatever it was they came from, sadder if not wiser men.

Somebody higher up there must have decided this didn't make sense. If the United States is doomed to be in this foreign aid business permanently, it might just as well be run by a pro who will stick at it.

For it is admitted that foreign aid is not the most popular program either in Congress or back home. Statesmen and military leaders can argue till they are red, white, and blue in the face that foreign aid is an essential expenditure for free world security and the cheapest defense America can buy. A lot of taxpayers still aren't convinced.

Part of Director Riddleberger's job now is

to administer ICA so wisely that more people

will be for it.

At 55, he comes to this job after 30 years' experience as a Foreign Service officer, principally in Europe. His last job was Ambassador to Greece.

It was in Athens that Ambassador Riddleberger got firsthand experience with what foreign aid can do for a country. He offers that as evidence of what it should do in all underdeveloped countries. For Greece today is almost back to normal-for a Balkan country—after 20 years' hell.

It was invaded by the Italians in 1940,

then by the Germans. After the liberation in 1944, Greece had a Communist revolution. Then came the Truman doctrine, U.S. aid. General Van Fleet, and a clear knockout

of Commies.

Today, says Ambassador Riddleberger, Greece is close to being a success. It is now almost self-sufficient in food. It may even export a little wheat this year.

Greece is also a maritime nation-11th in the world. If all ships operated by Greeks were under the Greek flag it would be fourth. Greek sailors' remittances home do much to help balance the national economy.

It's still a delicate balance. But inflation has been licked. The currency is stable. Taxes are being collected. Per capita income has been raised from \$150 to \$325 a year. And politics are more stable than ever before.

All this has been achieved with the help of \$1.8 billion in U.S. foreign aid. You have to face that.

Economic aid, delivered and authorized, from 1948 through June 30, amounts to \$925 million. Military aid from 1950 through June 30 is \$920 million.

#### St. Louis on the Riverfront

EXTENSION OF REMARKS OF

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. CURTIS of Missouri. Mr. Speak-er, in the St. Louis Review of May 29, 1959, an excellent editorial appeared on the St. Louis Riverfront which I believe merits attention. This editorial won the Catholic Press Association award for the best editorial on local subject for 1958. I have asked permission to insert it in the CONGRESSIONAL RECORD, and it follows.

ST. LOUIS ON THE RIVERFRONT

(Nore.—Reprint of editorial in St. Louis Review last August 22 which won Catholic Press Association award last week in Omaha as "best editorial on local subject" in 1958.)

We would like to propose to those in charge of the riverfront memorial that, arch or no arch, there be a fitting representation of the patron of our city, St. Louis, in that area.

There are those who, whether with architectural and esthetic intelligence or not, do not subscribe to the stainless steel arch that will describe St. Louis as the gateway to the West. We take no stand on this. While it is not out of our province we feel it is a bit out of our competence.

bit out of our competence.

But we do think there will be very few who will not be surprised, after a brief historical reflection, that there is no honor paid to our city's namesake.

It is not without thought or meaning that Louis IX of France has a city named in his

He was a just, wise and prudent statesman. The principles of morality, charity and equity, as well as justice, found full measure in his reign. It was quite normal for the French settlers of this territory, founding a city, to dedicate it to the ideals that his life reflected and to name it after him so that those ideals would not be forgotten.

Among many, the name of St. Louis is our city's greatest asset. This political unit conducts its affairs under the aegis of one of the noblest politicians who ever lived and who, at the same time, was a gentleman and a soint

We have no objection to any architectural design that signifies a warm welcome to visitors from the east, or which would symbolize our significant position on the frontier of the west. But we do strongly feel that the planners and designers of the new riverfront should pay due respect to Louis IX, King of France, saint, and patron of this area.

Our recommendation obviously goes beyond the realm of architectural design. We would like to see him there as a reminder to both citizens and visitors of what, politically and morally, our civic goal is.

Poison in Your Water-No. 127

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional Record an article appearing in the Portland (Oreg.) Oregonian of September 10, 1953, entitled "Poor Fish":

Poor Fish

With his dams, nets, and pollution, man has put formidable obstacles in the path of salmon and steelhead striving to ascend the Columbia River to their spawning beds. But now comes word of an even more formidable natural enemy, Chondrococcus columnaris, a bacterium responsible for a disease which has been decimating the anadromous fish in the river and its tributaries this season.

Unusually warm water in the river is said to be to blame for the upsurge in bacterial activity. This in turn is blamed on the dry

summer and the raising of the temperature of water impounded by storage dams under the hot sun. Nothing can be done about the former, and it is a little late to remedy the latter. But there is a third factor that may have some influence on the situation.

It is known that the Columbia River below Pasco is warmed a significant amount because part of its flow is diverted through the Hanford Plutonium works to cool the nuclear reactors. Just how much the temperature is increased, the public does not know. The Atomic Energy Commission won't tell, presumably because this might give a clue to the plant's output of plutonium for atomic waspons.

In the absence of the facts, it cannot be said with certainty that Hanford shares the responsibility for the high mortality rate among salmon and steelhead spawners. But it certainly is suspect, in view of the known fact that a variation of a few degrees in water temperature makes a big difference in the activity of Chondrococcus columnaris.

It is ironic that Hanford's wasted heat, which may indirectly be damaging the Columbia River fishing resource, could be performing a constructive service in electric power generation instead. Congress this year authorized construction of a dual-purpose reactor at Hanford to make this possible, but the project has powerful opposition in the private power industry, and it is possible this influence may cause the Bureau of the Budget to withhold the authorized funds.

It will be doubly ironic if this occurs, since one of the arguments against building the dual-purpose reactor is the doubtful need of the United States for more plutonium for its A-bomb stockpile. But if this is true, why the need for continued AEC secrecy about the influence of Hanford on the Columbia River's temperature? One or the other of the Hanford premises may be valid, but both of them can't be. The threat to the Columbia River fish provides one more reason why the veil of unnecessary secrecy should be stripped from the AEC so the public can make an intelligent appraisal of its policies.

#### A Place for Realism

EXTENSION OF REMARKS

# HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. ALGER. Mr. Speaker, "A Place for Realism," an editorial from the Wall Street Journal of March 17, 1959, merits thoughtful attention it seems to me by those interested in the problems surrounding foreign aid.

The editorial follows:

#### A PLACE FOR REALISM

Some powerful men in Congress are sharpening their blue pencils to go to work on President Eisenhower's request for almost \$4 billion in foreign aid. Not only do they think we are spending too much not too wisely; some disagree quite loudly with Mr. Eisenhower's conclusion that foreign aid is "essential to our survival and important to our prosperity."

To be sure, foreign aid is and has long been an instrument of foreign policy among nations and as such has a place in the scheme of things. But its case can be overstated; and Senators and Representatives are already pointing out that Mr. Eisenhower seems to be using the same arguments for foreign aid that he himself rejected when

proposals were made that the U.S. Armed Forces be increased to meet the Berlin question.

What, Mr. Eisenhower asked them, would we do with more troops in Berlin if the Russians decided to use force? We could not stop them, he said, short of using other weapons. That answer made a great deal of sense.

Just as the reply now of those who would reduce our foreign aid commitments seems to make sense. What good, they ask, will more dollars do if the Russians decide to move? We cannot stop them with foreign aid dollars.

Indeed, some of the examples the President gave to Congress in his message as proof of the value of foreign aid seem to bear out the critics of more aid. He mentioned the "difficulty in Lebanon" and said that without mutual security aid Jordan would have faced collapse. But mutual aid did not prevent the outbreak in Iraq, and the Iraqi now are closer to communism than to the West as a result. Also "aid" may have helped Jordan; but it was the presence of British troops that saved it that time.

Mr. Eisenhower mentioned also Quemoy, and said that without our ald the Chinese Nationalists could not have saved the island. Mutual aid may, indeed, have helped in providing the guns and ammunition; but it was the shadow of U.S. might that at the time dissuaded the Chinese Communists from their adventure.

The point is that all these matters probably would have turned out the way they did with or without much of the kind of foreign aid the administration bill requests. Foreign aid did not prevent these clashes, and foreign aid did not determine the manner of their settlement.

There is something to be said, from the

There is something to be said, from the view of realism, about foreign aid for those countries mentioned by the President as supplying bases for military forces, for weapons and for early warning facilities. But what is to be said for all the vast foreign aid that has gone to neutralist countries in the hope that they will come over to our side?

We think the Prime Minister of Cambodia had an answer for that question. He gave it last October in this country in a speech explaining why Cambodia's policy was to take aid from any source. He said: "Our people are basically nationalistic, and, being objective, they judge issues according to their merit. Because of this thinking, the national government must avoid tying the country to any international or federal, political or military organization whatsoever, which might sacrifice certain national prerogatives \* \* Cambodian neutrality is, finally and above all dictated by reality."

Inally and above all, dictated by reality."

It is time the same sort of reality about our own interests should guide foreign aid disbursements. And if and when it does, we may be sure foreign aid will not cost us anything like \$4 billion a year,

#### The Egg Crisis

EXTENSION OF REMARKS

#### HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. RHODES of Arizona. Mr. Speaker, it is clearly evident that the Nation's poultry industry is going through a critical period of readjustment. Like

many other farming enterprises, the poultry and egg business has economic peaks and valleys. When things are good, there is a great influx of capital in the poultry business. Eventually, markets become flooded with eggs and broilers—far more than the consuming public is willing to absorb except at low prices.

Right now we are confronted with that situation again. More eggs are being produced than can be used at reasonable prices, and great pressure is being brought to bear on the Department of Agriculture to bail out the industry with ill-advised palliatives which could do more harm than good.

I am convinced it would be a mistake for the Department to do much more in the way of assistance than it is already doing. Secretary Ezra Taft Benson has said he will explore what further can be done, but I believe he merits much credit for the actions already taken. He cannot guarantee every poultryman a profit, but he can make this period of readjustment less harassing to producers. That he is doing.

Since last October, the Department has bought a total of 13.5 million pounds of dried eggs for relief distribution and the school lunch program.

The Department called a meeting of leaders in the industry and agreed to work with the industry on a vigorous sales promotion program for poultry products.

And just yesterday it was announced that the emergency program is to be further stepped up to provide additional relief to hard-pressed poultrymen by buying up frozen eggs.

Meanwhile, we need to bring this whole picture into perspective. Production of eggs and poultry is now largely in the hands of producers and concerns which handle thousands of layers and fryers and broilers. Many of them are highly efficient. A few perhaps do not belong in the poultry business at all.

The newspapers have been keeping a close watch on developments. Those coming to my attention editorially praise the steps taken by Secretary Benson and advise strongly against deeper and more costly Government involvement in this farm enterprise.

At this juncture, I would like to insert editorials appearing in the New York Times, the New York Herald Tribune, and the Washington Daily News.

The editorials follow:

[From the New York Times] THE EGG Carsis

Secretary of Agriculture Benson may be forgiven if he looks with a jaundiced eye at his breakfast eggs, be they boiled, scrambled, poached, baked or made into a cheese omelet. The bottom has almost vanished from the egg market in recent months and the resulting political splatter has landed on Mr. Benson, who had troubles enough before with wheat and other farm commodities. Only last week an angry delegation of New Jersey egg producers called on the Secretary and demanded he take such measures as trying to save Latin America from communism by shipping surplus eggs there and discouraging newcomers from entering egg production. And two bills are before Congress calling for price controls over eggs.

Since nobody likes to go broke, the political storm aroused among egg producers by the unprofitable prices of recent months is understandable. Moreover, our friends in New Jersey who are in the egg industry do have the perfectly justifiable point that Government price support activities in grain raise the prices producers must pay for hen feed. And if price supports for wheat growers are sound, why are not similar supports justified for those who produce eggs, or for barbers, plumbers and everybody else who thinks he is not getting enough?

The last question, of course, gets to the heart of the problem. There is no more insidious enemy of our private enterprise system than the growing habit of rushing to the Government for aid every time an industry gets into trouble. And it is not only farmers, of course, for only in the last few months domestic oil producers have secured quotas on oil imports, while some groups of retail merchants have made ominous progress toward winning a system of Federal resale price maintenance. If we really believe in private enterprise and free competition then we must be prepared to bear the risks and burdens of adversity along with the profits and capital gains of prosperity. All the appeals for Government aid are of course for help in raising prices. They ignore the fact that each artificial price increase secured by Government aid is another blow for inflation and its ultimately calamitous consequences for all of us.

# [From the New York Herald Tribune] Mr. Benson and the Egg Men

Now Secretary of Agriculture Benson has drawn upon himself the wrath of the poultrymen, and particularly of the egg producers of New Jersey. Prices in the poultry industry are at their lowest in 18 years, but just the other day Mr. Benson told the House Agriculture Committee he wouldn't do anything more to support them, although yesterday he was said to be reconsidering. What he does now is to buy a limited quantity of dried eggs for welfare purposes and help promote egg consumption.

A delegation of New Jersey poultrymen in

A delegation of New Jersey poultrymen in Washington want much more than that. They want the Government to provide them with low-cost feed from surplus stocks; to buy shell eggs and some of the laying hens for distribution to the hungry here and abroad; and to get Congress to extend the authorization of loans to farmers for short-term emergencies.

The proposal to sell some of the grain surplus sounds sensible, although it might invite similar demands on the part of other kinds of farmers. But how wise would it be to start stockpiling so perishable a things as eggs, apart from the extra tax money it would entail? We sympathize with the plight of the New Jersey poultrymen, who are particularly hard-pressed because they have little chance to diversify. But the lesson for them, perhaps, is that there are not too many eggs but too many chicken farms. It is a lesson that American farmers in general should consider carefully.

# [From the Washington Daily News] Am For Eggs

It is regrettable that any segment of American enterprise should find itself troubled by lack of profits, whether it deals in eggs or autos. But we challenge the bland assumption that the Government should make up the difference. That isn't free enterprise. That's heads-I-win-tails-you-lose with the taxpayer on the short end.

Urged by a New Jersey delegation, a House subcommittee will hold hearings June 17 and 18 on means to cope with overproduction in the egg and poultry industry which has driven prices down to the level of 1939

when a dollar was worth a dollar, instead of the present 48 cents.

Agriculture Secretary Benson is buying up dried eggs and is increasing a promotional campaign designed to increase the sale of eggs, which certainly are an outstanding food bargain at present prices.

But the New Jersey delegation, headed by the State's secretary of agriculture, complains that this isn't enough and that Secretary Benson is just giving it the runaround.

Representative Lester R. Johnson, who heads the subcommittee, sides with them, saying Mr. Benson has "refused to purchase laying hens, shell eggs, and broilers for use in school lunches, for relief food within the United States and for export."

The time has long passed when farm wives supervised the production of eggs and fryers, to be exchanged for merchandise at the drygoods store. Chickens and eggs are business, like any other business, and pretty big business at that

Falling prices are useful warning against overproduction. The remedy is to reduce production or get out of the business. Federal subsidy tends to prevent this wholesome readjustment, piling up surpluses without any real or permanent help to the operators thus relieved. This is the process through which we got the wheat surplus problem—for which the combined wisdom of the U.S. Congress and the U.S. Department of Agriculture is unable to find an answer.

#### Father of the Modern Post Office

EXTENSION OF REMARKS

# HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. JOHANSEN. Mr. Speaker, on last Saturday, June 13, citizens in the largest city in the Third District of Michigan—the district I have the honor to represent in this House—participated in the dedication of a new modern post office at Kalamazoo, Mich.

The occasion marked the culmination of more than 4 years of planning and anticipation—and many more years of a growing need for more adequate postal facilities for a dynamic, growing, thriving Michigan city.

I share with the citizens of Kalamazoo and the personnel of the Kalamazoo Post Office, headed by Postmaster John Van Eck, their pride in this impressive, wellengineered, modern-equipped new postal facility.

Highlight of the dedication ceremonies and of a postdedication luncheon, the latter sponsored by the Kalamazoo Chamber of Commerce and attended by representatives of all segments of community life, was the participation of the Postmaster General of the United States, native of Michigan, son of one of the State's two original rural carriers, and originator of the commercial lease program for financing construction of new post offices, Hon. Arthur E. Summerfield.

The Postmaster General spoke at both the dedication and the luncheon, and following his luncheon address presented a motion picture, "The World's Most Mechanized Post Office," the story of the

modernization and mechanization of the Washington, D.C., post office. Many of my colleagues in Congress visited this pilot plant of postal improvement here in the Nation's Capital when it was formally dedicated on March 3 of this year.

The new Kalamazoo post office, like the Washington post office, is a symbol of the great advances being made in the mail service under the leadership of Postmaster General Summerfield.

A graphic example of these advances-familiar to many of the Members of this House-is the construction of some 3,000 urgently needed new post offices during the past 61/2 years. These post offices, located in every State in the Union, have been built with private funds and leased to the Post Office Department, thereby avoiding a virtually impossible demand upon Federal funds and, at the same time, keeping the property on local tax rolls to bear a share in the costs of local government.

As I was privileged to point out in my own remarks at the post-dedication luncheon in Kalamazoo, under the administration of President Eisenhower and the leadership of Arthur E. Summerfield in the Post Office Department, the department has been making revolutionary strides in automation and mechanization; methods of transportation have been modernized and adjusted to changing overall transportation patterns in the United States: research and experimentation have been established as a vital activity in the department; rates have been revised and placed on a more realistic basis; liberal and progressive personnel policies-including substantial pay increases—have been inaugurated. All of this has been done with the cooperation and support of the Congress on a basis which transcended party lines.

Only recently the Nation has been given a dramatic demonstration of the potential of missile mail-a development, I am sure, which would have fired the enthusiasm of the imaginative and inventive Benjamin Franklin, first Postmaster General of the United States.

I not only was honored to welcome Postmaster General Summerfield to Kalamazoo and the Third Michigan District, but I was delighted on this dedicatory occasion-and I am hereto pay tribute to his enormous and continuing contributions to an improved postal service, moving toward the declared goal of next-day delivery of firstclass mail anywhere within the country.

For what he has done, and is doing, I salute Postmaster General Summerfield as the father of the modern post office.

Fetish of Foreign Aid

EXTENSION OF REMARKS OF

#### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. ALGER. Mr. Speaker, the "Fetish of Foreign Aid," by William Henry Chamberlin, is a very penetrating analy-

sis which is timely and stimulating. Under unanimous consent, I include it in the Appendix of the RECORD:

FETISH OF FOREIGN AID: CRIES FOR HUGE SPENDING AGAIN ARE ILLOGICALLY MIXED WITH ASSERTIONS IT IS ANTI-RED PANACEA

(By William Henry Chamberlin)

There is no lack of ingenious schemes, sponsored at home and abroad, for spending the money of American taxpayers on so-

called foreign aid projects.

Cuba's Fidel Castro proposed at a recent meeting of the economic branch of the Organization of American States in Buenos Aires that the U.S. Government find \$30 billion for a Latin American development plan over the next 10 years. Proposals by other Latin American delegates included suggestions that the United States supply fixed amounts of capital every year for Latin America, that the United States create a preferential trading zone for Latin American exports, and that the United States agree to finance the rapid industrialization of Latin America.

There is also considerable advocacy of America's underwriting the foreign exchange required for India's third 5-year plan, which begins in 1961. This bill is variously estimated at \$1 billion and \$1.5 billion. The argument advanced here is that Red China has been bounding along economically under communism and that India, with its mixture of socialism and private enterprise, has been lagging in development: therefore the American taxpayer should fill the breach for India's benefit.

#### SUNFED'S QUICKSANDS

Still another potential funnel for U.S. substance is SUNFED, a project which is being nursed along and held in reserve by the global manners of ECOSOC. This last abbreviation stands for the Economic and Social Council of the United Nations. SUNFED, although it sounds like a new cereal, is code for Special United Nations Fund for Economic Development.

What SUNFED could cost the American taxpayer, if a high-spending, high-taxing administration took off the brakes, is evident from this quotation from Gunnar Myrdal's book "An International Economy": "The United Nations experts on economic development calculated that for the underdeveloped countries, the capital needed annually from abroad for industry and agri-culture alone \* \* in order to insure the very modest increase in per capita income of 2 percent a year would be around \$10 billion." Myrdal is a Swedish Socialist who for some years headed the U.N. economic commission for Europe.

American public opinion is being subjected to a campaign, so concentrated and intensive as almost to suggest brainwashing, designed to create the conviction that the issue of the cold war will be determined by the willingness of America to sign unlimited blank checks. It is a rare exception when a sober realist like Mr. John Hollister, former head of the International Cooperation Administration, finds a forum in a mass circulation magazine for expressing some doubt and warning.

Yet some of the assumptions on which the pleas for ever bigger government-to-government subsidies are based are downright untenable and others are very rickety. It simply is not true that this or that amount of dollars will save this or that nation from

passing under Communist rule.
For 7 years the United States has been pouring money into Bolivia on a very considerable scale (in relation to the population and poverty of the country). The argument has been that American largesse has helped to keep in power a left Socialist regime which is accepted as a bulwark against communism. But recent anti-American riots show that this investment has brought little, if any, good will and Bolivia's economic difficulties seem just as far from solution as ever.

Indeed, it is quite arguable that in this and other cases, lavish American aid has been of little real benefit to the recipient countries. It has encouraged their rulers to dodge the temporarily unpopular measure which would put the economy on a sound hasis.

Brazil is a larger and economically more significant country than Bolivia. Here also there is little economic benefit to show for the loans to a total value of some \$900 million which Brazil has received since the Eisenhower administration came into power. Some of these loans were granted on the understanding that Brazil, one of the world's chronic inflationists, would take some economic and financial measures calculated to put its house in order. These measures have not been taken; but one of the difficult tasks which awaits the career diplomat who has been nominated Ambassador (after Senator Morse and the horse that kicked him put Mrs. Luce out of the post) will be to deal with the request that the United States somehow pick up the tab for the deficit of some \$300 to \$500 million between what Brazil wants to buy abroad and what it is likely to sell abroad.

Despite frequent reiteration by Senators and publicists, there is absolutely no proof. that communism will take over in India if that country does not realize the aims set by its government's economic planners. would be an appalling responsibility for the United States to undertake to meet the balance-of-payment deficits of India and other underdeveloped lands which have set goals of rapid industrialization.

#### AVAILABLE CREDIT

It is not as if credit is not available, and readily available, for projects which give some prospect of being ultimately profitable. Apart from private banks and private business investments, the Export-Import Bank, the Bank for International Reconstruction, the International Monetary Fund, among other institutions, are ready to lend a help-ing hand when reasonable conditions of creditworthiness are met.

The U.S. Government, besides dispensing foreign aid of one kind or another to an amount running into many tens of billions of dollars, is accumulating an embarrassing quantity of soft, unconvertible currencies by making cutrate sales from our unwieldy agricultural surplus.

America and Americans have not proved wanting in the spirit of international cooperation. But it is well to remember, with the outflow of gold from this country as a periodic warning, that our resources are not inexhaustible and that a gift, as well as a loan, "oft loses both itself and friend."

When America is asked to commit itself to trying to bail out the ocean of poverty in Africa, in many parts of Asia, in some countries of Latin America, the skeptical instinct of the average American voter and taxpayer is probably a sounder guide than the fallacious eloquence of those who make a fetish of unlimited handouts.

Poison in Your Water-No. 125

EXTENSION OF REMARKS OF

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Syracuse (N.Y.) Herald-Journal of November 11, 1957, entitled "Every Onondaga County Stream Polluted Somewhere on Route."

The article follows:

SERIOUS HEALTH PROBLEM-EVERY ONONDAGA COUNTY STREAM POLLUTED SOMEWHERE ON

(This is the 14th in a series of articles devoted to the functions and problems of Onondaga County's governmental expansion.)

(By Paul J. Peffers)

It isn't safe to obtain drinking water from any stream in Onondaga County.

All are polluted somewhere along their routes by raw sewage, industrial wastes, or other forms of pollution.

The New York State Water Pollution Control Board is aware of this, so is the Onon-daga County Public Works Commission.

Both know the soil in Onondaga County is honeycombed with cesspools, septic tanks, and disposal trenches of raw sewage.

The rapid population growth has caused a housing boom in the rural areas and sewage disposal facilities are inadequate. To install sewer lines and treatment plants cost money and property owners, already up to their necks with taxes, are facing high annual sewer tax rates, up to \$180 a year for 30 years in some cases, if they want these proper facilities.

It is a serious health problem. Raw or improperly treated sewage can cause typhoid,

cholera, dysentery, dlarrhea.

The State health department is clamping down. Approval of realty subdivision plans now requires a septic tank installation on a lot of 1 acre or more. Under that minimum acreage sewer lines have to be installed.

Onondaga County and the city of Syracuse, realizing something would have to be done, entered in a program of sewage treatment in 1952 which would center on a modern treatment plant on Hiawatha Boulevard.

The plan was a long-range one aimed at the ultimate goal of cleaning up polluted Onondaga Lake. For years, raw sewage has been dumped into the lake by the city, Solvay, and industrial plants.

The county public works commission, created by special State law in 1933, was put

in charge of the plan.

Briefly, the proposal includes a metropolitan Syracuse sewage treatment plant on Hiawatha Boulevard, a West Side sanitary district, and an enlarged Ley Creek sanitary district. Some sewer lines in the West Side area have been installed and work on the plant is slated to start early next year. The entire project is estimated to cost in the neighborhood of \$20 million.

Property owners in the city and several towns in the western section of the county already have been taxed for their share in the project. The first levies were started

this year.

Meanwhile, most of the homeowners in the rural sections depend on septic tanks and, in some low areas, the wind blows more than the scent of flowers. Health officials maintain septic tanks provide only the first treatment of waste materials, not complete disposal. The tank system has to be coupled with tile fields, sand filters or other satisfactory methods.

Right now, the commission has nearly \$15 million of sewage disposal units and pipelines under construction. Still, it can't keep up with the demand. And, if it could, the taxpayer couldn't pay for the service with

high construction costs of today.

A sanitary district is created, constructed and operated by a town or village board. Lateral sewer mains in it are paid for by taxpayers. The taxpayers also pay for the cost of treatment plants and trunk sewers. Generally, the financial arrangement is by bondThe commission operates the Ley Creek treatment plant between Mattydale and Syracuse. It will supervise the metropolitan plant on Hiawatha Boulevard.

The commission's total operating budget for 1958 is estimated at \$446,145.

Besides the commission's facilities, there are treatment plants in Baldwinsville, Minoa, Liverpool, and Camillus, operated by each village. A small plant along Nine-Mile Creek, town of Camillus, treats sewage from the Sylvania plant and a housing development near the plant.

Even if the metropolitan treatment plant costing millions, is put into operation, it is doubtful whether it will abate all raw sewage unless the city's sanitary sewer system is repaired.

Right now, health officials estimate, a large percentage of the city's raw sewage is leaking into Onondaga Creek, then into Onondaga Lake.

This situation would have to be cleared up before the multimillion metropolitan plant could operate adequately.

#### Adams and Strauss Cases Cited

EXTENSION OF REMARKS

# HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. WOLF. Mr. Speaker, it now appears that the vote on the nomination of Admiral Strauss will take place in the Senate within a week. Both sides of Admiral Strauss' nomination have been presented again and again. But the comparison between this nomination and the Sherman Adams incident has not been made clear yet.

Under leave to extend my remarks, I wish to insert into the RECORD the following article by Drew Pearson which draws a clear-cut comparison of the two cases:

From the Washington Post and Times Herald, June 18, 1959]

ADAMS AND STRAUSS CASES CITED (By Drew Pearson)

Recollection of Washington headlines exactly I year ago this week makes me a little ashamed. The headlines blazed with news of Sherman Adams' vicuna coat, his oriental rug, and his hotel bills-all presents from Bernard Goldfine.

This column had something to do with digging out the first facts in this conflict-ofinterest case, and the reason I'm ashamed is the contrasting treatment given by Republicans to Sherman Adams and to Adm. Lewis L. Strauss.

In the case of Sherman Adams, they yelled: "Resign. Throw him out." In the case of Admiral Strauss, the same Republicans have ben shouting: "Confirm. Don't persecute

The two cases offer significant contrasts and give deep insight into American politics. They indicate that what is really at stake is money and power. Here are some of the contrasts:

Contrast No. 1: Sherman Adams is not a man of wealth. When his scalp was demanded by leading Republicans, he had no tob to fall back on, and no income outside

his Government salary.
Strauss, a partner in Kuhn, Loeb, filed a partial financial statement with the Senate showing that his stock in one firm, Polaroid Camera, alone was worth \$1 million.

Contrast No. 2: When Sherman Adams was about to testify before Congress, not one member of the administration helped him prepare his difficult statement. Jim Hagerty, an expert at public relations, did not. "Tex" McCrary came down from New York to help, but on that Sunday evening before he testified, no other Republicans or administration representatives were around to give advice.

In contrast Strauss had the regular press relations officer of the Department of Commerce issuing press statements all during his hearings. He also had two Commerce Department assistants—Robert J. Dodd and Arthur Arundel-sitting at his elbow every day at the Senate hearing, with a battery of researchers and others helping him at the Commerce Department.

Contrast No. 3: When Sherman Adams was in trouble Vice President Nixon was one of the first to advise privately that he resign. But for Strauss, Nixon has been using his persuasive influence for confirmation.

Contrast No. 4: Bernard Goldfine had used Sherman Adams' influence at the Federal Trade Commission to avoid trouble over the Wool Labeling Act. This was the conflict of interest.

Admiral Strauss, when Chairman of the Atomic Energy Commission, had conferred with Adolphe Wenzell of the First Boston, who had been planted inside the Budget Bureau to put across the Dixon-Yates contract. The First Boston Co. was to do the financing for Dixon-Yates.

Finally, when the finagling between the First Boston Co. and the Budget Bureau, plus the conferences with Admiral Strauss, was ferreted out by a Senate investigation the deal was canceled. The Justice Department which canceled it ruled that all the finagling was in violation of the conflict-ofinterest statutes. A conflict of interest carries a criminal penalty.
Incidentally, Admiral Strauss has been a

friend of George Woods, president of First Boston. Kuhn, Loeb and First Boston are so close that in September 1955, shortly after the Dixon-Yates deal, First Boston, Warburg, Ltd., and Kuhn, Loeb (Strauss' firm) teamed up together to form the Transoceanic Development Co. for investment in securities outside the United States.

The value of the Dixon-Yates contract was \$20 million. The value of the vicuna coat Sherman Adams got from Bernard Goldfine, plus oriental rug, plus hotel bills, was about \$5,000.

But the American public can understand a fur coat and a rug. It can't understand a complicated public utility contract. So what's involved in the Strauss case is the tremendous power of Wall Street money behind the man it wants to put into the Cabinet as Secretary of Commerce.

That's why the same crowd that is moving heaven and earth to confirm Admiral Strauss dumped Sherman Adams and indicted Bernard Goldfine as millstones around

the GOP neck.

#### Wheat Program

SPEECH OF

# HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. BASS of Tennessee. Mr. Speaker, my friend from Iowa and the other Republicans who have taken the floor against this wheat bill today have expressed the "Republagin" philosophy. Now, I want to spell that word "Republagin," R-e-p-u-b-l-a-g-i-n. It is synonymous with "Republican Party". They are "agin" public housing; they "agin" aid to airports; they are "agin" aid to depressed areas; they are "agin" water pollution control; they are "agin" the tobacco bill; they are "agin" the wheat bill; they are "agin" the farmer in general; in fact, I do not know of anything in the world they are not just plain "agin," except for raising the public debt and interest that the poor man has to pay on borrowed money. Now they bring up this bugaboo about the farmers not voting in the wheat referendum. The wheat bill was written in 1938, 21 years ago; in fact, it is an adult this year; it has come of age, and this is the first time they ever worried about him voting, just because he happens to be 21 years old, and they cannot think of any other good reason to oppose the bill before us today.

# The Challenge of Economic Growth in the Free World

EXTENSION OF REMARKS

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 12, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and address by the Honorable Douglas Dillon, Under Secretary of State:

THE UNDER SECRETARY OF STATE, Washington, D.C., June 17, 1959.

Hon. James G. Fulton, House of Representatives,

Washington, D.C.

DEAR JIM: Last week I used the occasion of a speech at Harvard to spell out my deep personal conviction that our mutual security program will involve a persistent effort over a period of at least 20 or 30 years, if we are to succeed in our efforts to help the newly developing nations achieve economic growth as members of the free world. I am enclosing a copy in the belief that you might find it of interest.

Sincerely,

DOUGLAS DILLON.

THE CHALLENGE OF ECONOMIC GROWTH IN THE FREE WORLD

(Address by the Honorable C. Douglas Dillon, Acting Secretary of State, at meeting of Harvard University Alumni Association, Cambridge, Mass., on Thursday, June 11, 1959)

On this same occasion 12 years ago, a great initiative was launched, looking to the reconstruction of a Western Europe struggling to rise from the ashes of war and menaced by the corrosive tide of Communist imperialism.

That initiative fired the imagination of the peoples of America and Europe and inspired them to an effort of a kind never before seen in all history. The energies and resources of hundreds of millions of freemen were mobilized in the task of peaceful reconstruction.

The Marshall plan is now history. To it, we most certainly owe the present strength and possibly even the continued existence of the free world.

Today we are engaged in another great initiative, looking to the growth and progress of vast underdeveloped areas of the free world in Asia, Africa, the Middle East, and Latin America. The success or failure of this effort will decisively shape the future of this earth for centuries to come.

Its fulfillment will require the dedication of greater energies and resources—and over a far longer span of time—than did the reconstruction of Western Europe.

For its objective is not just the restoration of a devastated area to a previous state of progress, but the shining goal of helping a billion human beings to throw off their ageold bonds of poverty and ignorance.

The attainment of this goal is essential to our survival. We cannot hope to maintain our way of life surrounded by a sea of misery. The less privileged peoples are reaching out for economic growth with almost desperate determination. We must help them find the way in peace and freedom.

The main burden of work and sacrifice will, of course, fall on the less developed countries themselves, just as it fell on Western Europe in the case of the European recovery program. They must accept the major responsibility for their own progress. But they cannot make a real start toward progress

without our assistance.

We are responding to their needs in many ways. Our major instrument is, of course, the Mutual Security program. Financial assistance is an important element of this program, but it is only a part of our response. For the process of growth is essentially one of altering human attitudes and improving human skills. Human beings are the basic resources of development; and it is the fulfillment of their infinitely varied potentialities which must be the major goal of development. That is why we place such emphasis on our programs of technical cooperation and on efforts to improve levels of health and education in the underdeveloped world.

At the same time that we are working with the less developed nations to help improve their human resources, we are also assisting them to meet some of their most pressing financial needs.

We have varied instruments for this pur-

Where development is just commencing or where countries have to support relatively large military establishments to maintain their security, we must, of necessity, provide assistance in the form of grants.

For nations in a somewhat more advanced stage of economic development, our primary emphasis is on loans, often repayable in local currencies, through our new Development Loan Fund.

We are also making every effort to expand the flow of private American investment to the less developed countries, since with it goes urgently required managerial and productive skills.

This effort to help provide skills and resources is no longer just an American enterprise. It has become a cooperative venture in which we are being joined with increasing vigor by more and more of the industrialized nations of the free world. We should remember that it is largely due to the Marshall plan that most of these countries have recovered the ability to join us in aiding the less developed countries. In addition to their participation in the effective work of the World Bank and the International Monetary Fund, England, Germany, France, Italy, Japan and Canada last year made further contributions to development through either grants or loans.

Nevertheless, as the wealthiest and most industrialized country in the world today, the United States remains the principal single free world source for the foreign capital which the less developed countries must

have to supplement their own efforts. We must continue to take the lead.

We must do this, not simply as a countermove to communism, nor as an exercise in charity, but in the same spirit in which the Marshall plan was launched, as a cooperative endeavor, based on mutual respect and interdependence. Our primary aim must not be to achieve short-term political gains or expressions of gratitude. It must be to help the less developed peoples strengthen their well-being and, thereby, their freedom and independence.

I have so far refrained from discussing the efforts of the Sino-Soviet bloc to penetrate and capture the less-developed countries with trade and aid as part of its overall drive for Communist world domination. I have done so because our foreign ald programs would exist even if Lenin had-never been born. For in today's shrinking world, it is imperative that ways be found, first to halt, and then to narrow, the still-growing gap between our standards of living and those of the great masses of humanity in Asia, Africa, the Middle East, and Latin America. Such a task is deeply rooted in the traditions of humanitarianism that have always motivated Americans.

However, the growing economic power of the Soviet bloc is a force to be reckoned with in today's divided world. Let us look briefly at that world:

On one side we have the nations of the free world which have already achieved economic growth—not only the strongly industrialized countries of Europe and North America, but also Japan, Australia, and New Zealand.

On the other side, we have the Communist empire, including Russia's eastern European satellites and Communist China and its satellites. This bloc is led by the Soviet Union, which has made remarkable economic progress in recent years.

In between lies the great underdeveloped sector of the free world, which the Communists have openly identified as the major target in their strategy of conquest. If these countries find that they cannot achieve progress in freedom, as they would prefer, they will surely be tempted to try an alternative route to their goal. And today international communism loudly proclaims just such an alternative route.

I am convinced that the events of the next 20 to 30 years will determine the state of the world for centuries ahead. I believe that the biggest single deciding factor will be the path taken by the peoples of the less developed world in their impatient efforts to achieve social and material progress. Over the coming years, the newly emerging peoples will be heavily influenced by three factors:

First, the power of example: If international communism is successful in projecting an image of the Soviet system as the magic blueprint for achieving rapid progress, it will have a powerful influence on men who are desperately seeking to lead their peoples into the 20th century.

It is undenlable that the Soviet economy

today is developing faster than that of the United States. Soviet annual growth in industrial production in recent years has been about 7 to 9 percent, as compared to the long-term average of a little more than 4 percent in the United States. Soviet industrial production is now in the neighborhood of 40 percent of our own. If Soviet and American industrial production continue to expand at the average rates of recent years, by 1970 the Soviet Union's industrial output may be more than three-fifths of our own. This is certainly much less than Soviet Premier Khrushchev's best boast of advancing to first place by 1970 in both absolute and per capita industrial production. However, it should be obvious that if these trends

continue, the Soviet Union will draw abreast of the United States in industrial production in the mid-1980's. Faced with this prospect, it is imperative that the United States find ways of accelerating its own economic growth while always maintaining the stability of our currency. The 5 percent annual increase recommended as a goal in recent studies would seem to be an absolute mini-

By accelerating our domestic growth we will defiate the Soviet line that communism represents the "wage of the future." will demonstrate to the peoples of the newly developing nations that their aspirations can best be met in a free society. And, most important of all, we will create the climate and capacity at home which will permit us to continue the long-term effort needed abroad.

The second factor which will influence the newly developing peoples is trade. The Soviet bloc has recently made substantial trade overtures to these nations. But Soviet trade can be, and is, turned on and off at will for political purposes. Once a country becomes dependent upon the Soviet Union for a large share of its trade, the Soviets do not hesitate to use this dependence as a means of blackmail and pressure.

The dangers for the underdeveloped nations are obvious. But trade they must. It is up to us to provide an increasingly attractive alternative. We must continue to take a leading part in reducing barriers to world trade. We must keep our markets open to peoples who are struggling to improve their lot, and we must strive to find workable answers to the problems they face as a result of price fluctuations in their raw-material exports.

The third factor influencing the develop-ing countries is financial and technical aid. I have already outlined our own program. Mindful of our success, the Soviet Union 5 years ago launched its own ald drive as part of a general campaign to establish the Soviet "presence" in the newly emerging areas. As with Soviet trade, so with Soviet aid-once a country begins to lean heavily on the Soviet Union for its development needs, political strings become very apparent, and that country's independence is in

jeopardy.
This, then is the challenge. Are we, the peoples of the economically advanced free nations going to persevere in our efforts to help the 1 billion people in the free world's less developed areas place themselves firmly on the road to progress? Or are we going to be found wanting in this supreme test of our free and democratic way of life? If we do not measure up to the challenge-if through unwise or inadequate actions on our part we allow the newly emerging nations to be dragged one by one into the Communist orbit-then, as surely as night follows day, our own freedom cannot long endure.

This is a challenge of stamina and perseverance. It entails a coordinated, persistent effort over the next 20, 30, or perhaps even 50 years. We have never in our peacetime history faced anything to compare with it. If we succeed, and these peoples choose irrevocably the path of freedom, then indeed the future will be bright. For their example will be irresistible and international communism as we know it today will become a mere nightmare before the dawn of universal freedom.

I believe that Americans can rise to the challenge. They are at their best in responding to such an opportunity. For provides that "remote and ideal object which captivates the imagination by its splendor and the reason by its simplicity," of which Lord Acton spoke and which, as that British historian said, so eloquently, evokes an energy that is not inspired by lesser and more proximate goals.

But if we are to stay the course, there must be much greater and deeper knowledge of world events among our citizenry. Unfortunately, such widespread knowledge of world affairs is lacking in our country today. This is why many of our people do not fully comprehend the crucial importance of our foreign aid program to our future.

Let me urge each and every one of today's graduates to study and to travel. You must work to keep up your knowledge of world affairs. You must not, cannot, permit yourselves to become buried in the local scene. Our country looks to college graduates for leadership. The promotion of a better understanding of foreign affairs is a field where you can exercise leadership no matter what your occupation.

The task of preserving freedom through perseverence has been laid upon my genera-tion and, to an even larger extent, upon your generation. We must meet this task or foreclose our country's future. We cannot simply pass along the assignment to our suc-

cessors. It will not wait.

We must see the task before us in its historic perspective. We must not permit ourselves to be diverted from it by our involvement in the day-to-day problems of life in a complex world. America owes what it is today to our profound and enduring faith in freedom, justice, and equality of opportunity for all men, everywhere. This is the American message and promise. We must never allow ourselves to forget it.

#### Basic Information on the Aged

EXTENSION OF REMARKS

# HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Thursday, June 18, 1959

Mr. McNAMARA. Mr. President, on Tuesday the Senate Subcommittee on Problems of the Aged and Aging began its hearings.

For the past 3 days, we had the privilege of listening to statements and discussions by a score of national authorities on the problems of health, employ-ment, income maintenance, housing, financing of medical care and community services.

I ask unanimous consent that an introductory statement by Prof. Wilbur Cohen. of the University of Michigan, be printed in the RECORD.

Mr. Cohen, a nationally recognized expert on problems of the aged, gave a careful, objective appraisal of the social and economic implications of an increasingly aging population. I am sure the Senate will find these facts of great interest.

There being no objection, the introductory statement was ordered to be printed in the RECORD, as follows:

BASIC INFORMATION ON THE AGED

(Summary of remarks by Wilbur J. Cohen, professor of public welfare administra-tion, the University of Michigan, before the Senate Subcommittee on Problems of the Aged and Aging, June 16, 1959, Washington, D.C.)

1. AGED INCREASING NEARLY A THOUSAND A DAY About 1,230,000 persons became age 65 in 1956, over 3,000 every day.

About 900,000 persons age 65 and over died in 1956.

The net increase was about 330,000, nearly

1,000 every day.

There are 15.4 million persons aged 65 and over representing 8.6 percent of the total population.

By 1975 there will be 20 million aged persons.

2. LIFE EXPECTANCY FOR OLDER WOMEN IS LONGER

The life expectancy of men at age 65 is

about 13 years; for women, 15½ years.
This difference diminishes with age. At age 70, for men, life expectancy is 10.3 years;

for women, 12.2 years.

At age 80, it is 6.0 years for men and 6.6 years for women.

3. ONLY A SMALL PROPORTION OF THE AGED LIVE IN INSTITUTIONS

Three-fourths of all aged persons live with some family member.

About 15 percent of all the aged live in their own households but live alone or with nonrelatives. Another 4 percent live with nonrelatives but not in their own homes. About 6 percent live in other places-about 3 percent in institutions and about 3 percent in hotels, roominghouses, and the like.

4. THE AGED ARE NOT EVENLY DISTRIBUTED THROUGHOUT THE COUNTRY

Five States had 10 percent or more of their population age 65 and over in 1950 (Iowa, Massachusetts, New Hampshire, Oregon, and Vermont).

Seventeen metropolitan areas with a total population of 100,000 or more had an aged population of 10 percent or more (Tampa-St. Petersburg, Brockton, Atlantic City, Terre Haute, Lowell, Spokane, Portland (Maine), Utica-Rome, Topeka, Lawrence, Worcester, Orlando, Cedar Rapids, Lincoln, Springfield (Mo.), New Bedford, Rochester).

In a State like Illinois with a slightly higher than average proportion of aged, there were 16 counties with more than 13 percent of the population age 65 and over.

5. SMALL TOWNS HAVE THE HIGHEST PROPOR-TION OF OLDER PERSONS

About 13.5 percent of the population of incorporated places of less than 1,000 are aged persons. Aged persons on farms were a slightly smaller proportion of farm people than aged persons in urban areas.

6. NEARLY HALF OF THE TOTAL INCOME OF THE AGED COMES FROM INCOME-MAINTENANCE PROGRAMS

Total income of all the aged was about \$25 billion in 1958.

About \$6.7 billion was received from social security, \$1.7 from public assistance, and \$2.2 billion was received from other governmental programs (civil service retirement, veterans) making a total of \$10.6 billion from all governmental income-maintenance programs.

About \$1 billion came from private pension plans and an additional amount from individual insurance contracts.

Thus over 45 percent of the aggregate income came from income-maintenance programs. Probably about 40 to 45 percent of total income came from employment.

7. PRIVATE PENSION PLANS HAVE INCREASED BUT PROVIDE BENEFITS TO ONLY A SMALL PROPOR-TION OF THE PRESENT AGED

Total contributions to private pension plans in 1957 were \$4.6 billion, of which \$3.9 billion was paid by employers. Total reserves billion was paid by employers. Total reserves in these plants were about \$35 billion. There were 1,250,000 beneficiaries who received about \$1.2 billion in benefits.

About 36 percent of the 49.1 million private wage and salary employees were em-ployed in firms with private pension plans.

8. MOST OF THE AGED HAVE LOW INCOMES

In 1958 three-fifths of all people age 65 and over had less than \$1,000 in money income.

-30

Another one-fifth received \$1,000 to \$2,000. The other one-fifth had more than \$2,000.

Of the men, about two in five had less than \$1,000 and two in three had less than \$2,000.

#### 9. MOST AGED PERSONS ARE NOT WORKING

Of the 15.4 million aged persons, only about one in every five in December 1958 had a paying job—about 3 million persons. When women who are not themselves employed but are married to earners are included, the proportion of the aged population with some money income from employment is raised to just over one-fourth or about 4 million people.

Thus, over 11 million aged persons are dependent upon income or support from sources other than employment.

# 10, EMPLOYMENT PARTICIPATION FOR MEN IS DECLINING

In 1945 one out of every two men age 65 and over was in the labor force. Today it is only one out of three. In 1890 it was 7 out of 10.

# 11. EMPLOYMENT PARTICIPATION DECLINES RAPIDLY WITH AGE

In 1957, 83 percent of all men age 60-64 were in the labor force. This dropped to 53 percent for men age 65-69 and to 28 percent for men age 70 and over.

#### 12. MOST AGED RECEIVE SOCIAL SECURITY

About 6 out of every 10 aged persons in June 1958 were receiving OASDI benefits. Another 1 out of 10 received some other social insurance or pension benefit.

About one out of six aged persons received old-age assistance.

About one out of five aged persons received income from more than one of the following sources: employment, social insurance, or assistance.

# 13. SOCIAL SECURITY BENEFITS AVERAGE \$72 A MONTH FOR AGED PERSONS

The average old age insurance benefit awarded to aged persons retiring in March 1959 was \$82 compared to \$72 for all aged persons on the rolls.

About half of all aged married couples receive less than \$125 a month.

#### 14. AGED WIDOWS HAVE THE LOWEST INCOMES

The aged with the lowest incomes are widows. Widows' benefits under social security were \$61 a month for benefits awarded to widows in March and \$56 for all widows. The number and proportion of aged widows is growing. A widow is paid only three-fourths the amount of social security benefits a single retired employee would get under the same circumstances. Over one-third of all aged widows receive \$50 or less a month from social security.

#### 15, MOST AGED MEN ARE MARRIED; MOST AGED WOMEN ARE WIDOWS

About 70 percent of the aged men are marrled compared with 36 percent of aged women.

Nearly 25 percent of aged men are widowed compared with 55 percent of aged women.

#### 16. AGED USE MORE HOSPITAL CARE

Days of hospital care used by persons 65 and over are about 2 to 21/2 times as much as those used by persons under age 65.

About 90 percent of all the aged hospitalized in 1956 and 1957 were in hospitals for 60 days or less in the year.

#### 17. MEDICAL CARE COSTS ARE RISING

Since 1947-49 the overall consumer price index has increased about 24 percent. Medical care costs have risen over twice as fast—49 percent. But hospital room charges have risen 105 percent and are continuing to increase.

During the same period of time surgeon's fees have risen only 24 percent, about the same as the total overall index.

# 18. MOST OF THE AGED DO NOT HAVE ANY HOSPITAL INSURANCE

About 65 percent of the aged do not have any hospital insurance as compared with 34 percent of those under age 65 who do not have such insurance.

For the aged couples drawing OASDI, 80 percent of those with incomes of under \$1,200 did not have any hospital insurance, compared with 35 percent for those with incomes of \$5,000 and over who did not have such insurance.

#### 19. MOST AGED WITH VOLUNTARY HEALTH IN-SURANCE HAVE INDIVIDUAL POLICIES

About 11 percent of the aged have group health insurance coverage while 22 percent have individual policies. This compares with the age group 30-39 in which 53 percent have group coverage and only 18 percent have individual coverage.

Individual policies usually cost more than comparable group policies or have more limitations or both.

#### 20, PUBLIC FUNDS FOR MEDICAL CARE OF THE AGED ARE A RELATIVELY LARGE PROPORTION OF ALL SUCH FUNDS

Public outlays for medical care for civilians of all ages in 1956 (including tax-saving subsidies) were \$4.4 billion. Of this amount, \$900 million or 20 percent was for the aged.

Private expendatures for persons of all ages were \$10.5 billion, of which \$1.4 billion or 13.7 percent was for the aged.

# 21. OVER HALF THE RETIRED AGED QUIT WORK FOR HEALTH REASONS

In 1952, 57 percent of all the aged men who were not in the labor force retired voluntarily because of health reasons.

Of those not working, 77 percent said they were unable to work or were not well enough to work.

#### 22. OLD AGE ASSISTANCE VARIES WIDELY BY STATE

The average State old-age assistance payment in March 1959 was \$64. This varied from \$108 in Connecticut and \$101 in New York, to \$29 in Mississippi and \$33 in West Virginia.

In June 1958 the proportion of the aged receiving old age assistance was 16.2 percent for the United States. This varied from a low of 3.9 percent in New Jersey to 58 percent in Louisiana.

Most States provide for paying medical care costs of aged persons on assistance directly to the provider of medial ccare; some do not.

# 23. ONE-THIRD OF ALL PERSONS 80 YEARS AND OVER RECKIVING ASSISTANCE

One-half of the persons receiving old-age assistance are aged 75 or over. The proportion of aged persons receiving assistance increases with age. Among all persons aged 65-69, 1 in 10 receives aid; among those 80 and over, 1 in 3 receives aid.

A majority of old age assistance recipients live in rural areas and small towns. The proportion of aged persons receiving assistance in such areas is two-thirds higher than in metropolitan areas.

One of every four old age assistance recipients receives OASI (about 600,000), primarily among those living in industrial areas.

24. COST OF SOME ILLUSTRATIVE SOCIAL SECU-BITY CHANCES

Many changes have been suggested by Members of Congress in the social security program. The following are illustrative of some major proposals and their costs (on a level-premium, intermediate basis) measured in terms of percent of payroil:

Pe	rcen
A. Repeal of the retirement test B. Repeal of the retirement test at age	1.00
70	.15
C. Delayed retirement credit, 2 percent	
vear	. 28

D. Increase in retirement test to \$1,500

and \$125 units\_

25. THE AGED ARE NOT A HOMOGENEOUS GROUP Some are between 65 and 70; most are over age 70.

Some are working; most are not.
Some are in good health; most are not.
Some live in institutions; most do not.

Some are living with their spouse, most are not.

Some live alone; most do not.

Some have a high school education; most have not.

Some have adequate incomes; most do not. Some do not receive social security benefits; most do.

Some receive private pensions; most do not. Some receive social security and a private pension; most do not.

Some have hospital insurance; most do not. Some have surgical insurance; most do not. A very few have comprehensive medical insurance; most do not.

Most aged persons live in the State in which they were born, some do not.

Most aged live in urban areas; some do not.

# Retirement Benefits for Self-Employed Persons

· EXTENSION OF REMARKS

# HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 18, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement given by Richard W. Thorington, chairman of the Philadelphia Bar Association's Committee on Lawyers' Retirement Benefits, before the Committee on Finance today.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

#### STATEMENT OF RICHARD W. THORINGTON

My name is Richard W. Thorington. I am a partner in the Philadelphia law firm of Obermayer, Rebmann, Maxwell & Hippel and present chairman of the Philadelphia Bar Association's Committee on Lawyers' Retirement Benefits. The other members of the committee are Sanford D. Beecher, Frederick E. S. Morrison, Fred L. Rosenbloom, Flugh Scott, William R. Spofford, Lewis Weinstock, and Andrew B. Young.

The Philadelphia Bar Association has consistently favored the principle of retirement benefits as provided by H.R. 10, believing that this represents a practical approach to the problem of establishing a method whereby self-employed persons may provide for their own retirement through the use of

earnings accruing from their own personal efforts.

Accordingly when H.R. 10 was being considered by the Ways and Means Committee of the House in the 84th Congress in June 1955, Mr. William R. Spofford, the then chairman of the Philadelphia Bar Association's committee, appeared and testified in support of the bill.

It was our opinion then and it is our opinion today that current income tax rates make it difficult, if not impossible, for that current income tax the average lawyer and other self-employed persons to provide adequately for old age with savings available to them after the payment of Federal income tax. The ex-emption allowed under section 404 of the Internal Revenue Code for contributions to employee pension plans is not available to persons who do not occupy an employee status. This discrimination in the law is a serious one and has directed attention to the need of a plan under which all selfemployed persons may be accorded the same favorable tax treatment with respect to savings set aside and earmarked for retirement purposes as is available to employed persons. Such a plan-is contained in the bill presently under consideration.

We do not regard this bill as special legislation for the benefit of any group of citizens, but rather as a bill which attempts to remove, in part at least, the discrimination which presently exists in the law in favor of employed persons. I say "in part" because the present bill restricts deductions in any year for persons under age 50 to \$2,500 or 10 percent of earnings from selfemployment, whichever is less, with a lifetime limit of \$50,000. There is no such limitation on amounts that may be set aside to provide retirement benefits for employed persons. We are willing to accept this limitation, however, because we recognize the fiscal problem involved. We believe that an income tax deduction should be granted only where it will serve a public interest. We also believe that it is sound public policy to encourage people to exercise thrift and to make it possible for them to provide adequately for themselves in their old age rather than having to rely on Government as the ultimate source of economic security.

We ask that the discrimination against the self-employed be eliminated, at least to the extent provided by H.R. 10, and that lawyers and all other self-employed groups be afforded the opportunity and privilege of providing for their later years through their own efforts.

# Centennial of Birth of Senator Thomas J. Walsh, of Montana

EXTENSION OF REMARKS

# HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. MANSFIELD. Mr. President, June 12 was the centennial of the birth of a great Senator and a renowned Montanan, Senator Thomas J. Walsh. On that day special tributes were made here in the Senate and in the Treasure State. One of the finest tributes appeared in the Sunday June 14, 1959, edition of the Great Falls Tribune. It is an article written by Josephine O'Keane, perhaps the foremost authority and biographer of Senator Walsh.

Mr. President, I ask unanimous consent to have this article, entitled "Senator Walsh Was Born 100 Years Ago," printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Senator Walsh Was Born 100 Years Ago
(By Josephine O'Keane)

BILLINGS.—Although the Badger State produces no oil, it gave to Montana a great American whose name will be forever associated with oil—Thomas James Walsh, who was born in Two Rivers, Wis., on June 12, 1859.

The boy Walsh gained his first experience in oil as the village lamplighter. Before his life ended, the man Walsh acquired an astonishing knowledge of the gigantic oil industry. Through his spectacular investigation, the American public became alerted to political intrigue practiced by private oil interests.

Perhaps he will be remembered longest for the notable service he rendered in exposing the fraudulent naval oil leases, but Senator Walsh by no means confined his activities to investigation. There were other issues that brought him along the road to fame. For the life of Thomas J. Walsh merits classification in the category of lives that continue to exert influence upon succeeding generations. His public career led through national political conventions spanning 25 years; through the administrations of Wilson, Harding, Coolidge, Hoover in what has been termed one of the most telling eras of modern history.

Few men have won the hold upon the admiration and respect of the public he enjoyed. His distinction came from a characteristic fairness and capacity to deal evenhanded justice even in a political crisis where his emotions were wholly engaged on one side of the controversy. His persistence, his courage, and his willingness to vote according to his own convictions, irrespective of party duty, were paramount in every issue.

Yet, he didn't gain his enviable position by being sensational. Having a creative imagination that was forever reacting against his environment, he went about the usual things of life in an unusual manner. But, having the control of a trained lawyer, he never quite let his imagination run away.

Born in a family of little means, Tom Walsh had to struggle for an education. He taught himself out of need and high courage. Sustained by a determination to become a lawyer, he held steadfast to a goal he saw clearly ahead. It became the driving force of his life, taking him first to Dakota Territory and on to Helena in 1890, shortly after Montana reached statehood.

Those were the stirring days that dramatized the end of a reckless era and the transsition from fortune seekers to permanent settlers; from placer mining where a tin pan might make a man rich to copper kings, warring for control of "the richest hill on earth and the vote of the poor miners who burrowed in its depths." Unobtrusively, Attorney Walsh made his own place in the changing era and had the satisfaction that nothing could take it away from him.

The Helena attorney was not nationally known then, but destined to be. Starting in a modest office in the Gold Block, Walsh slowly increased his legal practice until he became one of the most eminent lawyers in the West. He held an excellent reputation among members of the bar association. His scrupulous fairness and profound knowledge of law gave him the confidence of his associates and respect of his adversaries. But he still had a difficult road ahead of him before first winning the senatorship in 1913.

Like Jefferson, Walsh was interested always

in the welfare of the common man. Above all else he was a workingman's lawyer. Almost from the start of his professional career in this State his uncompromising stand for workmen's rights against business interests practically made him a legend. Out of this regard came an unerring instinct for popular government.

At this stage the influential lawyer became a prominent figure in the councils of the Democratic Party. His office was the rallying point for persons of both major political parties who rebelled against boss rule. Since there was evidence that the citizenry had lost its capacity for independent thought, Walsh envisioned a grim struggle to determine whether democracy had sufficient strength to overcome the special interests who controlled its vote. Sharing his view with political associates, he pointed out the need to arouse public sentiment for rule of the people through progressive legislation. Though the stakes were high, his resourcefulness was unlimited.

Through his consistent efforts, The People's Power League, which he helped to organize, secured the enactment of such progressive reforms as the direct primary, initiative and referendum, popular election of U.S. Senators and other revolutionary laws that are as vital today as they were in his own time.

Consequently, despite the difficulties he had encountered, his campaign for U.S. Senator in 1912 proved a brilliant success. At the polls on November 5, the voters of Montana designated Thomas J. Walsh as the people's choice by a wide majority that amply justified the preferential primary.

In his speech of acceptance before a joint session of the State Legislature on January 15, 1913, the Senator-elect thanked legislators for having chosen him at the critical juncture of political life. He reminded his listeners that this was the last time a Montana Legislature would formally participate in the election of the U.S. Senator. And, in the departure from the old system was witnessed one of his initial triumphs in the movement to make this Government truly popular.

Satisfied that they had chosen a man of deserved eminence and unselfish desires to serve their best interests, the people of Montana sent Tom Walsh off to Washington and undreamed of fame. It is to Walsh's glory that he never broke faith with them. Entering the national Senate as an unknown, Walsh commanded almost instant admiration because of his keen and searching

As he continued to grow in stature, Montana achieved a unique and historically unprecedented position in the Nation. A persistent crusader, Walsh fought tirelessly for what he believed right for all people not for just the favored few. Seldom has history revealed a public servant freer from the taint of personal ambition and greed than was ours in the person of Senator Walsh.

A pronounced leader in the Wilson administration, Senator Walsh, only went as far with the President as his honest convictions allowed him. In a series of speeches defining war powers under the Constitution, Walsh won the praise of rulers in foreign lands. Not until then did the general public really begin to know him as an American statesman, respected throughout the world for his legal ability and clear thinking.

It was not until Americans became involved in World War I that national interests became inextricably entangled with those of the outside world. For 12 years after the cessation of hostilities, when the United States withdrew from almost every form of cooperation with other nations, Senator Walsh fought against the isolationist policy. Up to then few men had given a closer, more sustained scrutiny of international issues than he.

In the powerful Senate Committee on Foreign Relations his long interest in world affairs was clothed with responsibility both in formulating America's foreign policy and articulating it. Walsh urged his colleagues to show more imagination and initiative toward constructive statesmanship. For, he argued, only by commonsense cooperation with other nations could the American people create a world society which might be able to crush the causes of war.

Focusing on the tariff problem, he gave his finest efforts toward formulating a reciprocal trade program, placing still greater emphasis on the need for sound long-term planning. It is noteworthy that many of his logical interpretations have had a substantial influ-

ence ever since.

Because postwar unemployment resulted from the cessation of tremendous war expenditures, Tom Walsh proposed and defended unemployment compensation, and tending it absolutely necessary that governmental capital be invested on a large scale to combat the destitution of the 1920's. He effectively argued that Congress should formally recognize the maintenance of full employment because, he said, "nothing contributes more to stable farm prosperity than the maintenance of full employment in the cities with the assurance of adequate purchasing power for both farm and factory products."

Much of the colossal highway program that has been under way for decades originated in his insistence that improved transportation was the key to unlocking the resources of the vast undeveloped western regions. He considered good roads as important as good homes and as essential as motor vehicles in the transportation revolution this country was even then experience.

Senator Walsh was among the foremost to direct attention to the relationship between highways and airways fed by the same streams of commerce. Believing that air traffic would have a far-reaching effect on national economy and defense, Senator Walsh crusaded for a direct air-route from Chicago to Seattle. His work in promoting the commercial network which would carry passengers and freight proved exceptionally fruitful. Croil Hunter, official of Northwest Airways, Inc., referred to the late Senator as "the real father of the northwestern air route."

This man who was born 100 years ago in the little lakeport where the mingling waters of two rivers flow into Lake Michigan labored ceaselessly for the enactment of that important piece of legislation, the St. Lawrence Seaway. The last public speech Senator Walsh made was his favorable report that brought the treaty to the Senate chamber. That was as far as he could go with it before death claimed him in 1933. It remained for another generation to pick up the banner the fallen Senator had dropped. Coincidentally, this year marks the formal opening of the engineering marvel. As ocean vessels move 2,000 miles inland, bearing their cargoes from the ends of the earth, one wonders how much credit will be ac-corded Senator Walsh for his help in making the great industrial dream come true.

The historic old Madison Square Garden had been the scene of many important happenings in the past, but never had it been the center of a more stirring attraction than during the Democratic convention in 1924 where Tom Walsh presided with coolness and impartiality. On introducing him that torrid June 28, Senator Harrison sald:

"I present to you a real Democrat and the greatest investigator in the history of the country, United States Senator Thomas J. Walsh."

It was that oil-soaked Teapot Dome inquiry that brought Walsh his greatest publicity. But even so, his fame before the American people has never been in proportion to the weight of his deeds.

# The FHA Idea: Better Housing Through Sound Finance

EXTENSION OF REMARKS

# HON, HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an address delivered by Dr. Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, on the occasion of the industry salute to the FHA in honor of its 25th birthday, on June 18, 1959, at Washington, D.C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FHA IDEA: BETTER HOUSING THROUGH SOUND FINANCE

(Address By Dr. Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, on the occasion of the industry salute to the FHA in honor of its 25th birthday, June 18, 1959, Washington, D.C.)

Our pleasant purpose here this evening is to celebrate the 25th anniversary of the launching of an idea—the FHA idea—and to express our gratitude for the enormous benefits it has brought to the American people. Essentially, the FHA idea is a simple one.

This statement may surprise those who have been fully exposed to the intricacies of our Federal home loan insurance programs. Indeed, it has not been easy for me to persuade myself that the statement is entirely correct. Along with many others, I have struggled hard to understand the complexities of our mortgage insurance programs, and I cannot pretend that my efforts have been fully successful. I am forever discovering new things about these programs, and forever discovering that things I thought I understood I did not really understand at all.

And there is little wonder that this should be. We have sections galore in FHA, each with its distinctive provisions. Among the survivors—and few ever die—are 203, 207, and 213, to mention but three; and there is 608 of beloved memory. We have several new arrivals, too—220 and 221; and the Lord only knows how many more to come. We have section within sections, too. I would remind you that once upon a time one of the principal FHA programs was elegantly numbered 203b(2)b. This is the stuff out of which the expert is made.

But despite all this, I think we can say that the FHA idea is a simple one. The idea is that, within limits set by sound appraisal procedures and underwriting principles, the pooling of risks in a self-supporting mutual-insurance system enables American families, borrowing from private financial institutions, to buy a home, or improve a home already owned, on liberal—indeed, generously liberal—credit terms. The Federal Government sets the ground

rules, so to speak, and, within these bounds, private funds, protected by Federal insurance, flow into private use.

. This idea was written into law in June 1934 in the National Housing Act. It is not too much to say that it is one of the outstanding social inventions of our time.

II

The whole Nation owes a debt of gratitude to FHA for its accomplishments over the last 25 years. Large numbers of business concerns and millions of individuals have benefited directly from its operations.

First, some 14,000 private home lending and investing institutions of our country, many of which are represented here tonight, are approved to make FHA loans. They hold among their assets close to \$26 billion of FHA-insured mortgages and nearly \$1½ billion of FHA-insured home improvement loans. Thousands of these institutions also make loans to finance the construction of homes, premised largely on the ultimate availability of an insured mortgage. And many thousands are engaged in servicing FHA-insured loans, each in direct contact with large numbers of borrowers. Finally, there are many that perform a mortgage warehousing function. I will resist the temptation to explain what warehousing a mortgage means, except to say that it doesn't mean what the uninitiated probably think it means.

Second, many thousands of firms and individuals who help complete transactions in real estate markets benefit from the services provided by FHA. So also do those associated with the construction industry itself—architects, builders and contractors, the nearly 3 million workers in the building trades, and producers and distributors of building materials. And so do those who make and sell the countless things that equip and furnish our homes today.

equip and furnish our homes today.

And finally, 5 million American families have acquired homes under what has come to be called the FHA plan, and additional millions have improved their homes on credits protected by FHA insurance.

m

It is fair to say that all of these are celebrating with us in spirit, at least, tonight. And so they should, for FHA, in benefiting them, and the Nation generally, has not just done its job well; it has done its job superbly well.

FHA passes with flying colors the usual tests of an insurance system. In the last 25 years it has sustained losses of only three-tenths of 1 percent on an insurance exposure of some \$57 billion. These losses have been fully covered by its insurance reserves, now totaling nearly \$750 million. In addition, nearly \$100 million of the premiums paid by FHA borrowers have been paid back to them in dividends out of the system's mutual insurance funds.

To have made ends meet in this manner is a very good record, indeed, but I doubt that this birthday would mean as much as it does to us if we could not say more for FHA than that it had been actuarially sound.

We do have additional reasons for this celebration.

One is that FHA has done its job in ways that have enhanced the vigor and increased the strength of our free institutions, not weakened them. The FHA idea does not contemplate the replacement of private financing by public financing. It is the FHA idea that Government's role is to facilitate the flow of private funds into the financing of home ownership and improvement, not to substitute public funds for them. And for the most part this is the way the FHA system has worked, though we would be ignoring important chapters of its history

If we did not acknowledge that even today almost \$2 billion of loans protected by FHA insurance are held directly by the Federal Government.

Another valid reason for celebrating this occasion is that the FHA idea recognizes the equity of placing on those who directly enjoy identifiable and useful services of Government the costs of rendering those services, rather than to levy them on taxpayers generally. And it has demonstrated that such an arrangement is both practical and beneficial. For all the good things it has done in its first 25 years, FHA has not cost the general taxpayer one single cent. It is probably our outstanding example of the principle of user charges put to effective work.

Finally, we can be grateful to FHA for the fact that it has demonstrated the good that can be accomplished by a credit tem that operates under sound construction standards, appraisal practices and underwriting principles. The FHA idea does not contemplate the conduct of an insurance system on a basis that ignores, or even subordinates, any thought of credit quality. On the contrary, it contemplates the insurance of credits on terms that will hold losses within limits that can be supported by only a modest insurance charge. grateful to FHA not just for having demonstrated conclusively that such a system can be made to work, but for having shown that sound finance is an effective instrument for the improvement of human welfare.

IV

Birthdays are appropriate occasions for looking backward and for counting our blessings. They are, or should be, occasions also for looking forward and for counting our new opportunities.

Can there be any question but that the next 25 years will be just as exciting and fully as challenging as the 25 years through which FHA has just passed? They will be different, certainly, and we hope they will be better. Barring the international calamities which we will strive by every means to avoid, we know that in these coming years our home-financing system must help provide a great deal more, and we hope even better, housing for the American people. Compared to the 50 million increase in population of the last 25 years, in the next quarter century our population may increase by something between 65 and 115 million. No one can translate this expected population growth into housing demand with precision. But the number of households may increase half again as much as in the last quarter century. Is it not reasonable to expect housing demand to rise in roughly the same, possibly even a higher, proportion?

To meet this challenge will be no easy task. But the accomplishments of the last 25 years, performed as they were in the face of great difficulties, are so impressive as to provide reasonable assurance that we can do at least as well in the future. In any case, building the houses will be the least difficult part of the Job. The real challenge of the next 25 years will be to meet our housing requirements in ways that leave our free institutions not just intact at the end of the period, but stronger and more vigorous even than they are today.

- 27

Can we successfully meet this challenge? I believe we can, and much of my confidence is based on the fact that we know very well the conditions necessary for success.

First, we know that we must keep our economy on a reasonably even keel. Like all insurance systems, a system of credit insurance is based on the assumption that the conditions affecting the risks it insures can be successfully anticipated. A mort-

gage insurance system implies a prospect of continuing employment opportunities, and a continuing flow of income to individuals and families undertaking the purchase of homes on credit.

It is a measure of the optimism of our country that the concept of installment credit has been applied to the purchase of homes through payments spread over a period of 20 to 30 years; and that FHA, as a Federal instrument for facilitating such purchases, was launched in the depth of the Nation's gravest economic depression. this optimism has been amply justified. Over the 25 years of FHA's history the American economy has grown at a vigorous rate. We have had ups and downs since 1934, to be sure, but economic fluctuations have been kept within rather narrow limits, and FHA has weathered them remarkably We cannot expect to eliminate economic fluctuations entirely in a free so-ciety, but we can expect to narrow their range and to improve our performance as we go along. This is the constructive meaning of the Employment Act of 1946, which it is my privilege to help administer. Clearly, the degree of our success in helping to promote orderly and sustainable economic growth will have a decisive bearing on the degree to which, in the next 25 years, we realize the continuing benefits we can properly expect from the FHA idea.

Second, while we are aware of the benefits obtainable through the use of credit, including the use of credit to finance home ownership and improvement, we also know that there are limits to its safe use. Our installment credit systems, whether protected by Federal insurance or not, make it possible for individuals to achieve significant improvements in welfare by purchasing useful things costing several times their incomes. Indeed, historians will someday look upon our Nation as having introduced the novel idea that an economy can provide its own expanding markets by dedicating itself, not just to the interests of a small class, but to raising the levels of living of the people at large; that this system of mass distribution is an essential complement to mass production; and that the wise use of credit plays a constructive role in this accomplishment.

There will be many temptations in the future to push toward greater liberality of housing credit terms, but we know that the success of FHA in the next 25 years will depend in no small part on its continued adherence to sound construction standards, appraisal procedures, and underwriting principles.

Finally, we know that if FHA is to serve us as well in the future as in the past we must preserve its inherent adaptability. Especially, it is essential that its programs continue to operate on realistic interest rate bases. Only under these conditions will an adequate supply of funds flow directly from private institutions into private use-in part under the protection of Federal insurance, to be sure, but without making a detour through the Federal Treasury. A large measure of FHA's success is due to the fact that its insurance has been available for loans which could carry realistic interest rates. Indeed, if this had not been the case, private financing under FHA insurance would long ago have ceased to be available, and we would not be here tonight.

VI

Given these conditions—a soundly growing economy, the prudent use of credit, and realistic interest rates—and the continued service of those in public and private life who strive daily to make the FHA idea work, we can be confident of successfully meeting the housing challenges of the next 25 years.

As we look toward the future, let me conclude with a final expression of appreciation for the record of the past. To those who helped invent the FHA idea; to the Members of Congress who helped write it into legislation; to the national leaders who maintained its vigor and integrity over the years; to the Commissioners of FHA, past and present, for their constructive stewardship; to the members of FHA across the country for their devoted service; and to you, Mr. President, for your own inspiring support of the FHA idea, we here tonight and millions of our fellow citizens join in salute and in thanks for a job well done.

Thank you very much.

# Editorial Comment on Recent Supreme Court Decision

EXTENSION OF REMARKS

# HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Thursday, June 18, 1959

Mr. KEATING. Mr. President, in connection with the remarks which I made this morning about a recent Supreme Court decision, I ask unanimous consent to have certain editorials printed in the Appendix of the Recorp.

There being no objection, the editorials were ordered to be printed in the RECORD as follows:

[From the New York Times, June 9, 1959] IN THE NATION—A COURT SPLIT ON AUTHORITY OVER CONGRESS

(By Arthur Krock)

Washington, June 8.—Conflicting concepts of the limits to which the jurisdiction (and inherent obligation) of the Supreme Court extend in nullifying the investigating activities of Congress were the root of its 5-to-4 division today in the case of a former Vassar College instructor.

The majority, whose spokesman was Justice Harlan, decreed that when Congress keeps within its constitutional bounds in authorizating and conducting such an investigation, "the judiciary lacks authority to intervene on the basis of the motives which spurred exercise of that [inquiry] power." The four dissenters, for whom Justice Black was spokesman, contended that the judiciary has the authority as well as the obligation to weigh motives as a basis of decision.

The congressional activity which produced this case involved an assertion of his constitutional freedoms by an individual in resisting a House committee's exercise of Congress' power of inquiry. Justice Harlan squared the decision with the court's ruling in the Watkins case. This required that, in the exercise of that power, congressional committee questions be pertinent to stated and constitutional objectives set for the committee by Congress is authorizing an investigation, and that this pertinence be made clear to witnesses. And Justice Harlan ruled that the committee, in addressing three of five questions to the former Vassar instructor. Lloyd Barenblatt, met both requirements.

But Justice Black, for the dissenters,

But Justice Black, for the dissenters, drew so wide a zone of protection from governmental inquiry and act for Communist partisans and their sympathizers that apparently he went too far for one of the dissenters, Justice Brennan. This was indicated by Justice Brennan's carefully limited concurrence:

"It is sufficient that I state my complete agreement \* \* \* that no purpose for the

investigation of Barenblatt is revealed by the [committee] record except exposure purely for the sake of exposure."

However, Chief Justice Warren and Justice Douglas made no restrictions on their agreement with these passages in Justice Black's opinion:

"No matter how often or how quickly we repeat the claim that the Communist party is not a political party, we cannot outlaw it, as a group, without endangering the liberty of all of us. \* \* \* For mixed among those aims of communism which are illegal are perfectly normal social and political goals. \* \* \*

"Once we allow any group which has some political aims and ideas to be driven from the ballot and from the battle for men's minds because some of its members are bad and some of its tenets are illegal, no group is safe. \* \* \* Today Communists or suspected Communists have been denied an opportunity to work as Government employees \* \* \* and in just about any other job. In today's holding they are singled out and, as a class, are subjected to inquisitions which the Court suggests would be unconstitutional but for the fact of communism."

But this was dictum and prophecy. For what the majority held, in addition to finding pertinent to the inquiry certain questions Barenblatt refused to answer, was that:

The House established its Un-American Activities Committee in 1938 to "expose and ferret out the Communists and Communist sympathizers in the Federal Government,' in labor unions, in entertainment, in education, etc. It has "never narrowed the powers of the committee," steadily increased its appropriations and promoted it from a special to a standing group. The establishment and the stated objectives were within the and the stated objectives were within the power of Congress, subject to constitutional limitations set by the Court in Watkins and other decisions. These were properly observed in questioning Barenblatt on his membership in the party at the time and concerning his Communist associations as a teacher, for neither teachers nor educational institutions are immune merely because they are such. In these circumstances the judiciary has no power to intervene on the basis of motives. Therefore Barenblatt was properly sentenced to 6 months in prison and fined \$250 for refusing to answer these questions.

No previous decision and dissent have cast so clear a light on the source of one fundamental difference in the Court—how far it has the power to assert judicial supremacy over Congress.

[From the New York Herald Tribune, June 10, 1959]

SUPREME COURT CLARIFIES

In upholding the contempt of Congress conviction of Lloyd Barenblatt, the majority of a sharply divided Supreme Court affirmed the broad investigative powers of congressional committees in the field of Communist activity.

When he refused in 1954 to answer questions put to him by the House Un-American Activities Committee about present or past membership in the Communist Party, Barenblatt—a former instructor at the University of Michigan and Vassar—maintained that the inquiry violated his rights under the first amendment.

The Court, however, held that the Communist Party cannot be considered an ordinary political organization, and that congressional power to legislate (and to investigate) in the field of Communist activity "rests on the right of self-preservation." It rejected the contention that academic freedom makes education "a constitutional sanctuary from inquiry into matters that may otherwise be within the legislative domain." While reaffirming its 1957 Watkins case ruling that the pertinency of a question to a

clearly defined legislative purpose must be demonstrated to a witness, the Court found that in spite of a vaguely worded charter, a "persuasive gloss of legislative history" has "clothed the Un-American Activities Committee with pervasive authority to investigate Communist activities in this country."

This should not, however, be taken as a charter for harassment of witnesses without compelling legislative purpose. Justice Black, in a biting dissent joined by Justice Douglas and Chief Justice Warren, declared that "the Court today falls to see what is here for all to see—that exposure and punishment is the aim of this committee and the reason for its existence."

The franchise of congressional committees to investigate has been strengthened. But this is liberty, not license, and the sharp words of the dissenters should be a warning to investigators to guard their franchise in the future by not abusing it.

[From the Christian Science Monitor, June 10, 1959]

THE COURT AND CONTEMPT

It is easy to read overly broad meanings into Supreme Court decisions. Two just rendered may prove less substantial in their concessions to State and congressional authority than at first appears.

One looks like a retreat from the Nelson case where the Court held invalid a State law designed to protect the Federal Government from sedition. Now the Court says that decision did not affect efforts of States to protect themselves against sedition. Practical effects of this ruling may be limited. For sedition against States is not common.

In the other decision the Court appears to give back to Congress some of the powers it took away last year in the Watkins case. There, in another contempt case, it set up strong barriers against abuse of congressional investigative powers. In the present case it says a teacher was rightly held in contempt for refusing to answer questions put by a committee about his political beliefs.

Justice Harlan, in the majority opinion, reaffirms that there are constitutional limits on congressional investigations. He says the Court would be alert if an inquiry were attempted into the general freedom to teach and to learn. But he holds no individual rights were violated by the committee's questions.

Four justices strongly dissent. They declare this was in effect a legislative trial based on vague legal authority. Justice Brennan makes the further point that the record shows no purpose of the committee to frame legislation but merely "exposure for the sake of exposure." This is the key question for public judgment.

In this newspaper's opinion too many congressional committees in recent years have strayed far from actual legislative functions. In addition to FBI activities, exposure—especially of the Communist conspiracy—may be desirable. But if exposure, not legislation, be the purpose, then a noncongressional, nonpartisan commission of distinguished citizens is the better instrument.

Justice Harlan says it is not the province of the Court to judge the wisdom or efficiency of congressional committees. But the public should certainly restrain the publicity-seeking personal-promotion misuse of inquiries. And it should ask the Court to hold the line against official oppression of individuals including those holding unpopular views.

[From the Washington Post, June 10, 1959] THE COURT BACKSTEPS

Whether or not the Supreme Court has listened to its critics, it certainly gave heavy

weight to the position of the Government in the two civil liberties decisions handed down on Monday. In the Barenblatt case, the conviction of a recalcitrant witness before the House Un-American Activities Committee was upheld, and the Court's 5-4 decision went far to give constitutional sanction to the committee's operation. In the Uphaus opinion, the Court not only sustained a State contempt conviction, but also explicitly approved the right of New Hampshire to enact laws prescribing State sedition.

The effect of the two decisions is to restrict the application—or at least the interpretation—of some of the Court's most controversial rulings in the area of civil liberities. These include the Watkins and Sweezy cases of 1957, both concerned with limiting legislative inquiries, and the Nelson opinion of 1956, which held that only the Federal Government could prosecute for sedition against the United States—an opinion which was then regarded as voiding State sedition laws.

But the shift of judicial opinion is more apparent than real. In all of the cases at issue, Chief Justice Warren and Justices Black, Douglas, and Brennan have voted consistently to uphold civil rights against what they regarded as possible Government encroachment. Among the remaining Justices, the role of Justice Frankfurter is undoubtedly the most significant. Two years ago he voted with the 6-1 majority in the Watkins case (Justice Clark dissenting), and he also was with the majority in the Sweezy opinion handed down the same day.

Nevertheless, Justice Frankfurter gave a clue to his present position in concurring opinions in both Watkins and Sweezy. He made it clear that he did not join in the broader dicta condemning legislative investigations conducted solely for the purpose of exposure. He felt that the Court should confine its rulings to narrower grounds and avoid sweeping asides on general matters, remarking in Sweezy: "It would make the deepest inroads upon our Federal system for this Court now to hold that it can determine the appropriate distribution of powers and their delegation within the 48 States." caution is the animating doctrine in Justice Harlan's opinion in Barenblatt and Justice Clark's opinion in Uphaus. Thus Justice Frankfurter's long-held philosophy of constitutional law has prevailed.

It probably would go too far to say that the protection of the individual citizen against wild-swinging committees has thereby been permanently diminished. To be sure, when the Supreme Court in 1957 upheld the right of John Watkins not to name names before the Un-American Activities Committee, it limited the range of inquiry when no pertinency to a valid legislative purpose was evident. In the case of Lloyd Barenblatt, who appeared before the same body in 1954, the Court now finds that the pertinency test is inapplicable because the issue was not originally raised by Mr. Barenblatt. But there is a distinction between the two cases.

Mr. Watkins had not declined to testify about his current activities; he had refused. rather, to give the names of associates of some years before. Mr. Barenblatt, however, flatly refused to answer the question whether he was at the time of the inquiry a member of the Communist Party. One of the fine issues between the two cases—testimony about present direct involvement as contrasted with testimony about past associates-the Supreme Court has yet to meet. Justice Harlan's opinion stresses, however, that because the Communist Party is not "just an ordinary political party," governmental action is permissible which in a different context "would certainly have raised constitutional questions of the gravest char-

If this seems to confirm the charter of the Un-American Activities Committee despite the vagueness of that mandate, it also recognizes the undenlable need for Congress to have wide latitude in ferreting out information about the Communist Party. This does not necessarily mean, however, that the Court is unwilling to set limits of pertinence on congressional inquiry when the issue of com-munism is involved. Rather, it says in effect that Congress has a right to protect the country against the particular phenomenon of Communist conspiracy. The Court itself will remain as a bulwark against invasion of basic constitutional rights.

Not unnaturally, the dissenters led by Justice Black see in the majority opinion a dangerous potential for the invasion of civil liberties. In the case of Uphaus, there are grounds for serious misgivings over the ruling that the attorney general of New Hamp-shire can force Willard Uphaus to disclose the guest list at a summer camp meeting of a pacifist group.

In the larger compass, however, it is the task of the Supreme Court continually to reassess the balance between individual rights and the obligation of the State to defend itself against subversion. The Court has, this time, struck a balance in the Government's favor. But the presence of four powerful dissenting voices and the independent position of Justice Frankfurter afford reasonable assurance that the balance will be struck on the other side if governmental organs abuse their power.

#### [From the New York Herald Tribune-June 15, 1959]

SUPREME COURT PERSPECTIVE—BARENBLATT DECISION ADDS TO RED PRODE'S AUTHORITY

Two decisions of the Supreme Court last Monday-Barenblatt v. United States and Uphaus v. Wyman-dramatically iliustrate the need for remembering that what the Court decides, rather than what the Court says in its opinion, is the true measure of the law it declares. In each of these cases the Court dealt with situations similar to but essentially different from, situations on which it had ruled 2 years before-in Watkins v. United States and Sweezy v. New Hampshire. In each of the cases the Court without reversing its prior decisions, has shown that popular assumptions derived from the language of its earlier opinions have been somewhat wide of the mark,

The Barenblatt case can Illustrate both. Lloyd Barenblatt, a former psychology pro-fessor at Vassar, had been identified by a Witness before the House Committee on Un-American Activities as a member of a Communist group at the University of Michigan from 1947 to 1950. When subpoenned by the committee, Barenblatt refused to answer, among other things, whether he was then, or ever had been, a member of the Communist Party. The Court, confining its consideration to his refusal to answer these questions, upheld his conviction for refusing to answer. Mr. Justice Harlan wrote the opinion for the majority (including Justices Frankfurter, Clark, Whittaker and Stewart). Mr. Justice Black wrote a dissenting opinion joined in by Chief Justice Warren and Mr. Justice Douglas. Mr. Justice Brennan dissented in a separate opinion.

#### DID NOT INVOKE FIFTH

Barenblatt did not claim the benefits of the fifth amendment. His arguments were: That the resolution setting up the Com-mittee on Un-American Activities was too vague; that it was inquiring into areas of beliefs and associations with which Congress could have no proper concern because of the first amendment, and that the committee was not seeking information in ald of legislation, but was out to punish individuals through public disclosure. Three

of these contentions; Mr. Justice Brennan put his dissent solely on the last ground.

The arguments made by Barenblatt could be supported, in many respects, by the language of the majority opinion in the Watkins case, which was decided in June 1957.

In the Barenblatt opinion, however, Mr. Justice Harlan tells us that while the Court continues to believe, as it did in Watkins, that the committee's enabling resolution itself is too vague to be a guide, Barenblatt was given additional information as to scope of the particular inquiry by the preliminary statement of the chairman and by prior proceedings of the committee which Barenblatt had attended.

#### EXPOSITEE ISSUE

On the matter of exposure for exposure's sake, Mr. Justice Harlan states that the Watkins case was not decided on that Indeed the Court had expressly ground. conceded that it could not examine into the motives of committee members.

Although the Watkins case is still law, there is certainly a sharp contrast between the opinion in that case and the opinion of the new majority in the Barenblatt case (which, incidentally, includes Mr. Justice Stewart, appointed since the decision in the Watkins case). Moreover, in the Barenblatt case the Court has decided several new matters. The Court has held that, if the Committee on Un-American Activities will take the trouble to make clear the nature and scope of each of its investigations as they occur, the vagueness of its basic charter will not deprive it of the right to compel answers to its questions.

More importantly, the Court has decided that the committee may inquire into beliefs and associations, so long as they are related to the Communist Party and its activities. If they so probed other matters, the inquiries would raise, in Mr. Justice Harlan's words, "constitutional issues of the gravest character" under the first amendment.

#### REDS SINGLED OUT

It is on this latter holding that Mr. Justice Black's dissent poses its most serious question. In effect, as he points out, the majority has decided that Communists have lost at least some of the first amendment's protection which would apply, for example, to Democrats, or Socialists or Prohibitionists. They have lost them because among Communist tenets is the ultimate overthrow of the Government by force and violence.

Of course the Government has and has exercised the power to protect itself by punishing seditious or treasonable acts, but now it may, to an extent which would be forbidden as to other groups, curtail Communist ideas, opinions, speeches and associations. Recalling that in our past history we have had other groups which have been similarly accused—the Socialists in 1920, the Masons in the 1830's, and Jefferson's party in the late 18th century-Justice Black feels that the Court has made a major step away from the safeguards, not only to Communists, but to everyone, embodied in the first amendment.

Perhaps it is too much to expect that in an era of cold war with the Communist world the Court would carry to its ultimate conclusion Mr. Justice Holmes' dictum of "freedom for the thought we hate," or the proud boast, in Jefferson's first inaugural address, of toleration under the Constitution even of those who would like to dissolve the Union. The more significant safeguards in such times will come from a sense of re-straint in the Congress, and a widespread sense in the community of the values inherent in the Bill of Rights.

#### of the dissenting justices agreed with each LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or document in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec, 150, p. 1939).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

New Glory for Old Glory

EXTENSION OF REMARKS

## HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. McINTIRÉ. Mr. Speaker, too few of us are constantly conscious of the fact that our flag is a symbol of the truly great American drama, that the Stars and Stripes first fluttered in the winds of dynamic events which were the heightened expression of the breath of freedom.

To refresh our minds, stimulate our patriotism, stir our hearts, and excite our spirits, I submit to the Record the following excellent address:

#### NEW GLORY POR OLD GLORY

(Address delivered by Daniel E. Lambert, Orrington, district commander of the fifth district, Department of Maine, the American Legion, during the special American Legion Flag Day observance program on station WLBZ-TV, channel 2. Bangor, Maine, on June 14. The program was held in cooperation with the Maine Department of the American Legion and station WLBZ-TV, Bangor, as part of a public service effort to stimulate interest in the patriotic observance of our national day of remembrance)

My friends and fellow Americans, Flag Day on June 14 is the annual observance of Old Glory's anniversary.

It was on June 14, 1777, that George Washington proclaimed the first Flag Day. It was on that date that the Stars and Stripes first was displayed officially as the national American colors. This first flag embodied the 13 stripes but had only 13 stars representing the original Colonies which had formed the first Union.

In the eyes of the Maine American Legion, Flag Day is one of the most important of American holidays. The American Legion since its birth has been dedicated to the promotion of flag education and the proper display of the Stars and Stripes.

We of the Maine American Legion urge every citizen of the Pine Tree State to practice good citizenship with home ownership

and display of our flag.

How many of our American citizens know the dramatic history of Old Glory? As an American Legion representative, I would like to devote this Flag Day talk to the birth and

development of Old Glory.

It was at the battle of Fort Stanwix—later renamed Fort Schuyler, at Rome, N.Y., that the American flag was first flown in the open air in the name of freedom. The battle for New York was just beginning. The upstart colony would not respond to the dictates of the mother country, so the English Redcoats were sent over to beat them into submission. And now the unkempt American farmers who fought under Colonel Gansevoort had the nerve to fly this new flag in their faces. The Redcoats laughed, and vowed they'd soon tear it down.

That was on August 3, 1777. But that flag, which was supposed to fall with the first volley of shots, somehow kept flying.

It was still at the mast 19 days later, when the British called off their siege. Then, on October 17, little more than 2 months after the Stars and Stripes first fiew in the faces of the enemy, General Burgoyne handed over his sword to General Washington at Saratoga. One of the most decisive campaigns of the Revolutionary War was over.

That first fing was a homemade affair. History tells us that it was made from shreds of cloth which were available in the fort. It was put together, it is said, from the white of a soldier's shirt, the blue of a captain's cloak and the red from a woman's peticoat. It was fashioned, in the tradition of American democracy, from the resolution adopted by the new American Congress a few months earlier:

"Resolved, That the flag of the 13 United States be 13 stripes, alternate red and white; that the Union be 13 stars, white on a blue field, representing a new constellation."

It was in June 1776, fully a year before this official adoption of the flag that a committee called upon Mrs. Betsy Ross at her little upholstery shop in Philadelphia. Would it be possible, they asked, to make a flag according to the sketch they presented?

They showed her a drawing of 13 stripes and 13 stars, 1 for each of the Thirteen Original States. Each of the stars had six points. Mrs. Ross quickly suggested that the stars be reduced to five points. She showed them how a five-pointed star could be made with one snip of the scissors through folded cloth. George Washington, one of the committee members, immediately agreed and suggested that the new five-pointed stars be arranged in a circle. This would signify equality for all, and that no one star was to be better than another.

Within a few days the flag was made. Although America was to have no official flag until that first Flag Day—a year later, on the 14th of June 1777—the Betsy Ross flag served in the meantime. The deep significance behind the colors which has attended them through the years was pointed out by General Washington:

"We take the star from heaven, the red from our mother country, separating it by white stripes, thus showing that we have separated from her, and the white stripes shall go down in posterity representing liberty."

The first official flag, like the Betsy Ross flag, embodied 13 stars and 13 stripes, representing the Thirteen Original Colonies, But, on March 4, 1792, Vermont joined the new Union, and on June 1 of the following year, Kentucky did likewise. How were these new members to be recognized in the make-up of the flag?

Various suggestions were made. The circular pattern of the stars of the early flag had been replaced by that of three horizontal lines of stars; perhaps Vermont and Kentuck could be placed at the end of the last line. Then, too, they could be represented by two new stripes at the bottom of the flag.

So, in 1794, President Washington approved an act which had been passed by Congress:

"Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the 1st day of May 1795, the flag of the United States be 15 stripes, alternate red and white; and that the Union be 15 stars, white in a blue field."

This flag, with 15 stars and 15 stripes, was flown over U.S. forces during the War of 1812.

It was the sight of this flag, as it flew over Fort McHenry in September, 2 years after the war's outbreak, that inspired the writing of "The Star-Spangled Banner" by Francis Scott Key.

But the baby Union kept growing. Tennessee and Ohio had joined before the 1812 war; Louislana joined that same year. Indiana joined on December 11, 1816, and Mississippi on December 10 a year later. Now the Union was made of 20 States. Would it not be cumbersome and awkward to add a new stripe and star each time a State joined?

A committee was set up by Congress to study the problem. They realized that more States might join, and that some means must be found to give them a place of honor in the flag without radically altering its plan. Many suggestions were made. Design after design was presented, considered, dropped.

Finally, on April 4, 1818, "An act to establish the flag of the United States" was signed into law by President Monroe. The flag would consist of 13 alternating red and white stripes, plus a field of blue with a white star representing each State. As new States were admitted to the Union, a new star would be added, to take effect, in the words of the act:

"On the 4th of July next succeeding such admission."

Thus, 141 years ago, the general pattern of our flag was settled. Stars were added with the admission of new States, until in 1912—nearly 100 years after the writing of the Star-Spangled Banner—the 48th star was added to represent Arizona, which had joined earlier that year.

Tradition has it that the first American flag to fly over a warship was hoisted by John Paul Jones on July 4, 1777. Later it was transferred to the ship Bon Homme Richard, a decrepit hulk which staggered under the recoil of her 40 guns. With the Stars and Stripes at her masthead, he took her into English waters. Here he secured many valuable prizes, engaging far better ships and defeated them by brilliant seamanship. Finally, however, his ship met her fate in a conflict with a Baltic man-of-war. The

Finally, however, his ship met her fate in a conflict with a Baltic man-of-war. The Serapis, a bristling new frigate, was engaged by the Bon Homme Richard in a tremendous battle. Firing point-blank, the two ships neither gave nor asked any quarter. Finally, the Serapis sent a request for surrender to the shredded and sinking Bon Homme Richard.

Back came the famous reply of John Paul

"I have not yet begun to fight."

Within a few hours the tenacity of this unquenchable American and his crew turned the tide—and the pride of the British convoy lowered her colors to a sinking American hulk. John Paul Jones transferred to the Serapis, and watched the Bon Homme Richard go down with her dead still aboard and the Stars and Stripes still flying.

Telling of it later, he said, "The very last vestige mortal eyes ever saw of the Bon Homme Richard was the defiant waving or her unconquered and unstricken flag as she went down. And as I had given them the good old ship for their sepulchre, I now bequeathed to my immortal dead, the flag they had so desperately defended for their winding sheet."

A finer tribute to a flag can be paid by no man.

When did the flag get its name Old Glory? History tells us that Capt. William Driver, a Salem sea captain, who moved to Nashville just before the Civil War, took with him the

flag from the brig he had commanded. It was his flag which was eventually raised over the capitol there. As it rose to the breeze, history reports Captain Driver as saying, "I have always said if I could see it float over that capitol I should have lived long enough; now Old Glory is up there, gentlemen, and I am ready to die."

In keeping with the humble origin of our banner, one of the first American flags to fly over a schoolhouse was a homemade affair. It was unfurled over a log school in Colrain, Mass, in 1812. Since that date millions of schoolchildren have passed in and out of the doors of the Nation's schools under the protection of its banner. While they learned their three r's, most of them were only dimly aware of the immense significance of that red, white, and blue ensign.

That awareness came later. Some learned the meaning of the flag during those years of the war of 1812 when their fathers, their brothers, or their classmates failed to come home. Others learned it in the Mexican War 35 years later. Still others, in the heartbreaking struggle of the Civil War, carried it into battle against their own countrymenor saw it lined up against them across the

The heroes of the Spansih American War raised that flag over the Philippines and Cuba, as Spain was prevented from any further threat to the New World. The doughboys in Europe carried that flag into battle in the First World War. The American GI, the sailor, the marine, the coastguardsmantook it with them to the corners of the earth in World War II. Fliers wore it on their sleeves high over Europe and the Pacific theater. Old Glory floated proudly with other flags in Korea as the first test of the new United Nations was passed.

One of the greatest peacetime triumphs of the Stars and Stripes came nearly 50 years ago. For four centuries man had tried to reach the North Pole. Explorers of many nations had matched their best against the awful cold and misery of the polar regions, and had never attained their goal. Finally one man successfully completed the struggle. On April 6, 1909, the American flag was fixed in the ice of the pole. There it snapped in the wind-a tribute to the spirit of the brave men of all nations and a monument to the courage of Robert E. Peary, commander, U.S. Navy-the man who had placed it there.

The Stars and Stripes is a new flag. No ancient crest adorns its folds. No timehonored motto is emblazoned upon it. Although possessed of a glorious history, it has existed less than 50 years in its present form. It had its modest beginnings in strips of the clothing of a beleagued Nation. Tradition is not a part of it. Rather, it represents those things for which America is most noted: vigor, youth, independence, leader-ship, goodwill. It welcomes under its folds the hopeful pioneers from many lands. No

other flag on earth is like it.

It stands as a symbol of hope in a world full of doubt. That hope has been engendered by the blood and the struggles of millions of boys and girls, men and women, who have fought for the cause of liberty wherever the flag has been in danger.

It is in danger now; perhaps the gravest danger of its two short centuries of existence. The surest way out of the danger is a full appreciation of-and reliance in-the ideals for which it came into being, the sacrifices of those who have made it possible, and the Almighty God without whose favor it could not exist.

In the words of Henry Ward Beecher:

"The history of this banner is all on one side. Under it rode Washington and his armles; before it Burgoyne laid down his arms. It waved on the highlands at West Point; it floated over old Fort Montgomery. When Arnold would have surrendered these valuable fortresses and precious legacles, his night was turned into day, and his treachery was driven away, by the beams of light from this starry banner.

"It cheered our Army, driven from New York, in their solitary pligrimage through New Jersey. It streamed in light over Valley Forge and Morristown. It crossed the waters rolling with ice at Trenton; and when its stars gleamed in the cold morning with victory, a new day of hope dawned on the despondency of the Nation. And when, at length, the long years of war were drawing to a close, underneath the folds of this immortal banner sat Washington, while Yorktown surrendered its hosts, and our Revolu-tionary struggles endeded with victory.

"Let us then twine each thread of the glorious tissue of our country's flag about our heartstrings; and looking upon our homes and catching the spirit that breathes upon us from the battlefields of our fathers, let us resolve, come weal or woe, we will, in life and in death, now and forever, stand by the stars and stripes. They have been unfurled from the snows of Canada to the plains of New Orleans, in the halls of Montezumas and amid the solitude of every sea; and everywhere, as the luminous symbol of resistless and beneficient power, they have led the brave to victory and to glory. They have floated over our cradles; let it be our prayer and our struggle that they shall float over

Thank you, on behalf of the Maine American Legion, God bless you and remember join your American Legion's compaign "New

Glory for Old Glory."

(Following Commander Lambert's address, the new American Legion film "Stars and Stripes in Review" was shown over the was shown over the Bangor TV station.)

Resolution by Textile Workers Union of America on Area Redevelopment Legis-

> EXTENSION OF REMARKS OF

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the resolution recently passed by the northeastern Massachusetts joint board, Textile Workers Union of America, AFL-CIO:

RESOLUTION ON AREA REDEVELOPMENT LEGISLATION

The problem of chronic unemployment will persist with us even if the level of national unemployment declines. There are more than 200 labor markets with substantial labor surpluses which means that more than 6 percent of the labor force are unemployed in these areas. In 121 major and smaller labor markets, unemployment in excess of 6 percent has lasted for more than 18 consecutive months. Continued unemployment has brought great human distress representing a drain on the resources of the individuals, their families, and the communities.

In most of these areas the long-term unemployment is due to the fact that the older industries have shrunken in size, or closed, or employment in the established plants has been reduced by automation and technological change. New industries and employment have not appeared in sufficient volume, if at all, to absorb the present employees and the new entrants into the labor force.

The area of Lawrence, Mass., has been distressed for many months. The latest report on unemployment shows 7 percent unem-ployed. Our community needs the benefits which would be provided for under the area redevelopment bill now being considered by the House of Representatives.

The American people are committed to maintaining an economy which assures maximum employment, production, and purchasing power. Only by assuring jobs for these people can we assure the realization of this

goal.

We are now helping foreign distressed and underdeveloped areas through our foreign-aid program; these same principles should be implemented in this country: Therefore be it

Resolved, That we, the northeastern Massachusetts joint board, Textile Workers Union of America, AFL-CIO, urge upon the Congress of the United States that it pass the area redevelopment bill, S. 722 (House version), and that the President of the United States sign this bill.

LAWRENCE, MASS., June 15, 1959.

Disabled American Veterans Renders Real Service to Veterans in Pennsylvania

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks it is a pleasure to incorporate an interesting report titled "DAV Service in Pennsylvania," submitted to me by my good friend, Mr. Millard W. Rice, who served as Disabled American Veterans National Commander in 1928-29 and subsequently in various responsible positions with the Veterans of Foreign Wars of the United States and the Disabled American Vet-

My friendship with Mr. Rice extends over a long period of time. We were closely associated during my third term as commander in chief of the Veterans of Foreign Wars when in 1936 I appointed him as Veterans of Foreign Wars National Legislative Director, a position he filled in a highly efficient manner for 5 years, resigning to accept appointment as national service director of the Disabled American Veterans. At the present time Mr. Rice is serving as executive secretary and director of the Disabled American Veterans Service Foundation.

The report follows:

DAV SERVICES IN PENNSYLVANIA

The Disabled American Veterans, through its varied activities, has compiled an exceptional record of vital rehabilitation services freely extended to thousands of Pennsylvania citizens. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations which have State departments and local chapters in Pennsylvania is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time

#### DAY SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activitles have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability-compensation payments for service-connected disabilities-some 2 millionthe DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation, in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers, 138 of them being located in the 63 regional and 3 district offices of the U.S. Veterans' Administration and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed

#### DAY SERVICES IN PENNSYLVANIA

Nine full-time national service officers are maintained by the DAV in the three VA regional offices in Pennsylvania: Mr. Samuel A. Hoopes, Curtis Haube, and William C. Watkins are located at 107 Sixth Street, Pittsburgh, Pa.; John J. Keller, Peter Dudish, and Charles S. Rouse at 19-27 North Main Street, Wilkes-Barre, Pa.; and Rudolph Mileski, William E. Gearhart, and Edward J. Norris at 128 North Broad Street, Philadelphia, Pa.

The DAV department commander is Sterling L. Morelock, 1141 North Highland Avenue, Pittsburgh; and the department adjutant is Harry C. Martin, 432 Market Street, Harrishurg.

The national executive committeeman and alternate of the DAV third district are Mr. Marvin Silver, 7725 Pickering Street, Philadelphia, and Mr. Fred J. Hannan, 110 Milten-

berger Street, Pittsburgh.

Ten VA hospitals are maintained in Pennsylvania: A 488-bed GM hospital at Philadelphia, a 200-bed GM hospital at Altoona, a 455-bed GM hospital at Aspinwall, a 500bed TB hospital at Butler, a 204-bed GM hospital at Erie, a 606-bed NP hospital at Pittsburgh, a 742-bed GM hospital at Pittsburgh, a 1,913-bed NP hospital at Coatesville, a 1,065-bed NP hospital at Lebanon, and a 500-bed GM hospital at Library and a 500-bed GM hospital at Wilkes-Barre.

The Disabled American Veterans representatives with the Veteran's Administration voluntary services are: Jacob Zaslow of 2649 North 25th Street, Philadelphia, Pa., at the general medical hospital at Philadelphia; Mr. Germain Stehle of 1120 Fifth Avenue, Altoona, at the general medical hospital at Altoona; Mr. John Cousins 1237 Berkshire Avenue, Pittsburgh, at the neuropsychiatric hospital at Pittsburgh; Mr. Clifford J. Lecch, R.F.D. 1, Elwood City, at the TB hospital at Butler, Mr. Earl Higgins, 3003 Cherry Street, Brie, at the general medical hospital at Eric; Mr. Bartosiewicz 409 Esther Avenue, New

Kensington Pa., at Pittsburgh; Mr. Robert A. Hance, Glen Mills, at Coatesville; Mr. A. Charles Simonson, 237 Blackman Street, Wilkes-Barre; and Mr. Walter T. Cook, 2916 Butler Street, Penbrook at the neuropsychiatric hospital at Lebanon, Pa.

During the last fiscal year, the Veteran's Administration paid out \$333,443,000 for its veteran program in Pennsylvania, including \$98,350.696 disability compensation to its 138,102 service disabled veterans. These Federal expenditures in Pennsylvania furnish substantial purchasing power in all communities.

Less than 6 percent (7,474) are now members of the 72 Disabled American Veterans Chapters in Pennsylvania.

#### SERVICE ACCOMPLISHMENTS BY THE DISABLED AMERICAN VETERANS

This 6 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the Disabled American Veterans national service officers in behalf of Pennsylvania veterans and dependents during the last 10 fiscal years, as revealed by the following

Claimants contacted, esti-	
mate	192, 537
Claims folders reviewed	160, 447
Appearances before rating	
boards	75, 688
Compensation increases ob-	N 1 1 - 22 200
tained	12, 596
Service connections obtained_	3, 712
Nonservice pensions	2,981
Death benefits obtained	506
Total monetary benefits ob-	
tained	\$6, 423, 542.37

These above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three district offices. handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of \$20,850,335.32, and in the central offices they handled 58,282 reviews and appeals, resulting in monetary benefits of \$5,337,389.05. Proportionate additional benefits were thereby obtained for Pennsylvania veterans, their dependents and their survivors.

#### SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted Disabled American Veterans service officers in person, by telephone, and by

Pertinent advice was furnished to all disabled veterans-bnly about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, etc. Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans-not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impos-sible. A claims and rating board can ob-

viously not grant favorable action merely based on the opinions, impressions or con-clusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national dipointed out by the DAV acting national di-rector of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

#### LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugu-rated by the VA some 4 years ago, the disability compensation payments of about 37,-200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than \$28 million per year. About 6.7 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Pennsylvania, with a consequent loss of about \$1,876,000 per year.

Most of these unfortunate claimants were

not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. It is urged that every disabled veteran in Pennsylvania give his power of attorney to the national service officer of the DAV or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

#### COSTS OF DAY SERVICES

Measured by the DAV's overall costs of about \$12,197,600 during a 10-year period, one would find that it has expended about \$3.50 for each claim folder reviewed, or about \$3.80 for each rating board appearance, or, again, about \$22.70 for each favorable award obtained, or about \$123 for each service connection obtained, or about \$54 for each compensation increase obtained, and has obtained about \$14.10 of direct monetary benefits for claimants for each dollar expended by the DAV and its national service officer set-Moreover, such benefits will generally continue for many years.

#### METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its idento-tag (miniature auto-mobile license tag) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Ameri-cans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's identotag department, 56,343 of whom, during the last 8 years, were Pennsylvania residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

#### MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating \$3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members, and other social-minded Americans-by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of \$1,000 with the DAV Service Foundation. Recently it added another \$100 thereto. Since then added another \$100 thereto. Since then every DAV unit in that State has established such a special memorial trust fund, ranging from \$100 to \$1,100, equivalent to about \$5 per DAV member.

Inasmuch as only the interest earning from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Pennsylvania. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Pennsylvania by sending in donations to the DAV Service Foundation, 631 Pennsylvania Ave-nue NW., Washington, D.C.

Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is \$100 (\$50 to those born before January 1, 1902, or World War I veterans) payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints-labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic. service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Lewis L. Strauss, Outstanding American

EXTENSION OF REMARKS

## HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. DEROUNIAN. Mr. Speaker, the Senate's early morning action today has brought upon our Nation a tremendous loss. - David Lawrence's article, which appeared in this morning's issue of the New York Herald Tribune, is an excellent summation of the episode:

SENATE FIGHT ON STRAUSS CALLED A TRAGIC EPISONE

#### (By David Lawrence)

Washington, June 18 .- One of the most tragic episodes in the entire history of the U.S. Senate is the fight that has been waged to prevent the confirmation of Lewis L. Strauss as Secretary of Commerce. It is tragic because it is based on a personal feud. When hatreds become deep-seated, they sometimes produce far-reaching cleavages, with emotion substituted for reason.

The current dispute is the outgrowth of friction between Mr. Strauss and Senator CLINTON ANDERSON, Democrat, of New Mex-When the former was chairman of the Atomic Energy Commission, he rubbed Sen-

ator Anderson the wrong way.

The New Mexico Senator is chairman of the Joint Atomic Energy Committee in Congress. He is influential with his colleagues. Many sided with him-as members of the senatorial club often do-without particular regard to the merits of a question but with greater regard for the wishes of a fellow

#### STRAUSS GAVE DATA

Mr. Anderson's home State-New Mexicois the seat of atomic laboratories where many scientists are gathered. Some of them are embittered over what they believe was Mr. Strauss' animosity toward J. Robert Oppenheimer, the scientist whose clearance was denied for security reasons by a Presidential board. While Mr. Strauss was not a member of this board he did present to the White House the charges that led to the inquiry. It was natural that many of Mr. Anderson's constituents should expect him to do what he could to punish Mr. Strauss.

But this isn't all of the controversy. It couldn't be focused on the Communist issue alone. It so happens that Mr. Strauss fought against governmental operation of power projects and in favor of private power. this gave an opportunity for some of his foes in that field to be lined up against him.

The tactics have been palpable for months. The hearing held by a Senate committee was more of an inquisition than the normal recording of the views of a prospective Cabinet Usually the opposition party doesn't object to the appointment by a President of whoever he wants in a Cabinet post. But the recent hearings resulted in a bitter fencing match and naturally the answers provoked were not always as clear cut as they would be if a different atmosphere had pre vailed. Mr. Strauss was thereupon attacked as being deceitful and as lacking in character

#### PRAISED BY DODD

But not all the Democrats allowed this vendetta to envelop them. Senator Thomas J. Dopp, of Connecticut, for instance, in a speech to the Senate today, said:

"Lewis L. Strauss is a man of 63 years. He is a former shoe salesman with a high-school education who has received honorary degrees from 29 colleges and universities.

"He has a background of devoted service to philanthropic and religious affairs.
"He has earned distinction and wealth in

the field of finance.

"He has a record of honorable achievement in the naval service in which he rose progressively to the rank of rear admiral.

"He has played some role in almost every administration, Democratic or Republican since the days of Woodrow Wilson.

"He has earned letters of recommendation from five Presidents.

"He has been awarded five of his country's highest decorations.

He has been honored by grateful nations of the free world.

"He has taken positions on matters of first importance to this Nation, positions that were controversial, positions that were right.

"In the 42d year of his public life, at its climatic hour, we in the Senate are asked to reward this man by visiting upon him a condemnation and a repudiation that have not been accorded any American in a genera-

#### CONDEMNED OPPENHEIMER

Senator Dopp referred to the case of Dr. Oppenheimer and said: "If ever a Government official, in possession of critical secret information, indicted himself as a security risk by his own words and actions, it was Oppenheimer. \* \*

"It is uncontested that over a period of many years Dr. Oppenheimer persisted in his Communist associations. He was a regular financial contributor to the Communist

Senator Dopp, referring to the Haakon Chevalier case, said it "is an admitted mat-ter of record that Oppenheimer concealed this espionage attempt from security investigators in an attempt to protect a Communist spy."

#### OPPOSED BY LIBERALS

Indignant denials are being made that the friends of Oppenheimer have not influenced the waging of the fight against the confirmation of Mr. Strauss. But the fact remains that for some unexplained reason the present Secretary of Commerce has been the victim of the same kind of smears and innuendoes which only a few years ago were being denounced as "character assassina-tion" in the era of so-called McCarthylsm. Today many of the liberal Senators are lined up against Lewis Strauss.

The most charitable interpretation of all this is that it is a personal feud, and that where human forgiveness should long ago have settled the quarrel between two strongly dedicated men it lingered on until the Senate itself became the vehicle for personal spite and recrimination. It is a sad chapter in American history.

#### Nationality Day U.S.A.

EXTENSION OF REMARKS

### HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the proclamation issued by President John Cashmore, of the Borough of Brooklyn, in honor of Nationality Day U.S.A. As a result of this proclamation and the ceremonies held on June 14, 1959, in Brooklyn I have introduced a resolution, House Joint Resolution 430, which would designate the

second Sunday in June of each year "Nationality Day U.S.A." on a nation-wide basis:

Whereas the Italian Historical Society of America has become the pioneer in a laudable movement to promote a nationwide observance of Nationality Day throughout the United States on the second Sunday of June of each year in tribute to all immigrants and their descendants; and

Whereas the first observance of Nationality Day has been arranged for Sunday, June 14, 1959, in conjunction with the traditional

Flag Day celebration; and

Whereas the numerous groups have signified their intention to participate in appropriate exercises which have been arranged for this occasion at the mall in Prospect Park; and

Whereas Brooklyn takes pride in the great contributions which immigrants and their descendants have made toward its cultural and economic well-being during its history

of more than 300 years; and

Whereas Brooklyn is today one of America's largest urban centers and particularly enjoys the distinction of having originated patriotic, religious and cultural ceremonies which have become nationwide in observance:

Now, therefore, I, John Cashmore, president of the Borough of Brooklyn, do hereby proclaim Sunday, June 14, 1959 as the first Nationality Day in conjunction with the traditional observance of Flag Day in our borough and do invite the attention of our own residents as well as the residents of other communities to the commendable purposes for which this occasion has been designated.

In witness whereof, I have hereunto set my hand and caused the seal of the Borough of Brooklyn to be affixed this 11th day of June 1959.

Attest:

JOHN CASHMORE,
President, Borough of Brooklyn.
JOHN A. HAYES,
Assistant to President.

Just More Controls

EXTENSION OF REMARKS

## HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Just More Controls," from the Rockford (Ill.) Morning Star of June 16, 1959:

JUST MORE CONTROLS

It is apparent that the Democratic-controlled Congress does not intend to take any effective action to reduce farm-crop surpluses and the farmer's dependence on Government rather than markets. A Senate-House conference committee has been assigned the task of reaching a compromise on two wheat-control bills which do not meet the overproduction problem any better than previous Federal control measures.

The wheat bill passed by the House is designed to cut planting allotments and boost price supports. Under the bill, wheat acreage of individual farmers would be reduced 25 percent for the next 4 years, and the price-support floor would be jacked up to 90 percent of parity. The present program provides for 75 percent of parity on a total allotment of 55 million acres.

The Senate's wheat bill provides for a sliding price-support level running from 65 percent of parity to 80 percent, depending on the acreage individual farmers plant under their allotments.

Both Houses rejected an administration plan to cut production of wheat surpluses without boosting price supports.

There is a strong possibility President Eisenhower will veto whatever compromise comes out of the Senate-House conference. The President has repeatedly challenged Con-

gress to do something to curb the mounting wheat surplus and its cost.

The Democrats should know by now that control programs do not make the farmers any happier or solve the problems of agriculture. American farmers do not want a dole. Whenever they have had an opportunity to express a choice, they have indicated a desire to work free of Government restrictions and toward a reliance on the natural market.

Farmers and their organizations are conducting intensive sales campaigns at home and abroad on their own initiative and at their own expense. They are thinking in terms of merchandising rather than Government subsidy. The Government should lend encouragement to their efforts by moving away from supports and controls that serve only to fill Government warehouses at heavy expense to the taxpayers. Congress can bestelp the farmers by permitting them to regain their independence.

Another Bout With Tight Money Could Be Disaster

EXTENSION OF REMARKS

## HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 18, 1959

Mr. ROOSEVELT. Mr. Speaker, I wish to bring to the attention of my colleagues a very sensible and public-spirited editorial which appeared in the Sacramento Bee on June 4 of this year.

The editorial offers valid criticism of a tight money policy. Because of its timeliness, clarity, and concern about our national fiscal policy, I sincerely hope it will be widely read by my colleagues and fully discussed.

I might add that this California paper is known not to speak for either the Democratic or Republican Party. It has a reputation for taking stands on the merits or demerits of given issues, regardless of who proposes or espouses them.

The Sacramento Bee calls the shots as it sees it and this editorial has hit the bull's-eye:

ANOTHER BOUT WITH TIGHT MONEY COULD BE DISASTER

As if two recessions were not enough in 6 years, the Federal Reserve Board, with its obsession about inflation shared by President Dwight D. Eisenhower, has resorted again to its recession policy by raising its rediscount rates to banks in five of its districts.

Just prior to this action some of the large banks had raised their interest rates to prime borrowers in response to a resurgent economy's need for loans. Demand in the classic fashion had driven up the price of money.

The chief hope that money would remain available for continued growth and that interest rates possibly would subside was for the Federal Reserve System to make it easier for the banks to get money. Instead, the system has made it harder.

The administration appears to have been panicked by economic expansion as a result of its obsessive fear of inflation. It cannot get it through its collective head that increased supplies are a curb on inflation.

With its heavy foot on economic growth, the administration has run up a \$20 billion addition to the Federal debt in 6 years. Higher interest rates have added from \$8 billion to \$10 billion to the annual cost of carrying just the national debt. The loss of unproduced wealth has reached what some competent economists estimate to be \$100 billion. The growth of the total national product fell from 4 percent in 1951 to 1½ in 1958, even as Russia's growth rose by 10 or 11 percent a year.

All through the Eisenhower period of antiinfiation policies prices rose except for last year. The administration and the money managers have evidenced no concept of the fact administered prices, even with lowered production volumes, held the price level up despite action to make money harder to get.

Of course, higher interest rates are discriminatory, since the well heeled corporations either have reserves of money or can afford to pay the higher rates. It is the small business that is driven to the wall.

What is at work is the old conservative fear of growth and policies which play into the hands of the privileged few, a disastrous combination when the Communist world is turning more and more to the economic weapon.

Operation Bootstrap, Indian Style

EXTENSION OF REMARKS

OF

## HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the Record a statement on my Indian bill which I have chosen to term "Operation Bootstrap," Indian style, because the plan has been copied pretty much from the plan of Operation Bootstrap in Puerto Rico.

Since the introduction of this bill 2 weeks ago I have had dozens of letters from organizations interested in Indian problems, from industrial plants interested in the provisions of the bill, and from Indians themselves who see in this bill an opportunity for they and their family to obtain the better things of life.

Contrary to other proposed legislation for the Indian people, Operation Bootstrap does not propose the direct expenditure of a single cent of taxpayers' money. True, there is a tax exemption provided for an industrial plant locating on the reservation's area which one might call an indirect subsidy but it requires no personnel, it requires no direct appropriation. The only cost to the taxpayer is the cost of the tax exemption for the industrial plant.

On the other hand, the benefits, Mr. Speaker, are manifold. The principal problem on the Indian reservations of America is the fact that there is no employment and as my grandfather, a good old Dutchman from Pennsylvania used

still, for idle hands to do.

No work, no job, no income-other than relief-they sit unemployed without hope or purpose.

Where industrial development has offered employment, the entire reservation community has been completely changed, homes are repaired, children are clothed, an atmosphere of pride overtakes the community, with a better diet, bodies become more resistant to disease. The manager of the Bulova Watch Co., who have a jewel bearing plant at Rolla, N. Dak., told a group of us at a breakfast one morning that the absenteeism at the Rolla plant, which

cent. Mr. Speaker, I hope that the Members of this Congress will give serious consideration to Operation Bootstrap, Indian style. Passage of this style of legislation is long overdue.

has 90 percent Indian employment, is

less than any plant the company has.

He said normal absenteeism ran about

15 percent-at Rolla it is less than 3 per-

The Altoona (Pa.) Mirror, One of Pennsylvania's Most Popular and Widely Read Daily Newspapers, Celebrated Its 85th Birthday, June 13, 1959

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. VAN ZANDT. Mr. Speaker, amid a shower of congratulatory messages that included greetings from President Dwight D. Eisenhower, Vice President Richard M. Nixon, Members of the U.S. Senate and House of Representatives, Gov. David L. Lawrence, of Pennsylvania, and business and industrial leaders, the Altoona Mirror celebrated its 85th birthday, June 13, 1959.

Founded in 1847 by Harry Slep, a youthful German immigrant with a determined purpose in life and unbounded faith in America, the Altoona Mirror from its humble beginning as a four-page paper of five columns steadily grew in importance in the newspaper field under the inspired leadership of its founder.

Today daily issues of the Mirror contain many pages of eight columns each in presenting practically every facet of news found in the metropolitan daily papers.

The largest edition of the Mirror consisted of 128 pages and was published August 6, 1949, in heralding Altoona's centennial celebration; while the 85th anniversary issue published last Saturday was an 80-page edition replete with interesting articles tracing the Mirror's history and progress and likewise the business and industrial growth of the Altoona area since its first issue over three-quarters of a century ago.

Thus the 1959 anniversary edition embraced the period from the horse-and-

to say, "And Satan finds some mischief buggy era to the present atomic age, and gave an account of the Mirror's stewardship in abiding by the noble precepts of its founder Harry Slep and his son the late Daniel N. Slep, who for many years before his death in 1953 followed faithfully in his father's footsteps.

Truly the successful achievements of the Altoona Mirror and the prominence it has attained as an exponent of clean journalism are enduring monuments that keep alive the memories of a distinguished father and a faithful and renowned son.

Today the legacies of love and devotion to the highest ideals of responsible journalism exemplified by father and son are entrusted to the Mirror family comprised of a 12-member board of directors headed by President and General Manager J. E. "Ted" Holtsinger, who is also recognized in newspaper circles for his marked ability in writing editorials that have been widely acclaimed for their timeliness and content.

With Ted Holtsinger continuing as the guiding genius presiding over the destiny of the Mirror it is the consensus that under his inspiring leadership and administrative ability even greater success and progress are assured as the popular Blair County daily newspaper continues the journey onward to its 100th anniversary.

It was my pleasure to join with the large number of persons in all walks of life who extended on the 85th anniversary of the Mirror sincere congratulations and best wishes to officials and the staff of over 180 dedicated employees as well as, to nearly 500 newsboys, dealers, in independent carriers responsible for the delivery daily of the Mirror to its thousands of readers.

In further salute to the Mirror family incident to the 85th birthday of one of Pennsylvania's most popular and widely read newspapers and in keeping with the spirit of the occasion I wish to include at this point in my remarks an editorial written by the Mirror's president and general manager, J. E. "Ted" Holtsinger, entitled "Our 85th Birthday," together with an article entitled "Happy Birthday" written by Herman S. Reifsnyder, managing editor of the Mirror, who gives an interesting résumé of the accomplishments of the Mirror over a span of 85 years.

In conclusion there is included in my remarks my congratulatory message to the Altoona Mirror on such a memorable occasion as its 85th anniversary:

OUR 85TH BIRTHDAY

(By J. E. Holtsinger, president and general manager)

Eighty-five years ago today the Altoona Mirror was born. Conceived in the brain of a master printer, whose job shop had become an accepted part of the community, it was dedicated to community service. Its continued growth has proven the soundness of its founder's dedication to that service. He had faith in this community and its people.

Harry Slep, the founder of the paper, had a firm conviction that the master craftsmen who lived in Altoona and the surrounding towns would appreciate good printing. He insisted on good legible pages and the type of newswriting that conformed to clean type and good composition of both news and advertising pages.

The Mirror never has been a sensational paper. It has had its share of human tragedy to report, but it has never capitalized on human misery. Its editorial policy has been to give as much space and prominence as possible to the good deeds that men do and never to overplay their mistakes and the penalties they have had to pay for making them.

Starting a business back in those days was quite different in many ways from starting a new enterprise today. The founder and members of his family made up the greater portion of the work force. The apprentices and printers, admen, and reporters all served in dual capacities. Payment for services sometimes consisted of store orders and part cash and it was a happy day when all the pay was in the coin of the realm.

Nothing was deducted from the pay envelopes for social security, income tax, re-tirement fund, insurance or for any other reason and it did not require several bookkeepers to figure out what part of the pay or income of the business had to be set aside for Uncle Sam, for the Commonwealth, and for the city. Had all these requirements been in force at that time the little newspaper never could have been born and, if by some chance it had been born, it never would have survived.

Cash derived from sales of the paper and from advertising was used to pay the workers and when cash was short, as quite often it was, then the letters FHB were likely to come into use. These abbreviated letters meant family hold back. It was a familiar term with all local business of that era.

When there was surplus money it was spent for more type, better machinery, and that host of little things that go into the printing of a better paper. When the first linotype was purchased, the printers, less than 10 in number, were afraid that this would mean the end of their trade. On the contrary, the speed which was attained in setting type soon made it possible for more men and more machines to be added.

As the city grew, the Mirror grew with it. Today it is a regular visitor to almost every home in the city and it goes into more than 90 percent of all the homes in the county. It has held its own in the matter of quality printing and Mirror makeup and Mirror printing are bywords in the whole industry. In the national scene, competing with the largest newspapers of the country, the Mirror has won more than its share of the prizes and in a State noted throughout the Union for its fine newspapers it is a consistent winner of top awards for editorial and advertising content as well as for its excellence in typography.

The 80-page paper which the Mirror presents to its subscribers today taxed the capacity of the five big Goss units in our pressroom. This is one of about 10 daily papers in this State with an 80-page press. pressroom, which is visible from the 10th Street side of the building, is acclaimed as the cleanest pressroom in the State by those who regularly call upon the trade in Pennsylvania cities. It is manned by a crew that takes great personal pride in their work.

The composing room, which also is one of the most modern in the State, is kept in good order by the fine mechanics who work there. They also take good care of their machinery, knowing that clean type and dirty machines just don't go together for long. Those who write the news and advertising copy for the pages also have in mind the type of paper that will find ready acceptance in all the homes of the com-

A modern paper has many partners. Its closest partners and the ones whose opinions and preferences are most likely to be reflected are, of course, its subscribers. They make it a valuable asset to a growing region. Their lives and the life of their time are reflected

in its daily pages.

Another partner of considerable consequence is the advertising community. Cooperation and common trust between the subscribers and the advertisers make it possible for goods to move freely and services to be provided at lower costs than any other discovered means of trade.

Other partners include, of course, senior partner mentioned last week. He has never heard of the term FHB; with him it is a matter of uncle comes first. Then there is the Commonwealth which also comes in for its share of the income and the city and county and school district, all of which are dependent upon the profits of industry and the wages that industry provides for their continued existence.

Then, too, there are the guests. They include the Community Chest and Red Cross and all the other agencies that work for

the betterment of mankind.

Harry Slep, the master printer, would be amazed at the size to which his family has grown. We believe that he would be pleased with them and with the 80-page paper that they present to their subscribing partners on this anniversary.

May those who write and those who print

the anniversary editions in the years to come remember forever his conviction that clean printing, clean thinking and good service are the primary requisites for success.

#### HAPPY BIRTHDAY

(By H. S. Reifsnyder, managing editor)

"Happy birthday" is a greeting that is just about the nicest statement that anybody can receive, whether it be given to the youngest in years or to the oldest. a salutation with much meaning, one of sincerest best wishes, one of praise, one of congratulation, of remembrance, and of accomplishment, It's a salute that one cherishes as an in-

dividual. Yes, even business, industry and all firms appreciate the phrase on the occasion of the anniversary of their founding.

This year, the Altoona Mirror marks its 85th anniversary and it's a birthday, a June 13 one, that has been well remembered by the entire Mirror family and its host of friends far and near and the greetings, received from many, are most certainly appreciated.

Nothing perks up an individual or an organization nearly as much as that greeting "happy birthday." Just remembering it makes the recipient feel proud and happy. Birthdays are noted for their messages of friendship. They also are marked for their congratulations, and of giving and receiving of gifts, whether they be words, of letters, of messages. All are cheerfully given

and gratefully accepted.

On this 85th Altoona Mirror aniversary we accept the birthday event as a pretty good occasion to acknowledge remembrances, not only of the day, but of recent days, of recent months and of years gone by, for the Mirror has been the recipient of honors, awards and praises that have accumulated until today we of the newspaper fraternity are really bursting with pride over the numerous gifts that have been bestowed for services, for innovations, for outstanding achievement in the newspaper profession, in civic affairs and in practically every endeavor that the Mirror has been called upon to play some part.

June, of course, is a pretty swell month in itself. It is a month for brides, of roses, of graduations, for vacations, for celebrating the birth of our flag. It is also a month for sunspots, a hot moon, the surprise of heavy and fast appearing thunderstorms, and of halistorms. It is also the month for the swelling of little apples, green leaves on the swelling of other important things.

Eighty-five years represents an experienced age. Just to operate successfully over that period of years is an achievement. To continue a fine reputation for 4 score and 5 years is commendable. To stay young in spirit and continue to grow is even more creditable. And 85 is a fine time to look back over accomplishments and the resultant awards.

The Altoona Mirror has been extremely fortunate in winning laurels. The newspaper also shares many individual awards gained by the editorial, the advertising, the classified, the mechanical, the press, and the job departments. All have been highly praised for their services.

Gold cups, silver cups, loving cups, plaques, certificates, citations, and medals have all

been bestowed on the Mirror.

This newspaper is a muchly decorated business building. The walls are adorned with framed citations and with plaques. The library displays cups. It's practically a showplace for citations.

All our awards are cherished. All have tended to make the Mirror bigger and better for they have been an inspiration to the family of workers at all levels of employment.

Compiling a list of awards has been an interesting undertaking within recent weeks. Reciting all of them would consume much time. Even a roster of awards fills quite a

large sized volume.

Awards have come to the Mirror in com-petition, on occasion, with the more than 2,000 daily newspapers in the United States. The Mirror has won in many State competitions, both in the open class against 130 daily papers, large and small, and has competed against newspaprs in four States, combined for some years in an association for mutual benefit to advertisers.

General appearance, makeup, typography, best editorials, best editorial page, advertis-ing promotion, and ideas have all brought the Altoona Mirror high awards.

One of the Mirror's most prized gold cups sort of furnished this newspaper with a motto "A Mirror That Shines." And Editor and Publisher, donor of the cup, editorialized on the victory referring to the Altoona Mirror most glowingly.

"Far above any stood the Altoona Mirror. Every page was made up—made up, and not thrown together by a hurried compositor. It was expert workmanship, performed by skilled workmen, interested in producing the finest and most appealing product. Every advertisement bore the stamp of having been followed through from the front office to the delivery platform with an expert hand and a seeing eye. The writing was of real excellence, the paper one pleasing to the eye of the reader. Even food advertising, an eyesore in several of the papers examined, stood out bright and sharp in the Mirror.'

It quite naturally pleased the Mirror as the recipient.

From the Freedoms Foundation came a top award of money and a medal for a Mirror editorial. The Mirror achieved a membership in the internationally famous Headliners Club of newspapermen for a promotion in the news department. We own the President's cup, for the best local advertising campaign. Another gold cup was awarded for excellence in advertising. A bronze plaque came for the best advertising promotion, nationwise, for paper under 50,000 circulation.

A month ago came another award for makeup among papers in Pennsylvania, the Altoona Mirror competing far out of its class, circulationwise, but taking third place, which is an excellent achievement.

The very latest award is less than a few weeks old, being presented for the Mirror's promotion at the 26th salesmanship and idea presentation of the Newspaper Advertising Executives Association in Chicago.

The Altoona Mirror appreciates greatly the numerous citations. The very first plaque ever given any newspaper came to the Mirror, the gift of the Pennsylvania Music Education Association.

Our farm page, a weekly feature now in its 5th year and presented every Saturday, won Penn State University plaudits and more than a dozen grange and farm magazine awards. The Mirror was recognized at a recent national convention of agriculturists held at State College, the Mirror being on the program.

Mirror poetry columns have drawn the greatest correspondence in the entire history of newspapers. Mirror poetry is contributed and a generous space is devoted to all poets from many States. Mirror poetry is quoted consistently in the Williamsport Grit, with full credit with the "appeared in the Altoona

Mirror" notation.

The weekly display of infants arriving at the Altoona Hospital has attracted national attention following a glowing report in the Editor and Publisher and many papers have copied the idea.

Mirror editorials are copied profusely, with credit, too, not only in State newspapers but in the Congressional Record and in other State journals of large size. Two newspapers have been most generous, especially in copying Mirror editorials, to the extent of over 100 individual items, within the last decade. This naturally pleases the newspaper and the authors.

Mirror individuals are called upon often, and most willingly, to act as judges whether it be writing news, columns, editorials or perhaps beauty contests, civic promotions, outof-State newspaper contests. Annually, The Mirror staff judges hundreds of papers, Pennsylvania papers reciprocating for their judges of this State's annual newspaper contests.

Over the years Mirror officials and employees have been selected in view of the paper's high standing among the country's newspapers, to fill high offices in State and national associations.

Pennsylvania Week, celebrated for 8 years in the State and founded by a newspaper-man, saw the Mirror furnishing the executive director of the newspaper promotion for that week in the State. Twice the Altoona that week in the State. Twice the Altoona Mirror was honored as its publishers filled the presidency of the Pennsylvania Newspa-per Publishers Association, the Mirror being a charter member and one of the founders of this organization.

The Mirror has provided a president for the Pennsylvania Society of Editors, a president of the Circulation Managers Association, and a secretary, vice president, and treasurer for the ANCAMS, the American Newspaper Classified Managers Association. Our display advertising staff has long held important positions with the National Advertising Managers Association and has brought home numerous awards. The Pennsylvania Women's Press Association is officered by the Altoona Mirror also. Recent conventions found the Mirror lauded for its high-class advertising standards from national speakers.

Briefly listing the certificates and citations and medals, includes thanks bestowed on more than one occasion for Armed Forces Day promotions, all the health organizations, the American Legion, National Guard, women's auxiliaries awards for meritorious services, Veterans' Administration, U.S. Treasury, DAV, Kiwanis man-of-the-year award, hospital campaigns, ministerium, the various religious organizations, Boy Scouts, National and State YMCA, U.S. Chamber of Commerce, and many others. All recall happy feelings and tasks well performed and praises and thanks were most generous.

The Mirror especially enjoys receipt an-nually of a citation from the National Safety Council and of the various newspaper safety groups for its 100 percent perfect record in the delivery of newspapers by truck and car-

From our newspaper suppliers we appreciate awards for our long amiliations. The United Press has always been the source of the wire news, the organization presently being United Press International, a fine worldwide news source. Plaques adorn the Mirror plant from the comany. Our association with the Newspaper Enterprise Association has likewise been for more than 50 years; in fact the Mirror is a charter member. Newsprint firms supplying paper have long been furnishing the product without delay

And on this 85th birthday the Mirror can claim many more honors for firsts, the first linotype machine in this part of the State; one of the first to use color on page 1 and in advertising; the first for teletype machines, the first for punchers to tape the news for automatic processing on machines, along with up-to-dateness in giant presses with all the latest improvements for today's

high-speed newspaper production.

A Mirror feature of recent months, the city manager election and city operation of 40 years ago, brought many congratulations to the newspaper, the series of 180 daily stories informing Altoonans of problems, of arguments, of political mismanagement. The Mirror has long been an advocate of city manager government, still regarding the few years of operation as the best management this city ever had.

The Mirror is proud of its block-long newspaper plant, more spacious than many of the competitive State newspapers.

Proud indeed, the Mirror commends its loyal employees for long services and the over-25-year club has reached more than 70 in number, with many employees over the 50-year service record, or approaching it within a few years. All help produce "a Mirror that shines."

Keeping up to date and hustling is accomplished through membership in the various newspaper organizations, locally, in the State and nationally. New ideas, new features, new inventions are all studied closely and newspaper employees have the finest and the latest of equipment, lightening and speeding up their work, while at the same time having the employee group enlarged from year to year.

In conclusion, it's our 85th birthday and, as celebrants, we at the Mirror are most happy and grateful for 85 wonderful, prosperous, progressive years.

CONGRESSMAN JAMES E. VAN ZANDT CON-GRATULATES THE MIRROR

(Congratulations to the Altoona Mirror on its 85th anniversary have been extended by Representative James E. Van Zandt to J. E. Holtzinger, president and general manager of the Mirror Printing Co. Representative VAN ZANDT's message follows:)

Mr. J. E. HOLTZINGER.

President and General Manager. Mirror Printing Co., Altoona, Pa.

DEAR TED: The 85th anniversary of the Altoona Mirror is a memorable occasion and I extend my heartlest congratulations.

Reaching the important milestone is a source of happiness because it focuses public attention on over three-quarters of a century of progress in the field of journalism in Blair County, Pa.

As you and the Mirror staff of employees joyously celebrate the 85th anniversary of one of central Pennsylvania's most popular and successful daily newspapers, you have the added satisfaction of knowing that the great progress achieved is a monument to the Slep family tradition of strict adherence to the principles expressed in the canons of journalism-an all-embracing code of ethics of the fourth estate.

This happy event recalls to mind that freedom of the press as guaranteed by the first amendment to the Constitution is a precious right. It is common knowledge that from time to time repeated efforts have been made to muzzle or silence the press in the United States while in foreign nations we have the sordid and shameful spectacle of a subservient press bowing to the demands of power-crazed dictators to the extent such newspapers are propaganda machines of the

Liberty and freedom of the press are inseparable companions and in preserving them the newspapers of the Nation are mighty fortresses in defense of the truth. It is recalled that Thomas Jefferson

warned: "Our liberty depends on freedom of the press and that cannot be limited without being lost," His words are believed to have been uttered as a result of studying the trial of the crusading and courageous John Peter Zenger, a poor printer who became editor and publisher of the New York Weekly Journal in 1733 and who had his presses demolished and was jailed because of his viewpoint that freedom of the press be unassailed.

Freed from jail when his views were upheld in court his name is revered today wherever a newspaper is printed. In fact one American orator described Zenger's victory as the "morningstar of liberty.

Freedom of the press in full bloom brought tremendous power and influence. It is recorded that in 1805 Napoleon Bonapart said at the height of his own power "I fear the power of one newspaper more than I fear the guns of 100,000 troops." When these words were uttered the power and influence of the press were yet in swaddling

Today we have only to recall the fate of the press in countries behind the Iron Curtain or where other dictatorial powers gained the upperhand such as in Argentina when the daily newspaper La Prensa was silenced.

On the occasion of the 85th anniversary of the Altoona Mirror we are forcibly remind that in this blessed United States we have a vigorous, grassrooted free press.

As the Altoona Mirror progresses toward a

century of service as a watchdog for the public interest and in helping its readers to keep abreast of events in this fast-moving and changing atomic age, its greatest challenge is to remain steadfast in its 85-year policy of faithful observance of the principles of sound journalism which means continued refusal to slant the news in violation of the highest tradition of a free press. To indulge in such a form of base journalism would defeat the will of the people in seeking to be truthfully informed and thus would give them no opportunity to profit from the surance of the Lowly Nazarene-"ye shall know the truth, and the truth shall make you free.

Mindful that your life is dedicated to upholding the precepts of responsible journalism and since your outstanding ability as an editorial writer is well known, it is a foregone conclusion that your literary efforts will continue to produce pungent, inclaive, and thought-provoking editorials so essential in keeping Mirror readers abreast of the issues of the day. You are fortunate in having the ald of such fine editors as Herman S. Reifsnyder and J. Edward Benney, which the result that the three of you through a trinity of effort give ample assurance to the reading public and especially the residents of Blair County that their favorite daily newspaper the Altoona Mirror is in good hands.

It further demonstrates you can be depended upon to continue to carry the torch for freedom of the press in the same commendable manner as in the past 85 years and as envisioned by the Mirror's founder, Harry Slep, when he placed his faith in Altoona and established what is now one of Pennsylvania's most highly respected daily news-

With kind regards, I am, Sincerely yours,
JAMES E. VAN ZANDT.

Wall Street Journal Article Proves Need for Overhaul of U.S. Government Patent Policies if Small Business Is Not To Be Destroyed

EXTENSION OF REMARKS

### HON. HARRIS B. McDOWELL, JR. OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. McDOWELL. Mr. Speaker, an article by Ronald J. Ostrow in the Wall Street Journal of June 10, 1959, proves the need for a complete overhaul of the patent policies of the U.S. Government.

U.S. Government patent policies, in the words of one high-ranking patent official, are "a mess," and with the Federal Government now footing the cost of more than half the research in this country, agitation for a general overhaul of the system is increasing both in the Congress and elsewhere.

Two points are at issue: First, whether present patent policies are fostering or hindering development of inventions, improvements, and discoveries; and, second, whether the Federal Government itself is hastening the death of small business by encouraging big business dominance and monopoly of research.

Within the past 10 years Federal expenditures on research have jumped from \$1 billion annually to more than \$5 billion-with \$3.5 billion for the Defense Department alone in the 1960 budget. Private industry altogether spends only \$4 billion on its own re-

The Defense Department allows a company to keep any patents it develops, except for free use by the Government.

Many people have asked why the United States does not at least recoup its research costs by taking a cut of the commercial royalties. The British Government has been doing this for over 50 years. The Vickers Viscount, developed under Government contract, has returned enough to the British treasury to pay off the original research cost and vield a profit. Jet engines have clearly been a profitable venture for the British Government.

There is no overall Federal Government policy on patents in Washington, as was pointed out in a fine article in the trade magazine Product Engineering, published by McGraw-Hill, May 4, 1959, written by David Secrest.

The Defense Department, the National Aeronautics and Space Administration, and the Atomic Energy Commission reflect three widely differing patent poli-cies. Since many contracts cut across several Federal departments and agencies, the contractor may be dealing with

half a dozen different patent attitudes on the same project.

I have joined with the gentleman from New Jersey [Mr. Thompson] and the gentleman from Utah [Mr. King] in offering legislation which would establish an overall U.S. patient policy similar to the British system. However, my bill differs somewhat from these earlier bills by being directed primarily at the patent policy of the armed services, and preserving the present patent policies of the TVA, AEC, NASA, the Departments of Agriculture, and Health, Education, and Welfare.

Under my bill the Government would share in patent royalties on inventions resulting from Federal research contracts, and small business would be helped. The present strong monopolistic trend which dominates the Federal research and development program would be halted. The record shows that 5 percent of the larger industries and research organizations in this country are now gobbling up about 95 percent of the research contracts.

The magazine Product Engineering says on this point:

Excessive channeling of research contracts into big business is causing considerable worry. Big business (over 500 employees) gets at least 95 percent of the Government research, and 100 firms get 85 percent among them. The top 14 companies getting contracts between 1954-1956 were all big electric and aircraft companies. The Attorney General has warned that channeling all this patent potential into big business is just building up the monopoly trend.

The House Small Business Committee recently spoke of "the ominous shadow cast on the future with the monopoly of technology by big business." Small business helps foot the Government research bill and should at least have access to patents developed at the taxpayers' expense. The big contractors reply that it is their reservoir of knowledge that makes research successful.

I include here the text of my bill, and the Wall Street Journal article for the information of my colleagues:

#### H.R. 7705

A bill to amend chapter 27 of title 35 of the United States Code with respect to the rights of the United States in certain patents arising out of research and development contracts with the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 27 of title 35 of the United States Code is amended by adding at the end thereof the following:

"f 268. Rights of United States in certain patents

"(a) In the case of any patent hereafter granted which is based upon an invention, improvement, or discovery conceived or first actually reduced to practice in the course of performance of any research or development contract with a procurement agency, or of any subcontract of such a contract, or in the course of the performance of any prior experimental, developmental, or research work done upon the understanding that a contract (whether or not a research or development contract) with a procurement agency would be awarded, the United States shall have royalty-free, nonexclusive license to practice or have practiced such invention, improvement, or discovery. Each research or development contract hereafter awarded by a procurement agency shall provide that in the case of any patent covered by the preceding sentence, the United States shall receive a percentage, determined by negotiation as provided in the contract, of the income from the commercial utilization of the invention, improvement, or discovery patented.

"(b) As used in this section (1) the term 'research or development contract' means a contract entered into by a procurement agency under which payment is to be made for experimental, developmental, or research work; and (2) the term 'procurement agency' means the General Services Administration, the Post Office Department, the Department of the Army, the Department of the Navy, the Department of the Air Force, and the Department of Defense."

SEC. 2. The analysis of such chapter 27 is amended by inserting immediately below

"267. Time for taking action in Government applications."-

the following:

"268. Rights of United States in certain patents."

[From the Wall Street Journal, June 10, 1959]

SWORD TO PLOWSHARE: MILITARY RESEARCH BRINGS GROWING FLOOD OF CIVILIAN PRODUCTS—ARMY HUT TURNS INTO BEACH HOUSE—NAVY GENERATOR GOES TO WORK ON PIPELINE—BUT SOME SECRETS SLIP AWAY

#### (By Ronald J. Ostrow)

Corporate Research, Inc., a year-old Ann Arbor, Mich., concern, plans to introduce this summer a round 230-square-foot house made of a plastic foam material lined with kraft paper. The company, aiming for the beach house and playhouse markets, will sell the house for about \$249.

New York Savings Bank just installed a high-speed facsimile communications system linking its main office on Manhattan's 14th Street with a branch office at 46th Street and Lexington Avenue. The particular type of facsimile system was developed and is being produced by Alden Electronics & Impulse Recording Co., an affiliate of Alden Products Co., of Brockton, Mass.

These newly developed products have something in common: They were developed primarily with Government funds and made their debuts in the military market. The house grew out of an Army research contract aimed at finding light, portable huts to house troops; the facsimile system resulted from a Navy contract.

#### AN INCREASING IMPACT

The mushrooming expenditures by the Government for what is familiarly known in industry as R. & D., is having an increasing impact on private industry, and ultimately on consumers. In the current fiscal year the Pentagon is spending about 90 percent of its \$3 billion research, development, and evaluation outlay among more than 1,700 private U.S. concerns. A year ago the Pentagon distributed a smaller amount among about 1,600 companies.

Look at some other cases where Government-sponsored R. & D. contracts led to products that found their way into civilian markets, and you get an idea of the diversity of the civilian goods that emerge by this route.

American Optical Co., of Southbridge, Mass., recently began selling a new type of lightweight sunglasses with straight sidepieces, designed to silp on and off easily, but to remain firmly in place when worn. A \$367,000 Air Force R. & D. contract financed development of the glasses, originally made to be used by flyers while wearing radio headphones. "The reception (by the civilian market) has been very good already, and we expect very good sales," says an American Optical official.

#### GENERATORS AND POWERPLANTS

Texas Eastern Gas Transmission Corp. plans shortly to install a 300-kilowatt generator on its natural gas pipeline in Louisiana. The generator, a newly developed product of Solar Aircraft Co. of San Diego, is powered by a 500-horsepower Jupiter gas turbine engine that has been converted to run on natural gas. Solar began to develop the engine in 1947 under a Navy Bureau of Ships contract when the Navy was seeking a shipboard emergency generator. Other models of the Jupiter are on consignment to two boat builders who are experimenting with them as powerplants to run personnel craft for offshore petroleum operations.

Coleman Engineering Co., Inc., of Torrance, Calif., has sold 600 of its Digitizer devices, 70 percent of these to commercial markets, since it developed the machine while working on a \$50,000 Navy contract in 1952 to develop a specialized automatic data handling machine. The Digitizer converts the movement of gages and other motion into numbers, then transmits this data to a computer; commercial applications include automatically recording temperatures and pressures in oil refineries and recording and transmitting weather data from remote observation stations, eliminating the need for such stations to be manned.

A company developing a device under a Government contract usually retains commercial patent rights, but yields to Uncle Sam a royalty-free license to have the item manufactured for military use.

Companies aren't always able to take a product developed for the military and convert it directly into an item for the civilian market. of course. "Commercial benefits from Government R. & D. are usually indirect," says Dr. James E. Lipp, director of development planning for Lockheed Aircraft Corp. of Burbank, Calif. "Technical advances made under Government sponsorship are usually applied in altered form and at a later time in our commercial products," he adds.

### A MAJOR EXAMPLE

A neighboring competitor of Lockheed, Douglas Aircraft Co., Inc., provides a major example of these indirect benefits. Says A. E. Raymond, senior vice president-engineering: "The DC-B jet airliner we're getting into service now follows the pattern of sweptbackwing planes we developed for the military."

A Douglas official explains that sweptwing aircraft, which have greater speed potential, have different flight characteristics than the conventional straight-wing planes. For one thing, the center of gravity in a sweptwing craft is farther to the rear, and the plane has a tendency to be less stable at low speeds.

To work out this and other problems, Douglas, under a Navy R. & D. contract, built the experimental sweptwing, needle-nose D-558-2 Skyrocket, a rocket-powered plane that first flew in February 1948. Later, with Navy contracts, Douglas turned out the sweptwing A3D, which first flew nearly 6 years ago but still is being produced and used as a bomber by the fleet.

"Military experience in operation and design is very useful commercially," says Mr. Raymond, "because the military is pushing for performance primarily, rather than safety. They try out new developments first, so commercial planes always derive some benefit from military designs."

Mr. Raymond is unable to estimate the amount his company saved through military-sponsored research in developing the DC-8, but notes: "If we hadn't had the military experience, we couldn't have built it at all."

Besides reaping both direct and indirect benefits from Government R. & D. projects, companies involved in these projects say the work allows them to maintain larger scientific and engineering staffs than they otherwise would be able to afford. They also find that working for Uncle Sam gives them access to reports on the progress of others in their industry; these reports yield vital technical information.

Observing that "civilian fallout from military R. & D. work is a hard thing to measure," a Raytheon Manufacturing Co. official declares: "We always benefit from military R. & D. inasmuch as it permits us to maintain a large and well-rounded scientific and engineering staff. From their research efforts, we derive a breadth and depth of technical knowledge that we would not be able to achieve solely from commercial R. & D.

Raytheon's development of radar for the Navy during World War II, with the resulting growth of a staff skilled in radar principles, is probably a classic example of Governmentsponsored R. & D. enhancing a company's profit capabilities. "Today, we're a leading producer of commercial ship radar, the basic know-how for which we gained from the Navy work," an official of the Waltham, Mass., concern says. The commercial work is in addition to the radar Raytheon turns out for the military, he adds.

#### A MIXED BLESSING

Companies at work on Government R. & D. programs and sharing technical informa-tion with other concerns engaged in like tasks say this exchange proves a mixed bless-

These reports enable us to save a great deal of money and effort by not duplicating something another company has done already," says the president of a company which develops and manufactures semicon-

But this executive comments that "technical information sharing is one of the prices a company pays for being engaged in Government R. & D." And he offers an example of how some electronics companies got a boost from the Government research work done by one of their competitors.

Backed by a military contract, a young, small east coast concern "did a whiz bang job of developing a silicon power rectifier, a piece of electronic hardware that converts alternating electrical current to direct current. "The minute they were out with this thing, others in the industry who had not been able to develop the rectifier on their own got a copy of the Government report and gleaned vital clues on how to produce the device," he says. The result was that a number of companies had the rectifier on the market at least a year sooner than they would if they had had to develop it entirely on their own.

In this case the company's development was not patentable, and there was nothing to prevent other companies from using the information learned through the Government report in producing their own versions.

#### A QUICKER EVALUATION

A company doing military-sponsored re-search often gets an earlier evaluation of how its work is going than it would if the research was aimed only for commercial mar-

kets, companies say.

"You get a good, early calibration of where your R. & D. stands in military work, not years later as is often the case in commercial research," contends Roy L. Ash, executive vice president of Litton Industries, Inc., Beverly Hills, Calif., electronics concern, whose military development and production currently accounts for about 45 percent of total volume.

"When competing in the commercial market, you often spend several years in the laboratory conceiving and developing a product, and then you take time to develop a market program and to test it, before you finally get around to putting the decision of your success up to the public," notes Mr. "But when you're selling to the military, they're interested in technological improvements just over the horizon—the best brainwork to this point. The Government,"

Mr. Ash adds, "is able to provide an early evaluation of your R. & D. effort."

Small companies often sing the loudest praise of Government R. & D. They say that with the aid of Uncle Sam's research money they're able to investigate fields that would be too expensive for them to look into with just their own resources.

#### COULDN'T AFFORD THE RESEARCH

"A company our size couldn't afford to be in this basic research if it weren't for Gov-ernment contracts," says Ralph F. Redemske, vice president of Servomechanisms, Inc., Hawthorne, Calif., developer and producer of electromechanical systems and components whose sales totaled about \$17 million last year. Mr. Redemske is speaking specifically of the company's investigation of thermoelectric power—the conversion of heat into electricity—under Navy sponsorship since 1957. The research, being carried on at the company's Santa Barbara, Calif., facility, is now at the rate of \$100,000 a year, according to Mr. Redemske.

Government research contractors, both big and small, insist that the direct profits from an R. & D. contract are not what prompt

them to vie for the work.

'There's not much profit in Government R. & D. work, especially when you develop just one of something," says an official Packard-Bell Electronics Corp., Santa Monica, Calif. "But you learn how to make something new, advancing the state of the art, which very often leads to commercial or Government production contracts. often the gleam in an eye in your lab is going to produce a hum in your production

line—regardless of who finances it."

Litton Industries' Mr. Ash also discounts the profits directly resulting from such work. "Litton isn't in this work to sell its engineering services for a fee," he says. "We look at it from the standpoint that for every dollar of engineering we do, there's \$10 or \$15 or \$20 worth of future product sold."

#### - A SMALLER PROFIT

Mr. Ash says that cost-plus-fixed-fee work, typically associated with military R. & D. yields a pretax profit of 6 or 7 percent of sales, lower than the 10-percent profit he says is generally associated with military fixed-price production contracts.

The possible profit you can make from an R. & D. contract is so small that going out for that alone is hardly worthwhile," asserts Dr. James Carter, research adviser of Aerojet-General Corp., Azusa, Calif., subsidiary of General Tire & Rubber Co. "Of course, there's always the possibility of the research contract leading to military production or commercial application," he adds.

Although he won't forecast when any of them might reach the market, Aerojet-General has several commercial applications from some of its military research in the works, Dr. Carter says. One project: Adapting nitromethane as a commercial explosive. "Under a Navy contract, some years ago we did a great deal of investigation of nitromethane as a monopropellant-for missilesone that would be a fuel and an oxidizer at the same time," Dr. Carter recalls. "However, it proved to be either to hazardous as a fuel or to have combustion difficulties."

Aided by its fuel study, Aerojet-General has ironed out some of the problems and now is working with petroleum companies studying the use of nitromethane in seismic oil exploration and also as the agent for underground explosions to step up the yield from low-producing wells. "It's much safer than nitroglycerine," claims Dr. Carter, "and because it's a liquid it's easier to place than solid explosives in a number of applications."

#### A SUBSTANTIAL PORTION

Although Government R. & D. contracts may offer lower profits than that which companies usually pursue, the dollar amount of

the work often is much greater than what they themselves put into research, and accounts for a substantial portion of their total sales volume. For example, Lockheed in 1958 had volume of \$962,679,211, which included \$323,900,000 of Government research and development contracts. In the same period Lockheed spent \$25.2 million on its own research and development program. This year the aircraft and missile maker expects to do \$400 million of Government-sponsored R. & D. while digging down in its own pocket for about \$12 million

"In an industry with a rapidly expanding technology like ours," says Lockheed's Dr. Lipp, "a strong R. & D. program is a necessary foundation for virtually all of Lockheed's sales."

Despite the chance of a hefty production contract or profitable commercial application, companies note that Government R. & D. contracts in some cases have some major disadvantages. For one thing, they say a company's patent position is sometimes damaged by work it does under Government contracts. They also say that nonmilitary projects often are delayed by work on military R. & D. jobs, which usually are on a rush basis, and that Government research wants often are too specialized to do a company's commercial market much good.

Another reason is that companies doing big Government R. & D. projects are, of course, at the mercy of the Federal Government; sudden cutbacks as the result of budget problems or other reasons often have a severe impact. A classic example was the cancellation in 1957 of R. & D. work being done by North American Aviation, Inc., on the Navaho missile. The work had started in 1950 and by the time it was canceled some \$700 million had been poured into it. North American had to lay off 12,000 people when the project was dropped.

Space age concerns, in particular, are upset these days by the regulations of the youthful National Aeronautics and Space Administration regarding patent rights. Just last month a delegation representing some of these contractors trouped to Washington to urge that the agency revamp its rules.

#### ALL RIGHTS CLAIMED

Terms of the 1958 law which created NASA to oversee the U.S. space programs seem to give the Federal Government the right to claim all rights-commercial as well as military-to any invention resulting from a NASA contract. Critics of the legislation say this is contrary to the usual practice under Armed Forces procurement provisions, where a company developing a device under a Government contract retains its commercial patent rights.

Contractors complain that besides retaining both commercial and military rights. NASA regulations define a contract so broadly that a subcontractor or supplier to a firm at work on a NASA project, though he has no direct contractual relationship with the Government agency, surrenders any chance to have a device patented if it's a space age

The NASA patent rules "will restrict creative effort on the part of private industry," warns Robert Lent, director of marketing for Statham Instruments, Inc., of Los Angeles, developer and manufacturer of transducers. electro-mechanical devices that convert physical information to electrical impulses and transmit the impulses to electronic data handling equipment.

Mr. Lent claims the rules assume rockets and missiles won't be used in a commercial way. He complains the rules recently caused

Statham to pass up an order.

"A buyer for a major company that had taken a NASA R. & D. contract came to us and wanted transducers off the shelf. But because his firm was working on a NASA contract, I would have jeopardized the patent

position of our transducers in accepting the order," Mr. Lent contends. He turned down the sale, and the buyer went to another supplier, the marketing director adds glumly.

A NASA official in Washington, citing the agency's provisions that allow the NASA administrator to waive the Government's patent rights, says it's not NASA's intention to apply the rules as severely as some industrial critics fear. Industry's objections to the patent provisions "are currently being considered," he says. "There will be changes," he predicts, "but how far they'll go we can't say."

## CARE Expands Pure Water Supply Program

EXTENSION OF REMARKS

## HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mrs. BOLTON. Mr. Speaker, one of the urgent public health needs in the less developed areas is that of improved and expanded community water supply facilities. Nearly a half billion people fall victim to gastrointestinal diseases each year, diseases which are directly attributable to the lack of clean water. Moreover, the rapid growth in world population together with the accompanying trend toward urbanization places considerable strain on already dwindling water resources.

One of the most active programs in this important area is that maintained by CARE. Under CARE auspices, health education programs are begun, and materials for physical improvement provided. CARE-mobile units, equipped with complete audiovisual facilities and designed to carry on intensive educational programs, operate in diverse places. Through ICA, the United Nations, and private agencies, a wide range of films, slides, recordings and posters for basic public health instruction are made available.

CARE book programs also play an important role in this educational process. Many health agencies and institutions overseas rely on CARE's bibliography of medical, scientific, and technical books to meet the study needs of nationals training for service in this field. Simple literature designed to increase public awareness of health problems is widely distributed. In Latin America, for instance, CARE is currently planning distribution of materials on safe water practices to various neoliterate community groups.

The past year has seen a substantial expansion of CARE activities aimed toward developing fresh supplies of pure water. Projects are now underway in various parts of Mexico, Vietnam, and Korea. In the Gaza strip, a program is being planned to provide an adequate water supply for the future development of this crowded and tense refugee area, and ways are being explored to meet the serious problem of dwindling water resources in Libya.

These are but a few of the activities in which CARE is constructively engaged to

bring about needed public health improvements. Dedicated to the concept of helping the world's needy, CARE programs currently operate in some 30 different countries. Certainly the programs deserve widespread public support in their efforts to realize improved conditions.

Under leave to extend my remarks in the Record, I include an article from the New York Times, dated May 17, 1959, which describes one heartwarming aspect of CARE-sponsored activities in Mexico.

New Well Fights Disease in Mexico—CARE and Quakers Help Program Based on Pure Water and Clinics

(By Paul P. Kennedy)

San Mateo Atenco, Mexico, May 12.—An attack on Mexico's greatest killers, diseases caused by germ-laden water, has begun in this little village.

In a fiesta atmosphere, a deep, pure-water well was dedicated. The well was the result of the combined efforts of Cooperative for American Remittances to Everywhere (CARE), the American Friends Service Committee, the Mexican Government and the townspeople.

This was the first part of the attack on such diseases as typhoid and dysentery. The second will consist of periodic visits by mobile clinics to eradicate the diseases.

According to Dr. José Alvarez Amezquita, Minister of Public Health, diseases traced directly to impure water are responsible for 21 percent of the deaths in Mexico. There are 89,000 towns and hamlets in Mexico that lack pure water, Dr. Alvarez said.

Applications for more than 100 wells in the state of Mexico alone have been received by CARE, according to Mrs. Mary Elmendorf, director of the CARE mission for Mexico.

#### COMMUNITY RAISES FUNDS

The townspeople must provide all the materials, such as casings and cement.

The San Mateo well was the first one because the people of the Santa Maria barrio, or precinct, were the first to raise the required 4,000 pesos (\$320) for the materials.

This amount is required, according to Mrs. Elmendorf, primarily to give the neighborhood a sense of participation in the project. The well rig and the gasoline-engine pump were provided by CARE from funds contributed in the United States. The labor,

of which took 10 weeks, was furnished by four young Quakers of the American Friends Committee.

It is estimated that when the program gets fully under way wells can be drilled in about 2 weeks. Arrangements are being made to add rigs as funds and labor become available.

## SURFACE WATER POLLUTED

Potable water was found at 195 feet. But water in large quantities had been met at less than 15 feet. This was the surface water that the people had been drinking. It was germ-infested.

Arrangements are under way to purchase, through contributions from U.S. companies in Mexico, one or more mobile clinics. These clinics, each equipped with an X-ray machine and manned by a physician and nurse, will tour the towns in which pure water has been introduced. Persons of all ages will be examined for intestinal diseases and will be treated without fee.

This eradication phase of the program is expected to present serious problems, however. The municipality of San Mateo Atenco

furnishes a ready example.

It consists of 13 barrios, or suburbs, of which Santa Maria is one. Only two now have pure water. Eventually, most of the barrios will have it, but as long as one remains without pure water, the possibility of infection remains a threat.

The Wheat Bill

EXTENSION OF REMARKS

## HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. SCHWENGEL. Mr. Speaker, it was gratifying to note the good judgment expressed by this body Thursday in rejecting the conference report on the wheat bill. All of us who have some feeling for the consumer, the taxpayer, and the farmer, hope that the conferees will go back to work and come forth with legislation which will help solve our No. 1 agricultural problem today.

The conference report certainly did not do it. It would not have substantially cut production and in the long run, it would have cost more money. It would have merely added to our woes by compounding the issue.

It appears to me that the type of legislation which was worked out and presented to this body is just another example that we sometimes get away off the track in representing the interests of the people.

Nobody wanted this legislation; even the majority leadership was lukewarm to it. The wheat farmers certainly did not want it, and in this group, I include those who grow and harvest 15 acres or less. In fact, they were going to be the forgotten men if this legislation passed and was put on the books. They would not have any voice in the program whatever.

The clamor across the country is for more freedom for the farmer. They want less Government interference in their programs. They would like to be able to grow what they can and sell it in the open market. They ask for a halfway decent chance to work out their own problems.

Yet the great architects of the planned economy schemes continually ignore these people as individuals with the ability to think for themselves. The social planners work out the legislation so that Washington and its bureaucracy will continue to have a stranglehold on everything that the individual farmer does. They will tell him what to grow, when to grow it, and how much he can expect for his effort under a complicated formula of compliance or noncompliance, but seldom cross compliance.

When we originally considered wheat legislation in the House—and frankly we were long enough getting to it in view of the urgency—we had some commonsense proposals offered from the floor. Most of them were beaten down without too much consideration of their ability to solve aspects of the problem.

When a new wheat bill is drafted—and certainly this Congress is charged with the responsibility of getting something on the books without further delay—it would be well to look at this program from a practical standpoint, and incorporate some of the ideas for holding down production; reducing storage costs and giving the farmer a chance to say

about the type of program in which he

will participate.

I trust that the conferees will accept this action by the House as indicative that the legislation in its present form is a far cry from what is best for most people. This should be all the prompting they need to go to work and give us a workable bill.

## Panama Students Defy Communist Oriented Leadership

EXTENSION OF REMARKS OF

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. FLOOD. Mr. Speaker, in the course of my addresses to the House on Panama-United States relations, I have repeatedly referred to the communistic agitations among the students in the Republic of Panama. Thus, I read with considerable interest a significant newsstory from the Isthmus by Mr. Ralph K. Skinner in the Christian Science Monitor of June 15, 1959, on the latest developments among the membership of the Panama Student Federation.

From this story it would appear that the rank and file of the students have now openly defied their Communist-oriented leadership. For that action, they are to be congratulated.

I am pleased to quote the indicated news story as part of these remarks:

PANAMA STUDENTS LOOSEN LEFTIST HOLD

(By Ralph K. Skinner)

PANAMA CITY, PANAMA,-Welcome evidence of some unsuspected maturity in the rankand-file membership of the Panama Students Federation was displayed here recently when Communist-oriented leadership was discredited.

At a plenary session of the Students Congress, a resolution was proposed calling for commercial relations between the Soviet Union and Panama. This had been passed by a tiny margin in a committee meeting.

In open discussion it became clear that the majority of the students were opposed and the proponents of the resolution attempted to withdraw it. This was not permitted and the resolution was defeated. This was seen as an enormous forward step for the students here.

This was the first open defiance of the Communist leadership which has ruled the local student organizations for some time.

#### LEFTIST HOLD BROKEN

Another step forward for the students was disaffiliation with the Communist-dominated Internation Student Union. The Panama students had been affiliated with this leftist group but, at the congress, they voted by a big majority to break off relationships. This has been done, it was reported.

A spokesman for the students explained that in their fight against imperialism and unfair conditions within their own country they did not embrace or show friendship for communism.

The students did go on record as demanding that the United States increase the annuity paid to Panama in connection with

the Canal Zone.

Also, with their customary heatedness, the students declared Minister of Education Carlos Sucre as their "Enemy No. 1 against Panama education."

The students are against certain legislation proposed by Minister Sucre to permit him to exert a firmer hand over student and teacher activities in Panama.

#### STUDENTS ALL RIGHT

Señor Sucre told this correspondent that the big mass of students are all right, albeit too romantic. The trouble is in the leadership of student federations by adults who are students in name only.

Some of these adult leaders have been educated and trained in Moscow; several of them are reportedly skilled organizers who work steadfastly for communism. Senor Sucre said that a small trained group of students manipulate and force the entire student body into the appearance of being communistic

The Education Minister also told this correspondent that there are active Communists among the professors in the public schools. He has endeavored to get legislation whereby such individuals can be discharged. Under prior law, he explained, they cannot be discharged solely for being Communists.

Senor Sucre said the main body of teachers in Panama is all right, but there are vicious elements who head up the teachers' union, and these individuals cause the trouble.

He said the teachers of Panama present a fertile field for agitation and discontent because there are some 1,700 qualified teachers unemployed, even after Senor Sucre employed 500 more teachers this year than ever before in this country.

#### BALANCE LACKING

There is seen to be a basic difficulty in education orientation in Panama, where "bachilleres" (holders of bachelor's degrees) are graduating in a 20-to-1 ratio over trained mechanics, machinists, and other skilled

craftsmen who are in short supply.

Minister Sucre would like to orient the schools toward technical training rather than academic training on the grounds of the economic needs of the country. He has plans to do this on a large scale, and has done some work in this direction already, he told this correspondent, adding that he had the full support of President de la Guardia, Jr., in his campaign to teach Panamanian students how to earn a living and to fill known gaps in the occupational fields here.

#### TEACHERS RESPECTED

Although not strong in the two principal cities of Panama, the teachers' union has enormous political significance throughout the rural areas. In many towns, villages, and hamlets the teachers advise not only the children, but also their parents, on national and provincial problems.

Teachers in Interior Panama have a certain privileged status in the community because of their educational status-far superior to their fellow townspeople. The opinion of the teachers is sought and respected.

## International Sportsmanship

EXTENSION OF REMARKS OF

### HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. JOHNSON of Colorado. Speaker, in light of the discussion on the House floor the other day regarding the participation of mainland Chinese athletes in the International Olympic competition, I believe that members may be interested in reading the editorial which appeared in the June 9 issue of the Denver Post. Under unanimous consent I am having it reprinted here in the Rec-

WE CAN HOLLER FOUL, BUT FEW LISTEN

A curious frenzy in Washington last week indicated just how static our policy toward mainland China has become.

Apparently we are as firmly sold as ever on the idea that the only China of the 20th century is the island of Formosa.

The International Olympic Games Committee, a body both non-American and nongovernmental, made the decision that the Chinese Communist National Committee should be responsible for entering mainland Chinese athletes in the Olympic games.

Formosa could represent Formosa, on the logical assumption that national committees should sponsor athletes they actually are

responsible for.

"A clear act of political discrimination," Washington complained. "Betrayal," cried Formosa, both treating the Olympic Committee action as if it amounted to diplomatic recognition.

Such incidents confirm our suspicion that no new thinking about mainland China, and its near 600 million people, is likely to be done in Washington for some time.

Meanwhile, who knows how soon it will be before some new East Asia crisis puts a gun in our ribs, a position from which we have rightfuly refused to negotiate in the past.

Senator CLARE ENGLE had the daring to tell the Senate last week that he thought we should try to open up some sort of negotia-

tions with Peiping.

The Californian believes that "the challenge to our foreign policy in the next decade is to prevent the total marriage of China to Soviet Russia."

He implied that we can't very well do anying about this if we refuse to even get into Peiping to find out what is going on.

ENGLE suggests that perhaps very limited negotiations about exchanging newsmen, or about starting some trade on the controlled basis we now have with Russia, might at least test the air, without, of course, giving something for nothing.

But the intemperate yelp from the State Department in the Olympic games matter indicates that ENGLE will get nowhere.

The old legacy of "see no China, hear no

China, speak no China-except Chiang," is still too strong.

ENGLE's call was just a faint echo in that senatorial vale known as Foggy Bottom.

No doubt the Red guns pounding Quemoy will sound louder when they start again in earnest.

## Minimum Wage Legislation

EXTENSION OF REMARKS

## HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by Local 37, Furniture and Allied Workers Union, of Philadelphia. Pa :

RESOLUTION CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world: and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator JOHN F. KENNEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 1448. This bill would greatly ameliorate this problem by

raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it Resolved by Furniture and Allied Workers Union, Local 37, UIU, AFL-CIO, That we call

upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

## Dedication of Table Rock Dam, Mo.

EXTENSION OF REMARKS

## HON. CHARLES H. BROWN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. BROWN of Missouri. Mr. Speaker, on Sunday last, our beautiful Ozarks had one of its most memorable days.

Senator STUART SYMINGTON dedicated the first Federal multipurpose project in Missouri, Table Rock Dam.

We are proud of Table Rock, and we are proud of STUART SYMINGTON.

One of our distinguished Taney County citizens introduced our great Senator last Sunday; and his eloquent introduction was worthy of the Senator's eloquent record in public service.

So, today, with the consent of the House, I include as a part of the RECORD the remarks of Marvin Millsap and the address by Senator STUART SYMINGTON at the dedication of Table Rock Dam in Branson, Mo., Sunday, June 14, 1959:

#### INTRODUCTION BY MARVIN MILLSAP

Mr. Chairman, members of the dedication committee, distinguished visitors, and fellow Missourians, someone has aptly said, "Young men shall have visions and old men shall dream dreams." The project we dedicate today was first envisioned nearly a half century ago, and was a cherished dream of many men for the past 25 years. This is an important occasion, significant out of all proportion to its surface implications.

I have heard it said by men privileged to know that this Nation would have found it most difficult to have made sufficient weapons for defense in the last great world struggle without the electricity generated at Grand Coulee and Boulder Dams, While we earnestly hope that no such need ever confronts us again, a sense of security comes from knowing that this dam and its counterparts on the White River will contribute substantially should the need arise. It is interesting to observe that the same groups that opposed this one, opposed those, asserting loudly that there was no need for additional power.

This project, as all others, represents the vision, the thought, effort and toil of many people. Yet it in no way lessens the credit due them to observe that projects of the size and scope of this one are usually completed because of the skilled effort and staunch support of a few dedicated men. None is due greater credit, for none contributed more than the man who is here to make the formal dedication presentation today. From the day he was elected to be your junior Senator, he began a study of this project to determine its merits: and on this deserved basis put his thought, time, and effort, however, whenever, and whereever it was necessary to make certain that this vision and dream would become a reality. With courage and determination, he challenged those who repeatedly recorded their hostile opposition to the principle of Government development, of the Nation's natural resources for the benefit of all.

Since the beginning of statehood Missouri has been fortunate in the men she has selected to represent her in the U.S. Senate. No State can boast of a more outstanding group of men. Witness the distinguished names of Benton, Linn, Atchison, Blair, Schurz, Cockrell, Vest, Geyer, Stone, Reed, and Truman. When time and history, plod-dingly, have written the record, it seems clear that the name of her present junior Senator will be added to this distinguished list. Having announced his intended objective to be that of being Senator of all the people, he transformed this objective, by faithful and diligent performance, into reality by representing farmer, laborer, business and professional man, Republican, Independent, and Democrat alike. If Missouri has been fortunate in his selection, the Ozarks community has been doubly so, for he has given to it time, energy, and thought out of all proportion to its acknowledged political and economic importance.

The aforementioned Senators had one trait in common-a keen sense of duty and responsibility to all the people of the United States. The present instance is no exception. His was the lone voice crying out in a wilderness of unconcern to alert the Nation to the danger to its national security, occasioned by the coming of the space age. Of lesser concern, but of great importance nevertheless, has been his effort on the domestic front to show the need for a national water authority to explore, develop, and conserve our limited water resources to meet the needs of an expanding population and economy.

The press, television, and radio record daily the hopes of many people that the Nation may have the use of his able effort in a greater area of endeavor toward a solution of the stubborn problems of the world that gravely concern man everywhere. They recognize in him an able public servant of great character, willing to defend right as strongly as he denounces wrong, offering a far visioned leadership, characterized by proper proportions of progressive liberalism and valid conservatism. Herein lies wisdom and sound judgment. I am pleased and prvileged to present to our good friend and fellow Missourian, our distinguished junior Senator, the Honorable STUART SYMINGTON—Senator SYMINGTON.

#### ADDRESS BY HON. STUART SYMINGTON, OF MISSOURI

It is a great privilege to be here at the dedication of this magnificent project.

What a wonderful day for Missouri. Amidst the oldest and most beautiful moun-

tains in the country, we have built our State's first multiple purpose project.

For the many people who helped make this possible, this is the day of a dream come true. I wish all of them could be here, but it is good that many of those who made Table Rock possible are on hand.

A project like this does not rise in a day or even a decade. A generation of patient effort went into Table Rock.

The first surveys of the possibilities of

building a dam on this part of the White River were made in 1912. Private surveys continued through the 1920's. The hope for immediate construction was swept away when the depression made private financing impractical.

Nevertheless the potential for water development at this site was too great for the idea to be abandoned.

Early in the 1930's, Congress expressed interest in the development. After prelimi-nary surveys, construction at Table Rock was authorized by the Flood Control Act of 1941. Actual appropriations, however, were not voted until June 1952.

The following year, a cut back in funds threatened the future of the project, but in 1954, more funds were voted and construction put back on an economically sound schedule.

There were more delays and controversies familiar to us all. But now we have it, and all the frustrations of the past can be forgotten in the fresh new hope of achievement.

Today is the beginning of an even greater era in the history of this beautiful section of our State.

If Harold Bell Wright's "Shepherd of the Hills" were to come upon this string of shimmering lakes stretching from Table Rock through Taneycomo to Bull Shoals and Norfolk, he would literally rub his eyes at the beauty which has transformed the economy of southwest Missouri and neighboring Arkansas.

Table Rock Dam will provide a great new source of power for this area. When all four generators have been installed, they will provide 200,000 kilowatts-a tremendous boost for the economy of this region.

Table Rock will help protect nearly a mil-lion acres of land in this basin from damaging floods. Annual flood control benefits will average close to \$1 million a year.

Table Rock reservoir, with a surface area of 52,300 acres, and a shoreline of 857 miles, will provide unexcelled recreational facilities for many thousands of people.

The White River country can rightfully claim to be one of the most beautiful spots in the Middle West.

Now that the natural beauty of this area has been enhanced with this magnificent series of lakes, it should become-and I believe it will become-the No. 1 recreational area of the Midwest.

There will be expanded facilities for one of the brightest attractions of the Ozark country—trout Tishing. A State fish hatchery, fed by waters from this reservoir, is in operation here at Table Rock, feeding an ever-increasing supply to White River fishermen.

The Federal fish hatchery at Neosho will have its capacity doubled. Just this week \$320,000 has been voted for a rehabilitation effort which will help stock the expanding fishing facilities in southwest Missouri.

Missouri State Park Commission is planning to develop areas along the reservoir, and on Friday the Senate passed a bill to provide for the sale of land to the State for this purpose.

In planning for the full development of our State, we should not neglect our forests,

In the Current-Eleven Point Rivers area to the east of here, progress is being made along that line. This week the Senate included in the 1960 appropriation for the National Park Service \$35,000 for a cooperative study of the future of that area. The Park Service and the proper State agencies will cooperate in this study to plan the best development of this picturesque section of our State. This will be an important step forward for the Current-Eleven Point Rivers area.

Local interests must work cooperatively with Government agencies to plan and develop our timberlands. Without such coordinated planning, the economic benefits which can be realized from Missouri forests will be lost.

Many other river basins of our State need to be studied and developed as individual units, in a manner compatible with their potential. An example is the Meramec Basin.

In developing these areas, we should be mindful of the advantages of multiple-purpose projects.

Their dividends are many: electric power, recreation, flood control, and water conservation, all for one investment.

Some projects provide sedimentation control. Others make rivers navigable.

Where nature has given us a diamond, why not cut it to its many facets, instead of leaving some sides rough?

The concept of multiple use is increasingly favored throughout the country. Many of the projects now under construction and being planned by the Corps of Engineers will provide a variety of benefits.

Here in Missouri, for example, two multiple-purpose projects will soon join Table Rock. The Pomme de Terre Dam to the north is nearing completion. The Stockton Dam on the Sac River is in the planning stage, and there are others.

Each step we take in using our resources must be orderly and economic.

A project once planned or partially built should move forward smoothly to its completion. It should not suddenly be halted every few years, or with each change of administration.

At the present time, the Government is practicing the policy of no new starts.

Such a policy represents false economy. It means that needed projects will be delayed for several years, and orderly programs will be disrupted—increasing overall costs.

There has been much debate for many years over what expenditures our Government should and should not make. Even projects for the development of our natural resources have often been called wasteful spending. But it is mighty hard to argue with a dam in being. It stands, as you can see, solid and proud as an asset to the country.

Appropriations for projects like Table Rock Dam are not spending, but investment—investment in the future of America. We will need more such investments in the future. Our country is expanding rapidly, with demands for all types of service increasing. Fifteen years ago the population of the United States was 140 million. Now it is 175 million, and by 1975 will be 235 million.

In 1952, the President's Materials Policy Commission issued an excellent survey of the resource requirements of this country over the next few decades.

The study pointed out that between 1900 and 1950, per capita water consumption in the United States had doubled.

Because our population had also doubled in that period, the demand for water had thus actually increased four times.

This Commission predicted a similar doubling of per capita consumption over the period from 1950 to 1975, as the Nation's standard of living rises.

Missouri, and the rest of the Mississippl Valley, is blessed with a large supply of fresh water. Properly utilized through prudent investment, it can not only support our increasing population but give the people an ever greater standard of living.

Another key resource in which investment is wise is electric energy. The needs of our future growth are sufficient reasons for its development. This same Presidential Commission predicted a rise in our demand for electric power, by 1975, of 250 percent. But the clinching argument for investment here is provided by Premier Khrushchey's bold declaration of economic war on the United States.

In the field of electric power, Russia has the resources to wage such a conflict. The Russians have 10 plants—four of which are completed or under construction, and 6 of which are in planning—each of which produces more kilowatts than the largest dam in this country. Informed authorities in our Government have estimated that the Russians may have already surpassed us in the production of hydroelectric power.

Moreover, in gaging the relative strength of the Sino-Soviet empire and the free world, we can no longer ignore the onrush of Communist China. Its hydroelectric potential has recently been estimated at nearly five times that of the United States.

These figures are the measure of the challenge. As the Communists develop resources that supply economic muscle to their efforts, we must match them to stay ahead.

In our country, energy no longer comes just from fuels and falling water. We have begun to harness nuclear power for this purpose.

A major source of power generation will continue to be water.

Thanks to enlightened leadership, public and private, today mighty power generators stand on many of our Nation's rivers.

But it is estimated that we still have developed only one-fourth of the hydroelectric potential of the United States.

A vast storehouse of 90 million kilowatts remains to be tapped through a sound program of waterpower development.

America should move ahead with surveys, plans and sound construction programs for the basinwide development of the power potential of our rivers.

Such planning should assure that the upper and lower basin areas share equally in the benefits of water development. One part should never be allowed to benefit at the expense of others.

The need for interstate cooperation is paramount in hydroelectric and water programing.

We face a national shortage of developed power.

We must come up with nationwide programing to meet it.

I hope that the State and Federal Governments and the private and local interests concerned can join in formulation of these programs.

Without such cooperation, a few may benefit, but the Nation will lose.

I am confident that with prudent investments in our own resources, our country can stave off any Communist economic challenge.

America and defeat can never be made to rhyme.

With the work, dedication, and patient effort that went into the Table Rock Dam, we can remain the world's No. I economic system.

Let the new economic and recreational wonders of Table Rock be a vivid reminder of the richer life that can be available to all if we utilize wisely what nature has given us.

Each new project is but another step on the road to a better tomorrow.

We can be proud of what this dam represents—a resolution writ into our landscape that the blessings which this country has received will be multiplied for the generations to come.

Toll of Traffic Accidents

EXTENSION OF REMARKS

## HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. RAINS. Mr. Speaker, Members of Congress concerned by the terrible slaughter caused by traffic accidents, and that includes all of us, are deeply grateful to our colleague from Alabama, the Honorable Kenneth A. Roberts, chairman of the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce, for the great work he has been doing to promote highway safety. In that connection, permit me to call attention of Members to a splendid paper by our colleague, which was read at the meeting of the American Medical Association in Atlantic City, N.J., June 7. The paper is as follows:

First, I want to extend congratulations to the medical and allied health professions for the gains which have been made toward harnessing many of our mass killers.

Within our lifetime we have seen many diseases which were commonplace early in this century conquered or brought under effective control.

Even now we can look forward to a day in the near future when the terrible crippler polio will be a thing of the past.

New surgical techniques and treatments have substantially reduced the number of deaths and disabilities caused by heart disease.

Progress is being made in the treatment of cancer.

Yet we have with us today a situation of epidemic proportions which is raging out of control and getting worse by the hour.

I speak, of course, of the tragic loss of life, productiveness, and property being caused by automobile accidents on our streets and highways.

Certainly, you who are meeting here—the ones who are called day and night to pronounce dead the persons so needlessly killed—are in a better position to understand the problem than the average layman.

Last year a great amount of publicity was given the fact that the traffic fatality toll was reduced by 1.700 deaths as compared with the figure for 1957.

Why, least year we only killed 37,000 people. Killed them needlessly. I find it difficult to find any comfort in this fact or any cause for self congratulation.

It is my belief that the most probable explanation of the declining death rate is that you doctors are simply getting better at the business of keeping people alive.

Not so widely publicized, however, was the fact that injuries—in both number and rate—had been rising.

Back during the Korean war, the U.S. Air Force got to wondering why it had so many men in hospitals with noncombat injuries.

The investigation had barely started when the Air Force found it was losing more men from automobile accidents than from enemy action.

Furthermore, the automobile injuries were usually more serious and required longer hospital care than the battle casualties.

Further investigation revealed that this situation was true for all of our armed services.

Then the U.S. Public Health Service started to look at the problem with renewed interest, and here we found the most shocking revelation of all.

In 1957, the best estimate we could get from private sources showed that 1,400,000 people were injured in motor vehicle accidents.

The Public Health Service study revealed that the true figure was nearer 5 million—nearly five times greater than we suspected.

Five million injuries a year means 25 million days in bed at the hospital or at home it means 125 people injured for every one killed in a traffic crash.

I do not believe this terrible situation is going to be improved simply by asking our motorists to stop killing and maining each other.

Unfortunately, I think we must accept the fatalistic fact that all traffic accidents cannot be prevented. The more cars you put in one place at any one time, the more chance there is for an accident simply by the law of averages.

And so long as we have accidents, we most certainly will have injuries.

As chairman of the congressional Subcommittee on Health and Safety, I have been studying this problem for about 3 years, and I have reached the conclusion that along with improved techniques for treating and healing our injured, we must have improved safety standard in the automobiles we drive to lessen the severity of those injuries and in some cases to prevent them entirely.

I don't think we can stop a driver from going to sleep at the wheel. I don't think we can stop a faulty tire from blowing out and putting a vehicle out of control. I don't think we can catch every drunk driver before he wrecks himself or someone else.

But I do think we can give the driver and his passengers a safer package in which to ride and a far better chance of escaping death or injury.

This to me is a logical conclusion and a logical place to begin working toward a cure for this epidemic.

John Moore, who directs Cornell University's automotive crash research program, has stated that the seriousness of the injury appeared to be very largely a function of the shape and form of interior car components and how the body hit them.

Dr. Fletcher Woodward, who heads your AMA committee on the medical aspects of automobile injuries and deaths, told our subcommittee:

"We are convinced that if speed, recklessness, and drunken driving are controlled, and if improvements in automobile design are provided to protect those involved in collisions, then the present appalling toll of injuries can be reduced."

These facts have repeatedly come up before our subcommittee, and I am sure they have come to the attention of the automobile manufacturers.

Yet, in my opinion, there has been no substantial improvement in automobile design as far as the safety factors are concerned in the 3 years we have been studying these facts.

With this in mind, I have introduced two bills which would direct the Bureau of Standards, certainly a nonpartisan agency, to prescribe certain safety standards for our automobiles.

One of these bills would require all automobiles shipped in interstate commerce to meet these prescribed standards and the other bill would require that all automobiles purchased by the Federal Government meet the standards.

The latter bill would have the effect, we believe, of making the safety standards regular equipment on all cars, as it would be impractical to manufacture one product for Government sales and a different one for regular dealer sales.

I am sure that this legislation is going to be attacked as Federal intervention into private enterprise.

I am equally sure that the attack will be directed from a highly industrialized area in the great State of Michigan.

But I do not consider this any invasion of States rights, any more than I consider it an invasion of States rights for a Government inspector to certify that the meat I buy is safe to eat or that the drugs I buy to cure my illnesses meet certain standards.

We have been told that the public will not buy safety equipment for his car, when it is offered as optional equipment at extra cost.

But no one has told us that the motoring public would not benefit from safety belts, padded dashboards, windshield washers, positive action door latches, and many other devices, if they were made standard equipment on his car.

I do not recall any great hue and cry for the public to demand purity in meats and other foods and drugs before passage of the Pure Foods and Drug Act. Yet we knew thousands were dying every year from tainted meats, improperly canned foods and drugs dispensed with no supervision.

Who today can deny that passage of the act and the resulting Government inspections and standards has been of tremendous value to all of us and to the country as a whole?

My bills have very simple objectives: to reduce death and injury and to provide the motoring American with the safest possible product.

If it results in the elimination of knifeedged tail fins and projecting spear points from the hoods and fenders of our cars so that a little more money can be spent on cleaning up the interior, I don't believe any of us will suffer or that the economy of the country will grind to a halt.

There are still enough flexible factors such as performance, economy, price and accessories to leave the automobile market one of the most highly competitive in our country.

I plan to hold public hearings on this standards bill in the very near future, and if the provisions of this legislation are in agreement with the policies of your association, I would welcome your support and would hope that you would be willing to have a representative meet with us and make your views known.

Briefly, I would like to discuss with you some other legislation presently before our subcommittee.

Representative Paul Schenck, my colleague from Ohio and ranking minority member of the subcommittee, has a bill which would make it unlawful for automobile exhausts to discharge unburned hydrocarbons in amounts sufficiently concentrated to be harmful to human health. This harmful level again would be determined by the Bureau of Standards.

The Public Health Service has considerable evidence—admittedly some of it is still circumstantial at this time—that air pollution is a possible source of lung cancer, and automobile exhausts are believed to be a major contributor to air pollution.

Then, in the belief that properly trained drivers have fewer accidents and traffic law violations, I have introduced a bill which would provide some Federal funds for research and facilities in the driver training field. These funds would be matched at the State level and control of their use would remain at the State level. None of the money could be used for teacher's salaries, and the Federal Government would only require the submission of a reasonable and workable research plan before granting of the funds.

All the testimony that we have had before the subcommittee has been to the effect that persons who have had formal driver train-

ing have about half as many accidents and violations as those who have not been so trained.

There is a great need for some sort of central violations section where the various States can check the previous record of drivers license applicants, and we have before us a bill which would establish such a records section.

I do not mean that every time a motorist got a parking ticket his law violation would be flashed to Washington, but in the cases of the most serious violations, such as driving while drunk or any offense which leads to license revocation, a permanent record would be made of it.

This would prevent habitual law violators from going to a neighboring State and applying for a new license. At the present time, the States have no means of checking at a central location the previous record of any driver.

The legislation I have mentioned here I consider to be of prime importance in bringing this traffic accident epidemic under control.

My personal feeling is that the subcommittee has proceeded with extreme caution in its work and has sought in every manner to avoid compulsive legislation.

But after 3 years of pointing out some of the things which need to be done, and with no indication of early action on the part of anyone else, I believe we must pass some sort of legislation in the best interests of the motoring public.

The time has come when some responsible body must act to curb this terrible loss of life and property.

And act is what we plan to do.

## Brief History of U.S. Postal Service

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday, June 11, 1959, setting forth a brief history of U.S. postal service:

POSTAL SERVICE HISTORY

Wilkes-Barre takes pleasure today in welcoming delegates to the 25th annual convention of the Pennsylvania Chapter, National Association of Postmasters.

While this organization is a relative newcomer on the scene, postal service dates back to the time of the great empires when the need for communication first developed. It was not until the days of the Roman Empire that postal service was perfected, only to receive a setback for centuries after its collarse.

Originally, postal service was largely a matter of government communication. Later, the universities and merchants entered the picture. Gradually, it was expanded to include the general public.

Postal service was inaugurated in Colonial

Postal service was inaugurated in Colonial America in 1639 when formal action was taken by the General Court of Massachusetts. Special messengers carried the mail between villages. It was not until 1692 that intercolonial service was instituted, with the main office established in Philadelphia.

Benjamin Franklin became deputy postmaster in 1737 and postmaster general in 1753. In 1755, a link was established with England.

Eventually, the Continental Congress took charge of the postal service, with Franklin as the first postmaster general. In the Articles of Confederation, provision was made to give Congress the exclusive right to establish and operate post offices. Under the Constitution, these powers were expanded.

The first post office in the United States. incidentally, was established in New York in 1783. In 1789, there were only 75 post offices throughout the country. Today, we have more than 36,000 with expenditures exceeding \$3 billions and stamps and cancellations running into astronomical figures.

As for postmasters, they come in four classes, with the first three appointed by the President with the advice and consent of the Senate. The fact that they are subject to confirmation like cabinet officers, ambassadors, members of the Judiciary and other high functionaries is evidence of the importance the Government attaches to the posts.

## Rapid Amortization in Regulated Industries

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. BOW. Mr. Speaker, rapid amortization for tax purposes is a subject that has generated a great deal of political heat and misunderstanding in recent years. In the interest of setting the record straight, Jacob Friedman, a Washington, D.C., engineering and business consultant and a former Government official who dealt with this problem, has prepared a statement setting forth the real benefits, to the Government and to the industry concerned. His facts and figures strip the subject of exaggeration and confusion. I believe members will be interested in a discussion of Mr. Friedman's analysis by Francis X. Welch, editor of the Public Utilities Fortnightly, which I include with my remarks:

RAPID AMORTIZATION IN REGULATED INDUSTRIES (By Francis X. Welch)

Hearings of the Senate Subcommittee on Antitrust and Monopoly, recently made available in printed form, contain some interesting views on the effect of rapid amortization for tax purposes of defense supporting plant structures by regulated industries. hearings were held pursuant to Senate Resolution 57 of the 85th Congress. And while the question of further issuance of rapid amortization certificates for regulated business has now been disposed of by the cessation of the program, the effect of such rapid amortization on the earning capacity of such industries, including both gas and electric utilities, is still being debated in regulatory and academic circles.

Is it a tax saving or a tax deferral, when a regulated business speeds up its deduction for depreciation for taxes so that it is entirely written off in 5 years? Does it amount to an interest-free loan by the Government during the period of amortization—as is so often stated by the critics of such certificates? On June 20, 1957, U.S. Senator Homer E. CAPEHART (Republican, Indiana) introduced into the Congressional Record a statement by an engineering and business consultant, Jacob Friedman, of Washington. D.C., summarizing the costs and benefits

arising from the amortization of Brownlee Dam by the Idaho Power Co.—which, incidentally, the company subsequently voluntarily declined to exercise. Using an estimated cost of \$67,138,000, of which 65 percent had been certified as eligible for rapid amortization, and using an estimated life of 50 years, Friedman arrives at some interesting conclusions. First, he deals with the joint advantages to both private industry and the Government, based on the assumption that a company will be able to invest profitably its so-called depreciation tax benefits at 6 percent annually for 50 years-considering the use of an interest-free loan as an investment at a profit rate equal to the rate of borrowing on alternative indebtedness. He also uses the assumption, for statistical purposes, that the corporate tax will remain at 52 percent, that the Government can borrow money at 3 percent, and that the taxpayer will continue a profitable business operation.

Here is Mr. Friedman's analysis of the conditions which would prevail under these assumptions:

(a) At the end of each of the first 5 years following completion of the facility, the Government will borrow money at 3 percent to offset depreciation tax losses (or company depreciation tax benefits), which are in effect interest-free loans to the company.

(b) At the end of each of the last 45 years, the company depreciation tax loss (or Government tax gain) because of less than normal depreciation allowable, represents a repayment without interest to decrease the remaining balance of the interest-free loans. At the end of 50 years, such loans will be fully paid as the company depreciation tax benefits will equal Government depreciation tax gains.

(c) At the end of each year after the first, Government receives income taxes equal to the company's profit rate of 6 percent multiplied by 52 percent or 3.12 percent of its cumulative depreciation tax benefits compounded annually at 2.88 percent (6 percent—52 percent times 6 percent), the com-pany's net return after taxes on its investment at 6 percent. Moreover, while the loans (depreciation tax benefits) received by the company at the erd of each of the first 5 years are interest free, the Government realizes as income taxes a return of 3.12 percent on the basis of the current value of loans that have compounded at 2.88 percent annually rather than on the basis of the value of interest-free loans. current

(d) The net Government tax loss at the end of each of the first 5 years is equal to the company depreciation tax benefits less the excess of income taxes received in (c) above over the interest expense necessitated by Government borrowing at 3 percent.

(e) Each net government tax gain from the end of the 6th year to the end of the 26th year is equal to the company depreciation tax loss plus the excess of income taxes received in (c) above over the interest expense necessitated by Government borrowing at 3 percent.

(f) Each net Government tax gain from the end of the 27th to 50th year is equal to the sum of the company depreciation tax loss, the gain from income taxes received in (c) above, and the interest at 3 percent on the cumulative net Government tax gain accrued to date that reduces Government borrowing to the extent of such net tax gain as it would not have existed in the absence of a certificate. During this period the net Government gains accelerate.

The important point of Mr. Friedman's computation is that the regulated company's benefits result from investing its cumulative depreciation tax benefits at a profit of 6 percent and compounding them annually at 2.88 percent after payment of income taxes. In the hypothetical (as it turned out, mythical) case of the Idaho Power Co., through

the certification of the Brownlee Dam at the end of 50 years following construction, the interest amounting to \$25,756,000 would have represented the gain of the Idaho Power Co. This is the interest which would otherwise have accrued without benefit of the certificate as a net interest expense after deducting, for income tax purposes, 52 percent of the total interest due on loans equal to the depreciation tax benefits at the end of each of the 5 years.

Note that the value of such a gain at the completion of the construction project is \$6.229.000. This is the amount of money invested at an annual profit rate of 6 percent. But 3.12 percent of this (52 percent times 6 percent) will be returned to the Government as Federal income taxes. Only the remainder of 2.88 percent of the profits can be figured as a component for compounding the interest benefit over the 50-year life period of the project. That is how Mr. Friedman finally arrives at the \$25,756,000 net gain to

the taxpaying company.

But what does the Government get out of this—as a benefit through the certification of the project for tax-paying purposes? Mr. Friedman figures that the Government stands to gain \$30,407,000 at the end of 50 years following the project's construction. Thus Uncle Sam stands to gain more than the taxpayer through the certification of the project for tax purposes. The Government's gain is due to the annual 3.12 percent return as income taxes on the investment of cumulative company depreciation tax benefits compounded annually at 2.88 percent. and the excess of annual savings of interest (at 3 percent) on the cumulative net Government tax gains over what the Government would have had to pay in the absence of a certificate. Mr. Friedman figures that the value of such a gain to the Government at the completion of a project would be \$6,936,000. At 3 percent compounded interest over the 50-year period, this figures out at \$30,407,000, as stated above.

In other words, critics of the amortization tax program have quite generally failed to take into consideration the Government's tax benefits due to the annual profitable investment of the company's depreciation tax

benefits.

Of course there are other benefits from such a program which eventually accrue to the Government as Mr. Friedman states:

"The receipt of a necessity certificate is to no avail unless the certified facilities are utilized in a profitable manner. Accordingly, the necessity certificate program has encouraged the incentive and initiative of private industry to undertake a successful operation, which has made the United States the mightiest nation. The additional plants with their complement of modern equipment, many of which would never have been built under normal conditions and others not built at the time needed by the Government. have provided necessary mobilization capacity, gainful employment, and have generated considerable tax revenue in addition to the Government gains discussed above. In this particular case, an electric power development will attract many industries, which in turn will generate much additional tax revenue in behalf of the Government."

These views are quite different, of course, from those of Russell C. Rainwater, chief accountant of the Federal Power Commission, who placed the cost to the Government of the Idaho certification at \$83,595,827. When asked to comment on Mr. Friedman's computations by Senator Kefauver, Democrat, of Tennessee, Mr. Rainwater submitted a memorandum on August 22, 1957, to the Senate Antitrust Subcommittee, which mainly differed as to the basic assumptions made in Mr. Friedman's computations.

Mr. Rainwater pointed out that the net Government tax gain was based on an interest rate of 3 percent which he thought

was too low, especially in view of the fact that the Government was paying 31/2 per-cent for such borrowed funds at the time of the inquiry. He also pointed out that Friedman had estimated the utility company's tax payment out of its return of 6 percent, whereas in conventional regulation return allowance is always made after the allowance of income tax as an operating expense. Mr. Rainwater also repeated his contention that the use of tax benefits, temporary or otherwise, enables an expanding company with constant need of new capital for construction to employ such benefits virtually as interest-free loans. If the company did not receive the amortization certificate. the funds for new construction would have to be raised by other means, in his view. Revising Friedman's computations in the light of his criticisms, Rainwater came out with a gain to the company of \$165,077,-000 compared to Friedman's \$25,756,000 result in the hypothetical case stated above. Rainwater also computed a net loss to the Government of \$39,064,000, compared with Friedman's gain to the Government of \$30,-407 000

In the nature of a rebuttal to such disagreement with his computations, Mr. Friedman wrote to Senator DREKEN (Republican, of Illinois) on January 17, 1958, a letter in which Friedman justified his computations as follows:

First, as to whether the assumption of 3 percent of Government borrowing was too low, Friedman thought that it was justified over a long-range average—not using just a spot period of higher interest—especially in view of taxes received by the Government from the interest income of those who loan money to the Government itself.

Secondly, as to whether the assumed Government tax benefit was erroneously based on a return allowance before taxes, rather than after taxes, Mr. Friedman made a very interesting observation. He said that he was not making any assumption as to company taxes based on the return allowance at all, but simply using the going interest rate of 6 percent on private capital to estimate the value of certificate to the taxpaver. If there were no certificate issued, the company would have to raise the money from private investors, issue bonds, and pay an assumed 6 percent interest to the bondholders. This 6 percent, paid out by the company, would be deductible as a business cost before taxes. But with the use of the money provided under the certificate, the company issues no bonds, which means that the 6 percent is now accrued as a profit for the stockholders, and the Government gets income taxes on this at the 52-percent corporate rate.

In other words, were there no certificate there would be no taxes for the Government (at 52 percent) on 6 percent otherwise paid to bondholders as tax deductible interest; but where the certificate is used, the Government gets such a tax on the 6 percent accrued as profit to the stockholders. Conventional ratemaking procedure, and whether the tax is assumed before or after the return allowance, have nothing at all to do with it. These additional taxes collected by the Government amount to 3.12 percent (52 percent of the 6-percent earnings) and must be paid by the utility, resulting in a net company benefit of only 2.83 percent (6 percent minus 3.12 percent).

Friedman went on to say that consumer rates remain the same in either situation. He noted also that the 6-percent assumption was admittedly a maximum interest payment rate and that if the company could borrow money from private sources for less, then the value of the certificate would correspondingly be reduced. With respect to Rainwater's comment that the certificate provides interest-free loans for the use of plant expansion, for which funds would otherwise

have to be raised from private sources, Friedman concludes:

"One of the objectives for providing benefits to private industry through necessity certificates is to provide an incentive to ex pand facilities in excess of scheduled needs, which represents a mobilization preparedness measure at an economic risk by industry. To the extent that such additional plant is constructed with the use of depreciation benefits either at the beginning or later in increments, because of the certificate that would otherwise not have been accomplished in the absence of such depreciation benefits, Federal income taxes can be computed in arriving at Government loss or gain. situation has been prevalent during the tax amortization program and, as a result, a tremendous increase in industrial capacity is available for mobilization purposes. Thus, it is agreed that the basic expansion would be undertaken without a certificate but it is not reasonable to assume that excess facilities which could have been built with the use of depreciation benefits would be constructed regardless of the certificate."

As to Mr. Rainwater's computation of a much greater benefit to the company under such a certificate, Mr. Friedman had this reaction:

That such benefits could only be obtained through an increase of consumer rates. Further, that, if consumer rates were increased, such benefits would result in the computation of Federal income taxes (in arriving at Government loss or gain) which are not the funds for new construction whether raised by private financing or not.

Aside from these differences of opinion on resulting benefits of tax amortization, Friedman made an interesting observation on the effect of accelerated depreciation on utility company earnings. In the case of the Idaho Power amortization certificate (which the company declined to use) it was represented that the depreciation benefits, on so-called interest-free loans of approximately \$30 million during the first 5 years—which must be repaid over the subsequent 45 years—represent a subsidy to the company of \$300 million or 10 times the amount of the loans.

Priedman said of this:

"How astonished would the average person be if he arranged to receive interest-free loans of \$1 at the end of each of 5 consecutive years with the understanding that they would be repaid in declining payments over the next 45 years but was advised 1 year before the receipt of the first loan of \$1 that this arrangement represented a gift to him of \$50. That would be analogous to the insinuation made through press releases, hearings, etc.; namely, that interest-free loans due to a certificate are worth 10 times their amount even though they must be repaid."

These are rather original approaches and observations made about a most hackneyed and complex subject. Does the Government benefit more from accelerated depreciation or rapid amortization than otherwise? Does the taxpaying utility? Does the consumer? You pay your tax money and you take your choice.

## Surplus Bins

EXTENSION OF REMARKS

## HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the RECORD a copy of an

editorial by the oldest newspaper in Iowa; the Telegraph-Herald. The article suggests the possibility that warehousing and storage of food is getting to be a big business itself, and that even here there may well develop a situation in which vested interests in warehousing of surplus foods could stop effective efforts to decrease our surplus stocks.

The editorial follows:

SURPLUS BINS

The State of Kansas, one of the great wheat States, alone has a billion bushels of grain storage capacity, or enough for five average crops of Kansas wheat. The increase in storage capacity in other wheat States has also been phenomenal in recent years.

There is an assumption—which may be wishful thinking—that the wheat surplus is going to be scaled down to a normal carry-over during the next few years. There are various proposals which could accomplish this.

If that happens, will the big proportion of the vast American grain storage plant then become surplus? Warehousing is a leading American industry, but can a warehouse built for grain be converted to other purposes? This will be one of the interesting phases of farm and allied operations as it unfolds.

Will we soon hear a new demand—to subsidize the warehousemen with their empty bins?

This storage for surplus crops is getting to be big business itself. And we shouldn't be surprised to learn that it will be a powerful force to reckon with if we ever get up the courage to cut down the farm surplus, and empty some of those bins.

## Editorial Comment on Pebt Managemer-

EXTENSION OF REMARKS

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, the press throughout the United States has with unusual unanimity supported the Treasury's request for both an increase in the amount of bonds that can be sold to evidence the Federal debt as well as to take the ceiling off the interest on Government bonds maturing after 5 years.

I have already placed in the Appendix to the Congressional Record the following six editorial comments:

First. "Paying the Piper," Washington Daily News, page A5225, June 17, 1959.

Second. "You and the U.S. Fiscal Plans," New York Herald Tribune, page A5231, June 17, 1959.

Third. "Pawn or Sovereign?" Washington Post and Times Herald, page A5234, June 17, 1959.

Fourth. "Federal Financing Reforms," New York Times, page A5242, June 17, 1959.

Fifth. "The Peg and the Kindling," Wall Street Journal, page A5244, June 17,

Sixth. "Up With the Ceiling," St. Louis Post-Dispatch, page A5119, June 9, 1959.

In the Appendix to the RECORD today I am adding four additional editorial comments:

First. "Lowdown on Treasury's Dilemma," by J. A. Livingston, Business Out-

look, June 10, 1959. Second. "Treasury Deep in Trap," by Sylvia Porter, "Your Money's Worth."

Third. "A Little Preventive Medicine" from the Wall Street Journal, June 11, 1959.

Fourth. "The Pension Society" from the Wall Street Journal Review and Outlook, June 9, 1959.

There are other articles which support

the same view, for example:

First. "Paying the Price," The Wall Street Journal, June 5, 1959.

Second. "U.S. Bond Rates," Baltimore Sun, June 5, 1959.

Third. "Treasury Interest Rate," the New York Times, June 4, 1959.

Fourth. "Everybody Has a Stake in Rate Treasury Pays," by Sam Dawson in the Evening Star, Washington, D.C., June 5, 1959.

Fifth. "Debt and Interest," from the

Baltimore Sun of June 2, 1959.

Sixth. "High Interest Rates at Expansion's Threshold," by Harold B. Dorsey, Economic View, June 1, 1959.

Seventh. "Heavy Ceiling," from the Washington Post and Times Herald, June 6, 1959.

Eighth. "U.S. Bond Ceiling Termed 'Political'," by Paul Heffernan, from the New York Times, June 7, 1959.

Ninth. "Liberal and Orthodox," from the Baltimore Sun, June 8, 1959.

Tenth. "New Interest Load," from the

Baltimore Sun, June 9, 1959. Eleventh. "U.S. Faces Hard Tasks in Debt Management," by Edwin L. Dale, Jr., the New York Times, June 7, 1959.

## Madisonville, Ky., a City of Good Government and Good Citizens

EXTENSION OF REMARKS OF

## HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. NATCHER. Mr. Speaker, I have previously been privileged to call attention to the enviable record that has been established and is being maintained by the city of Madisonville, Ky., population 17.372. For the fifth consecutive year the citizens of Madisonville will not be required to pay a real estate or ad valorem tax.

The city of Madisonville, named in honor of President James Madison, is the county seat of Hopkins County. It is a beautiful city which is continuing to be improved by public-spirited persons who take an active part in their city government, and who have faith in its future. It has been said that the antidote for pessimism is perspective. Surely the people of Madisonville have not been without perspective in any of their worthwhile endeavors. This fact is evidenced by fine churches, schools, and in every aspect of community life.

When visiting the city of Madisonville one is impressed by the warmth and sincerity of its residents. Interest in their community is generated from father to son and is manifested by civic clubs, professional and business men and by those in all walks of life. The local newspaper, the Madisonville Messenger, and also the radio station, WFMW, like the citizens of Madisonville, takes an active part in all activities for the betterment of the community. Through the medium of the Madisonville Messenger and radio station WFMW, the citizens of Hopkins County are the recipients of up-to-date. unbiased news. The owner, editorial staff, and all personnel connected with this newspaper and radio station are indeed serving the best interests of their town, county, and State.

The people who reside in Madisonville have shown foresight and wisdom in the selection of those who are responsible for the good performance of government. The mayor, David Parish, a successful businessman, is fortified in his efforts by members of the city council, as well as all city officials and personnel of the various municipal departments. Because of the untiring services rendered by such men and women. Madisonville is economically operated. The city has a modern sewer system, a sewage-disposal plant, and its own elec-

tric and water systems.

Madisonville residents have faced a challenge. Service to their community. conscientious performance of their jobssometimes in the face of difficultiesthese and many other everyday duties hold the possibility of deep gratification. For their activities they should receive and enjoy praise. However, I am sure, the true satisfaction, the essence of success, comes to them not from praise but from the doing. Good government and good citizens are one and the same; good individuals make good towns and nothing else does. Good communities make a good State and nothing else can. In this knowledge I hold the citizens of Madisonville, Ky., in the highest respect and admiration.

## TVA Project for Maine and Maritime Provinces

EXTENSION OF REMARKS

## HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. OLIVER. Mr. Speaker, Maine people as well as our good neighbors in the Maritime Provinces of Canada are eagerly anticipating a favorable report by the International Joint Boundary Commission resulting from the survey now being completed on the economic and engineering feasibility of the Passamaquoddy tidal power project.

Rumors persist that the report will be favorable. This could and should result in a multipurpose development project similar to the Tennessee Valley Authority's great achievement in the Tennessee River Basin and watershed.

I shall work to the end that a full Quoddy power development, integrated with multipurpose, full resources de-velopment of the St. John River Basin, may be constructed on the basis of the concept, established by TVA. Economic benefits for Maine people and our Canadian friends and in fact for the entire northern New England area, comparable to those now being enjoyed by the TVA area, will result from such a project.

I have strenously, with this potential in mind, opposed all attempts to malign TVA since its inception in the early 1930's. Certain interests in our country are determined to discredit and undermine this great example of progress through democracy in action. Opponents have dedicated themselves to a crusade of criticism of TVA, but their failure to justify such criticism on the facts often drives them to the fabrication

of unfair observations.

I recently received an expression of this type of attack against TVA which I referred to the TVA Board in Knoxville, Tenn., for reply. I am including, herewith, a copy of the reply of Hon. Herbert D. Vogel, Chairman of the Board of the Tennessee Valley Authority, which points out some of the misconceptions publicized by the dedicated opponents of TVA in their recent publication:

TENNESSEE VALLEY AUTHORITY,
Knozville, Tenn., June 12, 1959.
The Honorable James C. Oliver,

House of Representatives, Washington, D.C.

DEAR MR. OLIVER: I appreciate your sending me a copy of the Dan Smoot report on TVA, and I am happy to have the opportunity to reply to it and correct some erroneous statements.

Mr. Smoot opens his report with a quotation from a statement by a Congressman from California: "The TVA Act of 1933 took the place of the TVA fertilizer program of Muscle Shoals, Tenn., which had become so notorious that it had to be abolished."

First of all, Muscle Shoals has always been, and still is, in Alabama. Second, there never was a TVA fertilizer program of Muscle Shoals, prior to TVA. Since it was nonexistent, it could not have become notorious.

Nor could it have been abolished.

In later paragraphs, Mr. Smoot relates that "The idea was to build one dam at Muscle Shoals, Ala., to help control floods in the Tennessee River Valley and to im-prove water navigation on the river." The fact is that the Muscle Shoals Dam was begun during the First World War, long before TVA was created or even conceived, and completed in 1925. Its principal purpose was neither flood control nor navigation, though its design permits it to function as part of a flood control and navigation system; its original purpose was to provide electric power for two munitions plants built

nearby.

Mr. Smoot has apparently made little effort to verify his statements, and many effort to verify his statements. are directly contrary to fact. He asserts, for instance, that "\* \* \* TVA accomplishments are a bookkeeping \* \* \* miracle and that "\* \* \* the bookkeeping is always juggled. \* \* \* " The truth is, of course, that TVA bookkeeping follows the uniform system of accounts prescribed for all electric utilities by the Federal Power Commission. Moreover, its books are audited yearly by the General Accounting Office, an agency of

Congress, which publishes a report available for all to see.

In the light of fact, some of Mr. Smoot's other statements fall to the ground. "Pensions and retirement funds for TVA employees \* \* \*" he says, "Never show up as part of the operating costs of the Tennessee Valley Authority." It simply isn't so. They do.

"Research and public relations \* \* \* cost." he says, "is never included in TVA cost-of-operation." That, too, is untrue. All cost is reflected in the accounts of TVA and in the audit of GAO.

Mr. Smoot has resurrected an old and many times discredited story when he declares that TVA has flooded permanently more land than was previously damaged by intermittent floods. This statement is quite inaccurate in terms of acreages involved, but the misheading twist is the omission of an important fact: A very large proportion of the land inundated for reservoirs was steep and almost useless, or low-value timberland, or marginal agricultural land. The land protected, on the other hand, its high-value urban and industrial property in cities like Chattanooga, and rich, fertile agricultural lands on the lower Ohio and Mississippi Valleys.

I am reminded of the wealthy Texan who told of owning no large ranches or oil lands, saying that his only property was 8 or 10 acres—in downtown Dallas. All property does not have the same value, and Tennessee River property today is far different from what it was 25 years ago. Today we have a chain of beautiful lakes contributing to recreation (which has become a multimillion-dollar industry), to pleasant home sites, and to advantageous industrial locations. Shoreline lands sell at premium prices running up to many thousands of dollars.

Mr. Smoot has been careless, to say the least, in dealing with the navigation question. He alleges that the Tennessee Water-way costs over \$8 million a year in maintenance. The published, accurate figures show that for the last 10 years the entire cost of operating the waterway-operation of the locks by the Army Engineers, the Coast Guard patrol, and depreciation on the investment, as well as maintenance—has averaged less than \$4 million a year. Nor do I know where information was obtained that the rail freight cost on the goods moved over the waterway would have cost less than 30 percent of the investment in the waterway. Our careful calculations of cumulative sayings to shippers using the waterway-not by any means the total freight cost-now exceed the \$159 million investment in the waterway.

But this juggling of figures, to use Mr. Smoot's term, is but a distraction from the principal usefulness of a waterway as an artery of transportation binding the regions of the country together with stronger ties of commerce. Traffic on the Tennessee Waterway is growing faster than any other waterway in the country. From 33 million ton-miles in 1933 it has grown to 2.1 billion in 1958. Five years ago it was less than half that much. Products move by barge which would never move at all by rail, because of the higher rate. An example is the fastgrowing grain movement from the Middle West. The great poultry and broiler indus-try of north Georgia and Alabama would not exist today without it. Oil moves from Texas gulf ports. Coal, chemicals, and steel move from Illinois, Louisiana, and Pennsylvania. The navigation channel is becoming a highway of industry. Private companies since 1933 have invested nearly \$750 million in waterfront plants, 90 percent of it in the last 8 years, 45 percent in the last 3. The waterway, like all others in the country, is a national investment, and the dividends, like the others, are national in their impact. In this connection I think you will be interested in the enclosed copy of our recent publication on the Tennessee Waterway.

Another thoroughly discredited argument is used by Mr. Smoot to create a tall-wagsthe-dog impression about TVA's power pro-The generation of power by TVA dams was at one time, as he has quoted Congressman UTT, only one of the benefits anticipated from a multipurpose development of the river. If, in this light, the tremendous use of power today seems strange to some, it is because 25 years ago no one dreamed of America's growing hunger for electrical energy to turn the wheels of industry, to light, heat, and air-conditioned homes, to lighten the burdens on farms, and to do all the other things necessary to make a modern Nation. Nor did anyone dream of an atomic bomb and the great demand for power its manufacture would require. The Tennessee Valley is today a citadel of de-fense. Almost half of TVA's total power sales go to the Federal Government for its atomic plants and other critical defense installations. For every mill per kilowatt-hour saved through TVA's low power rates, the Nation reaps an annual benefit of about \$28 million. If we compute the residual benefits resulting from the lower cost of power delivered by private utilities endeavor-ing to meet TVA prices, the benefits are almost doubled.

Mr. Smoot's broad brush not only paints out the real facts about TVA but rather cleverly disguises what appears to be his real purpose, namely, to attack the TVA revenue bond financing legislation now pending in Congress by attempting to discredit TVA itself. Somehow, it is alleged that the Government's own investment of \$1.2 billion in power facilities will be downgraded to a second mortgage. The absurdity of the charge is evident from the fact that the U.S. Government is itself the owner of TVA, and I have never heard of an owner requiring a first mortgage on his own income. In any event, the owner's investment is amply safeguarded in the legislation. At present, the law provides for TVA payments to the Treasury from power revenues which average out to 2.5 percent a year. This, in terms of money, amounts to around \$30 million. Under the proposed legislation a return would be paid to the Government on its investment at the average going rate of interest to the Federal Government (something under 3 percent), and in addi-tion \$10 million would be paid yearly to reduce the Government's investment. This makes a total of about \$46 million TVA would be paying to the Treasury annually.

The charge that TVA refuses to raise its service rates sufficient to meet obligations again shows a complete lack of knowledge of the facts. TVA's power rates are sufficient to meet its obligations, including operating costs, maintenance, depreciation, substantial payments to States and counties in lieu of taxes, and payments to the Treasury which are well ahead of schedule.

The question of congressional control of TVA said to be weakened by the proposed legislation, is a straw man pure and simple. TVA asks for no separation from the control of Congress. TVA is a creature of Congress and Congress can always abolish it or change its policies and activities. Mr. Jensen's remarks, quoted liberally by Mr. Smoot, deal in general with philosophies of government which are the concern of Congress. I can only say that there is no socialism in the makeup of those who comprise the rank and file of TVA, and certainly no communism. Charges implying that TVA is a Soviet showcase are too ridiculous to dignify by counterarguments. In reality, TVA serves as a great proving ground to thousands of foreign na-Far from being a dictatorship of tionals. three Presidentially appointed directors, it is a demonstration of what can be accomplished when all elements of government and society work together to a common end-the development and magnification of na-

tural resources. Nearly 3,000 foreign visitors come to TVA every year, and every bit of the time and money which TVA spends with them is a part of an education in Americanism.

Sincerely,

HERBERT D. VOGEL, Chairman of the Board.

It's Dairy Month and We've Our Hat Off for Old Bossy

EXTENSION OF REMARKS

## HON. LAWRENCE BROCK

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. BROCK. Mr. Speaker, June is the month of blooming flowers and planned weddings but it is also known as Dairy Month, selected to give us the opportunity to pause momentarily in our busy lives and reflect on the many blessings emanating from good old Bossy, the perennial cow. To many of us here, who have lived and worked on the farm, the thoughts of our youth and old Bossy bring forth a feeling of nostalgia whenever the spring and summer months roll around.

To old Bossy goes the creidt for providing us with the essential products so vital in molding healthy bodies in the transition from youth to maturity. We can humbly thank her for our milk, butter and cheese, and last but not least, beef. Old Bossy, faithful to the end, even gives up her old hide enabling us to walk in fine shoe leather.

With the permission of my colleagues, I insert in the Record, a very fine and expressive editorial salute to old Bossy by Bob and Shirley Bogue, energetic publishers of the Oakland Independent, Oakland, Nebr., in their May 28 issue of the newspaper:

It'S DAIRY MONTH AND WE'VE OUR HAT OFF FOR OLD BOSSY

Balanced and diversified farming is one of the wonderful mainstays of the economy of our area. Everything depends on the farmer. And, now, during June Dairy Month, we'd like to pay tribute to the important part the dairying industry plays in the agricultural diversification of the Logan Valley.

While we've got our hat in hand, we'd like to raise it even higher this year to a member of the dairy industry who is even more important than the farmer—good old Bossy, herself.

Perhaps even the keepers of cows sometimes forget the accomplishments of this grand gal. She's a worker, and she's got figures to prove it.

Average annual production per cow in the United States has reached 6,330 pounds of milk. To manufacture 6,330 pounds of milk, Bossy must eat more than 4 tons of hay and sliage, plus the grass of 5 months in the pasture, and consume at least 1½ tons of grain. She needs 16 tons of water to drink and the salivary glands in her mouth make 6 tons of saliva to soften the 200,000 cuds she must chew for this quantity of milk.

Bossy's four departments—production, transportation, conversion, and storage would measure more than 200 feet if stretched into a straight line. She doesn't complain at all about working 16 hours a day and asks nothing extra for cud chewing on weekends and holidays.

On the group level, dairy cows are much like any group of females. They want a leader, or bell cow, who assumes command of the herd and leads it to and from the pasture each night and morning. A lead cow is very proud of her bell. Take it away and place it on another cow and Bossy sulks, loses confidence in herself, and produces less.

Dairy cows also tend to be clannish. When a new cow is purchased and introduced to an established herd, the newcomer must graze on the outside of the herd for up to 2 weeks before her sisters will accept her as a social equal. In the meantime, herd production may drop as much as 5 percent, but will rise again after the getting acquainted period.

Each herd will usually have a moocher, or freeloader. She is the cow that hurries into the bar and sticks her head through the stanchions of several of her sisters to steal a mouthful of grain before she goes to her own stall. And, of course, there's the mischiefmaker or curious cow who will find a hole in the fence and entice the herd into the cornfield.

Like man, the cow is a creature of habit and routine. She likes to be fed and milked at the same time each day by the same owner or herdsman she has learned to like and respect. She is dainty in her eating and sensitive to good care and attention. Bossy shows her appreciation in production ratio.

The cow is a natural engineer. A herd of cattle always will establish a path through the lowest points in a range of hills. A herd never becomes lost in dense woods and always finds its way to the gate at milking time.

We submit that cows, overall, are much like people we all know—good, bad, or indifferent—but on the whole, mighty nice to have around.

#### Editorial Comment on Debt Management

EXTENSION OF REMARKS

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include an editorial which appeared in the Wall Street Journal on June 11, 1959, entitled "A Little Preventive Medicine":

#### A LITTLE PREVENTIVE MEDICINE

A common refrain in this year's corporate reports is the remark by the company's president that "economies and more efficient methods applied during the 1957-58 recession" are contributing to this year's rise in profits.

In other words, the pains of the recent recession brought a good many managements up short. They found that a lot of lax practices had accumulated during the previous boom, and that they are now better off for having been forced to take corrective actions.

During times of trouble, this may seem, to be sure, a somewhat Pollyannaish comfort. Nevertheless, the experience embodies a commonsense truth that might be kept in mind now that some people are feeling quite different pains from prosperity.

As this paper noted yesterday, the impact of higher interest rates, as the demand for

money rises, is being felt throughout the economy. The U.S. Treasury, as President Eisenhower has reminded Congress, finds it painful to have to pay more for its borrowed money. So do a good many other borrowers, from the householder to the small businessman to big corporations. And nobody likes to pay higher prices for anything, whether it's eggs or dollars.

But we can't refrain from noting some other results of this. For the first time in years, to take one example, the managers of the Federal finances are really trying to do something realistic about the Federal deficit and the Federal debt.

What they are trying to do, of course, is no more than prudent anyway and no more than everybody knew before ought to be done. But now the intention is reinforced by harsh necessity. The prospect of rising money costs makes a better balance in the debt load more imperative. Also, more expensive money is making even Congress take a less cavalier attitude toward more deficits and more debt.

Nor is this the only place where the bad taste of the medicine is changing unhealthy habits. Several of the bankers interviewed by our reporters confessed, "We're making a special effort to cut out the more speculative type of loans." And quite a few would-be borrowers are already asking themselves the question. "Is this loan really necessary?"

There's also another side to the high interest rate story. Savings interest rates are going up too; a number of banks and savings and loan associations have already hiked the interest they pay depositors, with more raises in the offing. Thus along with some discouragement to borrowing we have an encouragement to thrift.

The point here is that the interest rate on borrowed money, especially if the Federal Reserve continues to adjust rapidly to market conditions, can act as a regulator against a run-away boom. Both the borrower and the lender are more apt to take a closer look at what they are doing, putting a little discipline on the excess of enthusiasms. The effects of this can be salutary; in fact, we have a feeling they already have been.

Nobody enjoyed the recent recession, and

Nobody enjoyed the recent recession, and few borrowers will be happy at having their plans curtailed. But this won't be the first time that a little preventive medicine, taken in due time, made a much healthier patient.

Chiropractic Day Sponsored on September 18, 1959, by National Chiropractic Association

EXTENSION OF REMARKS

## HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. COAD. Mr. Speaker, I invite the attention of my colleagues to an important special observance which will take place September 18 of this year. It is a day set aside for Chiropractic Day, sponsored by and observed by the Nation's second largest profession of healing, the chiropractic profession.

Throughout the world, chiropractors will celebrate the 64th anniversary of the discovery of chiropractic by the late Dr. Daniel David Palmer.

Because the chiropractic profession deals with one of the things important to each of us—good health—I think the value of this special day should not be overlooked.

Therefore, in connection with this observance, I wish to submit for the RECORD, a statement by Dr. Emmett J. Murphy, director of industrial Relations, National Chiropractic Association, Washington, D.C.:

STATEMENT BY DR. EMMETT J. MURPHY

On September 18, chiropractors will look back to survey 64 years of progress wherein the chiropractic profession has been raised to a firm basis of professional skill and ethical standards, and to the point where chiropractic today enjoys the prestige, standing, and material rewards of other professions,

Chiropractic is the second largest healing profession in America. It is classified as one of the four major healing professions, along with medicine, dentistry, and osteopathy by the Executive Office of the President of the United States, Bureau of the Budget, Washington, D.C.

Recognizing the goals already reached by this prominent profession, and the confidence of 33 million people who have received chiropractic care in the United States and Canada, it is indeed proper that we all should pause for a moment to consider the basic principles which form the foundations for this growing profession in our Nation today.

A fresh concept in the art of healing based upon the neurological, physical, and mechanical approach was given to the world 64 years ago. For it was in 1895 that Dr. Palmer brought to the modern world the benefits of chiropractic principles.

After exhaustive research, Dr. Palmer in 1895 introduced to our world these principles which have been carried on by chiropractors who are devoted to the prevention and treatment of disease and to the promotion of public health and welfare.

The specific function by which the chiropractor is distinguished from other modes of healing is his adjunstment of vertebral subluxation of the spinal column to restore normal nerve function.

The remarkable effectiveness of chiropractic methods in health care has won for chiropractic a permanent place in the family of health sciences, and in the hearts and homes of suffering humanity.

The rapid acceptance of this science in the past 64 years leads us to inquire of the standards in use today. And extremely exacting standards they are found to be.

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain accredited ratings. A basic course of 4,400 hours is recommended. Up to 2 years of professional (college) education is required by 26 State chiropractic laws of licensure.

The following typical or basic curriculum for approved chiropractic colleges is based on the profession's code for a minimum of 4,000 hours in a 4-year course:

2 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3	
Anatomy (including embryology and	Hours
histology)	740
Physiology	240
Biochemistry	180
Pathology and bacteriology	520
Public health, sanitation, hygiene	160
Practice of chiropractic principles and	
technique, neurology and psychi- atry, pediatrics, dermatology and	
urology, ophthalmology, otolaryno-	
gology, first aid and roentgenology_	1 960
Obstetrics and gynecology	200
Total	4,000

The average graduate of an accredited chiropractic college is as well qualified to practice chiropractic as the average graduate of an accredited medical college is to

practice medicine, and often must pass the same board examination in the basic sciences to gain a license.

The following salient facts concerning public acceptance of chiropractic need to be

considered:

1. Chiropractic is the second largest healing profession in America. It is classified as one of the four major healing professions, along with medicine, dentistry, and osteopathy, by the Executive Office of the President of the United States, Bureau of the Budget, Washington, D.C.

2. Five hundred and twenty-five insurance companies recognize claims for services ren-

dered by chiropractors.

3. The U.S. Civil Service Commission recognizes certificates of illness for leave purposes signed by doctors of chiropractic, which means that all Federal agencies are directed to recognize such certificates.

 Chiropractic care for veterans has been endorsed by the American Legion, Veterans of Foreign Wars, Disabled American Veterans.

Major unions of Federal employees have endorsed legislation to widen the use of chiropractic in Federal componsation work.

 Scores of employers provide regular chiropractic treatment for their employees.

 The Railroad Retirement Board accepts statements of sickness signed by chiropractors.

Chiropractic Day—on September 18, 1959—will bring to national attention the present record and the future plans of our profession. In conclusion, a word from the Present Day Doctor of Chiropractic should be mentioned here:

"The profession itself is so ardent about its future that nothing can stop doctors of chiropractic from being devoted public on vants and becoming better ones with the

age of time."

thar le remarkable effectiveness of chiropractic methods in health care has won for chiropractic a permanent place in the family of health sciences, and in the hearts and homes of suffering humanity.

## Tribute to Hon. John E. Fogarty, of Rhode Island

EXTENSION OF REMARKS

## HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. DADDARIO. Mr. Speaker, in the Hartford Courant of recent date, in a column by the nationally known writer, Thomas E. Murphy there appeared a remarkable tribute to one of our colleagues. I should like to call your attention to it:

I went to commencement exercises at a large Ivy League university the other day and the place was crawling with fellows in hoods and gowns showing they were doctors or masters of all the arts and sciences. They gathered in a great hall, apart from the undergraduate bachelors, there to receive their advanced degrees. A visiting scholar was to address them, and I thought his voice was familiar when it came over the loudspeaker on to the campus. Sure enough, as the speaker launched into an erudite speech on the future of education in the United States, I recognized him as a Member of Congress who became a bricklayer right after leaving high school.

I say this with the highest admiration, for this man is one of our better Congressmen. But what a commentary on our educational system that they let him get away to follow the trade of bricklayer. What an I.Q. he must have had. What drive. Still, perhaps college might have ruined him. But I thought it was the irony of the day, that in the midst of all this erudite plumage the big man of the day was the fellow who never went beyond high school. For that matter, who trained Bill Shakespeare?

There is no need to be secretive about it, the Congressman is John Fogarty, and he is considered the outstanding authority in Congress on governmental promotion of better medical facilities in the United States. He held that audience of several hundred scholars in the palm of his hand in a remarkable demonstration of what the indomitable spirit of man is capable of doing in the way of overcoming handicaps.

## Flirtation With Inflation

EXTENSION OF REMARKS

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. ALGER. Mr. Speaker, earlier this week in Dallas, Tex., Cabinet Secretary Robert Gray laid some economic facts of life on the line before the 44th annual convention of Kiwanis International. To my mind Mr. Gray said about all that needed saying on our dangerous and foolhardy flirtation with inflation. Moreover, he said it succinctly enough, and graphically enough, that his remarks deserve the widest possible distribution, for which reason I include them in the Record:

#### FLIRTATION WITH INFLATION

(Speech by the Honorable Robert K. Gray, Secretary of the Cabinet, before the 44th annual convention of Kiwanis International, Dallas, Tex., June 16, 1959)

I can truly appreciate your disappointment in not being able to hear Douglas Ambridge on this occasion. I know his reputation as an outstanding Canadian and upon his complete recovery I hope that you will still have the opportunity of hearing him at a future date. I feel somewhat as I imagine Cornelia Otis Skinner must have felt when the chairman arose for the usual introduction and with engaging frankness said, "Since we cannot afford Admiral Byrd, we are having Cornelia Otis Skinner." Well, my friends, I stand before you as one of those rare exceptions to the rule that you can't get something for nothing from Washington.

On February 26, 1951, Congress passed the 22nd amendment to the Constitution limiting to two, full consecutive terms the tenure of the President of the United States. In the press, on Capitol Hill, and among political scientists and academicians across the land, the two-term limit is under heavy discussion. Some point to the advantages of limiting the duration of control by one political administration. Others say the third term barrier restricts the right of the citizenry to select the President of its choice. President Elsenhower himself, when queried about the 22nd amendment at a recent press conference said:

"This is one of those questions where you can say a lot and you can argue very plausibly on both sides."

Obviously, much time and many words will pass before we all agree on the wisdom or folly of the no-third-term rule, and I do not raise it today except as a background for

a most interesting phenomenon taking place at 1600 Pennsylvania Avenue. For the Chief Executive is demonstrating that there exists at least one strong advantage for a lame duck President. At last he can shake the suspicion that everything he does and every stand he takes is dictated by partisan politics.

Today the President is in a unique position—he is the one elected official in all of Washington who by no less authority than the U.S. Constitution will not be a candidate to succeed himself

At last in the closing months of his administration a great citizen like the incumbent can cap a lifetime of public service by pushing hard for the things he knows are right for America without someone charging that he is trying to enhance his own political future.

There can be great power for a "lame duck" President, particularly if he is a "lame duck" President with the determination and the vigor and the drive and the leadership that Dwight Eisenhower is showing these days. With an obvious determination to make the last 2 years of his administration the best yet, the President in recent months has been interjecting more and more of himself into each and every White House meeting. He has been repeating more impatiently the philosophy which he hopes to leave this Nation at the termination of his 8 years in office.

Your President today is working longer hours on a heavier schedule on weightier problems than during any time in the 40 months in which I have been a member of his staff. To all of us at the White House it is obvious that Dwight Eisenhower is determined that history will not record his last 2 years as the "mark time" years of a "lame duck" President.

One of the many areas in which the President is hard at work these days is in behalf of a balanced Federal budget. This issue of such vital interest to all Americans, transcends politics and touches each of us as American citizens, the common denom-

inator we all proudly share.

In addition to being our Chief Executive, the President is a citizen and a taxpayer. As a citizen, he Joins you and me in our concern over our Government's financial condition. He has heard too clearly the Russian declaration of economic war hurled at the United States by Mr. Khrushchev. He has read the warning that communism will let the capitalist countries spend themselves into submission. He knows how the value of his dollars like yours and mine has declined through inflation and he has been in a good position to see the tragic effects of this inflation on pensioners, on those living on social security, and on the annuities purchased at sacrifice of past comforts with the harder dollars of the owners' more productive years.

Uncle Sam has a very good income. It has its ups and downs, but for the next 12 months it will probably be in excess of \$77 billion.

But Uncle is also a very high liver. His budget for that 12-month period calls for spending practically everything he earns except for a little cushion representing about one-half of 1 day's receipts. That is his margin of saving.

Interest costs alone on the money he owes will be nearly \$81's billion next year. He has lived within his income during only 6 of the last 30 years.

Is it any wonder that the President has forced the issue of a balanced budget for the year commencing on July 1?

Yet, there are powerful forces in our country which are accusing the President of sacrificing progress merely for the sake of a balanced budget. Those forces are well organized and outspoken.

We citizens are asked to believe things like

That a balanced budget is a horse-andbuggy notion that has been discredited since 1932

That a national debt can go on growing and need never be paid off because after all, we just owe it to ourselves.

That a little fling with inflation would do

us more good than harm. And,

That the Federal Government can go on spending without it costing anybody anything.

Ridiculous? Of course it is. But every one of these ideas is at the root of the doctrine of buy-now-pay-later deficit financing.

Balancing the budget isn't going to stop progress. But progress most certainly can be stopped by the triple threat combination of deficits, debt, and inflation. We can build the strongest military protection imaginable with missiles and weapons of every description, but we can lose the economic contest with communism by weakening our credit, our currency, and our free enterprise system in the sight of the world.

When Secretary of the Treasury Anderson returned from his trip to New Delhi, he reported that 21 different governments had asked him about our ability to pay our bills and to keep our dollar sound. It is obvious that America's fiscal position is worrisome to our friends. Our country is a young child in the family of nations and it is worrisome to our friends to see us persist in defying the

laws of economics.

The whole world is watching us, and our dollar's value in the world market, our ability to sell goods and services to other nations, and the free world's confidence in America. all depend upon our ability to manage our financial affairs.

The budget for 1960 was not balanced by a process of wild slashing of essential programs. It came about for two principal reasons: First, by postponing increases in many going programs, and second, by anticipating a very sharp pickup in the Treasury's income because of business recovery

The budget calls for the highest defense spending we have ever had in peacetime. Taken together, and including mutual security, an integral part of our defense, expenditures for national security will be almost \$46 billion, or 60 percent of the entire

In the field of space technology, the budget provides more than \$800 million, not including the hundreds of millions which will be spent on military missiles.

In the 1960 budget, over \$5 billion has been provided for the largest civil public

works program in our history.

Expenditures for health research will be at record level. Increases are provided for education, especially in science and mathematics. Loans and grants for urban renewal and other community improvements will require expenditures of over \$2 billion in 1960. and commitments still outstanding at the end of the year will be more than \$6 billion.

These illustrations make it clear that the 1960 budget is far from crippling or weakening essential Federal programs. If this budget is not the feast that some seem to want, it certainly cannot be called a famine.

We all agree that our national security and the civilian necessities of our people should be met. Beyond this, when it comes to the things that are desirable as distinguished from the necessary, priorities have to be set and the total cost must be kept within our

It is politically popular to play Santa Claus, but nobody likes to play tax collector. Still, the fact remains that the Government cannot run the budget by witchcraft, giving away

something for nothing.

If the budget attempted to provide for everything that has been urged upon the

President, the result would be beyond description. And yet I can tell you that there are bills in various committees of the Congress which, if they were enacted into law, would increase expenditures by \$30 billion a year. Fortunately, with the growing public interest in the budget, few of these bills will go through, but the very fact that they are even introduced should cause concern.

Perhaps because I have not been in Government long enough, a billion dollars still impresses this boy from Nebraska.

Using as an example the average family with a total annual income of \$5,000, and the average number of dependents, Congressman CRAIG HOSMER recently developed a formula to explain the parallel between increased spending and increased taxation.

The \$5,000 income family will pay the Federal Government about \$796 as its share of the current \$77 billion national budget.

For every additional billion dollars Congress adds to the budget, Mr. and Mrs. Average American will have to dig down and come up with an additional \$11.14 to cover their share. If your income is \$5,000 a year, the cost to you will be hundreds of dollars. This, of course, is just for operating expenses this year, and provides nothing for payment on the \$6,400 which is your family's share of the debt we owe for past fiscal indiscretions.

The pattern we set in our budget this year will greatly affect future budgets and future years. The pressures for more and more Government spending will increase in the years ahead. America's population continues to grow at a rate equivalent to adding a State the size of Kentucky every 12 months. In the 6 years Dwight Eisenhower has been President, our population has increased by nearly 20 million citizens. (To the Demo-crats in the audience I hasten to admit that this has been a bipartisan accomplishment.) In this growing America, we can expect the demands on the Federal purse to grow. Still we will continue to have two alternatives to red ink budgeting. One is to increase Federal taxes. Before we choose this course we must consider quite frankly if we have not reached the level where we are endangering incentive-the seed corn from which future Federal income must America has already gained shocking distinction of the highest Federal income taxes of any nation on earth. In my mind the alternative of increased income taxes must be abandoned. I want to say that it is not that I'm not proud to be paying taxes in the United States. It's that I could be equally proud for less money.

To me, and I think to you, the far more sensible alternative is to keep Government spending within its income-to return this Nation to the principles of thrift which made her great. If we do not do so, we can expect even further resistance to saving today's dollars for tomorrow. The high activity in the stock market in recent years seems to me, as a layman, at least one indication that the people are already approaching the dangerous conclusion that to speculate is safe, but to save is to gamble.

The battle of the budget recognizes that continued deficit spending is an open invitation to inflation. A balanced budget is Government's best contribution to the fight against further deterioration in the purchasing power of the dollar.

As the President said in his state of the Union message, "Inflation is not a Robin Hood, taking from the rich to give to the poor. It strikes hardest those millions of our citizens whose incomes do not quickly rise with the cost of living. Deficit spending means that the public debt piles up, borrowing increases, taxes remain high or go up, and interest costs are increased. When Government deficits are added to demands by labor for higher wages to keep up with

living costs, and to price increases, the value of the dollar shrinks.

It is obvious what economic end awaits us if we continue this flirtation with inflation. In these days of an enormous prosperity, high taxes, and international peace, now if ever, we have a right to insist on a balanced budget. America is too rich and surely she is too wise to add to her record of living beyond her means. As a Nation, we must permit the past to teach us, just as individuals we learn from experience. man never wakes up his second baby just to see it smile.

May I tell you the greatest single truth I have learned in my 3 years in Washington? As a citizen of Nebraska I used to indulge myself in that favorite American pastime. that luxury of life in a democracy, grousing about my Government. I would say "Why don't they do this or that?" or "They ought to-they-they." But this is the big truth I have learned in my days in the Capital. In a democracy, we, you and I and our fellow Americans-we are the "they" in Government.

May I ask for a show of hands of those who believe that our Federal budget ought to be in the black this year? Now, of those who have raised your hands, I'd like to see the hands of those who have contacted their representatives in Congress to tell them that they want the budget balanced or in surplus. Forgive me for trapping you in this embarrassment, but I wanted to dramatize

to you the crux of our problem.

The very central fact in our way of life in a democracy is the fact of self-government. We all believe in it, but sometimes only as an abstraction. "Self-government" means literally that we citizens govern our selves, and that we have a responsibilitito make the decision and the rules by whrowe live. If mistakes are made, we taketion responsibility for them and try to correct them. When it comes to self-government, citizenship is not a spectator sport. The leaders whom we select and send to Washington are our representatives, but they reflect exactly the kind of thinking we express to them, and if we fall to speak out, the failure is ours, not theirs. Citizenship is a positive responsibility, not a passive one.

This is plain talk, but the issue calls for

Those who would put America in the red ink again this year are not the least bit hesitant about the demands they are making upon your Government. They are not at all reticent about letting Congress know their wishes.

It is time for the 175 million Americans who only want good, honest government, and want as little government as possiblewho want no special privileges from their Government to let Congress know that they are no less interested in its welfare.

Ten cents out of every tax dollar you paid to the collector of internal revenue on April 15 went to pay interest alone on a debt which we are not even beginning to reduce. This makes the battle of the budget your business. You must not treat it as a kind of weird entertainment coming from Washington. If you are worried about your Government's finances, if you realize what in-flation can do to your business and to your country, and if you see no justification for a deficit budget in these prosperous days, then sound off about it. In this democracy of ours, you are the stockholders and the management will listen only to you.

You can do your part in bringing spend- , ing under control in two ways. First, as individual taxpayers you can think twice before making demands on the Congress for more services and benefits. It is a delusion to think and behave as though Government services were free. The Federal Government has no money of its own; the only Federal funds are those moneys which have been

collected from the people, moneys which you and I and our fellow Americans have given or loaned or pledged to our Government. We must put an end to the old cliche that if we finance local projects with Federal funds, then nobody has to pay for them.

Secondly, you can show that you are ready and willing to support a balanced budget. Washington is accustomed to special interest pressure groups demanding this or that. The novelty of hearing from taxpay-ers who think that economy is good for the country will cause any Congressman to listen in astonishment.

The President can lead the fight for a balanced budget, but his chances of winning it depend upon solid evidence of the fact that the country is in back of him. I think the people of this country are in a frame of mind to back up the President on the issue of inflation and the balanced budget.

But it isn't enough to have a frame of mind; what's needed is a frame of action. The people must speak out clearly and forcefully. Their representatives in Washington must be made to see clearly that there's more mileage this year in achieving a bal-anced budget than there is in the overworked political success formula of offering ple-inthe-sky.

saw Bruce Alger, Congressman from Dallas, at the White House yesterday. I mentioned to him that I would be in the key city of his district today speaking to Kiwanians and the Congressman told that he, too, is a Kiwanian. We talked for a moment about the Kiwanis motto, "We build," and, frankly, about whether it would be appropriate for me to talk with you about the importance of building a sound dollar for America. We agreed that it would for one particular reason.

This group impresses me less by its size than by the fact that it represents some 4,000 communities and within those communities some of the most influential mem-

bers in any congressional district.

If each of you, when you return to your homes, were to carry this message to the members of your clubs and their even wider circle of influence, you could start an economy snowball rolling on Washington. You could prove that there is no more underrated power in America than the power of a 4-cent stamp in the hands of a voter.

The issue before us is bigger than partisan politics, bigger than the interests of local or pressure groups. It goes to the ques-tion of how we can best govern ourselves to face the future, with its dangers and opportunities, in a posture of readiness and

strength.

In closing, I want to thank you for inviting me to join you to discuss this most pressing of today's Federal problems. If it seems to you that I have burdened you unfairly with your share in solving them, please remember this statement which President Eisenhower made as he started his second term of office. This great man already had given a lifetime of service to his country and was about to begin another 4 years in the most demanding job in the world—a job with responsibilities he can never put aside-had this to say:

"If in my entire lifetime I have been able to repay any one of the wonderful gifts which God and this country have given to me and to my family, then I shall be etern-

ally grateful.

I wish for all of you a most profitable convention today, proud successes in the years ahead—and, all your days, this remembrance of our few minutes together:

A successful democracy requires of you, its masters, good counsel, sincere interest, and your stanch support.

### **Building Safer Automobiles**

EXTENSION OF REMARKS

## HON, KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. ROBERTS. Mr. Speaker, the urgent need for a safer vehicle to reduce the terrible toll of life and limb being taken by automobile accidents in this country is fortunately receiving a great deal of attention by thoughtful people throughout the Nation. In that connection, I desire to call attention of Members to a splendid editorial which appeared in the June 9 issue of the Anniston Star, one of the leading newspapers in Alabama. The editorial is as follows:

#### ROBERTS BATTLES DETROIT

Favorable publicity throughout the Nation is our own Representative Kenneth Roberts' just recompense, on the basis of his chairmanship of a special House subcommittee concerned with promoting highway safety.

Hearings are scheduled for July on a bill designed to force automakers to build safer cars. According to Congressional Quarterly, they will pit the five-term Congressman from Alabama's Fourth's District against the might of Detroit.

Representative ROBERTS also is identified as the lawmaker who pushed through a statute requiring manufacturers to put escape handles inside their refrigerators.

Pointing to the chilling statistics on highway accidents, he is being quoted in no uncertain terms regarding the course his subcommittee plans to pursue in the hope of improving the situation.

Top priority is being given to a proposed heasure to be discussed at hearings starting July 7 which would forbid the Federal Government to buy cars not equipped with safety features, recommended by the Secretary of Commerce.

Since the Federal Government is such a big customer, it is reasoned that such a law might result in the incorporation of specified safety features in all cars.

Included would be attachments for safety belts; padded dasl boards to reduce the chance of skull fractures in a collision; steering wheels designed to keep the driver from being speared by the steering column in a crash; rooftop bars which would support the car if it rolled over; better packaging of the -driver and passengers.

Packaging suggestions made to date include seats designed to support the neck to prevent "whiplash" injuries.

I don't see any reason," Congressman Ros-ERTS says, "why autos should be any more exempt from Federal safety standards than airplanes.

He rightly argues that setting safety standards for automobiles involves the same principle under which canned goods and drugs are required to come up to standards of safety.

At the hearings, the auto industry is expected to emphasize that it, too, is vitally concerned with making cars safer, and is adding devices as soon as they are tested adequately.

To many persons, says Congressional Quarterly, Roberts in this fight against Detroit "looks like a pedestrian trying to knock over a Cadillac. But he is optimistic, partly because of the support he expects to get from medicine."

As long ago as 1955, Dr. C. Hunter Shelden told his colleagues in an article in the American Medical Association Journal that "the elimination of the mechanically hazardous features of interior construction (of cars) would prevent approximately 75 percent of the fatalities, or 28,500 deaths each year."

The American College of Surgeons adopted a resolution at about the same time, urging auto makers to "stress occupant safety as a

basic factor in automobile design."

After the July hearings, the proposed bill must receive approval of the parent House Interstate and Foreign Commerce Committee before it can get to the floor for a vote. unlikely, in view of the expected opposition, that the bill might reach the House floor before adjournment of the present session.

But if the subcommittee hearings accomplish nothing else this summer, Congressman ROBERTS will have placed the Nation further in his debt by turning the spotlight away once more from horsepower, and toward horsesense in highway safety.

He pledges to keep pushing his bill for Federal standards beyond 1959, if necessary.

## Resolution Adopted by Philadelphia Dress Joint Board, ILGWU, AFL-CIO

EXTENSION OF REMARKS

## HON, HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. TOLL. Mr. Speaker, I wish to direct to the attention of my colleagues the following resolution adopted by the Philadelphia Dress Joint Board, ILGWU, AFL-CIO, in support of S. 1046 and H.R. 4488, the fair labor standards amendment of 1959:

RESOLUTION CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basis minimum standard of living, if we are to maintain a healthy economy at home and a position of moral leadership in the world: and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democ-

racy's showcase through the world; and Whereas the existence of underpaid and overworked wage earners is a particular dan-ger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James ROOSEVELT and cosponsored by many of their colleagues in both Houses, No. S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore, be it

Resolved by the Philadelphia Dress Joint Board, consisting of eight locals of the International Ladies' Garment Workers' Union, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

## Another Battle in the Long War on Monopolies

EXTENSION OF REMARKS

## HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Government of this country belongs to all its citizens, and logically they should all have the opportunity to do business with Government agencies. Yet the U.S. Department of Agriculture, in issuing its Federal milk marketing order for the District of Columbia and nine surrounding counties of Maryland and Virginia, has, in effect, denied dairymen outside of this area the right to sell milk to the national defense agencies in and around Washington.

Alfred Stedman, agricultural writer for the St. Paul Dispatch and Pioneer Press, St. Paul, Minn., details the effect this Federal milk marketing order will have on dairymen in the Midwest and other dairying areas. Under leave to extend my remarks, I would like to include Mr. Stedman's article in the REC-ORD:

MIDWEST GIRDS FOR NEW MILK MONOPOLY FIGHT

(By Alfred D. Stedman)

Starting Monday, the U.S. Government is turning over to a virtual monopoly of Maryland and Virginia dairy farmers the milk business of all national defense agencies in and around Washington.

But a new and more unified Midwest fight was brewing Saturday to stop it. The office of Attorney General Lord was at work on new steps. Wisconsin's Legislature is preparing to authorize its attorney general to go to court against such milk barriers.

Overriding such protests, the U.S. Department of Agriculture placed in effect June 1 its proclaimed Federal milk order. This order regulates minimum prices and supplies of milk, cream, and concentrated milk in the District of Columbia and nine surrounding counties of Maryland and Virginia.

The avowed purpose of the new milk order is to discourage sales of such outside dairy products to consumers, including U.S. Government units within the area, on grounds that competition of outside milk is disruptive of local prices.

The Federal milk order achieves its aim of exclusion by defining the milk supply area, by systematically discouraging inshipments from outside that area, and by giving Federal backing to sanitary regulations of Washington and nearby municipalities.

Some of these are notoriously rigged to exclude outside milk of the highest purity by The Washington Post scientific test. May 27 stated where the order's main blow will fall.

"Its effect," said the Post, "will be felt chiefly by distant producers shipping milk here under contracts with Federal agencies."

Now the order in final form will be given fresh study by the State of Minnesota, said Sydney Berde, special assistant attorney general. Among the fields of this new study are:

1. Whether the order violates specific provisions in the defense laws requiring all Federal procurement agencies to give small business equal oppotunities to do business with the Government. Many Midwest dairies and dairy farmers classify as small business, Mr. Berde said.

2. Whether the order comes to the rescue of the Maryland-Virginia Milk Producers Association in its involvement with the U.S. Department of Justice under Federal antitrust laws. The association has been directed by Federal District Judge Holtzoff to divest itself of its acquired ownership of the Embassy Dairy, a retail distributor. That decision now is being appealed to U.S. circuit court. The question is whether the USDA's new Federal milk order, in officially giving the association a near milk monopoly of the market on the supply end, is throwing a potential monke wrench into the Government's antitrust case on the retailing end.

3. Whether Secretary of Agriculture Ben-son's declared policy of freedom of competition as beneficial to agriculture, including Midwest dairy farmers, is being flouted by this Federal order and scores of others whose aim is to exclude competition on grounds

of being unstabilizing.

First effects of the Washington order will be felt by dairy farmers in Pennsylvania, Ohio, West Virginia, and other nearby States who have been selling more milk, cream, or concentrated milk than the Midwest to defense agencies, Mr. Berde indicated. But as these lose their Government outlets for milk in fluid form, more of that milk has to be diverted into manufacturing in competition with Midwest dairying, he pointed out.

The question of Congress voting appropriations for administration of Federal milk orders that are harmful to Midwest dairying comes up in the U.S. Senate soon. issue is sharpened by the fact that Midwest dairy businesses and farmers who are shut out of the Washington market must support Washington defense agencies with their

Tito Handed Billion Dollars U.S. Taxpayers' Money To Strengthen Communism

> EXTENSION OF REMARKS OF

## HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. FEIGHAN. Mr. Speaker, Wednesday during the consideration of the mutual security bill H.R. 7500, I offered an amendment to prevent the use of American taxpayers' funds to support, nurture, and strengthen communism in Yugoslavia. My remarks appear on pages 10003 and 10004 of the Congres-SIONAL RECORD.

No member of the Foreign Affairs Committee or any other member present was recognized by the chairman to speak in opposition to my amendment.

During my remarks I stated:

Mr. Chairman, in order that the public may have some idea of the extent to which they have been forced to contribute to the spread of communism through Tito, I will include in my remarks the breakdown of the total amounts of economic assistance to Yugoslavia.

The following is a breakdown of the economic assistance to Yugoslavia:

Economic assistance to Yugoslavia

1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	Obligation	Expenditure	Unliquidated
Cumulative, June 30, 1958 Estimate, fiscal year 1959	\$411, 919, 000 11, 800, 000	\$399, 342, 000 12, 377, 000	\$12, 577, 000
Cumulative, June 30, 1959.	423, 719, 000	411, 719, 000	12, 000, 000

U.S. loans to Yugoslavia during fiscal year 1959 have been as follows:

Mutual security program, special assistance, April 7, 1959, \$7.7 million.

Public Law 480 (equivalent in Yugoslav currency under sec. March 10, 1959, \$69.2 million. 104(g)),

Development Loan Fund, fertilizer project, January 8, 1959, \$22.5 million. Development Loan Fund, diesel locomotives, June 12, 1959, \$5 million.

This compilation does not include the hundreds and hundreds of millions of dollars of U.S. taxpayers' money which has been given to Tito for military assistance which he is using to strengthen communism and to maintain his dictatorship over the people of Yugoslavia.

Under leave granted, I insert the above remarks and breakdown figures in the RECORD.

Onus for Spenders

EXTENSION OF REMARKS

### HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. BROOMFIELD. Mr. Speaker, a recent editorial in the Detroit News dealing with the subject matter contained in H.R. 7749 under consideration by the House today does an excellent job of explaining the peculiar position in which our executive branch is placed when it is forced to ask for raises in the national debt limit. I agree with this excellent newspaper that the responsibility for increases in the debt limit should be placed squarely upon Congress, where it belongs, as Congress still has controls of the receipts and expenditures of our Federal Government.

Following is the reprint of the Detroit News editorial of June 15, 1959:

ONUS FOR SPENDERS

From the beginning of the Republic down to the present, the executive department of the Government never has had an unlimited authority to borrow.

As in all Democratic governments, the power of the purse is firmly and rightly retained by the Congress. An essential part of that power is the power to borrow.

It is only since 1917, however, that we have had what is popularly known as a legal limit on the size of the public debt. In 1917 the Government faced the then unprecedented problem of financing a world war. It asked of, and got from, an awed Congress a blanket authority to borrow al or any part of \$7.5 billion by sale of bonds.

This was the first limit, subsequently raised in successive stages to the present \$283 billion and soon to be again boosted. The present limit is still in fact, as in 1917, an authorization of borrowing up to the amount

The distinction is not without practical importance. As noted by the Brookings Institution in a book-length study published today, popular understanding of the limit as a limit has opened the way to fiscal fraud. Congress orders the expenditures that produce a deficit and the necessity of borrowing. But when the Government then asks, as now, that the limit be correspondingly increased, the request is normally treated by Capitol partisans as though the Executive had authored the need for it.

The Brookings study proposes that we return in effect to the procedure followed from the beginning of the Republic down to 1917. It proposes that Congress annually authorize any new borrowing made necessary by its appropriations in excess of expected revenue. In that way the responsibility would be fixed where it belongs. The power of the purse would have a matching responsibility of the

We thing this is a very good idea. In fact, it is an idea heretofore urged on this page.

### Wheat Legislation

SPEECH OF

## HON. DONALD F. McGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. McGINLEY. Mr. Speaker, the wheat farmers of my western Nebraska district are well aware that the surplus stocks of wheat now in storage are now under production and a detriment to their own security in a sound wheat market. They are aware, too, of the increasing Government costs and the administration of the surplus storage. It is a bitter irony for the Nebraska farmer, who cherishes his independence, that he is forced to look to the Federal Government for market security against an avalanche of commodity production which our great natural resources can provide in fiber and food.

The problem is, as everyone knows, growing more serious each year, and under the planned attack by our national

publicity media, the farmer continues to lose public prestige in the face of increasing crises in their threat to his way of making a living.

Realizing this predicament, most wheat farmers in my area are willing to make sacrifices by cutting down further on their acreage production and thereby to diminish the surplus.

With this willingness to accept acreage cuts, expressed through their farm organizations, the farmers can rightfully expect the wheat program to compensate them with higher support prices. In spite of propaganda to the contrary, the adequate support price is the only medium the Government has to induce the farmer to comply with controls that would effect decreasing production. Higher support prices for wheat are not synonymous with higher food costs. Higher support prices do, however, promise the surety of decreased production, decreased administration costs of the wheat program, and increased financial security to the farmer rather than the middle man who is the chief beneficiary today of the high Government cost of storing farm surpluses. H.R. 7246, which in 1 week had passed the House and suffered a defeat in approval of the conference report, definitely was a moderate and helpful approach toward a change of departmental policy which, although not the sole cause of the wheat crisis, has greatly contributed to the magnitude of the

Like many others from the western wheat region, I did not believe H.R. 7246 was anything more than stopgap legislation. More effective legislation has been introduced but the red flag of the administration had been raised against it. Therefore I commend the Agriculture Committee for its sincere efforts in issuing a moderate proposal. This measure would not have been financially beneficial in the immediate 2-year period to the farmers of my district, but it represented a step toward some solution to his ever-growing surplus.

I regret that at the time the House voted on H.R. 7246 I was committed to an appearance in my State. Had I been present, the bill would have had my favorable vote. I voted for the conference report with considerable reluctance but in the spirit of offering a bill that would have cut our excessive surpluses.

Editorial Comment on Debt Management

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial which appeared in the Wall Street Journal on June 9, 1959,

"The Pension Society," in a column headed "Review and Outlook":

THE PENSION SOCIETY

When President Eisenhower talked to a group of business magazine editors recently, he got to reminiscing, and we thought even younger readers might find something useful in an older man's memories:

"When I was a boy, it was thought we could live our lives on a little piece of ground in the West, and the older folks-grandfather and grandmother-could live in the same home, after their days of hard work were ended. That's the way we took care of ourselves and our older people.

"Today, through the changes in our industrial system, we as a people have become dependent for old age security more and more upon pensions, insurance policies, savings bonds and savings accounts. the people that are particularly hurt by depreciation of the dollar. \* \* \* A man who puts away his savings to be used 40 years from now can receive some startling lessons over that 40-year period.

"My wife and I decided in 1916 to get mar-Since I, like all other second lieutenants, was always overdrawn at the bank, I decided that I ought to show a little more sense of responsibility. So I began to buy a small insurance policy. • • • Thirty years later the company came around to pay off. It was so small (in terms of today's dollars) that I would have been ashamed to ask my wife to exist on it for 6 months.

"Today think of the man at the lathe, the drill press, who is earning money which he is putting away in his pension with his company or into an insurance policy. If we cannot today insure him that 40 years from now he is going to be able to have a living left. then I say, sooner or later, he will quit buying insurance policies, he will not have any confidence in a Government bond, and he will not think much of his pensions."

This was the same talk at which the President kicked up an uproar by suggesting that the Government ought to get its debt management in order, as he formally proposed to Congress yesterday, even if that meant pay-ing higher interest rates. The uproar was caused by critics who said that higher interest rates-or indeed, anything designed to est rates—or inuetu, anything de-preserve a sound dollar—is something de-Street to the injury of the common man.

Well, there never was a time when honest money did injury to any society. But perhaps never before in history have we had a time when dishonest money can do such grievous injury to the common man.

The truth is that the people least hurt by cheap money are those who deal quickly with money; the moneychangers and those who earn today and spend today can come closer to compensating for its deterioration in value. Those who are injured most are those who depend upon a promise of tomorrow.

Today, for better or for worse, we are all joining the pension society. The present generation doesn't privately take care of grandmother; the sons leave that to the State or to the corporate pension. And you can be pretty sure that, with the example before them, the sons of the present aren't going to take care of this working genera-tion when it too becomes old.

And among the many alterations this has made in society, good or ill, one seems to have so far completely escaped the politicians who build their careers upon a professed con-cern for the common man. They have not yet grasped the fact that "hard money" onetime epithet hurled by demagogs that at those supposedly trampling upon the poor-has become in fact that true rallying cry of all those whose banner is security against old age and misfortune.

If a poor lieutenant, clinging to the copybook maxims, was gulled by a Government that with cheap money destroyed the greater part of his savings, that might not be a great concern to some politicians or labor leaders, who put no great value upon individual thrift anyway. And perhaps to today's younger generation it may seem just another example of how dumb that old fellow was to try to plan his own future security instead of leaving it to social security or some other collective retirement fund.

But when practically everybody, the thrifty and the wastrel alike, is today depending on that retirement fund 40 years hence, the matter ought to have a different complexioneven for politicians. Today when any man throws bricks at the hardhearted advocates of hard money, he is in reality smashing the hopes of the common man and the dream of

security in the pension society.

## Laboratory in Democracy

EXTENSION OF REMARKS

## HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 16, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the Record, I include the annual report of Colony House, in Brooklyn, written by Miss Sara M. McCaulley. I have been pleased each year to call the attention of my colleagues to the work of this outstanding social agency in my district:

#### LABORATORY IN DEMOCRACY

#### PAST LABORATORY

Colony House Settlement for the past 46 years has been a laboratory of democracy in the true sense of the word. We have been a workshop devoted to experimental study where we prepared youth and adults for the acceptance of social equality in a democracy. The formula for our experiments was stated in our Declaration of Independence: "We hold these truths to be self-evident that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

Our laboratory was presented as an oasis of friendliness in the midst of a great impersonal city. We experimented with interweaving the threads of the daily lives of our members through work and play so that they learned to live with each other, to achieve new skills and to build new roots so that each child, youth, and adult could find his own fullest possible self-realization.

It has been our belief that basic planning and coordination must be done in the local neighborhood in order that broad planning and coordinating can be carried on, on a citywide or national basis. We believe that in order to make democracy a living reality to our American people we must secure the active participation of every citizen in our community in planning for the betterment of his home, his group, and his neighborhood.

Democracy had to be learned in small units of group life in the settlement. We found it could not be learned through slogans and preachments but had to be practiced through daily experiments.

Over the years Colony House has worked with many kinds of groups to achieve definite ends. We have had experience in knowing how people can be organized to achieve purposes of common interest. We have seen our adult clubs grow in stature in assuming re-

sponsibility for some project of benefit to its fellow members, and in using democratic methods to accomplish these objectives. During the year a most exciting event occurred when the Heckscher Foundation for Children generously redecorated our entire building and gave new furnishings for some of our rooms. This started a chain reaction with members eagerly offering their services to assist in giving our laboratory a new look.

The past year's program in community organization through a grant from the Schwarzhaupt Foundation has been of most vital importance. This program has been geared to reaching out into the community to make city officials and other organizations aware of the unmet needs of our area.

This has always been the philosophy of the settlement movement, striving to gear our services to the unmet needs of our neighborhood. With this thought in mind please share the highlights of our past year's experiments in striving to meet some of these needs:

#### THE 1958-59 LABORATORY

Twenty-one nationality groups were represented in the 2,694 children and adults from 3 to 92 years of age who participated in our past year's laboratory. Many who formerly were only used in the tests of every day programs now participate as technicians. Our community which a few short years ago was in the state of flux has now stabilized. The neighbors who were formerly labeled apathetic are now searching out new areas for us to test.

One of the most encouraging developments is the positive action of many neighbors including newcomers in accepting their responsibilities of living in a democracy. Although many areas of our community are still clamoring for service in the laboratory, we feel great strides were made in accepting and working toward social equality for

Colony House, like all settlements, is a neighborhood-centered community agency, with a rich history of helping people, carrying through social reforms, and creating new approaches to individual, group and community problems.

A neighborhood is a proving ground for childhood and a haven for old age, the base of daily return of adolescents and adults, soil in which the seeds of human understanding take root and sprout. Surely, more than grass grows in our neighborhood. Since the greatest commodity of our land is our children, the citizens of tomorrow, much of our work in the laboratory was devoted to them since democratic skills do not come about accidently, but must be learned and developed.

Colony House since its founding in 1913 has always had an open door policy for all ages, both sexes, any faiths, and all races, thus providing a unique opportunity for easy contacts out of which mutual understanding grows.

As family life is the primary living process within which the human personality is shaped, our child care program was of indefinable service in assisting families to remain as a unit.

From small crowded flats or furnished rooms with no space for creative play, parents brought their nursery and young school age children to our child care center where they found stimulating opportunity for growth.

The task of parents at best is not an easy one and in our overcrowded, underserved area it becomes even more difficult. It calls for the best of which human beings are capable. The rewards are largely intangible—the satisfaction that comes from seeing children develop into useful, independent, and constructive citizens. Our laboratory technicians, teachers whose concern was the family unit in our neighborhood setting, ofttimes

were the stabilizers in the face of family disintegration. Our daily experiments involved processes of informing, teaching, guiding, inspiring, supporting, and often restraining. Finding the right balance of judgment and self-discipline was an everpresent challenge in our interests in the growth of these young children.

In our Gowanus Center workshop much time was devoted to helping the members develop a satisfying life where they were—in a housing project neighborhood. Here groups who were different were brought together, not to talk about differences, but to work on common problems of neighborhood life.

Many of our families had for the first time been given an opportunity to live in decent modern housing but had been uprooted from ties in their old neighborhoods. Staff was constantly on the alert to locate and secure cooperation in alleviating conflict-producing elements in the community life.

In this center where tradition in the neighborhood was not rooted deeply it was necessary to create a climate of acceptance and each technician had to have the ability to reach out and make the new youth comfortable in our setting. We found it essential in our laboratory of democracy that the idea of participation and involvment—action by our members on their own behalf and for the good of our community were the most rewarding experiments.

Parents of this center are now active technicians in planning for and with their children for a better community spirit. Thus our laboratory has become a symbol of democracy. Not only for the children in the day care and Gowanus programs but for all neighborhood children. Colony House provided an opportunity to develop sportsman-ship as they worked and played together enjoying woodcrafts, games, clay work, cooking, music, dramatics, singing and other activities under trained, understanding supervision. Recreation is a grassroots experi-ment. It grows out of the needs and interests of those who participate. These young boys and girls respond to the disciplines imposed by subject matter in their recreational programs which provide emotional outlets and creative expression for many.

Character growth needs to be cultivated and directed, not left to chance in youth, so our athletic workshop was very active. Here physical fitness and the challenge of accepting a new neighbor for his contribution to the game formed a real basis for reaching future adult maturity.

Hot, blistering city streets in the summer were forgotten by 133 boys and girls who shared the experience of camp or friendly town vacations through the Tribune fresh air fund. Day camp, softball leagues, and a full teenage program with excursions to many exciting new horizons, as well as returning to favorite beaches and parks, provided a challenging program for long vacation days and evenings.

In our day-to-day experiments with adolescents, we found the teenagers feeling their way to adulthood. We knew this was a time of normal physical and psychological growth and change. We knew it was essential for a teenager to be a member of a group of young people his own age. This helps to bridge the gap between childhood and adulthood and offers opportunities for positive growth and development, so many of our laboratory experiments were with teenage club groups. These clubs under the guidance of mature leaders with a real affection for young people have been the very heart of democratic neighborhood experience. These are our citizens of tomorrow who with a better knowledge of their world around them, can be helped to take part in activities directed toward making our community a safer. healthier, and happier place in which to live.

Adult clubs at Colony House have always been a strong factor in our laboratory for democracy. It has been evident over the years that the major reasons for joining the social groups are rooted in the search for pleasurable relations, friendship, and security. But in the warm atmosphere of our laboratory the members were enrolled to seek help for their problems and discovered an outlet for their social instincts.

Our two men's clubs made up of alumn! have not only found outlets for social in-stincts but act as technicians for younger members in the club and athletic programs.

The Senior Mothers' Club which has been active for 43 years and the Liberty Club for 23 years have contributed greatly to our community laboratory.

The Happiness Club for those over 65 years of age has proven that a laboratory is not just for the young in years but must include those young in heart as well, who have much to contribute.

The task of weaving into our community life the contribution of our Puerto Rican neighbors, both newcomers and long-time residents, challenged the imagination and persistence of our technicians. But these experiments have been rewarding. These neighbors have been encouraged to be themselves, proud of their culture, comfortable in keeping it alive, and are now contributing from it to the enrichment of our American way of life. From a shy, hesitant, and almost distrustful acceptance of our laboratory a few short years ago they are now accepting their responsibilities and reaching out to help others participate in a democratic manner.

The most exciting experiment of our laboratory has been that of our new community organization called DARE (downtown area renewal effort). Here 49 local community groups including business, religious institutions of all faiths, PTA's, colleges, political clubs, social agencies, civic groups, etc., have joined together to form a focal point for thrashing out local problems and for meeting local needs.

Colony House has long felt that one of its major functions was to find out by careful observation and through close relationship with the people of our area, their needs, problems, aspirations, and hopes and through sound organization to work with them toward building a better community. Now for the first time we feel we have this sound organization in DARE.

Housing (a major problem); education; health; safety and sanitation; recreation and youth concerns are a few of the projects being conducted in the workshop by this group. Their goal to make this area a better place in which to live and work is a daily challenge to us all.

Our area which had been designated as "blighted" is now a site chosen to inaugurate a citywide slum prevention program in which city officials are cooperating to help achieve our goals.

A laboratory in democracy cannot func-tion in an ivory tower or without the help of many other technicians. To the city departments who worked with us as technicians in our daily programs we are grateful for it is only through that that our laboratory has enlarged to serve more of our community. Our parent organization, the United Neighborhood Houses of New York City, has given us their material assistance and guidance which has helped to broaden the scope of our activities. We are indeed fortunate in having the assistance and co-operation of many Borough and citywide organizations, to each of them we are grate-

In a laboratory a very vital and contributing factor is the quality of the technician.
Colony House has been fortunate in having star members who have a genuine desire to participate in working for an idea and a goal. Our great need today is to build a peaceful, democratic world where each person can live happily and fully, where people get along together, and where each can contribute his best to the community. Because our staff recognizes that we shall have this world only when people are educated to better human relations-and because today's boys and girls will be the ones to build -they have offered their talents and energies to Colony House and made our labora-

tory of democracy possible.

Our faithful and enthusiastic students from Brooklyn and Adelphi Colleges, as well as other dedicated volunteers, have all given time and talents to our experiments.

Members of our corporate and associate boards the gulld and men's council, as well as our many contributors have all shared in the year's work in this stimulating program.

A settlement can only reach horizons beyond its doors if the board of directors has vision. Colony House has always had directors who face the challenge of a constantly changing community and working closely with staff, help as technicians as well as participants in our democratic laboratory.

#### OUR FUTURE LABORATORY

The inspiration provided by foundations having faith in our laboratory, as evidence by the gift of bright new surroundings and the tools for a real community organization, gives us confidence to approach this new year with high hopes for the many experiments that need to be undertaken.

We need to evaluate the capacities of our youth and be willing to use the young people's strength. There are enormous resources in the great aspiration and altruism of youth that must be used for achieving a better social order in our world of tomorrow. We must remember that we, adults of today, are handing down to them, citizens of tomorrow, a great amount of unfinished business, problems whose solutions we have postponed or delayed. Our tob must be to continue our experiments with the youth so that they are able to cope with these inherited problems.

We must strive to see the community is

equally interested in all its people; to learn whether there are hurdles which handicap certain groups; and to study what can be done to improve our neighborhood.

Our community organization must be assisted in their master plan for a renewed neighborhood so that all will have a better place in which to live or work.

As we continue our efforts in the labora-tory of democracy in the year ahead, the words of Nick Kenny in his poem "Charity," will form the basis of our future work:

"It is more of sharing than giving. It is more of Heaven than earth. It is following in His footsteps. It's the soul's divine rebirth.

"It's the sharing of little things, we treasure With some brother who's in need. And helping to make his dream come true-Whatever his race or creed.

"It's forgiving instead of hating Our foe in a world of strife. It's God's tears that fall out of heaven To water the desert of life."

## Editorial Comment on Debt Management

EXTENSION OF REMARKS

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include an editorial which appeared in the Evening Star, "Treasury Deep in Trap" by Sylvia Porter in her column Your Money's Worth:

#### TREASURY DEEP IN TRAP

If you would like a simple explanation of how serious a trap the Treasury is in today.

Imagine you're the head of a huge business which has a lot of outstanding debts. For years everybody has scrambled to lend you money whenever you've wanted any, for your I O U's were recognized as 100 percent safe. Any interest you cared to pay on loans was gratefully received. You were the big fish in a vast pool of money. You were "it."

In the last 18 months, though, your cor-

poration has been spending money as never before, and you've been tapping your creditors as never before. Also in the last few years, many other borrowers have moved in to compete with you for cash, and although you're a bigger fish than ever, you no longer have the whole money pool to yourself. In these years, too, investors who once were eager to lend you in return for an annual payment of interest and a sure payoff at a loan's maturity have decided, in increasing numbers, that they prefer to put money in stocks that might go up in prices, or higheryielding mortgages, or other securities.

Aware that investors like your I O U's less and like other investments more, you approach your top creditors and you say, Will you lend me cash for 5 or 10 years or for a longer period?"

Say your creditors: "No. We don't want to give you long-term loans." Say you: "Even if I pay the highest in-

terest in decades?"

Say they: "No. You can't pay the rates we'd want. Anyway, we just haven't any long-term money for you now."

Say you: "You'll renew my maturing I O U's at least?"

Say they: "But only for a year at most, and that's a favor."

You fume, worry, consult experts. But what can you do? This is a free country; you can't force people to lend to you if they don't want to. You're in a trap, and you have to sweat it out.

And that's exactly the situation in which the Treasury is.

To cover the budget deficit of the past 12 months, the Treasury has been selling billions of new I O U's, and banks and other investors are loaded with them. Although the loans are as safe as ever, competition for the money pool from all sorts of bor-rowers is immense, and investors who once were eager to lend to the Treasury are placing their funds elsewhere. And the Federal Reserve System is concentrating on fighting inflation dangers, won't print enough new greenbacks to fill the pool.

In the past 10 days the Treasury has issued \$5.3 billion of new I O U's to pay off maturing loans and to raise extra cash.

The longest loan it could get was for only 1 year, and on that it had to pay over 4 percent interest against a rate of 11/4 percent on a similar loan a year ago.

Even at 4 percent-plus, buyers aren't eager for Treasury securities now. Even if the Treasury could find some long-term money, it couldn't pay the rates the market want for it's limited by law to 414 percent, and when Treasury Secretary Anderson asks Co-gress to raise that statistical lid, the political lid is likely to blow sky high. And while Mr. Anderson doesn't have to come back to market until late June, the probability is the Treasury then will be just as deep in the

How is it going to get out? Well, a bal-anced budget would help; that would permit the Treasury to stop asking for extra money, and it should quiet some inflation fears. A high enough interest rate to satisfy

investors who want a good return after allowing for the bite from the income tax and from anticipated price rises would help, too.

Those of us who have specialized in Government finance usually have answers when asked what we'd do if we were Treasury Serretary. This time as we study the Treasury's trap our glibness vanishes into gulps. None of us has any quick solutions to this one.

## Twentieth Anniversary of the Declaration of Slovak National Independence

EXTENSION OF REMARKS

## HON, MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the Record an address I delivered March 14, at the Benedictine High School in Cleveland, commemorating the 20th anniversary of the declaration of Slovak national independence:

It is an honor for me to be here with you this evening and to join with you in commemorating the love of Slovak people everywhere in the world for God, freedom, and individual liberty so well expressed in the declaration of Slovak national independence.

The lessons of the ages teach us that from time to time evil forces arise which challenge the dignity of man and seek to overthrow the divine plan which secures that dignity.

In our times we are faced with this challenge on all sides. We find evidence of the "dark ages" in this 20th century. The human values which mankind has won at such great sacrifice are being trampled under the heavy boots of the Russian barbarians. At this turning point in history we are faced with a series of choices at the core of which rests the fundamental question "Are we willing to sell our birthright for a mess of pottage?"

In a world torn by strife and tension, we are told we can have peace if we are willing to pay tribute to the new barbarians. The peace they offered in return is no peace at all; it is the strange peace of human slavery. Justice, the only basis upon which peace can be built, is rapidly losing its place in the affairs of nations because it permits no compromise on the dignity of man. A peace without justice is the certain formula for war, a war which no thinking man may countenance.

What is the tribute demanded of us by the new barbarians as the price for an unjust peace?

First, they are asking freemen, par-ticularly the United States, to acquiesce in their enslavement of 35 percent of the people who inhabit the earth. They are desperately to drag the spokesmen for the Western World into another summit conference. At this conference they expect to force recognition of a status quo, that is, recognition of their right to enforce the darkness of despotism and slavery upon humanity. They want freemen to guarantee to them that their evil work will go unmolested. that the conscience of the West will not be moved by the sad plight of so many of their fellowmen. As they hear the millions of our brothers now persecuted as martyrs to our cause, cry out for justice, they are fearful that these cries will be answered by a world enraged by man's inhumanity to man. Evil works quietly in the shadows, always fearful of arousing the forces of righteousness.

That is what lies back of the present Berlin crisis, precipitated by the barbarians of Moscow. First, we are told that unless we desert the people of free Berlin we will be driven out by force. When we responded to the threat by declaring our intention to stand fast in our defense of freedom, the Russians began a series of retreats. Pressed by the deadline which they were so bold to make, and in the face of our determination to be firm, they have now taken the position that if we agree to a summit conference they will not cause a war over Berlin. This is apparent from the fact that only a few days ago the Kremlin spokesman stated the deadline of May 27 would be extended if preparations were underway for such a meeting. But, as always, there is a catch. The continued Russian insistence that no agenda be prepared in advance of the conference gives ample evidence that they intend to limit discussion to those items which force recognition of a status quo.

It is strange, indeed, that at this point in our history, when freemen have advanced so far in knowledge and accomplishments, we should be ordered about by the crude barbarians. We must ask ourselves, has our civilization lost its sense of high purpose. Have we surrendered our mission to the world? There is mounting evidence that something is missing from our national life which, in past generations, made our country the beacon light and great hope of the world.

Not many months ago we had a strange visitor come to our country, allegedly on a vacation. He was the eyes, the ears, and the spokesman for the new barbarians. Every schoolchild in America knew who he was and what he represented; yet this same individual was wined and dined by influential segments of our national life. He shrewdly dangled the prospects of huge profits before the eyes of those industrialists and businessmen who willingly paid him homage. He made no mention of the fact that he was simply carrying out the orders of Lenin, who held that when the time came the biggest capitalists would be anxious to provide the rope with which they were to be hanged by the new order. Nor did he mention the plan to destroy the hard-won gains of free labor in the United States by putting it in competition with the products of his slave empire. Few voices were raised in protest to this spectacle, and those who did raise their voices to the danger were branded as extremists and not representative of traditional American hospitality. Few asked. Since when has it been the tradition of our free people to extend hospitality to a person who has the blood of martyrs on his hands, to a person whose whole life has been dedicated to the destruction of those priceless values which we hold to be as dear as life itself? This emissary of evil left the United States with the false impression that we are a divided people; that we are more interested in material things than in spiritual and human values. He could no more understand the American people and our way of life than could Hitler in his time. The tragedy is that the false impressions gathered during Mikoyan's short visit to our country will make our role in world affairs more difficult and increase the dangers of war.

Now one hears the call for compromise on Berlin from quarters and individuals who should know better than to ask the impossible. What do we have to compromise? All we have ever asked for is the right of the German people to determine their destiny by the process of free elections. We are fully prepared to accept the results of these elections because we believe in the right of all people to self-determination. It is the Russians, the new barbarians, who refuse to accept the verdict of the people directly involved. How can we compromise this position we have taken? There is

nothing to compromise unless we are prepared to abandon our position of moral leadership in the world. There are other disturbing signs of free-

men growing weary and tired of the struggle for survival. For the many years of the cold war it has been our national policy to bring comfort and hope to the oppressed through the media of international broad-Broadcasting to the people in the casts. countries now overrun by the new barbarians in their native tongues, we have been able to keep alive their hopes for a better life, and a return to the civilization of which they are a part. This has proven to be a work of peace, because so long as they could hope, they could not abandon the heritage of freedom, they would not, in desperation, accept things as they are and make accommodations with the despots. Now, we see this policy in the process of change, a change which bodes evil for the future. Gradually there are being eliminated the many voices which carried this message of hope. The Russian language, the language of the oppressor, is beginning to monopolize the Voice of America programs beamed to the darkened lands behind the Iron Curtain.

This tactic can only alienate our proven friends in these many lands and drive them into the camp of the enemy. Frequently I have asked myself whether this results from ignorance or from a secret agreement already entered into by the Eisenhower administration to accept a status quo, that is, to recognize the permanent occupation of these once free lands by the new barbarians.

These are ominous signs of the times, they threaten the precarious peace which now hangs over a tired and weary world. They are dangerous because the appetite of the aggressor cannot be satisfied by concessions, he must have everything or nothing. He understands firmness and courage, though he lacks it himself. The bully is always a bluffer and he dominates none but the timid.

But there are other signs of our times in which we can take comfort. A very large segment of our people have come to recognize the full meaning of the crises of our times. This awakening to the harsh realities of our divided world is being stimulated by the growing pressures put upon us. A move-ment to retreat from materialism is underway in the United States. More people are seeking their strength of purpose from that deep spirituality which is our heritage. When all is said and done, the strength of our country rests firmly in the hands of our people. It is within their power to use that strength as we face the test of our worthiness to lead the cause of peace with justice. In generation past we have not feared to face responsibilities, nor have we feared the threats and boasts of tyranny on the march. We, as a nation, have learned well that man lives not by bread alone.

In the perilous days in which we are living, when human freedom has been taken from millions and millions of people by the tyrants of the Kremlin, we can, with profit, reflect on the history of the Slovak people. As good Americans we must be concerned with the fate of the Slovak people and feel it our solemn duty to do everything in our power to see that freedom is restored to this enslaved nation.

The Slovak people can very well be a symbol of hope for the ultimate restoration of freedom and independence throughout all of eastern Europe. History records that while they were under the hard hand of tyrannous rule for over a thousand years, their spirit of independence and patriotism, their language, their folklore, and their faith, survived the test of tyranny. The gifts of St. Cyril and Methodius to all the Slovak people and to civilization at large, have proved that they can stand the test of time as well as tyranny. These particular

saints of the Slovak people gave to the Slavs their first written language—old Slavonic—and were the trail blazers in the affairs of state administration. Their works distinguished the difference between benevolent rule and rule by force. These lessons were so engrained in the Slovak people that no force can take it from them.

With the breakup of the Austria-Hungary Empire after World War I, we witnessed the reshaping of the geography of Europe. that time the Slovak drive for independence had reached a high peak in the history of its peoples. Right here in Cleveland there was established what later became known as the Cleveland agreement—a document which was intended to express the Slovak bill of rights. This Slovak bill of rights was to be the guidepost in the formation of the new Czechoslovak Republic. It is with sadness that I remind you that the Cleveland agreement was not honored in the formation and development of the Czechoslovak Republic and as a consequence, Slovak autonomy within that republic remained an empty promise up to the outbreak of World War II. But this up to the outbreak of World War II. But this said event of history did not break the spirit of the Slovak people, because under the leadership of Monsignor Klinka, founder of the Slovak Peoples' Party, the cause of the Slovak nation was preserved.

The agents of the Kremlin and the trai-forous agents in its cause will have no more success in subjugating the Slovak people than those who in history past have attempted this same goal. Alien occupation and oppression has not dimmed the aspirations and the hopes of the Slovaks, but has increased their determination for national independence. It is a well established fact that the resistance movement in Slovakia today is among the most powerful in all of eastern and central Europe. The spirit of independence, the love of country, and the burning patriotism of the Slovaks, must be regarded as a great asset in the struggle for freedom of the free world against the tyranny of the Kremlin. I hope that the free world will learn the full lesson of this resistance movement and that in the happy day when freedom is restored to the subjugated lands there will arise a free and independent Slovak nation.

We are saddened by the events which are taking place in Slovakia today. There the evil hand of the Russian Communist is attempting to destroy the very spirit of Saints Cyril and Methodius and to reduce the Slovak people to a state of servility worse than that of the dark ages. But in their evil cause the Russian Communists shall fail, because the spirit of SS. Cyril and Methodius shall prevail so long as there is a Slovak alive anywhere in the world.

Poison in Your Water-No. 128

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. DINGELL, Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Little Rock (Ark.) Gazette of June 4, 1958, entitled "A Polluted Stream Becomes A Blight, Not An Attraction":

A POLLUTED STREAM BECOMES A BLIGHT, NOT AN ATTRACTION

(By Hubert Thompson)

Pisheries biologists are pretty well agreed that it is impossible to hurt fishing with

hook-and-line fishing. The one exception is trout fishing in streams where they do not

What, then, does hurt fishing, if fishing doesn't deplete the supply of fish?

Three things in particular hurt game-fish fishing. They are out-of-balance fish population, siltation, and pollution.

Examples of fish population out of balance: a farm pond with a few bass and lots of stunted bluegills; and a lake overrun with gizzard shad, buffalo, drum, and carp. cept in the very large lakes it is feasible to restore the balance.

Siltation is caused by poor farm practices. poor drainage practices and sand and gravel washing, principally. Better farm practices, with emphasis on erosion control, have eliminated much of the siltation. However, when it comes to drainage there are two sides to the question to be considered. For example, the draining of the St. Francis River Valley, which ruined it as a great wildlife habitat, but made much rich land available for farming.

Pollution is a manmade condition which can only be controlled by rigidly-enforced manmade laws. The cost of correction measures is sometimes enormous, as demonstrated by the present campaign to clean up the Ohio River, which had become one long cesspool, from which cities took water, purified it, polluted it again, then dumped it back into the river for downstream cities to repeat the process.

Some of the better fishing streams in this State, such as the lower Ouachita River and upper Bayou Meto, are badly polluted. Not only are we not doing anything effective about cleaning them up; we are continually urging more industries to come into the State and pollute our streams, if they don't want to take means to dispose of their wastes without polluting streams, and naturally they don't want to build disposal plants if they can get by without that expense.

To really appreciate the many fine, clean streams we have in this State it helps to look at them again after looking at the blighted streams in some of the heavilypopulated, industrial eastern States. Then remember that each time we allow a stream to become polluted we have an eyesore, in-stead of an attraction.

Town of North Andover, Mass., Endorses Commemorative Stamp for First Postmaster General

> EXTENSION OF REMARKS OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I received from Mr. Ralph E. Finck, chairman of the board of selectmen, town of North Andover, Mass.:

TOWN OF NORTH ANDOVER, MASS. June 17, 1959.

HOR THOMAS J. LANE. House of Representatives, Washington, D.C.

DEAR CONGRESSMAN LANE: The board of selectmen voted unanimously to endorse your proposal to the Post Office Department special stamp committee that a postage stamp be issued commemorating Samuel B. Osgood, first Postmaster General of the United States.

Since Mr. Osgood maintained residence in the village of Andover, now known as the town of North Andover, the above vote was recorded with a great deal of pleasure.

ed with a great Very truly yours, RALPK E. FINCK, Chairman, Board of Selectmen.

Editorial Comment on Debt Management

EXTENSION OF REMARKS OF

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 19, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I wish to include an editorial which appeared in the Washington Post and Times Herald on June 10, 1959, entitled "Business Out-look" by J. A. Livingston, headlined "Lowdown on Treasury's Dilemma":

LOWDOWN ON TREASURY'S DILEMMA

"Joe, I don't think there is any subject in the world that's less understood than this." That's what a high Treasury official said to

me just before President Eisenhower sent to Congress his request to raise (1) the debt limit and (2) the allowable interest rate on U.S. bonds. Only a few days before, Mr. Eisenhower, himself, had had a hard time explaining what he wanted at a press conference. He was asked:

"Mr. President, in these discussions on raising the interest rates, will you please tell us what impact this might have on the people generally?"

The President replied: "The impact ought to be well understood, I should think, by all our people if the country-if the Nation-

cannot borrow money.

"As of now, the rate is fixed for any money except below 5-year money, and if you put the total \$283 billion or \$288 billion finally in short-range money then the people will be so badly hurt that we have got to do something.'

CONGRESS HAS NO CHOICE

Here's how I'd interpret Mr. Eisenhower: Congress has put a limit on how much money the Government can borrow. Right now, the debt limit is \$288 billion. But on July 1, unless Congress acts, the limit will slip back to \$283 billion.

The Treasury has issued bonds, notes, certificates, and bills up to \$286 billion. These marketable securities are held by banks, trust companies, insurance companies, corporations, individuals—by you and me, as bank depositors, as holders of insurance policies, stockholders, and as owners of E- and H-

If Congress doesn't increase the debt limit, think of the absurdity. There'd be 3 bil-lion of U.S. bonds and notes and bills owned by U.S. citizens, which, technically, are illegal—above the debt limit. The long and short of it is: Congress has no choice-it will raise the debt limit.

will raise the debt limit.

Politics and Senator Harry Flood Byrd.
of Virginia, being what they are, the President refrained from suggesting doing away with the limit entirely. Yet the limit is illogical. Congress has to authorize expenditures before they can be made. So why okay 'em double?

#### RATE IS BIGGEST PROBLEM

In 1953, the debt limit caused great embarrassment. Taxes came in slowly. Ex-penses rose. The Treasury couldn't borrow It held up paying bills. That was hard on companies and persons who had done work for the Government and needed to be paid. It was poor business. The richest Government in the world was a slow pay.

The debt limit's a secondary problem. The big one, as Mr. Eisenhower said, is the interest rate. Right now, a bank, an insurance company, a savings institution, and you and I can call up a bond broker and buy Government bonds to yield 4.4 percent or thereabouts. But poor Secretary of the Treasury Anderson can't sell us such a bond. Congress has put a 41/4 percent ceiling on what he can pay.

Why would you or I buy a new Treasury issue which could return only 4.25 percent, when we can get 4.4 percent in the open

market?

So, if Anderson wants to borrow, he has to issue what the President called shortrange securities. There's no ceiling on shortterm interest rates, only on bonds payable after 5 years.

#### IT'S EVERYBODY'S PROBLEM

But the short-term debt is already excessive. Only 26 percent of the Government's marketable securities matures in more than 5 years; 32 percent matures in 1 to 5 years; and 42 percent within a year.

This short-range concentration tends to worsen. Cash-ins of E and H bonds have exceeded sales in 33 of the last 36 months. In April and again in May, redemptions ran \$100 million above sales. The Treasury has to get that money from somewhere. It has to substitute short-term marketable debt for socalled long-term nonmarketable E- and Hbond debt.

This can only end in one way. The Government has got to become its own best customer. The Government has got to buy in its own bonds. It has to retire some of its debt-either (1) by spending less or (2) by taxing more, thus generating a surplus.

In the meantime, Congress has no alternative. It must grant Secretary Anderson freedom to finance in the open market. It will have to raise the interest ceiling on bonds above 414 percent-in case he has to use it. Anderson's fix is everybody's fix.

## Cross Country With the On-to-Oregon Cavalcade-VI

EXTENSION OF REMARKS OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the report of the sixth week on the trial for members of the On-to-Oregon Cavalcade. These reports cover the journey from Bridgeport, Nebr., to Fort Laramie, Wyo. They appeared in the June 4, 1959, Drain (Oreg.) Enterprise:

"KI" Joins Wagon Train Now in Wyoming MOUNTAINS

(Written by Robert "Rudy" Roudebaugh who is driving the Drain covered wagon in the Oregon Wagon Train. These reports cover the journey from Bridgeport, Nebr., to Fort Laramie, Wyo.)

May 25: Well, the weekend is over and its farewell to Bridgeport. We still have large crowds coming from a 100-mile radius. 7:31 a.m.: We are ready to roll again. ing Morrill County fairgrounds. Janell is back today. She is driving and calls "58" (one of mules) Doc and "57" Jan. Doc is the male and Jan the female. The weather is partly sunshine with a few clouds. 8:26: I can see Chimney Rock. 10:37: Stop for lunch and wait for the Indian raid. 1: We are on our way to Chimney Rock. Arrived at Chimney Rock at 2:10 and Indian raid went off OK, but we had a runaway with one team of mules. They went way up on the hill and nearly got away, but we were able to return them to the circle.

May 26, 6:56 a.m.: All ready to go. Janell is still in bed. The sun is out with clouds over in the west. Wind about 30 miles and howling. 7:09: We are all lined out and on our way. 7:40: Entering Scotts Bluff County, the last county in Nebraska for us. 9:48: Milbeta (population 140) and they were all out to see us. This is sugarbeet country through here. 10:52: Stopped for lunch and feed. Doc and Jan ate a little oats and drank half pail of water. 11:55: On our way again. 12:36: Entering Gearing (population 362). Still having school here. Arrived at camp 1:25. Was led through Gearing by old stagecoach used on old Ore-

May 27: 7:05: Seen headquarters of Scottsbluff National Monument. 9:51: Raining this morning. 11:13: Stopped for lunch and fed Doc. Drank one pall of water, but ate no oats. Jan drank a pail of water and ate about two handfuls of oats. Had to put a bolt in the wagon tongue. 12:20: On our way again. 12:41: Crossing the North Platte River. Arrived Morrill 1:20. Arrived in camp at 1:35 at the Vernon C. Luth farm. The ladies from Morrill brought coffee and cookies for us. James Wilkinson took us in his home for a shower and a beer. I finally got the letters from the Drain mayor to pass out. Only about 3 weeks behind time now that we are out of the population areas.

May 28: I had the 2 to 5 a.m. watch this morning. 7:06: We are on our way to Oregon. Jan has four new shoes. The first she had since she joined the train. 8:43: At Henry (population 180). The Woman's Club of Henry gave us the last coffee and cookies in Nebraska, 9:38: Entering Wyoming, Have to take off our hat to Wyoming for the roads they have here. The Wyoming sheriff's posse met us at the State line and are going to ride to Torrington with us. 10:58: Stopped to feed mules and eat lunch. 11:57: Going west. 12:37: Arrived in Torrington and its starting to rain. Just as we were ready to leave Torrington it started raining and hailing. We put into a long side of the sale barn to quiet the mules. We put into camp at 2:54 at Mr. Stephensen's ranch.

May 29, 6:56: Left campsite. Arrived at Lingo (population 403) at 7:47. Paul and Bobby Cormier rode from camp to Lingo with us. (Editor's note: Mrs. Kiwanda Roudebaugh is now with her husband.) They both got a chance to drive the mules. Weather: Rain and hail this morning; sultry and cloudy now. Last night some kids around camp trying to turn animals loose. Windell Tedwell, a friend of Rudy, is riding now with us. He drove 150 miles to see the wagon train. 10:10: At Fort Laramie (population 400), elevation 4,230. The wagon train was given a banner of the fort. Here comes the Cavalry to escort us in to old Fort Laramie. It is one of the most historic along the Oregon Trail. Crossed the North Platte River. The Cavalry acted as messenger relaying messages until we got to the fort. Mel Ross' (Drain storeowner) red, white and blue spreader rings sure showed up riding with the Cavalry. Arrived at camp at 11:14. The mules have made good time today.

May 30, 6:42: Doc and Jan ate all their oats since they joined the wagon train. 7:08: Leaving Fort Laramie. The Cavalry is saluting us goodby. We are out on our own going right beside the Oregon Trail. We can't go on the Oregon Trail because the rain has

washed ditches in it. However, this is the first day of going right out through the fields and opening gates.

Here is a real life scene: Gail Carnine (scout) rode ahead to the ridge and waved for the wagons to come ahead. We have pulled to the top of the ridge now resting Here are some of the sayings by Ben Griffith of Salem who drives the Independence wagon: "By George, the people said we'd be tired of it by the time we got this far, and I'm just starting to enjoy now." Ben was born in Geneva, Nebr., where his folks had lived since coming there by covered wagon in 1879. Ben is 57 years old and is driving the wagon carrying the official U.S. mail. His wagon is the only one pulled by four mules. The other wagons have only

Dave Gastman (wrangler) rode up from behind with his eyes popped and exclaimed, "I've seen a couple of antelope, and the view of the Platte Valley is sure beautiful." is from Cottage Grove and has worked as Indian packer and guide in the Olympic mountains.

8:23: It is raining again today. It is cold and cloudy. 9:56: Top of pass, elevation 5,500 feet. 10:21: Dropped down a steep hill. 10:23: Arrived at camp at Rock Cliff. will camp here the weekend. It is raining now. Ki is cooking today and she had a whole extra crew to feed. The Cavalry were here for breakfast and lunch, so she got broke in right. Janell slept all morning and missed a good day's trip.

#### Amending Mutual Security Act of 1951

SPEECH

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. GROSS. Mr. Chairman, this amendment would strike out the increase of a half billion dollars in the capital funds for the so-called guarantee program. I would like to ask why in all conscience American taxpayers should be guaranteeing or putting up any money in any way to guarantee the investments of American businessmen in France or in England. Will somebody tell me why?

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield. Mr. JUDD. The basic reason is that we believe in the free enterprise system. We believe, in accordance with the gentleman's quotation from George Washington's address yesterday, that the more our relations with other countries are on a private and commercial basis rather than on a government-to-government basis, the better it will be. This provision does not guarantee any American's investment in a foreign country. It is an insurance system and the investor pays a premium. We give no foreign countries any money. If the investor makes any money, the fund guarantees that it can be converted into dollars. If the foreign government, by legal action, should expropriate or nationalize that property, the person guaranteed can come to the insurance fund and be made whole. Our Government will then try to recover from the foreign government on the property. The net result of the program is that we have had it now for 10 years and there has not been a single dime paid out and more than \$3.5 million of insurance premiums have been paid in.

Mr. GROSS. Then what is the need for this if it is not serving any purpose? Mr. JUDD. It is needed because many

businessmen need reassurance before they will go into areas that are not stable.

Mr. GROSS. Just a minute. Do English businessmen need any assurance to invest their money and deposit their gold in this country against the expropriation or seizure of their investments by the U.S. Government?

Mr. JUDD. No, but Americans do. This is going to some 40 countries, I may

say.

Mr. GROSS. With all of the billions of dollars that we have loaned and given to Great Britain has not a climate been established that is favorable to American investors in England? Has not a good faith climate been established?

Mr. JUDD. Many businessmen and firms will invest their money and not come to the guarantee fund and pay to

be insured. But some will not.

Mr. GROSS. We have poured some \$11 billion into France and, yet, it is necessary to set up a billion dollar fund, backed by tax dollars to guarantee American investors if the French Government confiscates their business?

Mr. JUDD. Not a cent of American money has ever gone to France or Britain under this program.

Mr. GROSS. There has never been a test of this guarantee program and the gentleman knows it.

Mr. JUDD. Not a dime has been spent in France or Britain. It goes only to American businessmen if they are insured and qualify under the terms.

Mr. GROSS. You mean if the gov-ernment seized a factory, for instance the Ford investment in France, if the Government of France seized that property and millions of dollars' worth of similar properties, then it would be up to the American taxpayer to underwrite the losses; is that not correct?

Mr. JUDD. The fund would reimburse the American investors who had bought

the insurance.

Mr. GROSS. What would happen if there should be a succession of failures? Would it not wipe out the fund?

Mr. JUDD. In that respect it is just like any insurance proposition. If a whole city burns down, that would be pretty hard on the companies that have sold fire insurance policies in that city. This is an actuarial estimate and, as a matter of fact, it has worked out far more successfully than any of us expected.

Mr. GROSS. The gentleman from Minnesota still has not answered my

question. Why is it necessary to guarantee American investments in England. Italy, and France?

Mr. JUDD. It is not necessary. We do not guarantee them unless they want it and pay for it.

Mr. GROSS. But you certainly do guarantee them.

Mr. JUDD. The program follows the general philosophy of all insurance practices.

Mr. GROSS. But you do guarantee them against confiscation of their property, as to convertibility of currency, and against damage in the event of war if they want all three coverages.

Mr. JUDD. It follows this principle. Where private business or persons want to invest their money and want to pay a premium to buy this insurance, it is in the interest of the United States to have private persons or corporations invest as much of their own funds as possible. That requires less from our taxpayers in

aid to the country.
Mr. GROSS. Let me ask the gentleman this question. Can Mr. Draper get a guarantee for his power company in Mexico? That is the same gentleman who recommended an additional \$400 million for this foreign giveaway pro-

gram.

Mr. JUDD. Mexico has not signed one of these guarantee arrangements with the United States.

Mr. GROSS. But if they do sign, he could come in and get it. And Eric Johnston could get a guarantee if the movie industry wanted to go into business in a big way; he could get guarantees in France, Italy, and England too, could he not?

Mr. JUDD. If his project meets the criteria written into the law, and if we have an agreement with that government under which it promises to make whole individual investors who lose their investment by reason of expropriation, then that could be done. We have to have an agreement with the government before that could happen.

Mr. GROSS. Mr. Chairman, it just does not make sense that we should jeopardize a single dime of the American taxpayers' money to guarantee investments of American businessmen in England, France or Italy or any other countries where we have pumped billions of dollars since the end of the war. I wonder if American taxpayers are underwriting the yacht that the Prime Minister of Ghana bought from the British recently?

If this business of insuring American investors in foreign countries carries no real risk, as the gentleman from Minnesota implies, and if it is so lucrative as others suggest, I wonder why the big insurance companies of this country have let this business slip through their fingers? It is my observation that private insurance companies are ready. willing, and able to insure any business operation where there is no abnormal risk and where they can expect a reasonable return.

I urge the adoption of my amendment.

The United States and the International Court of Justice. Part II

> EXTENSION OF REMARKS OF

## HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. REUSS. Mr. Speaker, it was my privilege Wednesday to offer for the RECORD the first of three parts of an excellent analysis of the United States and the International Court of Justice by Columbia University Prof. Herbert W. Briggs. Today, under leave to extend my remarks, I offer the second part of this worthwhile study.

For purposes of clarity, Mr. Speaker, I am introducing the second part of this study with the first paragraph from the article which appeared Wednesday at

page A5210 of the RECORD:

THE UNITED STATES AND THE INTERNATIONAL COURT OF JUSTICE: A REEXAMINATION, PART

(By Herbert W. Briggs)

In his state of the Union message on January 9, 1959, President Eisenhower declared his purpose of intensifying efforts "to the end that the rule of law may replace the rule of force in the affairs of nations" and of making proposals for a reexamination of our own relation to the International Court of Justice. It is no secret that the tide of criticism has been rising against the Connally amendment reservation pursuant to which the United States excluded from its acceptance of the compulsory jurisdiction of the Court-

(b) Disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America as determined by the United States of America.

#### THE INTERHANDEL CASE

In the Interhandel case " the United States first invoked its peremptory domestic juris-diction reservation as a bar to the Court's jurisdiction, to consider the indication of interim measures of protection requested by Switzerland. By a so-called preliminary ob-jection filed on October 11, 1957, the United States had informed the Court that since the United States had determined, pursuant to its domestic jurisdiction reservation, that the sale or disposition of the shares of General Aniline & Film Co. "is a matter essentially within its domestic jurisdiction," United States therefore declined "to submit the matter of the sale or disposition of such shares to the jurisdiction of the Court." his oral argument in October, 1957, Mr. Loftus Becker, agent for the United States, contended:

"This determination by the United States of America is not subject to review or approval by any tribunal. It operates to remove definitively from the jurisdiction of the Court the matter which it determines."

The peremptory character of the U.S. veto on the Court's jurisdiction was exploited by Mr. Becker in his argument that the "Court cannot be considered to have power to indicate provisional measures with respect to

<sup>&</sup>quot; Order of Oct. 24, 1957, on request for the Indication of Interim Measures of Protec-tion (1957), I.C.J. Rept. 105; digested in 52 A.J.I.L. 320 (1958).

the very matter concerning which it is known conclusively that it has no jurisdiction."

The determination made by the United States under its domestic jurisdiction reservation, he argued, "conclusively divested this Court of the prima facie jurisdiction which it did possess prior to that determination," and the Court "no longer possessed any jurisdiction to indicate provisional measures on the subject matter of the determination."

Despite this argument, the Court took jurisdiction to consider the indication of interim measures under article 41 of its Statute; but, because the United States informed the Court that the U.S. Supreme Court had granted certiorari in proceedings by Interhandel in American courts, and the United States was not contemplating immediate sale of the shares, the International Court of Justice rejected for lack of urgency the Swiss request for indication of interim measures.

In the second phase of the Interhandel case, the United States again invoked its peremptory domestic jurisdiction reservation. On June 16, 1953, the United States deposited with the Registry of the Court four preliminary objections, of which the fourth (in the language of the U.S. submissions) reads as follows:

#### "(4) FOURTH PRELIMINARY OBJECTION

"(a) that there is no jurisdiction in this Court to hear or determine any issues raised by the Swiss application or memorial concerning the sale or disposition of the vested shares of General Aniline & Film Corp. (including the passing of good and clear title to any persons or entity), for the reason that such sale or disposition has been determined by the United States of America, pursuant to paragraph (b) of the conditions attached to this country's acceptance of this Court's jurisdiction, to be a matter essentially within the domestic jurisdiction of this country; and

"(b) that there is no jurisdiction in this Court to hear or determine any issues raised by the Swiss application or memorial concerning the seizure and retention of the vested shares of General Aniline & Film Corp., for the reason that such seizure and retention are, according to international law, matters within the domestic jurisdiction of the United States." \*\*

In support of the contention advanced in paragraph (a), the United States preliminary objections once again state that the determination made by the United States that a matter falls essentially within its domestic jurisdiction "is not subject to review or approval by any tribunal" and—

"Accordingly, the question of the sale or disposition of the shares of General Aniline & Film is not justiciable, and the United States respectfully declines to submit the matter of such disposition or sale to the jurisdiction of the Court. Such declination encompasses all issues raised in the Swiss application and memorial (including issues raised by the Swiss-United States Treaty of 1931 and the Washington Accord of 1946), insofar as the determination of the issues would affect the sale or disposition of the shares.

"However, the determination pursuant to paragraph (b) of the conditions attached to this country's acceptance of the Court's compulsory jurisdiction is made only as regards the sale or disposition of the assets." <sup>24</sup> In reply \* the Swiss Government challenged the validity of the peremptory domestic jurisdiction reservation invoked by the United States, first, because it was incompatible with article 36(6) of the Court's statute by which "In the event of a dispute as to whether the Court has jurisdiction, the matter shall be settled by the decision of the Court"; and, second, because the peremptory reservation was inconsistent with the acceptance of compulsory jurisdiction under article 36(2) of the statute. Sub-sidiarily, the Swiss Government questioned the legitimacy of permitting a state which had accepted the compulsory jurisdiction of the Court to divide the subject matter of a dispute, which was alleged to fall within Its domestic jurisdiction, into questions the Court is asked to reject on the basis of international law and questions which are arbitrarily and unilaterally declared to be outside the Court's jurisdiction.™ Since the United States alleged, and the Swiss Government denied, that the subject matter of the dispute fell within the domestic jurisdiction of the United States, argued the Swiss Government, it was for the Court to decide this dispute as to its jurisdiction and to deny automatic effect to the U.S. reserva-

By the time oral proceedings were held at Hague on the U.S. preliminary objections in November 1958, Supreme Court had made its decision reversing dismissal of Interhandel's action in the U.S. courts and reopening the case." In his oral arguments before the International Court of Justice, Mr. Loftus Becker, agent for the United States, pointed out that the decision of the U.S. Supreme Court had made more important the third preliminary objection of the United States to the effect that the International Court of Justice lacked jurisdiction because Interhandel had not yet exhausted available local remedies, but had rendered "somewhat academic" and "somewhat moot" preliminary objection 4(a). Sale of Interhandel's vested was prohibited as long as it was in litigation before U.S. courts. Therefore Mr. Becker declined to reply to Swiss arguments against the validity of the U.S. domestic jurisdiction reservation, but contented himself with assertions that the reservation "is valid," its invocation in the Interhandel case was "not abritrary," and the United States maintained its preliminary objection 4(a) and asked the Court to honor it by declining jurisdiction on the sole ground that the United States had determined that the Court lacked jurisdiction.38

Since the United States did not withdraw its invocation of the peremptory domestic jurisdiction reservation, Prof. Paul Guggenheim, coagent of the Swiss Government, argued the invalidity of the reservation and of its invocation in the Interhandel case, and the Swiss Government requested the Court to reject or join to the merits the fourth preliminary objection of the United States.

ALTERNATIVES TO THE CONNALLY RESERVATION

The behavior of the United States in the Interhandel case reminds one of the observation made by Lawrence Preuss that to entrust to an interested party the determination whether or not a matter falls within its exclusive domestic jurisdiction "is to add to the risk of evasion that of error committed in good faith." \*\*\*

The essence of the objection to the Connally amendment reservation lies in its attempt to usurp for the United States the Court's own function of determining disputes as to its jurisdiction, by substituting the determination of a party in interest for that of an impartial judicial tribunal. The Court observed in the Nottebohm case that "since the Alabama case, it has been generally recognized, following the earlier precedents, that, in the absence of any agreement to the contrary, an international tribunal has the right to decide as to its own jurisdiction and has the power to interpret for this purpose the instruments which govern that jurisdiction."

This "rule of general international law" and "the judicial character of the Court" would suffice, said the Court, even if article 36(6) were not explicit, in relation to parties to the Court's statute, to confer on the Court the jurisdiction to decide disputes as to its own jurisdiction.

It is high time, therefore, that the United States withdraw its peremptory domestic jurisdiction reservation. Assuming that we wish to accept the compulsory jurisdiction of the International Court of Justice in legal disputes concerning the questions of international law listed in article 36(2) of the Statute—which we have in fact done—the reservation serves no useful purpose except that of evasion. Moreover, unless the Court finds the peremptory reservation invalid, it can be invoked against us when we are plaintiffs, under the condition of reciprocity contained in article 36(2) of the Statute.<sup>41</sup>

In eliminating the Connally amendment reservation, care should be taken not to fall into the facile error of attempting to incorporate in a new declaration a list of matters considered by the United States to fall essentially or exclusively within its domestic jurisdiction. The rule of law advocated by President Eisenhower would not be furthered by looking backward 40 years to the unconscionable fourth Lodge reservation to the Covenant of the League of Nations which, after stating that the United States "reserves to itself exclusively the right to decide what questions are within its domes-tic jurisdiction," went on to declare "that all domestic and political questions relating wholly or in part to its internal affairs, including immigration, labor, coastwise traffic, the tariff, commerce, the suppression of traffic in women and children, and in opium and other dangerous drugs, and all other domestic questions, are solely within the ju-

risdiction of the United States and are not under this treaty to be submitted in any way either to arbitration or to the consideration \* \* \* [of any League of Nations organ1," a

As David Hunter Miller suggested contemporaneously, the United States had already removed aspects of all seven listed categories from its exclusive domestic jurisdiction by concluding treaties on the questions designated as solely domestic.48 The conception that a matter can be listed once and for all as falling solely within the domestic jurisdiction of a state is an oversimplification which disregards the relativity of the concept of domestic jurisdiction and flies in the face of the established jurisprudence of the Court.

Nor would the rule of law be served by excluding from our acceptance of compulsory jurisdiction a list of matters, such as immigration or tariffs, whether or not treaties had been concluded on the subjects, and without any attempt to label them as falling within our domestic jurisdiction. extent that such matters fall by international law within our domestic jurisdiction, the listing is unnecessary; and to the extent that we may have contracted international obligations with regard to the listed items, we would merely be denying ourselves the help of the Court in furthering the rule of law without thereby releasing ourselves from the international obligations we had contracted.

Another danger to be guarded against is the ill-conceived suggestion once made by Mr. John Foster Dulles to tamper with the law to be applied by the Court. In his influential memorandum of July 10, 1946," to a subcommittee of the Senate Committee on Foreign Relations, Mr. Dulles wrote that it would be unnecessary "to stipulate who de-cides what is domestic" if the proposed declaration acepting the compulsory jurisdiction of the Court contained a stipulation to the effect that the Court could not decide a case to which the United States was a party unless the law to be applied was based on a treaty to which the United States was a party or unless the parties agreed in advance what principles of international law should be applied by the Court. With cavalier disregard for the institutional developments of 75 years in the judicial settlement of international legal disputes, Mr. Dulles favored turning the clock back to the Alabama Arbitration of 1872 as a precedent, where the parties first negotiated a treaty establishing

the law to be applied before going to court. Senator Millikin took up the Dulles suggestion and introduced an amendment that aceptance of the compulsory jurisdiction of the Court by the United States "shall not apply to disputes where the law necessary for the decision is not found in existing treatles and conventions to which the United States is a party and where there has not been prior agreement by the United States as to the applicable principles of international

Senator Wayne Morse pointed out to the Senate that the Dulles-Millikin proposal would have the effect of preventing the Court from applying its own statute in cases to which the United States was a party. By limiting the Court to the application of treaties to which the United States was a party, the proposed Senate amendment sought, in effect, to render inapplicable to

the United States subparagraphs b, c, and d of article 38(1), and thus to prevent the Court from applying customary international law, the general principles of law recognized by civilized nations and judicial precedent.46 Fortunately, the Senate decisively rejected the proposed Millikin amendment, which Judge Manley O. Hudson has characterized as "a ghost which stalked out of the Dulles memorandum" and which "would have been utterly unworkable in practice." 47

Equally retrograde are proposals by which United States would withdraw completely its declaration accepting the compulsory jurisdiction of the Court under article 36(2) and attempt to conclude a limited series of treaties accepting the compulsory jurisdiction of the Court for the limited purpose of the interpretation and application of certain treaties. The rule of law advocated by President Eisenhower would be ill served by such a throwback to the mentality of the Hague Peace Conference.

The jurisprudence of the Court, when confronted with a plea of domestic jurisdiction, is such as to inspire confidence that it will decline jurisdiction over the merits of any dispute the subject matter of which is, according to international law, exclusively within the domestic jurisdiction of a state. It may be doubted whether a revised U.S. declaration accepting the compulsory jurisdiction of the Court needs to contain any domestic jurisdiction reservation. Most states accepting the Court's compulsory jurisdiction appear to have found such a reservation supererogatory. It is interesting to note that Belgium, Finland, and Japan in 1958 deposited declarations accepting the Court's compulsory jurisdiction without including domestic jurisdiction reservations.

However, if it will serve to allay nerv-

ousness, however ill founded, there can be no strong objection to a reservation excluding "disputes with regard to matters which according to international law fall exclusively within the domestic jurisdiction of the United States." This formula, currently followed, with unimportant verbal variations by Australia, Cambodia, Canada, New Zealand, and the United Kingdom, is the basis of a consistent jurisprudence on the part of the Court and is in conformity with the statute.

"Ibid. 10702. The text of art. 38 of the Court's statute reads as follows:

"1. The Court, whose function is to decide in accordance with international law such disputes as are submittd to it, shall apply: (a) interntional conventions, whether general or particular, establishing rules expressly recognized by the contesting states: (b) international custom, as evidence of a general practice accepted as law; (c) the general principles of law recognized by civilized nations; (d) subject to the provisions of article 59, judicial decisions and the teachings of the most highly qualified publicists of the various nations, as subsidiary means for the determination of rules of law.

"2. This provision shall not prejudice the power of the Court to decide a case ex aequo et bono, if the parties agree thereto."

Hudson, loc. cit. note 39, at 895-896.

Retired Military Men Lobbyists?

EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish

to insert into the RECORD an article which appeared in the June 10, 1959, edition of the Clinton Herald.

It is a significant article because of its analysis and discussion of the role of the military man in the armaments race. Many military men upon retiring from active military service return to private life and work as so-called consultants for the munitions makers. There is not much doubt that these consulting functions are in the form of contracts with members of the Defense Department. There is nothing wrong with such arrangements per se except when it is clear that there is no connection between what is bought by the Government for defense purposes and what is necessary for our national defense. This may well be the case today.

Another interesting thought suggested in this article is that our entire economy is too closely tied to the construction of armaments. It is of paramount importance that we find and develop alternatives for the time when defense expenditures will not be necessary. Unless we do this, we will not be able to shake ourselves of the corporate-military state axis which could strangle our society in the next decade.

The Clinton Herald article follows:

RETTRED MILITARY MEN LOBBYISTS?

What could be nicer for a retiring general or admiral than to get a job—paying up to \$40,000 a year or more—with a company which sells some kind of military equipment to the Government?

But the question Congress is going to ask now is: What does he do to earn his money? About July 1 a House Armed Services Sub-

committee headed by Representative F. Ep-WARD HÉBERT (Democrat, of Louisiana) is going to start hearings digging into questions like these:

1. When a retired general or admiral gets a fat job from a company selling to the Armed Forces, is it strictly because of his executive ability and professional experi-

2. Or is he really hired as a lobbyist or influence peddler to use his old friendships and contacts in the Pentagon for the benefit of the company which hired him?

There is a third underlying question: Is a high-ranking official, still in the service, in-fluenced in the selecting of equipment from a particular company by the prospect of going to work for that company when he

HÉBERT Says the picture is not all white and black—that many retired officers now with military equipment companies do a good, legitimate job because of their knowledge and background.

However, he says he thinks more business in Washington is done on the golf links and over the cocktail tables than is ever transacted in the Pentagon.

But any legislation Congress considers to correct abuses-and HEBERT expects to have remedial measures for Congress when it returns in 1960-runs squarely into a problem of individual rights.

Many officers retire in the prime of life and, like nonmilitary people, have a right to make income in addition to their pensions-particularly in fields where their knowledge and experience should pay off best.

Pending results of the Hébert investigation the House rejected last week a ban on such employment for 5 years after retirement. But there is a long history of congressional agitation about military brass going into private industry which does business with the Government.

<sup>59</sup> CONGRESSIONAL RECORD (pt. 5) 4599 (66th Cong., 2d sess., Mar. 19, 1920).

<sup>&</sup>quot;Cited by Preuss, loc. cit. 732. ""Memorandum of John Foster Dulles concerning Acceptance by the United States

of the Compulsory Jurisdiction of the International Court of Justice, July 10, 1946," printed in the Senate hearings (cited in note

<sup>25</sup> above) at pp. 43-45.
45 92 CONGRESSIONAL RECORD, 10698 (79th Cong., 2d sess.)

When Senator Gerald Nye, a North Dakota Republican, conducted his historic investigation into munitions-making back in the 1930's, it was brought out that retired military brass had big jobs in that industry.

There is a difference between the Nye inquiry and the one to be made by HÉBERT.

The former had its roots in American pacifism and neutralism-this country isolationist then-and the munitions makers were accused of getting fat by fomenting conflicts around the world.

There is no dispute now about American needs for heavy armament. The American economy is so tightly linked with defense production that a sudden decision to reduce armaments drastically might throw the

country into depression.

The Hébert investigation will examine not only the roles of retired officers in firms dealing with the Government. It also will want to know how the military equipment makers go about competing with one another to sell their products to the Government. Meaning, how they try to influence decisions in their own favor.

President Eisenhower, asked at his news conference last Wednesday about the role of the munitions makers in American defense purchases, said: "Obviously something besides the strict military needs of the country are influencing decisions."

Statement of Hon. Leonard G. Wolf Before the Subcommittee on Dairy and Poultry of the House Agriculture Committee, June 19, 1959

EXTENSION OF REMARKS

## HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I would like to insert in the RECORD a copy of my testimony before the Subcommittee on Dairy and Poultry of the House Agriculture Committee, June 19, 1959.

The testimony follows:

STATEMENT OF HON. LEONARD G. WOLF BE-FORE THE SUBCOMMITTEE ON DAIRY AND POULTRY OF THE HOUSE AGRICULTURE COM-MITTEE, JUNE 19, 1959

Mr. Chairman, I appreciate the opportunity of appearing before you today. problem of egg supplies and low egg prices is not confined to the extreme eastern and western edges of our great Nation. Twothirds of the egg supply and the price prob-lem is in the great central belt of our country.

As a prologue to my statement, let me say

first that abolishing the corn and feed grains price support program is neither an adequate nor an acceptable solution to the egg and chicken problem. One of the reasons that eggs and meat producers are in trouble and getting into worse trouble is because the feed grains programs have been weakened, dismantled and disrupted. If we had had a good feed grains income and supply stabilization program over the past 7 years, egg

and chicken prices would not be in the fix they are in now.

I strongly urge that when you come to consider a long-range egg and chicken program, you think of it as part of a comprehensive farm income stabilization program including such parts as the Dairy Marketing

Act which you have introduced, a farm crops bill similar to that which my colleague and a member of your subcommittee, Mr. Coad, has introduced, and similar programs for hogs and other major commodities.

Egg and chicken producers cannot, in my opinion, stand alone in this matter, either on the floor of the House nor as an operating program. Consequently, I believe that the programs must be integrated; they must be part of a common agricultural plan.

As the chairman has said, eggs are selling for less now in real terms, in purchasingpower dollars, than at any time in recorded history. They are selling in Iowa this week for 18 cents per dozen for high quality market grade eggs, at least 10 cents per dozen less than actual out-of-pocket cash cost of production.

A dozen eggs right now will probably buy less of the things farmers have to buy for family living and investments than at any time in the history of this country or any other country in the history of the world. With this new historical low on top of us, we need, of course, to work out some kind of stopgap program to help us get out of this crisis. But we also need to start now to develop and enact a long-term program that will prevent the recurrence of this kind of crisis.

To get out of the current crisis, I urge the enactment of a program of income deficiency payments to egg producers geared to the re quirement that the producer voluntarily reduce his sale of eggs to 5 percent below his volume of sales during the same month in 1958. Such payments would be calculated as the number of cents by which the national average price received by farmers for eggs is less than 65 percent of the parity price of eggs, the current support level for feed grains. A similar program could be placed into effect for chicken meat.

This program certainly would not solve all of the egg and chicken producer's problems but it would at least stave off widespread bankruptcy while we go about developing a

workable long-range program.

In connection with the egg-payment and marketing-adjustment program I have suggested, I hope this Congress will enact mandatory legislation requiring the Secretary to utilize funds available to him to provide for purchase of both eggs and hens to the extent to which he can make humane and economic use of these products under the food-forpeace program and in domestic food distribution programs. Along these same lines, I suggest that we consider the possibility of using chicken and eggs for our school lunch program.

However, Mr. Chairman, partially relieving the current egg and chicken crisis will not be enough. We need to establish an egg and chicken program which will stabilize the market supplies of eggs and chickens at a level that will return a parity of income and

price to family farm producers.

I am informed that family farm egg producers have been working for nothing in producing eggs on the average for the entire period since 1954. If this continues, eggs will cease to be an income-producing enterprise on family farms and we will be allowing another nail to be driven in the coffin of the family farm pattern of American agriculture.

For a long-range program, we need to apply to eggs the same principles that are included in the bill which Mr. COAD has introduced for crops.

First, we should set a stabilization level of not less than 90 percent of a fair parity price. This program should be carried out by a workable combination of income deficiency payments and marketing controls such as is provided for milk in the bill introduced by the chairman of this subcommittee. Such a program could be enforced by means of compliance deposits on sale of eggs as is provide in the milk marketing bill to which I have referred.

The per capita sales of eggs were apparently quite well balanced with demand in 1948, and again in 1952, and were not greatly out of balance in 1958. There is not much oversupply, but that little bit has a very serious price depressing effect.

If we can arrange somehow to stabilize the supply of eggs for a brief period long enough for growing population to catch up with the supply of eggs our problem will be greatly simplified because then we shall be operating a program designed to gear increasing egg production to increasing demand resulting from the increasing population.

Your subcommitte is facing not only a critical crisis in the poultry situation, but also a chronic problem. Appropriate action, may I emphasize, must be addressed to both.

The current egg crisis is not just a tem-porary problem which can be dealt with in a haphazard manner. It is likely to get worse, and in any event will recur, if we do not develop and put into operation a continuing stabilization program for eggs and chickens as a part of a comprehensive income improvement and stabilization program for all major farm commodities, including among others, hogs, manufactured milk and butterfat, and the feed grains.

Except for the temporary purchase programs I have recommended, the suggestions I have made probably would be cost free to the Federal Treasury unless we should again allow the level of unemployment of labor and plant idleness to climb above the 5 percent level. In that case, the payment approach I have recommended would go into operation to maintain a supply of eggs equal to full prosperity conditions, allowing the market price to drop owing to the national economic recession brought on by unemployment. But such price slump would be made up to egg producers through a deficiency income payment.

I am sure that this subcommittee will make the kind of study and propose that kind of legislation which will benefit the egg farmer and consumer.

I cannot close my statement, Mr. Chairman, without mentioning one other question which occurs to me. While the Iowa farmer is getting 18 cents a dozen for eggs, I paid to the man who delivered eggs to my door this morning 57 cents a dozen. I feel that it is within the jurisdiction of this subcommittee to study why this great disparity between what the farmer gets and what I pay as a consumer. I think it is significant to report that I am paying very little less today than I was paying when the farmer received 40 cents a dozen. I would urge this subcom-mittee to pursue the idea of what causes this terrible disparity.

## A Prototype for the Nation To Follow: Detroit's Hundred Club

EXTENSION OF REMARKS

## HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. RABAUT. Mr. Speaker, it is a

high honor to commend to the attention of the Congress of the United States and to American cities everywhere, under leave to extend my remarks in the Record, the most remarkable club in the area of human decency that has yet come to my attention. This is Detroit's Hundred Club. Here is a volun-teer organization of Detroit citizens banded together for the sole purpose of helping materially-in dollars and cents and economic self-respect—the families of Detroit's firemen and policemen who are killed in line of duty.

This is the club which has achieved national attention by promptly presenting \$1,000 to the widow and family of a fireman or police officer whose devotion to duty compelled the sacrifice of his life. In addition the club pays off mortgages and otherwise eases the economic burdens and bereavement of the victim's survivors. I am reliably informed that clubs modeled after the Hundred Club have been organized in other cities. Responding to the Detroit prototype, similar clubs have been formed in Cleveland, Memphis, Indianapolis, Louisville, Orlando, Fla., and other communities of high civic conscience and humane responsibility. Detroit's Hundred Club is a completely selfless, dedicated, and wholly volunteer group with a long record of successful application of its principles in concrete cases. The whole Nation would do well to take note of this success. The uplifting impact of this movement on the morale and esprit de corps of any community's fighters against catastrophe and crime is incalculable. The Catholic Digest, June 1959, has just reprinted from Pageant magazine a condensation of a story by Hal Butler about the club. I am proud to have it republished in the RECORD. The article follows:

#### DETROIT'S HUNDRED CLUB

When a policeman or a fireman risks his life serving the public, and loses the gamble, what happens to his family?

Here is what happens in Detroit. His Widow receives a check for \$1,000 to cover immediate expenses. All his outstanding debts are paid. If there is a mortgage on his house, it is paid in full.

Where does the money come from? From Detroit's Hundred Club, a nonprofit organization made up of business and professinal men. They know that a man who makes a moderate salary guarding the public safety rarely is able to provide for his family in the case of his sudden death, a risk that he assumes daily when he puts on his uniform.

Since the Hundred Club was formally organized in 1952, it has given more than \$80,000 to 40 families of policemen and firemen lost in the line of duty. It has on hand more than \$225,000 in cash and Government bonds to cover future emergencies.

The club does not expect its help to lessen the family's grief. But it does reduce financial problems, assuring the stricken Widow that the death benefit and pension provided by the city of Detroit and 51 suburbs can be used by the family to live on, untouched by crushing debts.

Patrolman Sidney O'Conner was killed on the evening of January 17, 1956, in a gun duel with a bandit in a Detroit bar. next day three members of the Hundred Club appeared at the patrolman's home to present his widow with a check for \$1,000. On the same day wheels were set in motion to pay up an \$8,922 mortgage on the widow's

"The couple had made only one payment on their home," says William Packer, president of the hundred club and an automobile dealer in Detroit. "We figured that if Mrs. O'Conner had tried to make monthly payments on her home from her pension check for the next 10 years, she would have almost nothing left to support herself and her three small children." Because of the club, however, Mrs. O'Conner now lives in a debt-free home and has the pension available for the day-to-day support of her family.

Like many benevolent movements, the club got its start inconspicuously and operated for several years without public awareness of its existence.

In 1950, patrolman Andreas Mellert was picking up a parole violator when he was shot to death by the young man's enraged father.

Packer, a gray-thatched, active man with a rare feeling for the troubles of others, learned that the policeman's widow was about to have a baby, and visited her in the hospital. He was so moved by her plight that he went home and wrote 100 friends, asking them to contribute to a fund for the policeman's widow. At the same time he induced Detroit News columnist John Carlisle to devote a column to the tragedy. By the time Mrs. Mellert's baby arrived, \$7,800 was waiting for her.

A year after the Mellert case another officer, patrolman Stanley Jerlecki, was killed in an armed robbery arrest. Packer was out of town, but a group of his friends, led by chainstore operator Bert Hart, attorney George Fitzgerald, and bakery owner Jack Schafer, raised a substantial sum for the widow.

"About then it became obvious," says Packer, "that this kind of thing shouldn't be handled on such a hit-or-miss basis, that a permanent organization was needed to take care of such cases."

With the help of Carlisle and hotel manager Don Mumford, Packer founded the Hundred Club. Members were asked to contribute \$200 a year for a widows' fund plus \$50 to cover club expenses, which would include two dinner meetings a year. Enrollment was first held to 100, but within 5 months there were 197 members. Today the organization has 300 members, and there is a long waiting list.

The club is operated by a 24-member board of directors, which passes on gratuities rec-ommended by the disbursement committee. Although there is no set formula for amounts to be paid when a loss occurs, disagreement rarely emerges. The club works closely with the police and fire departments to determine the actual needs of a widow and her family. The amount paid is governed by the number of dependents, the mortgage on the home, and the outstanding debts of the family. Gifts have run as low as \$1,000 and as high as the \$9,922 paid to Mrs. O'Conner.

Only 6 months after the Hundred Club was formed, it had its first official case. Motorcycle Patrolman Arthur Meyers was killed in a crash at a busy intersection. Club officials discovered that the patrolman had left a wife and three children, some debts, and a \$7,500 mortgage on his home. Parker, who visited the widow with Carlisle and Hart, recalls the experience.

"You will find that the policemen who die on duty are usually men between 25 and 30 years of age who work in jobs that expose them to traffic hazards and dangers common to tough neighborhoods," Packer explains. "Arthur Meyers was one of these. I'll never forget the moment when we presented his midward to a check the moment when we presented the midward to a check the moment when we presented the midward to the check the moment when we presented the midward to the mi sented his widow with a check to pay off the mortgage on her home."

The Hundred Club doesn't limit its attention to front-page cases. Capt. Warner Bloess, of the fire department, died of a heart attack at the scene of a fire. Bloess received the usual \$1,000 check and the mortgage balance on her home. Grosse Pointe fireman, Charles Van Coillie, died of a heart attack while on duty, and his widow, free of other debts, received \$1,000. More recently the club paid off a mortgage and presented cash to Mrs. Harry Thom, whose husband, a police lieutenant, died of cancer traceable to an injury he had received while on duty several years before.

"We judge each case strictly on the basis of whether or not the city and police or fire departments consider it a line-of-duty explains Packer, "They call the death. pitch."

Several years after the Hundred Club was organized, members became concerned about the financial condition of women who became widows prior to its formation. Investigation turned up 25 in need of ready cash, and a \$1,000 check was sent to each.

Most widows of men lost in action know about the hundred club. However, several years ago Packer and Nate S. Shapero, chairman of the disbursement committee, visited the home of Mrs. William Katke. Her husband, Chief of Police Katke, of Pleasant Ridge, a Detroit suburb, had died of a heart attack while helping a similarly stricken victim. Mrs. Katke had never heard of the hundred club, and she was dubious about accepting the initial \$1,000 check offered her.

She patiently explained that her home was clear of debt and that she would receive a pension adequate to support herself and her 14-year-old daughter.

The club, however, thought she would have trouble stretching her small budget to cover her daughter's education. So Member Jim Zinn, a banker, put together an annuity that added \$30 a month to the widow's income for 10 years; long enough to see her daughter through school.

The hundred club did not win immediate acceptance from rank-and-file policemen and firemen. The bluecoats were frankly skeptical. No one, they reasoned, gave away money in large chunks for no reason. They wanted to know what the "gimmick" behind the generosity might be.

Edward S. Piggins, Detroit's police commissioner until his retirement in September 1958, sums up the opinion now held by policemen: "The hundred club has been one of the greatest stimulants to morale in the Detroit Police Department that has ever come from an outside source. I know that I express the sentiment of every Detroit officer when I say, 'God bless every one of you.'"

Fire Department Chief Edward J. Blohm is just as enthusiastic. "These people are a great credit to the community." he says. "Their organization has accomplished wonders in building high morale in our department."

In the annals of charitable organizations, the hundred club is not only unique in its purpose but one of the most unorthodox in structure. Despite the great amount of good work it has done, it has no physical facilities. There is no building, no office, no clubroom, no paid staff, not even a filing cabinet-and therefore no overhead. "All we have," says Packer with a grin, "is a lot of money."

And another thing, obviously, that Packer doesn't mention: The biggest collective heart in town.

# Daily Digest

## HIGHLIGHTS

House passed bill to increase debt limit. See Congressional Program Ahead.

## Senate

## Chamber Action

The Senate was not in session today. Its next meeting will be held at noon Monday, June 22.

## Committee Meetings

(Committees not listed did not meet)

#### APPROPRIATIONS-LABOR-HEW

Committee on Appropriations: Subcommittee, in executive session, marked up and approved for full committee consideration H.R. 6769, fiscal 1960 appropriations for the Departments of Labor and Health, Education, and Welfare.

# APPROPRIATIONS—STATE, JUSTICE, AND JUDICIARY

Committee on Appropriations: Subcommittee, in executive session, marked up and approved for full committee consideration H.R. 7343, fiscal 1960 appropriations for the Departments of State and Justice, and the Judiciary.

#### APPROPRIATIONS—BUREAU OF RECLAMATION

Committee on Appropriations: Subcommittee continued its hearings on Bureau of Reclamation items in H.R. 7509, fiscal 1960 appropriations for public works, receiving testimony from Senators Engle, Murray, Hruska, Curtis, and Moss; and numerous public witnesses.

Hearings were recessed subject to call of the Chair.

## CONTINENTAL AIR DEFENSE

Committee on Armed Services: The Military Construction Subcommittee continued, in executive session, to hear testimony relative to the continental air defense program, having as its witnesses Dr. C. C. Furnas, chancellor, University of Buffalo; Rear Adm. A. L. Reed, Deputy Director of Naval Intelligence; and Dr. Herbert F. York, Director of Defense Research and Engineering.

#### MINERAL LEASING

Committee on Interior and Insular Affairs: The Public Lands Subcommittee held hearings on S. 1855, S. 1732, S. 1412, and S. 1670, bills relating to mineral leasing and mineral rights in Alaska. Witnesses heard were Senator Bartlett; Max Caplan, Minerals Officer, and Harold Hochmuth, Lands Officer, both of the Bureau of Land Management, Interior Department; Philip Holdsworth, Commissioner of Natural Resources, State of Alaska; Bernard Sampson, a consulting engineer, Fairmont, W. Va.; Gordon Goodwin, Western Oil & Gas Association; and Frank Heintzleman, former Governor of Alaska.

Hearings were recessed subject to call of the Chair.

## POLITICAL BROADCASTING

Committee on Interstate and Foreign Commerce: Subcommittee on Communications continued its hearings on several bills relative to equal time for political broadcasting with testimony from Representative Cunningham; Robert Sarnoff, chairman of the board, National Broadcasting Co.; John Daly, vice president, American Broadcasting Corp.; Eugene Pulliam, publisher, Indianapolis Star; Lawrence J. Daly, of Chicago; and W. D. Rogers, WDUB-TV, Lubbock, Tex.

Hearings continue Tuesday, June 23.

#### FREEDOM COMMISSION

Committee on the Judiciary: The Internal Security Subcommittee continued its hearings on S. 1689, to create a Freedom Commission and a Freedom Academy to serve as informational media on techniques of communism. Testimony favoring enactment of the bill was heard from Representative Judd; Herbert Philbrick, a writer and lecturer, Rye, N.H.; Dr. Leo Cherne, Research Institute of America, Inc., New York City; and Lt. Col. MacArthur H. Manchester, Reserve Officers Association, Washington, D.C., the latter of whom submitted a statement.

Hearings were recessed subject to call of the Chair.

#### TVA, AND COMMITTEE BUSINESS

Committee on Public Works: Committee, in executive session, ordered favorably reported with amendments H.R. 3460, to amend in several respects the TVA Act of 1933. The bill, as amended, would (1) permit extension of TVA service area of 2,000 square miles or 2½

# Appendix

Visit to Soviet Republic of Dr. Luther C. Peak

EXTENSION OF REMARKS

OF

## HON, LYNDON B. JOHNSON

Mr. JOHNSON of Texas. Mr. President, Dr. Luther C. Peak, pastor of the with Dr. Luther C. Fear, paster Falls, with Baptist Church in Wichita Falls, Tex., has recently returned from a trip to the Soviet Union. The Wichita Falls Times of March 8, 1959, printed an interby Peak's findings and impressions.

think Dr. Peak's views will be of inteest to Members of the Senate, and I unanimous consent that the article be printed in the Appendix of the Con-ERSSIONAL RECORD.

There being no objection, the article ordered to be printed the the RECORD, 4 follows:

TIST MINISTER THINKS SOVIET DOES NOT WANT WAR

(By Wayne Lane)

Russian does not want war but is obsessed want the idea of outstripping every other na-tion in industrial production, in effect conthe in industrial production, in the United States economically.

These were among the impressions gained by Dr. Luther C. Peak, pastor of Faith Bap-Church, during a visit to the Soviet bailt made following an evangelistic cambaign in which he participated in the British

I am absolutely convinced that they do want war," Dr. Peak said.

"Hence of any kind that they desire war, but much indicated just the opposite."

war would destroy everything the Russians war would destroy everything the recommendation seeking to build, the minister explained, seeking to build, the minister of the seeking to build, the seeking to build the seeking the seeking to build the seeking to build the seeking the his ts and industrial output. Furthermore, is is contrary to the philosophy of Lenin, lounder and guiding spirit of the Soviet Republic bilic, whose teachings and memory the peo-

Nowever, Dr. Peak believes, the world some or later must reckon with the conhe or later must reckon with the eco-

The pastor was in Russia 5 days with a Roup of 18 ministers, from the evangelistic to himsters, from the evaluation. Their itinerary was arranged by Intorist, the Russian Government agency, the halso supplied guides and an official to be in charge of the grant during its stay. the in charge of the party during its stay.

The group flew into the country by Rusthe group flew into the country by the group flew into the group f deliner from Amsterdam. Accommoding were provided in a plush Moscow hotel. Most of the time was spent in Moscow, Most of the time was spent in Most of the city the one trip of 60 miles outside the city providing an opportunity to view the collective farming practices.

or. Peak saw no evidence or the property of the people, because, he said, they are entrying more privileges, have more food and

clothing, are better educated and more satisfied in every respect than ever before.

said Government propagandists continually contrasted the people now with the oppression suffered under the czars and before the October revolution of 1917.

Capitalism is depicted there as a "man eat man" society with the strong exploiting the weak and the rich exploiting the poor.

"It seems to me that there everybody is exploited," Dr. Peak said, "not by private enterprise, but by the Government." Yet it is not through forced labor. The masses of the people are not working against their will, but after applying for work are assigned to jobs and paid by the Government on the basis of the work they do.

With the Government operating all industry, profits which would be pocketed by private stockholders in America go to the Government in Russia to be spent on scientific, cultural, or industrial programs.

This was seen by Dr. Peak as a critical point in the worldwide race for economic superiority: Can the incentive of freedom provide sufficient initiative to maintain a production level at which revenue from taxes will enable the Government of the United States to compete with Russia on a comparable financial footing?

"We must realize we're in a race and must wake up and discipline ourselves accordingly." Dr. Peak asserted.

He called for a rebirth of American nationalism, a new patriotic emphasis, and suggested reconsideration of a "speak softly and carry a big stick" policy.

"The United States must stay armed, but at the same time we should make an all-out effort to strengthen the bond of peace with all," the pastor said.

While in Russia, the ministers attended ervices at the single Baptist church in Moscow and later were hosts at a dinner for the pastor, Jacob Zhidkov, and other church-

The church, with 4,000 members, is forced to operate within rigid rules laid down by the Government. Alexander Karev, head of the Russian Baptist Union consisting of 5.400 churches with 530,000 members, said, "We feel that in the Soviet Union we have the nearest thing to apostolic Christianity to be found anywhere in the world."

The churchmen expressed what Dr. Peak regarded as genuine desires for peace. But he quoted Michael Zhidkov, son of the Baptist pastor and himself assistant pastor, as saying, "We believe your people want peace, but the capitalists want to keep a war scare alive so the people will support the Government buying of war materials."

Most of Dr. Peak's time abroad was spent Bangor, Northern Ireland, where he was assigned when the 80 persons in the evan-gelistic crusade separated to conduct revivals throughout the British Isles. The mission was organized by the Church Evangelism Association with the primary purpose of en-couraging work among organized Baptist churches in that area.

#### RESULTS

Members of the team were pleased at the success of their efforts. A total of 3,768 decisons for Christ were reported, including 1,293 conversions, 2,438 rededications and 32 who indicated desires to become ministers or missionaries. Two hundred decisions were made during Dr. Peak's 15-day stay at Bangor.

Following the evangelistic effort, the party divided, some going to the Holy Land and the remainder to Moscow. They reassembled in London for the return flight to the United

While the trip "made a better American of me," Dr. Peak said, and impressed him with the advantages Americans enjoy, it also "opened my eyes to some weaknesses that should be corrected" to meet the challenge of communism.

Among his convictions of what America

must do, Dr. Peak listed:
1. "There should be a tremendous emphasis upon science throughout the entire educational system from the grades through college. We are entering an era when scientific discoveries will completely change the world and the people who excell in scientific achievement will lead the world."

2. "There should be renewed emphasis upon culture." The pastor said he was amazed at the cultural life that has been attained in the Sovet Union in all fields of

3. "I feel that the American people should demand to know the truth concerning Soviet-American relations, uncolored and without bias." Dr. Peak declared that all provocative acts and statements on our part should be played down and frowned upon, and said that if there is any possibility of salvaging peace from the present state of affairs, it is to the interest of every person in the Soviet Union and the United States to see that this

#### PHYSICAL CULTURE

4. "We need to put tremendous emphasis upon physical culture." While voicing pride in the great athletic programs of our schools, Dr. Peak said the benefits of such programs are restricted to too few. The comparative numbers of participants with nonpartici-pants reveals that the great bulk of pupils

are not receiving benefits, he said.
5. "The people should demand of their Congressmen and Senators that we stop the giveaway program." Saying he lays no claim to being an expert in field of political economy, Dr. Peak voiced the opinion that the United States has not bought a single friend through the billions spent for foreign aid around the world. "In fact," he said, "everywhere I went I found people embarrassed, humiliated, and self-respect injured

by the program.

6. "As a basis on which to build a greater and stronger America, a new emphasis should be given religion and morals." The pastor said a terrible mistake is made in presuming moral standards are low in Russia. Persons guilty of immorality are made to feel they are disloyal to society and to the state, in line with the fact which the Reds have recognized; an immoral people made a weak nation. The current drive to reduce drinking is part of the Russian program in this connection. The result has been a marked reduction in alcohol consumption, contrasted with an increase in the United States.

Dr. Peak pointed that while morality is a matter of pride with the Russians, it is taught apart from God. The United States, he said, must stress morals on their true basis-

faith in God.

## Employment of the Physically Handicapped

EXTENSION OF REMARKS

## HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. WILLIAMS of Delaware. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "How Delaware Does It." delivered by Gov. J. Caleb Boggs, Delaware, to members of the President's Committee on Employment of the Physically Handicapped.

Governor Boggs deserves much credit for the excellent progress that has been made in rehabilitating the physically handicapped in the State of Delaware.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

How DELAWARE DOES IT

(Address by Gov. J. Caleb Boggs, Delaware, to members of the President's Committee on Employment of the Physically Handicapped at their annual meeting, Washington, D.C., on May 7, 1959)

It is a great privilege to be inivted to participate in this annual meeting of the President's Committee on Employment of the Physically Handicapped, marking the 12th anniversary of the establishment of this organization. I have accepted your invitation because I am vitally interested in this great program of helping the handicapped and be-cause I am proud of the success of this effort in the State of Delaware.

Much of the success of our program of employing the physically handicapped in Delaware can be traced to the leadership provided by the President's Committee here in Washington and the personal drive and abil-ity of General Mass. This must certainly be true across the Nation. In recognition of General Mass' contributions to our work, we made him an honorary citizen of Delaware in 1958. Another big factor in our record is the strong rehabilitation program in the State. Rehabilitation and employment, of course, must go together.

Our program of rehabilitating and employing the physically handicapped in Delaware naturally is based on the same humanitarian and economic factors as the national program. No one can deny the moral responsibility of industry, labor, and government to help those citizens who are prevented from earning a livelihood through physical and mental handicaps. For the handicapped individual we must do everything we can to bring about employment opportunities and provide the incentive for them to help them-

In addition, we recognize the economic benefits of this program to the individual and to the community in removing the handicapped from welfare rolls or other dependency and enabling them to obtain employment through which they can become income-earning, taxpaying citizens. It has been proven that this program pays for itself many times over in humanitarian and monetary value.

We approach the task in Delaware as a team effort-a team composed of industry, labor, community agencies, and the Govern-The Governor's Committee on Employment of the Physically Handicapped, which has grown from 11 to 35 members, was first established in 1947, shortly after the President's committee was formed. The men who have been chairmen of the committee during its existence have kindled the community enthusiasm and forged an outstanding record. One of our past chairmen, Mason Turner, was promoted from my committee to yours. Our present chairman, James H. Sears, has been a real sparkplug in stimulating State awareness of the problem.

We have an employers' advisory council for the Governor's committee which has 100 experienced business and industrial people who interview handicapped persons for job placements. And on the subject of placement, we must also give considerable credit to the Delaware State Employment Service and the U.S. Department of Labor for their complete cooperation and assistance in helping find jobs for our rehabilitated citizens.

As I indicated earlier, we are aided in this effort by an outstanding rehabilitation program carried on by the State board of voca-tional education. We have enjoyed many firsts in the first State during the past 172 years, and one of which we are particularly proud is our position as first in the country for 9 years in terms of the number per capita of handicapped persons rehabilitated. Georgia has succeeded Delaware in first place and I offer my congratulations to that State for their fine program. In the past 5 years, we have rehabilitated 2,300 disabled persons and they have beeen satisfactorily employed. At the time of referral to our rehabilitation agency 85 percent were unemployed. After rehabilitation, these 2,300 men and women were earning at the rate of \$5,-400,000 annually. Of the 2,300 people, 290 were referred by the State welfare department. If they remained on the rolls for 1 year, the State would have expended \$283,000 in welfare benefits. The cost of their re-habilitation services was \$74,240 or \$256 per person, and in 1 year they had earned over half a million dollars in wages. I know there have been similar accomplishments in other States.

Another development in the rehabilitation program of which we in Delaware are proud is the legislation prepared and sponsored 2 years ago by our Congressmen in the 85th Congress, Harry G. Haskell, Jr. Congressman Haskell's legislation lengthened the advanced training available for specialists in the complicated techniques of rehabilitation. Congressman Haskell also obtained a special grant for Delaware's Opportunity Center, a workshop for the handicapped, which this summer, we hope, will employ over 100 disabled persons.

And we cannot forget the achievements of the Delaware Commission for the Blind, which has won national recognition. This commission, which is celebrating its 50th anniversary this year, has been instrumental in providing employment for nearly 17 percent of our blind citizens. That's a slightly higher percentage than the accepted national maximum. Last year, 125 blind men and women in Delaware, working at jobs made possible through our State commission, earned more than \$278,000. That means they were, to a great extent, able to sustain themselves and at the same time relieve the State of what otherwise would have been additional welfare responsibilities.

For the future, we look forward to an expanding program of rehabilitating and employing the physically handicapped as the State can absorb the initial added costs. The new Federal program will shift more of the financial burden to some of the State under a formula that in Delaware will require 50-50 matching of funds by 1963. We will do everything in our power to see that our program is able to maintain its present high quality and even perhaps recapture the num-

ber one rating in the country.
On this 12th anniversay of the President's Committee, is is clear that all those who

have participated in this great human po gram can take justifiable pride in the result

But even as we look ahead to greater gal in the training and employment of the phy cally handicapped, it becomes more and mo apparent that we are confronted by anoth major employment problem-that of t technically handicapped.

I refer to what I am afraid is a growing number of men whose skills have not keepace or have been displaced by the rap pace of technological change. There is urgeneed for a national effort to encourage at stimulate the retraining of these technical handicapped persons.

Technological change, often referred to automation, is essential. It will be source of new jobs and opportunities of the long run. It will mean higher was and a new standard of living. It will redu the physical burden on workers. It is key to our future national security. nological change is essential to the preserv tion of many enterprises that might other wise go out of business because they con not compete.

However, it is a fact that in the short ry momentarily, automation is causing and when the short ry the unemployment. patches, pools, or pockets of unemployment but it still means unemployment to

people who are affected.

As technological change takes place, so people are going to be unemployed as work force is reduced in a particular loc tion or as persons with outdated skills replaced by persons trained to operate new, complex equipment that industry m have. This change is particularly diffict for the older worker who has been train and has gained years and years of experies in a particular job. It is difficult for be to learn a new skill without assistance.

Our physically and mentally handicapy, workers are, in many cases, faced with the additional problem of technical handics Today, many of them are confronted with the problem of starting all over again, a cause the skill they mastered is no long required. Imagine, if you will, the frust tion and fears of these courageous peoling who fear for the second problem. who face for the second time the tremende obstacles to finding their place among to working and self-supporting members of

Society.

Large industry is making a valuable of h tribution to the problem by a great variety of training programs and sound long-rate planning. Labor organizations are more to meet the situation with training course. But this apparently is not enough. Most smaller businesses simply cannot afford training costs involved.

I believe there is a clear call for immedia national leadership on this tough " rapidly growing unemployment problemneed a coordinated effort, State-by-State. retrain the technically handicapped.

The problem of the technically has capped person is not only a difficult empl ment situation. It is one of our great cational challenges. Proper leadership helping to retrain and reeducate the te nically handicapped may well determ whether substantial numbers of people come public dependent or independent earners; whether they and their families eat or won't eat; whether additional new employment benefit programs become ne h sary to alleviate hardship. This is a PI to management and labor problem which my judgment, requires immediate attent

Can't we meet this problem with the sign enthusiasm, determination, and success we experienced with we experienced with the physically has coapped? Haven't we an organizational capped? Haven't we an organizational term in this committee that can be added for this purpose? Shouldn't we devote of the possible effort to this growing problem job dislocation and displacement? I am ggesting that the President's Committee Employment of the Physically Handi-pped take on this task. I am strongly sugsting that the administration give this olect immediate consideration, and per-ps many individuals from this Commitespecially at the State level, would be le to provide much advice and guidance. In Delaware, we have had a small pilot bogram in operation for the past 15 months der the guidance of the State unemployant compensation commission. They have coessfully retrained about 100 women, any of whom were unemployed sewing chine operators, to become practical rese. These women are now working in local hospitals. We are sure that there other places where retraining can be complished.

Beyond the humanitarian aspects of such program, this effort to retrain the techally handicapped also has the same ecomic incentives that we have found in our k with the physically handicapped. Unployed persons are dependent upon unployment compensation programs and ployment compensation programs and haps ultimately on State welfare funds income. During the time they are unployed, they pay no taxes. If we can be them acquire new skills, they probably the compensation of the programs of the property of the property of the programs o return considerably more than the very himal costs of retraining.

In the last few weeks I have had a check de with various Government organizathe in a formal way about the problem. the other hand everyone seems to agree the problem exists, that it will grow, that it will not solve itself.

Ditimately, jobs will be available for perhs whose skills are displaced by techodogical change. Economic history furthes us abundant evidence that this is ways the case. By 1975, economists have edicted, there may not be a labor force believe this is a problem and an opporhity we cannot ignore. In Delaware, we looking for new ways to ease the burden Job dislocation and unemployment by rething persons so they can obtain good, jobs. We are convinced this project be accomplished by the same team effort ong industry, labor, community instituong industry, labor, community ecessful program and the go to work now as an indicapped. If we go to work now as a modern we can almost certainly solve the probability of the governmental effort. essful program to employ the physically without a large governmental effort. we ignore it, we will very likely be faced the future with demands for a crash prom by Government to solve it.

# Meeting the Challenges of Science and Technology

EXTENSION OF REMARKS OF

# HON, ALEXANDER WILEY

OF WISCONSIN

THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. WILEY. Mr. President, today as attempt to unveil the mysteries of the ace age, it becomes apparent that sci-ice and technology will be increasingly portant in efforts to learn more of the diverse and, insofar as possible, gain ontrol of its forces.

We realize, of course, that exploration outer space is no longer just fantasy "Buck Rogerish" comic strips, Rather, in a highly competitive world, the control of space may well determine victory or defeat for conflicting forcesprincipally communism versus freedom-around the globe.

Progress in science and technology can be achieved, and sustained, not upon wishful thinking, but rather upon the creation of a sound foundation of highly trained and educated individuals; particularly in such fields as engineering and

Recently, Alan T. Waterman, Director of the National Science Foundation, spoke before the Association of National Advertisers, in Chicago, outlining some of the basic objectives he felt should be achieved if our Nation is to provide an adequate "pool" of brainpower to meet the challenges of the future. Dr. Waterman stressed the need for emphasis on two aspects of ou rscience and technology training program, including: (a) The encouragement of support of basic research; and (b) the identification, motivation, and thorough training of future scientists and engineers. To help achieve these objectives, the Director suggested the following things:

First. Raise the status of teachers. particularly high-school teachers.

Second. Encourage learning both for young and old.

Third. Encourage the development of individual talents.

Fourth. Provide basic subjects in the early years of education as a firm yet flexible foundation for life in a rapidly changing world.

Fifth. Improve the content of courses considered essential for general education while still retaining flexibility and high quality of training for careers of all

Sixth. Provide the necessary physical equipment in buildings, laboratories, libraries, teaching, and learning aids.

Seventh. Stimulate and encourage excellence in learning by suitable prizes, scholarships, fellowships, or

To give my fellow Senators the benefit of the wide gamut of ideas put forward in Director Waterman's speech, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOME GOALS FOR THE PURSUIT OF EXCELLENCE (Remarks by Alan T. Waterman, Director, National Science Foundation, before the Association of National Advertisers, Chicago, Ill., May 22, 1959)

By whatever name history records itatomic age, age of science, or space age-this time in which we live promises to stimulate man's interest and accomplishment in science and technology as seldom, if ever, be-fore. In spite of differences that exist between nations, they all agree on one point— the importance of science and technology for their future. All nations are witnessing a sudden awakening to the immense potentialities of science and technology-a world movement of possibly greater significance than the industrial age which preceded it.

This forward push of science is a challenge of great and noble proportion, since it promises to extend mankind's economic and social horizons beyond the limitation of immediate material wants and needs. At the same time, these vast frontiers for the advancement of human progress which we see distantly in the new science will continue to pose everincreasing social problems for the people of the world and for relationships between nations.

In case we did not realize it before, events of the past few years have brought out clearly that this is still a highly competitive world. As though by inexorable force, the spotlight of world affairs has been turned to focus upon our competition with Russia. This competition is extremely serious at least in the short-range view. Clearly the Soviets are dedicated to world leadership in science and technology-not in the sense of military competition, but rather in the sense of achieving world supremacy without the need of military domination.

Among other nations, we shall ultimately have to reckon with the genius for organiza-tion and the industry of the German people, the industry and learning ability of the Japanese, and the industry and potentialities of the Chinese. China is coming along fast, as all industrious and vigorous nations can be expected to do. I find no basis whatever for us to be complacent.

Neither can we as a people make the mistake of assuming that all of the requirements for leadership in this competition can be met by our Government. Such view smacks too much of "Let George do it"—or rather "Let Sam do it." We can succeed only by insuring that the people clearly understand the situation in order that they may act vigorously to carry out measures essential for success. By so doing, each of us will play his part in improving the welfare and advancing the progress of all mankind. If we are successful in this we shall not only achieve the things we want ourselves, but we shall be able to exercise the leadership which is necessary for the freedom of the world.

How are we to define our goals in such a campaign? Of one thing we can be sureit will take the best effort we can muster. Here we are truly concerned with "excellence," the pursuit or the recognition of ex-

Our emphasis must be on quality; quality in native ability, quality in training, quality in performance

Quality in native ability we have in abundance, latent among our youth, from all walks of life. We must identify these young people early, give them every encouragement and opportunity to develop their aptitudes to the fullest, whatever these may be, for their own future and for the future of our society.

Quality in training for these young people we must insist upon. This means superior teaching and superior teachers, together with the equipment and materials they should

Quality in performance in science andtechnology requires that we push forward the frontiers of science with all the vigor at our command. This means full support, both financial and moral for the needs of our competent basic research scientists and engineers. Especially does this include the construction of costly capital installations such as those required for nuclear physics, astronomy, and the exploration of outer space.

These requirements are clear. More importantly, we must determine to meet them. This will not be easy. To succeed, every organization, every citizen, every parent must realize responsibilities and play active roles. These are essential ingredients of excellence.

But is there not another issue to be faced? Should we not ask a further ques-tion? Excellence in what and for what? To excel as a nation-among nations-involves leadership in thought and deeds, security from military attack or other forms of aggression, and freedom and independence of action, with due regard for the rights and welfare of others. Excellence within a nation emerges from such bases as sound and strong ideals and aims; a strong, wise, and representative government; a stable and prosperous economy; and from a healthy and well-educated people, a strong labor force, industrial and business competence, a proud culture, and last but not least, vigorous and vital youth.

Perhaps what is missing is a clear con-ception on the part of our citizens of what our objectives are as a nation and more importantly how we can achieve them-and most important of all, what each citizen's responsibility is in cooperating. Probably we would agree on our traditional objective of peace and prosperity-"the pursuit of happiness." However, we do not seem to understand that it will be impossible to maintain our own prosperity and world peace unless we do, and do promptly, the things necessary to compete in a modern world. What is meant by this? Simply to develop our capabilities, both individually and collectively, to the fullest and then, in order to maintain a sound economy. identify and select the areas of endeavor which should engage our fullest attention in terms of money and effort. In science we should put maximum emphasis upon the relatively modest needs of basic research in order to learn all the possibilities of prog-ress in technology and then choose care-fully the fields for development that require large capital sums.

As a nation we are justly proud of our high standard of living. This is surely an asset, but what part does it play in world competition? I think most would agree that much of what constitutes a high standard of living in the public mind is not directed at the real issues ahead. It is true that a high standard of living should accompany success in the major problems a nation faces, but I question the concept of a high standard of living as an end in itself-unless one includes high standards of conduct, education, performance, and aims. If it were an end in itself, then a nation could exhaust its strength in providing greater conveniences, comfort, and pleasures for its people and sacrifice its place as a world power, or even suffer oblivion.

A nation depends upon its citizens both for its internal strength and prosperity and for its position among nations. A democratic nation must concentrate upon the quality and performance of its citizens in order both to achieve the best for them individually and the best for the nation as a whole, to say nothing of the part played by the nation among others. Our goals, then, should plainly be first—the development of excellence among all our citizens to the extent of their capacity and to provide opportunities for its achievement; and second-the development of a sense of values or priorities among our undertakings, in terms of national and worldwide objectives. Such aims cannot be accomplished promptly or to the required degree except by the will of the people and their determination to reach the goal.

I believe we should all agree on this. It is here that we of the Government who are gravely concerned about the matter of excllence in our lives turn for aid to you who are experts in communicating with the public. I should, therefore, like to set before you some of the facts and ideas that occur to us where improvement should be made, in the hope of providing material which you may find useful in developing this theme.

First and foremost, for the long haul, is the question of education and the encouragement of learning. Here we have been negligent. Unless our people are thoroughly educated for a modern world and trained to play important and appropriate roles in it we cannot hope to succeed.

In this field of endeavor we need to do the following things:

1. Raise the status of teachers, particularly high school teachers.

2. Encourage learning both for young and old.

3. Encourage the development of individual talents.

4. Provide basic subjects in the early years of education as a firm yet flexible foundation for life in a rapidly changing world.

 Improve the content of courses considered essential for general education while still retaining flexibility and high quality of training for careers of all sorts.

6. Provide the necessary physical equipment in buildings, laboratories, libraries, teaching, and learning aids.

 Stimulate and ecourage excellence in learning by suitable prizes, scholarships, fellowships, or other awards.

In the area of science and technology we should concentrate strongly on two points:
(a) The encouragement of the support of basic research; and (b) the identification, motivation, and thorough training of future scientists and engineers. Trained manpower we must have to carry out our technological undertakings. Basic research we must have because it is the starting point of all science and, therefore, all technology. It provides the basic, up-to-date information, the breakthrough, and the highly significant new discoveries which pave the way for exploitation in the development of our technology. Unfortunately, since basic research explores the unknown, it cannot foretell what may be discovered, but unless basic research is prosecuted with vigor we may be sure of one thing-we will not even know what are the possibilities.

Finally, by working through interested and competent groups, we should take the message of excellence to everyone—most especially to parents and to children.

Above all, we must keep our eyes on the ultimate goal—to cultivate to the maximum the talents of each individual.

I think we should begin our campaign back in the local communities. Such questions might be asked as: What is each citizen doing in his own community to uncover the boys and girls who may be tomorrow's leaders? Is this the sole responsibility of teachers, guidance specialists, parents, or should every citizen share the job? What is the thinking of parents about their children's future? Do they aim to develop their children's talents, whatever they may be? Or are they primarily interested in a safe and secure future for them, or a job where there are "opportunities" (for what)?

Responsible educators have reported that some 250,000 of our very ablest youngsters end their education every June on graduation from high school. These boys and girls, by any yardstick, are latently tomorrow's leaders—but whose most effective leadership may not be fulfilled for want of funds or preper motivation. Have we neglected them? What fraction of the 250,000 live in your community and in mine? And what are we doing about them? Does anyone face the question as to whether or not they might have more rewarding careers and contribute more to their country by continuing their education? Have they opportunities to do do so? Whose responsibility is this?

I commend to your consideration the possibility of trying to establish in each high school area throughout the Nation a community scholarship fund—for want of a better name. A score of farsighted parents in a given community could make it their business to find out who are the able youngsters needing financial or motivational sup-

port to fulfill the promise of their secondary school achievement. Why couldn't such a plan center around college alumni or alumnae associations? Or local industry? Or local sections of scientific, educational, and other societies? (I should be proud if Princeton men would inaugurate such a movement. Of course, I would not suggest they proselyte, but the youngster could hardly make a better decision.)

they proselyte, but the youngster could hardly make a better decision.)

We badly need more highly trained specialms and most urgently in science and engineering. For example: we are now graduating only about 600 Ph.D.'s in engineering per year in comparison with 35,000 engineering graduates (B.S.). Is this adequate coverage of technical training for the engineer of tomorrow?

By and large the ultimate "payoff" of formal education in the United States is the doctoral degree. Can all qualified youngsters hope to achieve such a degree? How many now would scorn the idea? What are we doing to change such attitudes?

Because the competition we have been discussing is worldwide in nature, shall we continue to be complacent about our lack of competence in the languages spoken by the people of other major nations? Should we realize the handicap this is to our efforts in cooperation with and on behalf of other nations—this inability to communicate freely and naturally with other peoples? For that matter, should we not do more to encourage the education and training of individuals who as specialists in their own fields are able and willing to carry our message to other lands and to cooperate with them in their problems?

If our promising youngsters are to enter colleges as undergraduates, let alone posting raduates, we must provide basic subjects in the early years of education as a firm yet flexible, foundation for life in a rapidly changing world. I think it can be demonstrated that the "hard" subjects of mathematics, English composition, languages, history, science and others, are fundamental to success in any career worthy of the name indeed, our strongest liberal arts colleges now require substantial minors in the sciences, and our finest technological institutions insist on considerable sophistication in the arts and letters.

Who will teach them? Our educational system is about to be overwhelmed by thous ands of youngsters of the postwar generation knocking at its doors. Who will greet them? Will we, as a nation, accept the challenge and provide the numbers, and the quality, of teachers needed to train our children to face confidently and courageously a future which, though marked by world unrest and insecurity, holds vast promise?

How can we make the teaching profession more attractive? By better salaries, by merit promotions, by public recognition? If so how bring this about, and promptly? Our has been called the "affluent society," but our abundance seems to be lavished on material, rather than intellectual, accomplishments. Earlier in our history we were liberal in rewarding teachers of youth; today we are niggardly. Who deserves greater consideration than those who instruct our sons and daughters? The prestige once enjoyed by teachers in the United States has been lost We should restore to teachers some of the prestige in which they were held by our forefathers. We should, without fail, pay them salaries commensurate with their high calling as teachers of our children.

What are the motivations that are moslikely to stimulate citizens to join our pursuit of excellence? Human motivations are many—certainly financial reward, advance ment in career, prestige, accomplishment the pursuit of happiness. But what about duty to one's country (other than military) dedication to the welfare of others, service world freedom, the importance of ex-ellence, and other ideals we cherish? If hey are indeed important, can we not find teans of cultivating them in our national hilosophy?

We are justly proud of our competitive birit of free enterprise. We can point out, owever, that industry today seeks the wellained and well-educated man or woman positions of responsibility in manageent, research, production, and distribution. dustry especially seeks to recruit the wellained scientist and engineer. We can deribe the growing significance to our econny of "the industry of discovery," Sumner chlicter's apt name for modern science and chnology. We can let parents see the stastics which demonstrate that the eager hd accomplished student generally earns ore money, enjoys more prestige, advances ster and further, accomplishes and crees more than the indifferent student.

Nor should we be exclusive in presenting our case for the pursuit of excellence—exellence is not class conscious nor is it conhed to science alone. It should be a mator of concern to every individual in order at he may both develop his life to the fillest and at the same time best serve his Country and mankind.

We can show why it is not undemocratic establish special classes in our schools for the gifted youngster, whether he's gifted science, art, music, history, or in any ther field which leads to a productive Greer. I say again that the pursuit of exellence imposes a requirement that the blents of each individual be cultivated to heir maximum. Democracy must not be quated with mediocrity; it cannot survive without excellence—among its people and mong its leaders.

There should be no conflict between dehocracy and intellectual ability. Indeed there are encouraging signs on this point. Precise times of changing attitudes are not tasy to discern when we observe total soelety or total economy, but from my own Observations in recent months across wide Becgraphic areas of the Nation, I think that hose who do not underwrite intellectual bility may be whistling past the graveyard keep up the courage of their own diminthing company. Why are thousands of citiens getting up at unheard of hours in the als getting up at unneard of hours in the aborning to study physics and Russian by elevision? What accounts for the popularity of the TV show, "College Bowl," in which have the TV show. bur of the top students of one college match htellects with four representing another colge and the winners are greeted on their ampus like returning football heroes.

So far as I am concerned, the answer to Il these questions is quite simple—we have underestimated the desire of our citiens to learn and to know. If this is true, bday is a fine time to begin to portray and develop our theme of excellence, Whatfer our calling, each citizen among us dould be brought to feel an especial reponsibility of his own to recognize and to fulltivate excellence, for himself, and for his children. If then we shoulder our responsibillities together, we will, as Dr. James R. Killan, Special Assistant to the President for Science and Technology, stated in a recent address, "Deepen our understanding and enarge our views of the world, enhance our ense of beauty and order, augment our bower and wealth, and minister humanely, benignly, and responsibly to the needs of bur dellows, our Government, and our country. I can think of no finer objectives than these for the pursuit of excellence. Dilemma of Nation's Egg Farmers

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. NEUBERGER. Mr. President. the plight of egg farmers continues to concern us all. A thoughtful discussion of this dilemma has appeared in the Pendleton (Oreg.) East Oregonian of June 18, 1959. The editorial points out one shocking truth—that it is the small egg producer who is suffering the most cruelly during this crisis. As a contribution to the discussion of what to do about our hard-hit egg producers, I ask unanimous consent to have printed in the Appendix of the Record this informative editorial entitled, "The Egg and We.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EGG AND WE

With grain and poultry surpluses it's almost the same old question—as it was with the chicken and the egg-the question of which came first. Egg producers are going broke in part because of the high price of grain feed, and feed is high because of Federal Government price supports, which come from tax payments, part of which of course come from egg producers.

In the hardest hit area-New Jersey-the bankruptcy rate among poultry farmers this year has already hit 17.1 percent. In lesser degree the pinch is being felt as well through-

out the country.

The U.S. Agricultural Marketing Service reports that in mid-April the average price received by the farmer for eggs was 28.1 cents dozen-10.4 below the price a year ago. And prices have been falling off since, hovering around the 1941 low. New Jersey farmers are selling for 30 cents a dozen eggs that cost them 39 cents a dozen to produce. Fowl prices are similarly depressed.

How did poultry farmers get into their present bind? Well, for one thing, they're too efficient for their own good. Production of eggs this year is up 7 percent over 1958, as against a rise of only 2 percent in popula-

With the demand for more and more food in World War II "egg factories" sprang up and output virtually exploded. Flocks now range up to a million birds. Mass hatcheries, more scientific feeding, use of antibiotics, even the piping in of music to keep the layers happy-all these add up to great overproduction.

At the same time, Government support of grain has raised the cost of keeping the hens at work. Feed prices have increased 400 percent since 1939, and they represent more than 60 percent of the pourtry farmer's total outlay. Just to bring a day-old

chick into its laying period costs about \$2.

What to do about it? Lobbyists for the farmers are suggesting Federal production controls, price supports, other emergency But, as Herman I. Miller, poultry measures. specialist for the Marketing Service, points out, 1.7 million farms produce the Nation's eggs, and these are marketed in 25,000 outlets. Just to police production and sale

would require more supervisors than we have egg farmers.

The Department of Agriculture on June

2 announced that it would begin a program of weekly purchases of frozen whole eggs. And since April 16, when purchase of dried eggs for the school-lunch program was stopped, the Department has been buying dried eggs to stabilize prices. The cost of the school-lunch and price-stabilization programs has topped \$15 million.

Chairman HAROLD D. COOLEY of the House Agriculture Committee on June 5 challenged Secretary of Agriculture Ezra Benson to use more of the so-called section 32 funds for egg purchases. The reference is to a provision of 1935 amendments to the Agricultural Adjustment Act which authorizes the use of 30 percent of customs receipts to pay bounties on farm exports equal to the difference between domestic and world prices. Some \$300 million is available.

Meanwhile, the small farmer, rather than the egg factory proprietor, is suffering, and the already decimated ranks of small operators are dwindling. The day when the farmer's wife kept chickens and sold eggs for pin money has virtually disappeared, but the old rural saying is truer than ever-"Zip goes the egg money.

## A Memorial to Samuel Hale Sibley

EXTENSION OF REMARKS

# HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. TALMADGE. Mr. President, the trustees of the University of Georgia Foundation recently adopted a memorial to the late Judge Samuel Hale Sibley, renowned Georgia attorney and jurist who served for many years with distinction to himself and his State of Georgia as U.S. judge for the northern district of Georgia and as both judge and chief judge of the court of appeals of the fifth Federal circuit. Judge Sibley was one of Georgia's most illustrious sons.

Mr. President, I ask unanimous consent that this memorial to his memory be printed in the Appendix of the REC-

There being no objection, the memorial was ordered to be printed in the RECORD, as follows:

A MEMORIAL TO SAMUEL HALE SIBLEY, 1873-1958, BY THE TRUSTEES OF THE UNIVERSITY GEORGIA FOUNDATION

Many memorials will be written of Judge Samuel Hale Sibley, Each will be deserved. We do not believe that we have the power to exaggerate his qualities as a lawyer, judge, man, and Christian gentle-

He was born in Union Point, Ga., in 1873. In 1892 he graduated at the University of Georgia with a bachelor of arts degree, and the following year with a degree of bachelor of laws. In each he attained the highest scholastic honors.

He began and continued the practice of law in Union Point. His character, ability, and success were so great that he became

Georgia's foremost lawyer. Clients came to him from every class and quarter in Geor-

In 1920 he was appointed as U.S. judge for the northern district of Georgia, by President Wilson. In 1932 he was appointed to the court of appeals of the fifth Federal circuit. He became its chief judge, and presided over it until his retirement in 1954.

The lawyers of Georgia rank him as the greatest lawyer of his generation. Justice Cardozo of the Supreme Court of the United States, referred to Judge Sibley as the best

U.S. judge on any court.

With all of his great character, mind, and ability, Judge Sibley was one of the kindest and most lovable men. He was habitually considerate, kind, and thoughtful. In many ways he was as gentle as a wom-Georgia has had, and will have, no

greater man.

Judge Sibley was one of the incorporators of the University of Georgia Foundation, and also one of the original board of trustees. He served for many years and resigned only because of his ill health. We were honored by his association and services on our board of trustees. Many of our members claimed him as a warm friend. His memory will ever be a sweet and gracious

Respectfully submitted.

HATTON LOVEJOY Chairman. ROBERT B. TROUTMAN, HUGHES SPALDING, Committee.

## **Educational Broadcasting**

EXTENSION OF REMARKS

# HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. LAUSCHE. Mr. President, on May 7, 1959, before the Institute for Education by Radio-Television sponsored by the Ohio State University, Mr. Paul L. Chamberlain, manager for marketing broadcast, military, industrial electronic equipment division of the General Electric Co., Syracuse, N.Y., delivered an extremely informative address on the subject of "Whither Educational Broadcasting?"

Mr. Chamberlain is well known to the educational and commercial broadcasting fields, and his views have long stimulated important discussions in both

The institute is the principal forum of educational broadcasting in the United States and Canada, and this year at its session in Columbus, Ohio, attracted more than 600 delegates from educational and commercial broadcasting and education.

In order that this excellent address may be made available for the reading by all Members of Congress, I ask unanimous consent that the text be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHITHER EDUCATIONAL BROADCASTING?

(By Paul L. Chamberlain, manager of marketing broadcast, military, industrial, industrial electronics division. General Electric Co., Syracuse, N.Y., before the Institute for Education by Radio-Television, Columbus, Ohio, May 7, 1959)

I am very happy to be with you on this occasion. Speaking for General Electric and for myself, I congratulate you for the tremendous-job you have done, and are doing, for education by radio and television. efforts are bearing fruit and are receiving increased recognition throughout the Nation.

It is particularly appropriate for us as proponents of education by radio and television to take time to stand back from our immediate jobs and take a look at just where we are; where we are going; and how we plan

Without such reappraisals, we may run the risk of learning too late that we have been devoting our efforts and our resources to inadequate goals. And perhaps, we may fail to recognize the cumulative impact of

gradual but continuing change.

For several years, you have experimented with the various phases of educational television. You have obtained amazing results at the college level, at the adult level, and even in classrooms at the lower grade levels. You have used closed-circuit television, broadcast television, and microwave for instructional and cultural programing. We are aware of the success you have had and the results you have obtained in expanding the scope, depth and quality of curriculum content. You have proven that every facet of television has its place in education at all levels of learning.

Today, however, I would like to explore with you the future of educational television solely in the primary and secondary schools. These are the levels which have,

and which are, receiving the initial impact of our expanding population.

It is estimated that this year, more than \$3½ billion will be invested in educational facilities throughout the Nation. While the greatest portion of this will be for classroom space, it is interesting to note that the national shortage will still stand at more than 200,000.

With this appalling situation, why is it that taxpayers continue to defeat schoolconstruction bond issues at special referendums? Especially, when in private conversation, few taxpayers will deny the need

for additional classrooms.

This is not an easy question to answer. State legislators and school administrators have given serious thought to the situation and it would be misleading to say they are not perturbed. However, some are still possessed with the thought that education, like the Nation, can only be saved by a spendthrift philosophy that could bring ruin to both education and to the economy.

In spite of the tax revolts we have witnessed in several States during recent months, the search is continuing for new areas of taxation. Apparently one simple fact is being overlooked. No government— be it Federal, State, city, village, or school district—can build one schoolroom or increase one teacher's salary without first raising the money by taxing the public. And, the public is balking.

Yet, we the public must assure the education of our children if this Nation is to remain great in the missile and space era we are now entering. Children are our most valuable resource to meet the challenges of the future, and it is our responsibility to see that they are adequately prepared.

First, let's consider the staggering costs of our present system of centralization. Secondly, let's consider what efficiencies and savings can be realized without sacrificing quality of education if we go one step fur-ther in centralization. The step I suggest is the consolidation of instruction across many school districts through the use of television.

To illustrate the tremendous cost of present centralization, I will use a hypothetical centralized school district in my own central New York State. This hypothetical district represents a composite of several districts in the area.

My composite school district was centralized in 1950, following a long fight among the several towns affected.

The average school tax was approximately \$15 per \$1,000 of assessed valuation. Today, 9 years later, the average school tax is \$45 per \$1,000, a threefold increase. I am sure this is not unique for my hypothetical district.

Now, the reason for this increase in taxes Because of the expanding population, tax-payers have had to authorize more than \$8 million for construction of new school buildings. They have rejected other bond issues about half this amount, and the end of the tax increase is not in sight. My district still needs a new elementary school to relieve crowded conditions and to eliminate double sessions

Unless we make more efficient use of educational facilities, property taxes will have to increase another 40 percent in the next 6 years, since school costs are expected to double.

The boom in bables is going to continue. Last year, in New York State, a record 362,000 births were reported. Based on present educational practices, New York State will need 3,700 additional classrooms each year just to take care of the expected increase in enrollment. Add this to our present shortage of 9,500 classrooms, and 2,000 new ones needed annually merely to replace obsolete facilities, and the cost of our class. room needs in New York State becomes 25° tronomical, especially when you consider that the cost per classroom ranges from \$25,000 to \$50,000.

Then we will need new school buses-at an average cost of about \$8,000 each-to transport the new children to the new class. rooms in the new schools we will have to build. Love never saw such an eternal triangle.

Transportation alone has become a large item in school budgets. In my hypothetical central New York school district, taxpayers are supporting a fleet of 35 buses, annually covering more than one-quarter-million miles at a cost of more than \$100,000. This is only 1 of 500 centralized school districts in New York State. Educational transports-tion is big business tion is big business.

Billions upon billions of dollars have been invested in education by State legislatures and by school districts, as well as by foun-dations. Without these funds, education could not possibly have grown as it did over the last century. The money for all this has come from a prosperous people, who on the whole, also enjoy the highest standard of living of any people anywhere. But, the standard of living which has made these funds possible, is being threatened by stead ily increasing taxation. When the tax load reaches the point where the people's stand ard of living is threatened by reduced real income, education itself will be in jeopardy

Something has to be done before that point is reached. Some have suggested we make more efficient use of our present schoolbuildings by sending pupils to school in two or three shifts. I don't think this is the answer. Statistics indicate that wherever this has been tried, there has been an alarming increase in juvenile delinquency.

Others suggest we use our schoolbuildings the year around, with staggered vacations. This appears to have merit and warrants further consideration.

Neither of these suggestions solve the problem of the shortage of qualified and capable teachers and the increased budgets required to hire them-if they could be found.

According to estimates, 70,000 new teachers will be required over the next 8 years in New York State. About 35,000 of these, or 50 percent, will be required because of increased enrollment. The other 35,000 will be regiured for normal replacement due to marriage, retirements, etc. My State is presently 1,000 teachers short of its normal tequirements. And next year, the State is faced with a large retirement, with too few available replacements. Similar conditions Prevail in other States.

There is little doubt that the time has ducational efforts. We need a method which will offer more economy and more efficient use of teaching talents. od is broadcast educational television.

Educational groups represented by audience have done a remarkable job of proving the feasibility of educational television. You have accomplished such an excellent job, that few now doubt that teaching can be done successfully by television.

I believe the time has come to take edutational television out of the laboratorybroven stage and apply it full scale to help solve the economic problems outlined earlier. Instead of concentrating on what we can do for one school, or for one community, by using one TV station, I suggest we explore What we can do with a system of educational stations serving an entire area of

many school districts.

Martin Codel of Television Digest, has quoted me as saying that within 10 years, the number of educational television stations may well be greater than the number of commercial TV stations. I know some people suspected I had been indulging in marijuana when that statement appeared. But similar suspicions existed 14 years ago when I did some "crystal-balling" on the Inture of entertainment TV. Let me quote from a speech I gave May 1, 1945, to the

Advertising Club of Boston.

"The public may have doubts as to Whether plastic bodied automobiles and such things as helicopters will be ready right after the war, but there is no doubt in their minds about television. Television can have a great effect on our cultural and habit patterns. It may well change our way of life to a greater extent then the automobile, the radio, or the movies. It will have profound effect on education, amusements, and advertising.

"Statements such as these bring up the

tuestion, just where is television today and how fast will it grow postwar. "There are nine television stations now erating-three in New York City, one in Philadelphia, one in Schenectady, two in Chicago, and two in Los Angeles. They have Potential audience of about 22 million

be in operation 2 years after the war. In fact there are 119 applications on file with the Federal Communications Commission right now.

"Within 5 years after the war we believe that at least 140 to 150 stations will be on the air serving nearly two-thirds of the population of the United States, and within 10 years, there may well be 500 or more television." television transmitters in operation."

That statement caused quite a stir 14 years ago. So did my statement regarding the future of educational television when it appeared in Television Digest a few months Today, there are some 40 educational television stations. If educational television is to outnumber the approximately 550 commercial TV stations, we have a lot of growing to do. But it can be done—with a systems approach. I repeat my prediction, that within 10 years, the number of educa-tional stations may well be greater than the number of commercial stations.

I propose the utilization of a multiplicity of educational TV stations on a consolidated basis. This system would spread simultaneous programs from several educational stations across many school districts from a central point. There would be at least four stations serving all school districts in a radius of 30 or 40 miles. Such a system could serve all grades, kindergarten through

12, in each school district.

Television instruction would be available an average of about one-third of the 7-hour school day, to each level of education. For instance, one station would program a total of 2 hours and 20 minutes at the first-grade level; 2 hours and 20 minutes at the secondgrade level; and 2 hours and 20 minutes to the third-grade level during the school day. The other three stations would be telecasting programs to other grades at the same time.

This systems approach is what I meant earlier when I mentioned that perhaps we should take one more step in our process of centralization. Admittedly, many problems will be involved. Undoubtedly many current standard practices will be obsoleted by such a systems approach. There will be fears about the loss of home rule,

But in this audience, we have a solid core of experience in the solution of many problems and in the promoting of educational television.

But first, you must get the economic facts together. It won't be difficult. I have done a little searching in my own area of Syracuse and have come up with some in-teresting statistics which I will use as an example.

In a radius of 40 miles, from Syracuse, are 92 school districts, with 452 schools, in 6 counties. Total public school enrollment in this area is approximately 178,000. State aid for education is more than \$44½ million annually. In addition, the real estate taxes for schools and education amount to more than \$32 million for a total of \$77 million budgeted for education in the 6-county area. And we still have classroom shortages and teacher shortages.

It is estimated that in one county alone, taxpayers will be in debt for more than \$100 million for public school construction by 1970, unless rigid economy is practiced.

We must improve the quality of American education at a price we can afford. In Dade County, Florida, some 5,600 pupils are participating in a classroom educationaltelevision experiment, using one station. According to figures published in Newsweek magazine, important financial savings have been realized wihout sacrificing quality of education. With TV classes numbering 300 or more students, teaching by TV is saving the school system \$300,000 this year-the equivalent of 60 teachers' salaries. Moreover, with auditoriums and lunchrooms utilized for TV sessions, 76 new classrooms did not have to be built, lighted, or maintained, and additional savings are estimated at more than \$1 million. This is but one experiment which proves that educational television is economically feasible.

From and economic standpoint alone, there are many reasons why this system

of instruction should be expanded into every county and every State in the Nation.

Since the average auditorium will seat about 500 students, the cafeteria another 200, and the gyms at least another 500 students, we have in these three locations seating capacity for approximately 1,200. All three of these locations may readily be used as is or adapted with sliding walls for the individual monitoring of several different programs at one time, thus adding to the normal capacity of individual classrooms.

The classical idea of 25 students per teacher no longer holds true in many crowded schools today. We can successfully teach more students with the same number of teachers we now have by using largescreen television-projection equipment, or a multiplicity of receivers in classes of 300 to 400, if the auditorium or gymnasium is used for instructional purposes. The classroom instructors will, of course, handle the regular assignments of discipline, examinations, discussion, and homework appraisals.

Later, assuming the temporary use of auditoriums and gymnasiums is successful, architectural plans for new schools-which will be needed to at least replace presently obsolete buildings-will be designed with

rooms for large-scale viewing.

For the present, however, the above mentioned locations may be used by the simple addition of viewing-monitors or receivers, thus improving the efficiency of use of present facilities.

If we multiply the number of students in each of the gymnasium-auditorium locations by the number of school buildings served by an areawide TV system, we can readily see the large number of students served by instructor, without the expense of building many additional classrooms and trying to obtain many additional, and probably unavailable, teachers.

In the Syracuse area, there are about 600 fifth-grade classes in 6 counties. In this grade, there are 16,000 pupils. All could be taught at one time by just 1 television instructor, rather than by the 435 normally needed classroom instructors. Please let me stress here, we do not mean to displace the presently employed teachers. We cannot teach all subjects on a full-time basis by television. Instructors will be needed to teach non-TV subjects and to perform other functions in the TV-taught subjects.

The point we want to emphasize is that by serving our 6-county area of 452 schools, in 92 districts, by a multichannel educational television system, tremendous econ-omies will be realized, and the quality of

instruction improved.

We suggest that the area be served by four UHF transmitters, sending programs from central studios or classrooms, to each room in grades 1 through 12. This would permit an average of one-third of the school day to taught by television in each of the 12 grades. For constructional economies, all four transmitters would be housed in one building. The four antennas would be mounted atop one tower.

Estimated costs of transmitters, studio facilities, building, land, road access, and classroom distribution equipment and receivers, is \$2,264,000. This amount would be spread over 92 school districts. This averages to less than \$28,700 per district, or less than the average cost of one additional classroom per district. Pupil cost for the district amounts to \$14.81.

Now, let's estimate the cost of operating the television system for one school year. We have checked operational costs of several successful ETV stations. They average about \$500,000 annually. Operational costs for our four-station plant would probably run in the neighborhood of \$11/2 million annually. This is a quick estimate and may be

However, taking this figure and averaging it across the 92 districts, we find the cost per district per year to be \$16,300 or \$8.42 per student. This is less than 2 percent of the present \$493 cost for education per student annually in this 92-district area.

It was recently stated in Syracuse, by a noted State educator, that the development of a major educational television station in that city appears to be far off. The chief stumbling block, it was said, is the high cost of educational television. For one station, perhaps this reasoning is justifiable. But the economics of the systems approach across. county boundaries make educational television so inexpensive, that legislators can no longer afford not to consider educational television; especially when each school district shares the cost in proportion to the student population.
Several reliable manufacturers are avail-

able who can assist in planning for the television system. They will contract for installation of facilities; help with the ini-tial training of technical personnel, and even contract to service equipment and keep it

in operation

This has been a broad discussion of a proposed educational television system for primary and secondary schools. Let's briefly consider some so-called fringe benefits. Time could be allocated to specialized groups. such as gifted students, the retarded, and the slow learners, without sacrificing the learning time needed for the average stu-

The automating of industry today is amplifying the need for more skilled workers and less unskilled. A prominent educator recently stated that functional illiteracy is expected to result in the technological unemployment of more than 15 million people by 1970, unless serious steps are taken or expanded in literacy-education programs.

Many illiterates are now enrolled in basic education programs. However, a far greater number are reluctant to enter such programs. They are too proud or too ashamed to admit their problem. I was quite sur-prised recently to read that there are an estimated 250,000 illiterates right here in the State of Ohio. Educational television. through such basic courses as the three R's. can help to reduce this illiteracy by bringing instruction right into the privacy of their homes, where they can learn without ever having to admit their plight to neighbors.

To reach and hold the large audiences we are talking about, in a systems approach, TV instructors must become experts in visual presentation. They must be able to compete successfully with their commercial cousins of "detergent dramas," adult westerns, Mickey Mouse, and baseball games, or they will lose some of their audience. But just as surely as entertainment television has progressed to Leonard Bernstein and the New York Philharmonic, educational television will also live up to its potential.

There is no other way that the vast number of students of all ages can be reached by great teachers as effectively as through the use of this electronic medium. Robert W. Sarnoff, chairman of the board of the National Broadcasting Co., recently said that if Dr. Harvey E. White, one of the best physics teachers in the country, were to divide his present television-student body into five standard college classes a day, teaching them in the usual way would take more than 1,300 years. Dr. White's "Continental Classroom" is programed over 149 stations and is offered for academic credit in 250 colleges and universities.

There is no reason why our suggested ETV system could not rebroadcast similar programs of great teachers to our six-county area. Our gifted high-school students, and other fast learners, thus exposed to the great teachers, would receive tremendous benefits.

Our warehouse of knowledge has increased so rapidly since the beginning of World War II, that it is absolutely impossible to keep abreast of current developments with our present means of learning. Various groups of specialists can no longer communicate with each other because of this progressive ignorance. Thus, we must use every means at our command to minimize this effect. Educational television has proved that learning, in many cases, can be quicker, more effective, and more easily retained than by conventional methods.

I do not propose that we abandon our present methods of instruction, but I definitely urge that multistation educational television be adopted to supplement our learning on a broad national scale, if we are to survive in this highly crowded and com-

plex world.

Tribute to John L. Conner, of Atlanta, Ga.

EXTENSION OF REMARKS

# HON, HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. TALMADGE. Mr. President, on June 1, 1959, the Board of Aldermen of the City of Atlanta adopted a resolution commending the Honorable John L. Conner of that city for his many outstanding contributions to the U.S. Navy, the U.S. Government, the State of Georgia, and the city of Atlanta.

Mr. Conner has played a prominent role in the civic and governmental affairs of the city of Atlanta and the State of Georgia for many years and as an official and active member of the Navy League of the United States has worked diligently in support of an adequate national defense. I am pleased to associate myself with this tribute to Mr. Con-

Mr. President, I ask unanimous consent that the text of this resolution of commendation be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF COMMENDATION ON THE OUTSTANDING AND VARIED SERVICES REN-DERED BY THE HONORABLE JOHN LINSEY CONNER

Whereas recent articles citing the many and varied services rendered by the Honorable John Linsey Conner to the U.S. Navy, the U.S. Government, the State of Georgia, and the city of Atlanta have appeared in various publications; and

Whereas Atlanta is proud to claim him as

one of its good citizens; and

Whereas the city is indeed blessed and fortunate in having in its midst one who possesses a talent in so many fields and excels in all of them, untiring in his efforts toward the progress of Atlanta and its people. Such a man is the Honorable John Linsey Conner. one of Atlanta's first citizens, a man who unselfishly and without thought of reward devotes his life to the service of his country: Now, therefore, be it

Resolved by the mayor and board of aldermen of the city of Atlanta, That this board commends the Honorable John Linsey Conner for his many outstanding contributions to the U.S. Navy, the U.S. Government, the State of Georgia, and the city of Atlanta, and congratulates him on his accomplishments and expresses appreciation and pride for his citizenship and love of Atlanta; be it further

Resolved. That this resolution be spread upon the minutes of this meeting and a copy thereof, under the seal of the clerk of the board of aldermen, be forwarded to the Honorable John Linsey Conner.

Adopted by board of aldermen June 1, 1959.

Approved June 3, 1959.

A true copy.

J. L. RICHARDSON. Clerk of Board of Aldermen.

## A Do-It-Yourself Crusade for Freedom

EXTENSION OF REMARKS

## HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. MUNDT. Mr. President, one of our distinguished South Dakota citizens has come up with the suggestion that America's crusade for freedom, which includes our efforts to preserve the free world against communism, should have a counterpart in the form of a crusade to preserve here at home the hallowed freedoms which have made us great and kept us strong. For the information of the Congress and the country, I ask that this proposal be printed in the Appendix of the RECORD.

Charles R. Hayes, of Deadwood, S. Dak., is the author of what might be described as a "Do-It-Yourself Crusade for Freedom." Mr. Haves is a former supreme court justice in the State of South Dakota. He was State chairman of the Taft-for-President forces in the South Dakota presidential primaries of 1952. He has for many years been a distinguished member of the awards committee of the Freedoms Foundation of Valley Forge, Pa. Presently, he is in the private practice of law in South Dakota's world-renowned gold rush city of Deadwood. His observations are always challenging and constructive.

I ask unanimous consent that the statement be printed in the Appendix of

the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CRUSADE FOR FREEDOM (AT HOME)

(Proposed by Charles R. Hayes, Deadwood, S. Dak.)

Good reasons are declared for the so-called crusade for freedom being staged in foreign lands. Good results from this crusade, costing many millions of dollars annually, are said by many to be either missing or very few.

The words "crusade" and "freedom" appealing to the American people, but words these days often have new and strange meanings. Labels are, of late years, rarely significant of the true character of a movement or organization.

What is drastically needed now in our own country is a sustained crusade on the part of every thinking citizen to bring about freedoms at home, as follows:

1. Freedom from taxation by Congress be-'youd the limits of the supreme law.

2. Freedom from humbuggery by public lervants at Washington and elsewhere.

Freedom from corruption of the ballot.
 Freedom from arbitrary governmental egulation and control.

5. Freedom from the wiles of those who would destroy our form and concept of government.

6. Freedom from interference with the wirthright of man to work.

7. Freedom from judicial legislation.

8. Freedom from propaganda mills suplorted by public revenues.

9. Freedom from Federal domination of the sovereign States.

10. Freedom from profligacy in departments of Government.

11. Freedom from assuming the ills of the

tarth and all its people.

12. Freedom from surrendering to any inernational outfit the sovereignty of the United States.

13. Preedom from legislative appropriations designed largely for vote buying.

14. Freedom from fiscal policies which ontinually reduce the value of our currency.
15. Freedom from the welfare state, the halignant bequest of usurpers of taxing lowers.

What may come from the crusade abroad the best of minor consequence unless an effective and widespread crusade for freedom thome gets under way and meets with rapid and marked success.

Millions of loyal and patriotic Americans an be effective and successful if they will but accept the role of the true liberal.

Posterity will have so much more for which to be thankful if these freedoms are reborn and thereafter survive.

# Professional Responsibility and the Bar

EXTENSION OF REMARKS

# HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. TALMADGE. Mr. President, on Thursday, June 18, the Honorable Ross L. Malone, president of the American Bar Association, delivered an eloquent address on the subject "Professional Responsibility and the Bar," before the uncheon of the annual meeting of the Georgia Bar Association held at the Hotel DeSoto in Savannah, Ga. I ask unanimous consent that the text of his remarks be printed in the Appendix of the Record

There being no objection, the address was ordered to be printed in the Record, as follows:

PROFESSIONAL RESPONSIBILITY AND THE BAR Address by Ross L. Malone, president, American Bar Association, before the luncheon of the annual meeting of the Georgia Bar Association, Savannah, Ga., June 18, 1959)

Last year a joint conference of the American Bar Association and the Association of American Law Schools filed its final report with both organizations in the form of a definitive statement as to the special responsibilities incident to the right to practice law. The statement was the product of a number of years of work by a distinguished group of lawyers and legal educators. John D. Randall, who will succeed me as president of the American Bar Association, was cochairman of the American Bar Association representatives; Lou F. Fulle of the faculty

of the Law School of Harvard University was the cochairman of the representatives of the Association of American Law Schools.

The final statement submitted by the conference was adopted by both sponsoring organizations. It constitutes a unique analysis of the professional obligation of the lawyer—as an advocate, as a counselor, as a citizen and in all of the other relationships normally incident to the practices of law. If you have not read this report, I commend it to you.

The opening statement of the report is as follows:

"A profession to be worthy of the name must inculcate in its members a strong sense of the special obligations that attach to their calling. One who undertakes the practice of a profession cannot rest content with the faithful discharge of duties assigned to him by others. His work must find its direction within a larger frame. All that he does must evidence a dedication, not merely to a specific assignment, but to the enduring ideals of his vocation. Only such a dedication will enable him to reconcile fidelity to those he serves with an equal fidelity to an office that must at all times rise above the involvements of immediate interest."

In December 1958, 110 leaders of the legal profession of the United States met at Arden House, New York, under the auspices of the American Bar Association and American Law Institute to devote 3 days to a comprehensive analysis of continuing legal education in the United States today. The group was composed of 34 presidents or presidents-to-be of State bar associations, 20 law school deans and faculty representatives, and a selected group of lawyers and judges from throughout the United States with special experience in the continuing legal education program.

At the conclusion of 3 days of serious and intensive discussions, the group joined in a final statement of the conference. That statement, among other things, concluded:

"A practicing lawyer has an obligation to continue his education throughout his professional life. This education not only must increase his professional competence but also better qualify him to meet his professional responsibilities to his clients and the public.

"Programs for continuing education thus far have placed a major emphasis on professional competence and have not always given to professional responsibility the attention it should have. In the future these programs must also emphasize the professional responsibilities of the lawyer. They must help the lawyer to fulfill a wide range of professional responsibilities: To the courts, to the administration of justice, to law reform, to the lawmaking process, to his profession, and to the public."

It was suggested by some who attended this conference that while they had come to consider the increase of professional competence through post-admission education, the most significant product of the conference was the agreement of the conferees that increased emphasis on professional responsibility must be a primary objective of the new era of continuing legal education which we envisage.

The unanimity of opinion on the part of the conferees as to the importance of such increased emphasis evidences a professional consciousness of the bar's responsibility in this area which is quite significant.

It is not a consciousness which is newly developed, however. No doubt it has existed as long as the members of our profession have recognized the existence of a duty to the courts which is paramount to their obligations to their client, as well as to their own individual interest.

Several suggestions have been made as to the basis for the obligations which we encompass in the term "professional responsibility," or "public responsibility" as some lawyers prefer to denominate it. Senator Borah in his lifetime once said:

"If the lay citizen owes something to the public, far greater the obligation of the lawyer. Obligations to the public are to be measured accordingly to ability and opportunity to serve the public, and the public interest has a right to exact services in proportion to our ability to meet the exaction just as the Government should collect taxes in accordance with ability to pay."

There can be no doubt that the position of the legal profession in our present day society is such that we do indeed have a greater opportunity for public service than many other pursuits.

The fact that in the 86th Congress 228 of 437 Members of the House of Representatives and 61 of 98 Members of the U.S. Senate are members of our profession testifies to the willingness of the public in the United States today to entrust the public welfare—and indirectly their own welfare—to the hands of lawyers. Both Senators from 19 of our States are lawyers, and the chairmen of 13 of the 16 standing committees of the U.S. Senate have had legal training.

Thirty-one of the forty-nine Governors of

Thirty-one of the forty-nine Governors of our States are law graduates, and the legislative bodies of our State governments invariably contain a higher percentage of lawyers than of members from any other voca-

These evidences of the confidence reposed by the public in individual members of our profession clearly support Senator Borah's premise that a member of the legal profession has a proportionately greater ability and opportunity to render public service—and there are other evidences which could be offered.

There is another school of thought as to the basis for the professional responsibilities which accompany a license to practice law. That viewpoint was well expressed by Louis B. Seltzer, a distinguished Ohio journalist, who said to the lawyers of the country in an address published in the American Bar Association Journal, "As lawyers you have a special role to fulfill in the administration of the law \* \* . You have been admitted to the bar. You have been given the special rights and privileges, and also the special rights of the court. The public at large, therefore, has the right to expect certain things from you, both as individuals and as an organized profession."

Mr. Seltzer's analysis of our special responsibilities finds them grounded in the special privileges which have been granted to our profession by society rather than in our increased ability and opportunity to render such service.

Whichever of the two you prefer as the predicate for the existence of extraordinary responsibilities which attach to the practice of law, it is significant that there is unanimity throughout the profession as to their existence.

Dean Pound finds the existence of these responsibilities to be a sine quo non of professional status when he defines a profession as "An organized body of men pursuing a learned art in the spirit of public service" and tells us that lacking any of the three qualities included in that definition the pursuit loses its professional status. It then becomes merely a trade or calling in which the remuneration involved is the primary—as distinguished from the incidental—product of the activity and its members are no longer entitled to the special status as professional men accorded to them by society.

The enumeration of the special obligations which constitute the professional responsibilities of the legal profession would require far more time than we have available. Generally, however, they may be said to begin at compliance with the standards of conduct

established by our Canons of Professional Ethics, and to extend to the performance "in the spirit of public service" of all functions affecting the public interest which, by reason of our training and position in society, we are especially qualified to perform.

Obviously, most of these responsibilities are to be discharged by individual lawyers in their day-to-day practice of law. Others, however, are susceptible of performance only by lawyers acting through organized groups—through bar associations. In that category are the responsibilities of the bar in the policing of the bar, in disciplinary proceeding, in legal education and admissions to the bar, and in other areas in which the activity of an individual lawyer would be ineffective.

In the light of the definition or professional responsibility which I have suggested, and the constant challenge which the discharge of this responsibility poses for the profession, I-would like to consider briefly some responsibilities as to which our professional performance is particularly important today.

The first is in the area of ethics in Government, and particularly, conflicts of interest which may arise in the case of the lawyer-legislator. In my travels about the United States this year I have been surprised, and concerned, by the number of states in which this question of the conduct of lawyer-legislators is one of public concern—as well as

concern to the bar itself.

When I stepped off a plane in Honolulu recently, en route back from Australia, I was surrounded by newspaper reporters who insisted upon an interview at the airport. The questions posed dealt almost entirely with the standards of conduct which lawyer-legislators should be expected to maintain. When I addressed the Bar Association of Hawaii 2 days later, I was told—perhaps in jest—that the news stories which resulted from my press conference had repercussions throughout the legislative halls of the capitol.

I am surprised-and disappointed-if that actually was the case. I had said that lawyer-legislators must be especially careful to avoid placing themselves in a position where they may be suspected of permitting a private interest to Interfere with the performance of their public duty. Specifically, I expressed the view that lawyers should disqualify themselves from voting upon measures which might involve them in a conflict of interest and make a complete disclosure of the facts in any case where there is a danger of an apparent conflict, even though no real conflict exists. It seems to me that the professional responsibility of the bar requires such action, even though there results a higher standard of conduct than is expected of other legislators generally.

It is implicit in the professional status which we enjoy that we will observe a higher standard of conduct than the general public, in all situations in which our status as lawyers places us in a materially different position than a layman in the same situation.

Similar problems to those concerning Hawaii have been the subject of correspondence between the Governor of Minnesota and me. His address on the subject to the meeting of the Minnesota State Bar Association last year contains a careful and conscientious examination of the problems in this area and recommendations for their solution.

I have been quite impressed with the report of the Minnesota Governor's committee on ethics in government dealing with this and related questions. Governor Freeman and his committee are to be commended for taking the lead among the States in attacking a problem which all agree is difficult.

The questions concerning Hawaii and Minnesota are receiving attention in a number of other States. To the extent that they deal

with the position and conduct of lawyers in government, the profession has a clear responsibility to take the lead in finding solutions for them. In so doing we must find solutions which are consistent in every respect with the high standards of conduct which are inherent in the concept of the professional responsibility of the bar.

A second responsibility of our profession, which seems to me to be of importance today, is that relating to legal education in all of its phases, including continuing legal education. The franchise which society gives us to perform legal services for the public is predicated upon the benefit to the public which results—not on the benefit that may result to lawyers. If benefit to lawyers were the criterion, no doubt the educational requirements for admission to the bar would be lowered on the theory that it would cost less to get a legal education if less education were required.

In recognition of our professional responsibility for legal education and admissions to the bar, the organized bar in 1922, at the invitation of the American Bar Association, convened the National Conference on Legal Education. The action taken at that conference under the direction of Elihu Root began a new era in legal education and in the establishment of adequate, uniform standards for admission to the bar. Out of that conference there developed the system of accreditation of law schools by the American Bar Association which has done so much to raise the standards of legal education and hence improve the quality of legal service which the public receives.

We have made great progress in this area—progress for which the organized bar of the country is almost entirely responsible. But we have not completed our job and the public is entitled to ask why we have not done so. The overwhelming majority of the profession has said to the public: "We believe that the requirements of the American Bar Association for approval of a law school constitute the minimum educational requirements needed to insure qualified practitioners under the conditions which exist in the United States today. Nonetheless, 37 years after the American Bar Association first promulgated minimum standards for law schools, and authorized the publication of a list of the approved schools, there are still in existence 35 unapproved schools. Their graduates are being admitted to the bar of States whose requirements are below those of the great majority of the States of the United States.

The determination of the requirements for admission to the bar are the prerogative of each individual State, and I would not have it otherwise. Nonetheless, it seems to me that if I practiced in a State whose standards fall far below those of all the rest of the country, I might be inclined to consider the admonition of the shotgun instruction sometimes given to juries, in analyzing the position of my State on this question.

Today there are more than 3,500 students attending unapproved law schools in the United States. True, this is a small percentage of the 42,000 law students of the country, and represents substantial progress over the years, but it is not a situation that should be permitted to continue. Determined action by the organized bar is indicated to complete the undertaking which we began 37 years ago. Only when we have done so can we say that the bar has discharged its professional responsibility in this area in the manner that the public is entitled to expect of us,

The third and final area of professional responsibility which I would like to mention relates to the problem of court congestion. It is a problem which is fast assuming the proportions of a catastrophe in many of the metropolitan areas of the country. The

backlog of cases and the time lapse between "at issue" and trial in many of our cities is a national disgrace. In the Superior Courf Cook County, III., 573 months is the average interval between "at issue" and trial in a personal injury case. In the Superior Court of Queens County in New York City the interval is 38 months; in the Superior Court at Bridgeport, Conn., 31.5 months. In Anchorage, Alaska, from whence I returned quite recently, there was a backlog of 2.100 cases in a one judge court at the time statehood was voted—an impossible situation from the point of view of administering justice. While not so acute, the problem exists in almost every large city in the country.

The Federal court system is in no better condition nationally. At the beginning of this term it had 75,000 cases awaiting disposition. This is enough cases to engage the entire judiciary of the Federal district courts in trials constantly for more than one year if no additional cases were filed.

The problem of court congestion in the United States has assumed proportions which cause it to strike at the very core of the professional responsibility of the bar of this country. No longer can the situation be viewed as only a problem of court administration; or one which concerns only judges alone. The legal profession is the custodian of the administration of justice in the United States. The public rightly holds us responsible for its effective functioning. Both the system and the profession are in jeopardy when the public loses confidence in the functioning of the courts.

There can be no doubt but that if the situation which exists in the Superior Court of Cook County prevailed throughout the United States, and it took 57 months to bring a case to trial everywhere in the country, there would be a revolution insofar as our judicial machinery and the legal profession are concerned. After such a revolution, it is doubtful if we would recognize either the courts or the legal profession. No one could say that in such a situation violent action would be justified.

lent action would be justified.

We have a real and pressing professional responsibility for the solution of the problem of court congestion wherever it exists and the solution is in our hands—in the hands of the practicing lawyers who are handling the cases causing the congestion.

It is not the cases which are tried which result in the congestion. It is the cases which clutter up the docket and are settled on the courthouse steps after they are set for trial, frequently the morning of trial, that are the real problem, and they are within the control of the counsel handling them. I can express that opinion on the basis of some experience. I have been a trial lawyer for more than 25 years, and I believe that it is a fair estimate to say that I can identify at least 75 percent of the cases in my office which will be settled before trial—and that is true of both plaintiff and defendants' cases.

The minimum demands of professional responsibility require that the bar, individually and collectively, recognize the crisis which exists in areas of extreme court congestion. It must determine that these cases which ultimately are going to be settled be disposed of early in their life—and not after the court calendar has been completed. It must under no circumstances, be a party to a delay in litigation because a client's chances of success might be improved—or a favorable settlement be made by a defendant, it such delay occurs. And we must so organize our offices that the delays incident to conflicting settings can be minimized.

By so doing the bar, with the assistance of the bench, can, and I believe will, ultimately solve the vexing problems of court congestion. In doing so it will be discharging its professional responsibility in the highest

tradition of our profession.

The fact that the three aspects of profesthe fact that the which I have discussed stitute problem areas in varying degrees as not indicate that the bar has fallen ort in the discharge of its public obligaas. On the contrary, we can point to ource of professional pride. But nothing to be gained by the discussion of those as in which we can take pride in our formance. You talk to your children but the D's on the report card—and merely bice over the A's.

Our profession can point to many A's in field of professional responsibility. In defense of unpopular defendants, in legal and lawyer referral activities, in law rem, in our reawakened drive for a nontisan judiciary, and in the public service thousands of individual lawyers in comnitles throughout the United States the refession is daily providing irrefutable evice of its consciousness of our public rensibilities and of its determination to charge them fully.

Our objective in the discharge of the proour objective in the discharge of the legal professional responsibility of the legal professions. will never be attained. Our consciousof these special responsibilities will conthatly be challenged to improve our performance; and this is as it should be. mance; and this is as it should be won again been said that liberty must be won again by each generation. Perhaps that is true each generation. Fernaps that the lives of professional responsibility in the lives at lawyers. Certainly it is only as each gention demonstrates its appreciation of ase responsibilities that the bar can conthe to merit the public confidence upon ich we are dependent for our professional estence.

# A Catholic President in the White House?

EXTENSION OF REMARKS

# HON. FRANK J. LAUSCHE

OF OHIO

THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. LAUSCHE. Mr. President, reotly I had the privilege of reading a copy of the sermon delivered by Dr. Abba ay 17, 1959, service at the Temple, East 17, 1959, service at the Lead, Cleveland, 6th Street at Ansel Road, Cleveland, Ohio.

The subject of Dr. Silver's sermon, "A otholic President in the White House?" one over which there has been from the to time much controversy, largely to misunderstanding and misconception. Dr. Silver deals with the sublet with a clear and open mind, and with a clear and open fact, history, and intent of the framers of our Constitution.

Mr. President, in order that the Members of Congress and the many others tho read the Congressional Record may have the privilege of reading Dr. Silver's sermon, I ask unanimous consent that the text be printed in the Appendix of the RECORD.

There being no objection, the sermon has ordered to be printed in the RECORD, & follows:

CATHOLIC PRESIDENT IN THE WHITE HOUSE? (By Dr. Abba Hillel Silver)

The question, dear friends, "Should a Catholic be elected to the Presidency of the United States?" always arouses the sharpest

controversy. Controversies which involve re-ligion tend to become unrestrained, and sometime venomous. The partisans come to feel that they are somehow defending not only their interests in this world, in the here-but also their interests in the hereafter. Soon memories of ancient wrongs and bitter hostilities of the past surge into the arena and bedevil the situation. Before long the actual question at issue is lost sight of and people are fighting in a fine frenzy of flagellation ghosts and goblins which their overheated imaginations have conjured up,

It occurs to me that the simplest answer answer to the question "Should a Catholic be elected to the Presidency of the United States" might well be "Why not?" There is nothing in the Constitution of the United States which prohibits it. The Constitution the United States is quite clear on this point. The framers of our Constitutionmany of them keen legal minds as well as great patriots-wanted to be very clear and specific on this point. And so they wrote into the Constitution the following: "No religious test shall ever be required as a qualification to any office or public trust under the United States." Words could not be more precise or clearer. Our Constitution also has as its first amendment—the first article in the so-called Bill of Rights-the following: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

It is clear that the framers of our Constitution did not wish the United States to be either a Protestant country, or a Catholic country, or a Christian country. They did not wish to give preference to any one religious body or to prevent the free exer-cise of any religion. They wanted the new state which they were setting up to be a secular state. They were not unfriendly to religion. Many of them were church members and belonged to various denominations. They believed in God and they sought to build their new state upon the highest ethical and moral ideals of religion. But they also wanted to keep church and state separate and distinct-each free from the interference of the other in its own legitimate sphere. They knew very well, because they were not far removed from the eventsthe evils, the strife, and the bloodshed which were visited upon the Old World-its gov ernments and its peoples-when a specific church was officially recognized by Govern-ment and received privileges denied to others and where the free exercise of religion was either denied or curtailed.

The government which the Founding Fathers of our Republic were setting up was to be different—different in many ways. Because we are so far removed from those days, we sometimes forget how different they aspired to make their new government. It would be a government which would limit its own scope and authority. It would respect certain basic human rights inherent in each citizen as having been bestowed upon him not by government or society but by his Creator. These rights were ac-These rights were accordingly inalienable and were subject to no annulment or abridgement by govern-ment. They were opposed to political tyranny-even the political tyranny of a majority in a free democracy. A written con-stitution would safeguard the individual citizen against the encroachment of the state. They wanted their Government to be different in other ways. They would set up a system of checks and balances so that neither the legislative branch nor the administrative nor the judicial would be in a position to run away, as it were, with things toward precipitate and ill-considered action. Nor did they wish this Government which they were setting up to be dominated by any other body or organiza-tion—ecclestiastic or otherwise. It was to be free from the control of any other organism within the state.

Their profound wisdom has stood the test of time-170 years-the most turbulent and . ' revolutionary years in the history of mankind. Because of that wisdom, our country has prospered-and no religion has suffered because of it. On the contrary, all religious bodies from the extreme liberal to the extreme orthodox, have thrived. What equally important they have learned to live together and at times to work together for the commond good.

From time to time zealous partisans of this or that religious persuasion would challenge mostly indirectly the clear intent and purpose of the first amendment. They tried to whittle down its scope and meaning. By means of interpretation they hoped to make legal the allocation of public funds to the support of religious educational institutions on a nonpreferencial basis of course. Thus, there are many Catholics and perhaps members of other religious bodies who advocate the granting of Federal funds to parochial schools. It is not that these people really desire a union of church and state. have officially denied it. In 1948, Archbishop John T. McNicholas, speaking on behalf of all American Catholic bishops, stated: deny absolutely and without qualification that the Catholic bishops of the United States are seeking a union of church and state by any endeavors whatsoever, either proximately or remotely. It tomorrow Catholics constituted a majority in our country, they would not seek a union of church and They would then as now, uphold the Constitution and all its amendments, recognizing the moral obligation imposed upon all Catholics to observe and defend the Constitution and its amendments."

I have no doubt that this is the position the Catholic hierarchy of the United States and of Catholic laymen everywhere. But many of them would like to see a relaxation of the first amendment which would make it possible for Federal aid to go to Catholic schools. These efforts, which have been made from time to time, have in the main been unsuccessful. Apart from certain fringe assistance given to the chil-dren attending parochial schools—and in my opinion wisely given-such as participation in the Federal school lunch program, or school buses—the basic principle of the separation of church and state has held good in its original intent.

In 1947 the Supreme Court of the United States proceeded to define more fully the intent of the first amendment. It declared: "Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid one religion, aid all religions or prefer one religion over another. \* No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called or whatever form they may adopt to teach or practice religion. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups and vice versa. In the words of Jefferson, the clause against establishment of religion by law was intended to erect a wall between church and state."

I believe that many Catholics in the United States fully accept this position. Recently, Senator KENNEDY, who came quite close 2 years ago to receiving the nomination for Vice President on the Democratic ticket, and who today is talked of as a possible presidential candidate, was questioned on this very issue and he replied very clearly— and, of course, he is a Catholic—"The first amendment to the Constitution is an infinitely wise one. There can be no question of Federal funds being used for support of parochial or private schools. It's unconstitutional under the first amendment as interpreted by the Supreme Court. I am opposed to the Federal Government's extending support to sustain any church or its schools. As for such fringe matters as buses, lunches, and other services, the issue is primarily social and economic and not religious. Each case must be judged on its merits within the law as interpreted by the courts."

It is true that Senator Kennedy has been sharply criticized by some editorial writers in the Catholic press for the views which he expressed. It is such criticism which disturbs some non-Catholics in the United States. It raises doubts in their minds, as does the continued criticism of the church hierarchy of our Government's failure to

aid religious schools.

But even those of us who are opposed to Federal aid to parochial schools—whethe they be Catholic or Protestant or Jewish and there are Protestant as well as Jewish parochial schools-fail to see what all this has to do with the election of a Catholic to the Presidency of the United States. A Catholic President, if elected, takes an oath of office which is prescribed by the Consti-tution of the United States. This oath of office reads: "I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States and will to the best of my ability preserve, protect, and defend the Constitution of the United States." Now what right have we to assume that a Catholic President would be less faithful to his oath, solemnly sworn, than a Protestant President? Numerous Catholics have in the past been elected or appointed to high office in this Nation and in every State of the Union—Governors, Congress-men, Senators—many of them elected in States where the majority of the electorate was Protestant—Supreme Court Justices, Chiefs of the U.S. Supreme Court—high ranking military chiefs and key diplomats. They served with unimpeachable loyalty and integrity. Their religion in no way caused them to subordinate the interests of their government to the interests of their church.

In the midst of this controversy, some have conjured up the so-called question of conscience. Conscience would presumably supersede the oath of office which an elected Catholic President would take. I am unable to follow this line of reasoning. When a man takes an oath to uphold the Constitution of the United States, he is in all conscience committed to it. If there is anything in the Constitution which the candidate finds contravening church dogma which obligates him, he cannot in all conscience either stand for office or take the oath of office if elected. There have been Catholics in high public office who have opposed the church hierarchy on questions such as that of Federal funds for parochial schools and on such matters as the appointment of an ambassador to the Vatican. They have not considered themselves, because of their position, either poor Catholics or disloyal to their church. Senator KENNEDY is among those who have registered their opposition to the appointment of an ambassador to the Vatican. Incidentally, President Roosevelt and President Truman, both Protestants, favored representation at the Vatican.

At the moment, it is the question of a Catholic President which disturbs some of our citizens. I recall the time, some years ago, when William Howard Taft was opposed for the Presidency because he was a Unitarian. A Unitarian, it was claimed, was not a Christian and this is a Christian country.

The same religious argument was used against Senator Herbert Lehman when he ran for Governor of the State of New York. How can a Jew hold that office? That office belongs to a Christian. Governor Lehman was elected and twice reelected and subsequently was elected to the senatorship of

the United States. This religious argument is a double-edged sword which can strike in all directions everywhere.

It has been said that because the Catholic

Church claims the only true church that Catholics should therefore not be elected to the Presidency of the United States. I see no objection to the Catholic Church claiming that it is the one true church. religions claim or claimed the same thing. Just so long as the church does not employ the power of government to enforce its claim or ask for special privileges on that account—as is the case in some of the countries of Europe, unfortunately. Lovers of religious freedom cannot accept the thesis "that a State which is overwhelmingly Catholic has a duty to protect this religious faith by controlling the public promulgation of non-Catholic doctrines or the public exercise of non-Catholic worship." This will never be accepted by those who believe in true religious freedom. Catholic theologians in this country may still subscribe to this thesis as an abstract proposition even when practice has made it obsolete. In the United States at least this thesis is one of those sleeping dogmas which no responsible Catholic would

seriously advocate.

Thirty years ago, a Catholic ran for the Presidency of the United States on the Democratic ticket-a great and good man-Alfred Smith, Governor of the State of New Bigotry and religious intolerance combined with other factors to defeat him. Some of the Democratic States of the South for the first time in their history broke rank and deserted their party because of its Catholic candidate. Some of the very issues talked about today were raised then, in even louder and more outspoken terms than now. I recall an open letter which was addressed to Governor Smith by Charles L. Marshall appeared in the Atlantic Monthly. Mr. Marshall, who was a member of the Episcopal Church and an authority on canon law, summarized all the arguments against Governor Smith's candidacy because of his religion. Governor Smith replied in great detail in the same magazine in the issue of May 1927. I reread both letters in preparation for my lecture this morning. Mr. Marshall had quoted in his letter Papal encyclicals and church encyclopaediae and built up a case for the inevitable conflict between religious loyalty to the Catholic Church and patriotic loyalty to the United States. Governor Smith's reply was made, as he writes in his letter, after consultation with his friends, Father Francis P. Duffy, a priest schooled in church law. I was struck very much in the letter of Governor Smith by the following statement. "By what right do you ask me to assume responsibility for every statement that may be made in any encyclical letter? \* \* \* These encyclicals are not articles of faith \* \* \* You seem to think that Catholics must be all alike in mind and in heart, as though they had been poured into and taken out of the same mold."

This is a mistake which people frequently make not alone about Catholics but about Jews. All Jews must act alike, think alike. and react alike to any given situation. They never did and do not do so now. There are sharp divisions of opinion among them. Governor Smith, who was a very loyal Catholic and a product of its parochial schools, challenged that prevalent conception and this challenge has been subscribed to by many Catholics.

I was also deeply impressed by the last paragraph of Governor Smith's letter, wherein he summarized his creed as an American Catholic. He says: "I believe in the worship of God according to the faith and practice of the Roman Catholic Church. I recognize no power in the institution of my church to interfere with the operations of the Con-

stitution of the United States or the enforce ment of the law of the land. I believe in absolute freedom of conscience for all men and in equality of all churches, all sects and all beliefs before the law as a matter of right and not as a matter of favor. I believe in absolute separation of church and state and in strict enforcement of the provisions of the Constitution that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof. I believe that no tribunal of any church has any power to make any decree of any force in the law of the land, other than to establish the status of its own communicants within its own church. I believe in the support of the public school as one of the cornerstones of American liberty. I believe in the right of every parent to choose whether his child shall be educated in public school or in a religious school supported by those of his own faith. I believe in the principle of noninterference by this country in the internal affairs of other nations and that we should stand steadfastly against any such interference by whosoever it may be urged And I believe in the common brotherhood of man under the common fatherhood of God-

'In this spirit I join with fellow Americans of all creeds in a fervent prayer that nevel again in this land will any public servant be challenged because of the faith in which he has tried to walk humbly with his God."

This hope, of course, has not been realized Men in our country are still being challenged because of their faith. Bigotry and intoler ance have not completely disappeared either from the ranks of the Protestants or from the ranks of the Catholics, the Ku Klux Klan, Gerald K. Smith or Father Coughlin-It is hidden away in Intolerance dies hard. some dark corner in the souls of people. Given an opportunity, it will come to the surface, surge forward and create serious and unhappy situations. I pray that it will not happen now.

A man should be elected to office because of his character, his ability, and the issues which he represents-not because of his religion-and no man should be defeated for office because of his religion.

We have a long way to go. In this gracious land we have been given the opportunity to live our own lives and to worship God as we wish Catholic, Protestant, Jew—each according to his own conviction. Let us not endanger that blessed right and freedom which we all enjoy by seeking monopolistic privileges, majority domination or arrogating to ourselves what the law of the land has granted to all. We have a long way to go But if we follow the clear light of our Constitution and the Declaration of Independ ence and the example of the fine men of all faiths who have faithfully and loyally lived up to the principles embodied in them, all of us whatever our religion or race-will be able to move into an even more spacious and beautiful day when as brothers we shall eagerly cooperate for the common good of all

# Indian Corn Tassel as National Floral Emblem

EXTENSION OF REMARKS OF

# HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. DOUGLAS. Mr. President, I as unanimous consent that a statement prepared by Miss Margo Cairns, sup orting the golden corn tassel as the naonal floral emblem be printed in the ppendix of the RECORD. Miss Cairns as been one of the moving spirits in e general movement to have the goldcorn tassel adopted as the national bral emblem, and this excellent stateent which she has prepared gives ded reason for such selection.

There being no objection, the stateent was ordered to be printed in the ECORD, as follows:

#### TWO SYMBOLS

Two new stars, the stars of Alaska and waii, are being added to our Nation's banr. As we honor these new States with a w flag, let us also honor the first flag that er waved over this vast land—the tassel Indian corn—maize.

As a symbol of our country, the corn tasantedates our glorious banner by thou-

ands of years.

Our flag is a symbol of our patriots' strugts and victories which gave birth to this tion. The corn tassel is a symbol of our oneers' struggles and victories, and of their ccess in establishing our great agricul-tal system, the economic backbone of Nation.

Our flag is reverentially handled when it is In up and again when it is lowered, when it carried in a procession or when placed on platforms in public gatherings. te laws protect it on all occasions, the elctest and most profound our Nation has. The corn tassel is deserving of reverential Tre comparable to our banner. Our flag as humanly conceived, humanly designed, imanly made. The plant corn, with its ower tassel is a divine creation. Man has tered and developed it; man did not cre-Re it.

E pluribus unum-one out of many; many, ut one. One nation born of many; many

ationalities united as one.

E pluribus unum-one flower of a host of owers; 50 States united in the growing of at one, a symbol of unity that is uniquely, storically, and reverentially America.

MARGO CAIRNS, Washington, D.C.

# Tax Help for Professions

EXTENSION OF REMARKS OF

# HON, RICHARD L. NEUBERGER

OF OREGON

THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. NEUBERGER. Mr. President, any Members of the Senate feel that me form of retirement relief for selfenployed persons is sorely in order, as matter of justice and equity. There no reason why officials of corporations hould have a tax advantage in setting side retirement funds in old age, as ompared with self-employed peopleuch as physicians, accountants, lawyers, uthors, veterinarians, dentists, composers, and others.

I consider myself a supporter of the mathers bill, which was recently introfuced by the distinguished junior Sentor from Florida, to furnish some ssistance to the self-employed by allowng them a tax exemption on a maxihum of 10 percent of their earned income from self-employment, a sum not to exceed \$2,500 annually or more than \$50,000 during a lifetime. They later would pay taxes on this when they receive their retirement annuities.

The Smathers bill is S. 1979.

A very comprehensive analysis of this situation was published in the New York Times for June 21, 1959, under the title "Tax Help in Sight for Professions." The author of the article is J. E. Mc-Mahon, staff writer for the New York Times. I trust that the optimism of Mr. McMahon's article is justified, and I include it in the Appendix of the Con-GRESSIONAL RECORD for the information of my colleagues in the Senate and the House. Mr. President, I ask that such permission be granted accordingly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 21, 1959] TAX HELP IN SIGHT FOR PROFESSIONS -CON-GRESS MULLS BILL GIVING PARTIAL EXEMP-TION TO RETIREMENT FUNDS

#### (By J. E. McMahon)

Hearings on the Keogh-Simpson bill, which would permit limited exemptions of taxes to self-employed persons on money they set aside for pensions and which passed the House of Representatives on March 16, were held last week before the Senate Finance Committee in Washington.

There were no indications, however, as to how the committee might act on the subject. But a more hopeful feeling exists among its proponents that such legislation might soon be enacted. In fact, this confidence has reached a point where banks and insurance companies are preparing to offer service contracts when it becomes law.

However, testimony before the hearing last week was divided on the subject. Keith Funston, president of the New York Stock Exchange, urged support for the bill in a statement that said it would give 10 million self-employed persons an opportunity to establish pension plans. He added that "we believe the time has come for Congress to provide those who work for themselves with the same tax treatment it provides for others."

#### TREASURY OPPOSED

But David A. Lindsay, assistant to the Secretary of the Treasury, said the Treasury was opposed to the measure on the overriding consideration of a revenue loss. He added, however, that the bill would give self-employed persons several tax advantages not available to other taxpayers.

James L. Greenbaum of Cleveland, representing the Bureau of Salesmen's National Associations, told the committee that more young people would pursue sales careers if traveling salesmen on commission could participate in tax-deferrable pension plans, as visualized in the Keogh-Simpson bill.

While there is strong support for the measure in the Senate and elsewhere, opposition to the measure has created some doubt about passage of the bill this year. However, those favoring the legislation say the outlook is more favorable now than it has been in any year since the first bill with this objective was introduced in Congress in 1951.

The cosponsor of the legislation this year is Representative RICHARD M. SIMPSON, Republican of Pennsylvania.

Last year, the Jenkins-Keogh bill, which had a similar aim, also passed the House, but died in the Senate Finance Committee because sufficient time to consider it was lacking before the session ended.

Representative EUGENE J. KEOGH, Democrat, of New York, has been seeking to have

such legislation passed by Congress in every year since 1951, excepting 1954, without success.

His present bill, H.R. 10, known as the "Self-Employed Individuals' Retirement Act of 1959" would provide that all persons selfemployed and subject to income taxes under section 1401 of the Internal Revenue Code, be allowed a tax exemption on a maximum of 10 percent of their earned income from self-employment, not to exceed \$2,500 a year, or more than \$50,000 in their lifetime. would be granted if they became members of a qualified pension plan. On retirement, the pension benefits under the plan would become taxable income.

#### PROBLEM SPOTLIGHTED

The rapid growth of employee-benefit programs in recent years, which has been encouraged through special tax benefits, spotlights the problem of self-employed persons in setting up retirement programs. law denies to self-employed workers the tax benefits that are made available to businesses and their employees under qualified retirement programs. The term qualified means plans that have met with approval of the Internal Revenue Service.

Countries abroad have corrected this inequality. Great Britian took action to solve the problem in 1956 and Canada did so in 1957.

What is sought under the latest bill is to give self-employed workers the opportunity to build a pension fund while getting tax deferment in doing so. At present all-self-employed are automatically covered on a compulsory basis under social security, except physicians, clergymen and Christian Science practitioners. The latter two groups, however, can elect to be covered. But pro-The latter two groups, fessional self-employed persons want to build a nest egg for retirement above social security just as employees in private industry now can do.

Two of the Nation's leading banks-the Bank of New York and the Bank of America National Trust and Savings Associationare so convinced that self-employed may soon receive more equitable tax treatment for pensions they are now issuing pamphlets explaining the proposed law and telling selfemployed persons how they may participate under its provisions. Other banks are said to be issuing leaflets to their depositors on the subject. Most of the big insurance companies here and in other States are studying the proposed law with a view toward issuing contracts under its provisions, if it should be enacted.

The movement to get tax relief for the self-employed goes back 2 decades. In 1939, doctors formed an unusual type of association, which, being taxable as a corporation, enabled its members to establish and participate in a qualified pension plan. While the plan received judicial approval, the Treasury did not go along with it, and thus the arrangement became of doubtful value even in the limited field in which it was

A group of attorneys discussed the subject in 1945 and their talks resulted in the appointment of committees by various associations that paved the way for the formation of the American Thrift Assembly, an organization composed of representatives of more than 30 associations, whose prime objective was to seek equitable tax treatment for self-employed.

The American Bar Association and the American Medical Association have long championed such legislation. Among many other organizations supporting the move-ment are the American Dental Association, American Institute of Certified Public Accountants, American Institute of Architects, the National Association of Real Estate Boards, the National Association of Retail

Druggists and the National Society of Professional Engineers.

Senator George A. Smathers, Democrat, of Florida, recently introduced a bill in the U.S. Senate identical to the Keogh-Simpson bill, except that its effective date would be January 1, 1961, instead of January 1, 1959, as stated in the Keogh-Simpson measure.

### Control Over Education

EXTENSION OF REMARKS

## HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. TALMADGE. Mr. President, Dr. George S. Benson of Searcy, Ark., president of the National Education Program, devoted his weekly column of June 10, 1959, to the compelling reasons for the adoption by Congress and ratification by the States of the proposed constitutional amendment set forth in Senate Joint Resolution 32 which has been offered by eight other Senators and me to restore State and local control over public education. I ask unanimous consent that the text of his article be printed herewith in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### SAFEGUARDING OUR LIBERTY

(By Dr. George S. Benson, president, National Education Program, Searcy, Ark.)

A resolution of importance to every citizen has been submitted in the U.S. Senate. It is Senate Joint Resolution 32. It proposes an amendment to the U.S. Constitution reserving to the States exclusive control over public schools. Such an amendment shouldn't be necessary, for when they created the Federal Government the Thirteen Original States retained full control over their respective schools and all other internal domestic affairs.

Such an amendment is necessary now only because the present Supreme Court, acting contrary to the Constitution itself, in numerous decisions has shattered the structure of States rights, one of the great bulwarks protecting each citizen against Federal tyranny, and essential to long retaining personal freedom.

#### A BROAD ISSUE

States rights is not a narrow issue concerning the present controversy raging around Southern schools; nor is the need for establishing full State control over State schools founded on any individual's or group's wishes regarding segregation or integration. The principle of States rights, the delegation to the States of control over intra-State affairs, including schools, was a keystone in the structure of American freedom when the Constitution was drafted. We will cease to have a Republic if this foundation stone is torn out, for destroyed with it would be our individual liberty.

The history of this Nation brings suffi-

The history of this Nation brings sufficient light to bear on the principle of States' rights. The War of Independence was conducted by representatives of the Thirteen Original States assembled in a loosely knit Continental Congress. In the midst of the war this Congress adopted Articles of Confederation and submitted them to the 13 legislatures, in 1778. Article No. 1 said

simply: "This confederacy shall be the United States of America." The States delegated only those powers to the Congress which they could not handle individually—the power to wage war, establish a uniform currency, make treaties, and contract debt for general expenses such as paying the Army.

#### STATES CREATED

Several years after victory in the War of Independence, representatives of five States met and decided to call a Constitutional Convention of the 13 States to better formalize a Federal union. The Continental Congress did not call the convention. felt that creation of a constitutional Republic, with a Federal Government, should be left entirely to the States. In the drafting of the Constitution, the basic spirit and philosophy of the Articles of Confederation were preserved. The delegation of powers to the Federal Government, carefully surrounded by safeguards, followed closely the States' rights philosophy established in the Articles of Confederation.

Yet, after the Constitution had been ratified, Thomas Jefferson and other leaders, still fearful of Federal Government tyranny, secured adoption of the first 10 amendments—the last of which, No. 10, clearly states the Jeffersonian philosophy of States' rights: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectfully, or to the people." These powers included the power of decision over all purely local or statewide affairs.

#### FEDERAL WEDGE DRIVEN

In recent years a Federal wedge has been driven into the door of public education and other States' rights by Supreme Court decisions. After many failures, some legislation has been pushed through Congress—largely because of the apathy of citizens—appropriating huge sums of Federal money for school buildings and aid to students. Legislation is now offered before Congress which would appropriate Federal money for payment of teachers' salaries. Nobody can successfully deny the fact that along with Federal grants finally goes Federal control.

The proposed amendment, Senate Joint Resolution 32, would place squarely in the hands of the local people the right to operate their schools as they see fit and as the Founding Fathers intended when they drafted the Constitution. If the Federal Government takes over control of the educational system, as it is beginning to do ultimately we will have political control and it will become the chief factor in destroying academic freedom. Farsighted people will support Senate Joint Resolution 32 to keep control of public schools in the hands of the several States.

Tribute to the Late John Foster Dulles

EXTENSION OF REMARKS

# HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an outstanding column entitled "State House Diary," written by New Jersey State Senator Albert McCay, which appeared in the June 11 issue of the News Chronicle, of Moorestown, N.J.

There being no objection, the column was ordered to be printed in the RECORD. as follows:

STATE HOUSE DIARY

(By State Senator Albert McCay)

John Foster Dulles—There was complete slience.

A reverent hush held everyone spellbound for moments after the Senate Concurrent Resolution honoring the memory of John Foster Dulles was passed unanimously by the State Senate, on May 25. I can imagine no more sincere or heartfelt expression than this, that our Senate Chamber usually humming each day from opening to adjournment should spontaneously be silent. Everyone sensed that in the death of the valiant Secretary of State, who had directed the foreign policy of our United States during the recent perilous cold war years, a great manhad passed away.

It was especially meet and proper that our

It was especially meet and proper that ownew Jersey Legislature should pay homage to John Foster Dulles. In his youth he was "one of us," a fellow New Jerseyite, while attending Princeton University in preparation for an outstanding career in law and diplomacy. I don't think I'm stretching my imagination to conceive that while a student an earby Princeton he often came to Trenton and might even occasionally have visited the Senate Chamber, where my colleagues and I had the solemn but sad privilege of paying final tribute to him so recently.

final tribute to him so recently.

While chatting with Bill Lanning, of Trenton, recently at the State capitol. I caught a brief glimpse of John Foster Dulles' close bond with the people of New Jersey. Bill, who is assistant general counsel of the Commission of Law Revision and Legislative Services of which I am Chairman told me that his father and John Foster Dulles were Princeton classmates and that Secretary Dulles was best man at his father's wedding.

Bill also gave me an inkling of the contribution made to our country by one great American family. He revealed that John Foster Dulles was the third member of his family to hold the high office of Secretary of State. His grandfather, for whom he was named, Gen. John W. Foster, was Secretary of State under President William Harrison and his uncle was Robert Lansing Secretary of State in President Woodrow Wilson's cabinet.

The boundless devotion of John Foster Dulles to our Nation was brought home to me most vividly in a tribute written by Vice President Nixon in the current issue of Life magazine. On his last diplomatic journey to Europe to defend the West from Communism he was in constant pain and unable to keep down a single meal due to the inroads of cancer. That is patriotism of the highest order, isn't it?

John Foster Dulles is a shining example to the whole world of a dedicated states man, an immortal inspiration to myself and everyone else in public life to follow.

## Opposition to Fair Trade Legislation

# HON. PAUL H. DOUGLAS

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very excellent statement by Father Robert McEwen, associate professor of economcs and chairman of the department in he university at Boston College, in opposition to the so-called fair trade bill. or the hearings before the Committee on Interstate and Foreign Commerce.

There being no objection, the statehent was ordered to be printed in the RECORD, as follows:

TATEMENT PREPARED FOR U.S. SENATE COM-MITTEE ON INTERSTATE AND FOREIGN COM-MERCE IN HEARINGS ON FAIR TRADE

In addi-ion, I am the chairman of the advisory onsumer council to the attorney general of tassachusetts, the Honorable Edward J. Mc-Cormack, Jr. For the record, the memberhip of this advisory consumer council is as bllows: Mr. John Cort, Newspaper Guild; br. Virginia Galbraith, Mount Holyoke Colge; Prof. Philip Gamble, University of Massechusetts; Prof. Joseph Golemme, North-astern University; Attorney John Graham, Jortheastern University; Prof. James R. Mc-herson, Boston College; Mrs. Martha O'Neil, herson, Boston College, Mrs. Martha Chen, leachers Federation; Prof. Arnold M. Solo-lay, Harvard University; Prof. Colston varne, Amherst College. I may say that our losition on the question of fair trade is a manimous one.

In this statement today I am representing hyself as an individual and the advisory onsumer council as a group. I shall not attempt to repeat what I have said on pre-

tious occasions.

My previous testimony has shown that My previous testimony has shown that Christian philosophy and theology can afford to justification for the type of legalized price fixing contained in these fair trade laws.

#### THE DRIVE FOR SECURITY

It is not surprising that people like secu-Aty and hate competition—that is only human nature. Therefore, we can expect to be a parade of business groups in before congress asking for this protection today, and another protection tomorrow.

The function of the Congress is not to give very group what it would like to have. The s. Senate has to be over and above all troup interests—like a common father of The father is supposed to be wiser and hore thoughtful and more farsighted than is children. The good father does not give n to every demand of his children. Either for their own good, or for the larger general tood, he must often exercise his authority to eruse a request which is passionately dehanded by the child.

#### FUTURE OF THE U.S. ECONOMY

In what direction, gentlemen, are you drivag the U.S. economic system? I beg you consider this question as a wholehich this drive for fair trade laws is only the part. In how many other areas are you wen now being asked to restrict compe-lition—always in the name of humanitarian notives of love of the small man, or revertince for an orderly market, or outraged indignation at some chiseler. Even now you are considering bills to curtail competitive bricing in the automobile distribution field.

<sup>1</sup>U.S. House of Representatives, Committee on Interstate and Foreign Commerce, hearings on fair-trade bills, 85th Cong., 2d sess., Apr. 29, 30, May 1, 6, 7, 1958.
U.S. Senate, Select Committee on Small

Business, hearings on discount house operations, 85th Cong., 2d sess., June 23, 24, 25,

U.S. House of Representatives, Committee on Interstate and Foreign Commerce, hearings on fair-trade bills, 86th Cong., 1st sess., Mar. 16, 17, 18, 19, 20, 23, 24, 25, 1959.

In my home State, and in many other areas including the Washington metropolitan area, the drive to eliminate retail price competition in fluid milk products has almost succeeded. Have you given enough thought to what the economic system will look like when all these eliminations of competition begin to take full effect?

#### PRO AND CON

The time has now come to speak bluntly on this issue. What reasons have you been given to support this demand for fair trade laws?

1. You have received emotional demands from the interested business parties urging this form of protection for their particular business interests.

2. You have heard also a host of unsupported generalizations about the virtues of fair trade and the vices of price-cutting which are backed by no intellectual or theoretical economic analysis.

3. The main proponents of these laws are industries which are at the same time showing record-breaking business profits and a record low rate of business failures.

On the other hand, what have you to dissuade you from passing this legislation?

1. You have the almost unanimous opinion of the educated and professional economic world-practically a thousand to one, that same professional economic world has constantly condemned this type of legisla-

2. You have also against you the vast majority of informed legal opinion.

3. Again, you have almost unanimous newspaper and magazine editorial opposition condemning this particular type of special-interest legislation as completely un-American and completely foreign to the historic type of economic system that made this country great.

4. You have also against you the almost unanimous opinion of all the agencies of Government that have any particular concern with this matter, beginning with the Council of Economic Advisers, the Department of State, the Department of Justice, the Department of Commerce, the Federal Trade Commission, and so on.

#### CONSPORTENCES

And what are the consequences if you en-

act this legislation?

1. You will be repeating the major error of the Volstead Act and the prohibition legislation. For you will pass a law that has absolutely no support among the editorial, radio, and newspaper public-opinion formers of the Nation. You will pass a law that is denounced as iniquitous and as pressure-group legislation by practically the entire intellectual and academic profession. A large part of the legal profession will be out of sympathy with what you do. The consuming public will be out of sympathy with what you do, and will feel no compunction in violating or attempting to violate the provisions of these laws. To some extent, too, even those very businessmen who are asking you to pass these laws will admit, of course, in private with a sort of sheepish grin, that this is special interest and pressure legislation, and that they pulled a "fast one" when they got it passed

In these circumstances, what possible good can come from your yielding to the demand for this law? It will increase general dis-respect for law by adding to the books an-other enactment that has absolutely no public support. Both consumers, retailers, and businessmen will feel absolutely no guilt in violating the provisions of this law, and this breakdown of respect for law is one of the sad and lamentable consequences of the prohibition legislation which it took us many years

2. Furthermore, you will be striking an-other blow at what is left of the competitive economic system in the United States, and

you will be embarrassing the U.S. representatives in negotiations with other countries wherein our official policy is to encourage freer and freer trade in the world. While our foreign representatives are taking this line. however, our domestic lawmaking body will be taking exactly the opposite, a restraint of competition and the promotion of a cartel philosophy. This inconsistency has not gone unnoticed and has caused no little embarrassment in the past to our foreign representatives. That is partially why the Department of State is opposed to this legisla-

3. From a domestic, economic point of view, you wil be adding further supports to already high prices when the whole national endeavor should be in the direction of lowering prices to combat inflation

#### Government Bond Interest Rates

EXTENSION OF REMARKS OF

## HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. MANSFIELD. Mr. President, in the Lewistown Daily News, of Lewistown, Mont., for June 16, 1959, appeared an editorial entitled "The Issue Over Government Bond Interest Rates," I think it is worthy of the attention of Senators. and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD.

as follows:

THE ISSUE OVER GOVERNMENT BOND INTEREST RATES

The rumbling in Washington over President Eisenhower's request to take off the interest rate ceiling on Government bonds is best explained as an argument over the roots of inflation. The request itself is being presented as a move by the administration to try to better the Government's competitive position in the money market.

The Eisenhower argument is that the interest ceiling must come off if the Government is to sell long-term bonds as a weapon against inflation. It is pointed out that interest rates on private bonds have risen far above the 41/4 percent the Treasury is permitted by Congress to pay on long-term (5 years or more) bonds. Treasury exponents argue that the interest ceiling hampers the sale of bonds, while at the same time the fear of inflation is diverting money into a rush to stocks. Proponents of the removal of the rate ceiling also say the Government would be better off by having its debt funded in long-term bonds, which they argue are less inhflationary in their effect on credit expansion.

Opponents of the request argue from a general backdrop of charges that the Eisenhower forces have bungled Government fi-nances completely, that higher Government bond interest rates would bring Treasury money into the market to an extent where the cost of money would go up. They say mortgage money, already growing tight under the Federal Reserve System's tightmoney policy, would grow scarce, that installment and short-term financing would be made difficult. Another opposition argument is that higher interest rates would increase bank profits at the expense of borrowers. It is also forecast that by driving up the cost of money and further depreciating the value of bonds bought at ceiling interest, the administration's proposal would

touch off another recession. Proof is being demanded that a genuine emergency exists and that a rise in the cost of living will not follow the raising of the bond interest rate.

On the administration side there are at work such factors as the continuing recovery of business, the relatively stationary status of the cost-of-living index, and a public consciousness of inflation's dangers.

Operating against the administration is the somewhat justified charge that the Nation's finances have suffered under the Elsenhower team's direction. The United States now is carrying its largest peacetime The national budget has been balanced only twice in 6 years, and current budget proposals are so delicately framed that the slightest shift can throw them out of kilter. Economic growth is showing signs of lagging. The bond market is trudging along in the dust left by the stock market which is enjoying one of the most active periods in history.

The issue boils down to whether removing the interest celling on Government bonds would be a genuine step toward stabilizing Federal finances, or would amount to little more than a stopgap. If the latter is the case, then the administration will be shown truly bankrupt in fiscal policy and an overhaul of Government finances decidedly must

be called for.

## History Brutalizes Everyone

EXTENSION OF REMARKS

## HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. CARLSON. Mr. President, the Geneva Conference has just concluded a session lasting several weeks devoted to solving some of our problems with the Soviet Union.

These weeks of discussion seem to have brought about only one definite conclusion, to recess for a few weeks, when another meeting will be held.

Our Secretary of State, Christian Herter, demonstrated great patience, but he also demonstrated firmness in dealing with Russia. When one considers the past actions on the part of Russia as a nation against citizens of our own Nation and citizens of other peace-loving countries, it is difficult to negotiate without deep feelings and emotions.

In the June 7 issue of the Wichita Beacon there appeared an editorial entitled "History Brutalizes Everyone." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

(From the Wichita (Kans.) Beacon, June 7. 1959]

#### HISTORY BRUTALIZES EVERYONE

Christian Herter, Secretary of State, denounced the Communists for many crimes in West Berlin-kidnapings, holdups, burglaries, espionage—at the Big Four sessions in Geneva.

Somehow, his accusations should arouse anger. They don't. The words, and the deeds they describe, seem so routine these

Gradually, throughout the last quarter of a century, the peoples of the great power nations have been losing their ability to feel and express emotions. They have lost the

sense of righteous indignation. Compassion and mercy become increasingly blunted. Even the good citizen's deep concern about his role in public affairs is seldom voiced.

Consider, for example, the news of Russia's crime against 17 Americans. Soviet airmen attacked an unarmed transport over Turkey and shot it down. It crashed in Soviet
Armenia. The 17 servicemen are presumed

The reaction of America was, and continues to be, apathetic. There was no violent outcry against the monstrous crime, no clamor vengeance. In Theodore Roosevelt's America, it would have been difficult to avoid

We aren't urging vengeance. Rather, we deplore the callousness with which America greeted this crime against American citizens and the American flag. People should have felt something.

This lack of emotional response arises from all the things people have lived through. In the 1930's we saw the German nation go insane. Hate and cruelty and total war were glorified, and those who still spoke for freedom and justice were silenced or driven into exile.

Casually, almost blithely, the Nazis murdered millions of Jews and others while the German armies sought to overrun the world. The Wehrmacht had no knightly sense of mercy; at a whim, the open city of Rotterdam was destroyed; in Russia, the Germans coldly murdered the citizens of entire cities. There was nothing for it but to fight fire with fire, violence with violence, cruelty with cruelty. The bombers hammered half the cities of the world with blockbusters, fire bombs, and finally atomic weapons.

The new barbarism did not end with the war. The broken wrecks of men stumble out of Red China to tell tales of a government that rules by brainwashing, torture, and mass murder. The brave children of Budapest chose freedom-and died for it. And the governments of the world coldly threaten massive destruction in pushbutton war.

Is it any wonder that people are emo-tionally numb? Is it any wonder that cries of enthusiasm or of anger are so seldom heard? The world we live in threatens the very meaning of being human. We are all brutalized, whether we know it or not.

The way out of the new barbarism, the dehumanization of our times, is to start thinking in human terms again. Hitler's murder of millions of Jews was too vast a crime to be comprehended. People, however, can comprehend the life and the suffering of Anne Frank, the 16-year-old girl whose diary has touched the hearts of millions. Indeed, the play based on the diary created a wave of soul-searching repentance in Germany.

In the matter of the servicemen gunned down by the Soviet pilots, don't worry about the abstractions of international law involved. Think rather about the heartbreak in 17 homes.

When one starts to think of people as people, not as large political abstractions, he starts to become human and civilized again. Such human interest in men and women is the greatest need of our times.

## Oregon Daily Statesman Heralds 109 Years of Oregon Statehood

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. NEUBERGER. Mr. President, on June 10 the Oregon Daily Statesman of

Salem, one of our State's most traditional and outstanding newspapers, heralded 100 years of Oregon statehood. This was accomplished with a special edition of the Statesman, which discussed thoroughly the history, economy, cultural and political development of our

The editor and publisher of the Statesman, Charles A. Sprague, is not only a distinguished journalist, but served with eminent leadership as the Governor of Oregon from 1938 to 1942. In his regular column, "It Seems To

Me," Governor Sprague has discussed in capsule form the dominant characteristics of Oregon. I should like to quote specifically one particular paragraph in his article.

Now, at the end of the first century as & State, Oregon, ranks high in standards of public morality, conservation of resources, support of education and deployment of government for the public good. It is essentially a State where moderation prevails-Its climate does not go to extremes. and poor are not poles apart—wealth is broadly diffused. Personal drive for power and place is tempered. Radicalism does not flourish, nor yet blind reaction.

I agree completely with Governor Sprague. Oregon is a State of articulate, fair, and moderate men and women who do not resort to extremes. That is much of its appeal. That is behind many of its contributions to our national, politi-

cal, and literary heritage.

I should also like to add that the Oregon Stateman, itself, goes back to the frontier era, when Oregon was still & Territory. It was founded in 1851. Indeed, when the Statesman celebrated its first century of publication, I had the honor of speaking at its commemorative banquet along with one of our State's illustrous historians, Dr. Dorothy O. Johansen, of the faculty of Reed College in Portland.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the thoughtful column by ex-Governor Charles A. Sprague from the Salem Statesman of June 10.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

#### (By Charles A. Sprague)

Today Oregon formally launches its Centennial Exposition and accompanying International Trade Fair. And the Statesman publishes a special centennial edition both to aid in promoting the exposition and as a show window for the mid-Willamette Valley. Salem hangs out the welcome sign to vacationists and travelers, inviting them to come this way this summer, and to tarry a while in the capital city.

The century of statehood has been one of both exploitation and development. The pioneer period was drawing to a close when Oregon was admitted in 1859. While the population of the new State was not large. communities were securely founded, land had been broken to the plough, lumbering had become a major industry.

Oregonians of the mid-19th century were stamped from the same dies as other Ameri-They followed the instinct to move westward, seeking better economic oppor-tunity, free land, wider horizons, and the chance of building a new American State on the Pacific coast.

Like Americans in other parts of the country, their greed and eagerness for quick realth led to excesses: Fraud in acquisition if land, waste of natural resources on the

lange, in the mines, and forests.

The political history of Oregon followed he pattern of other States, a sorry pattern in many respects, until Oregon at the turn of the 20th century led a great revolt to cleanse collicies, democratize the legislative process, and wipe out the boss control possible under the converse convention.

he caucus-convention system.

Now, at the end of its first century as a state, Oregon ranks high in standards of lublic morality, conservation of resources, apport of education and deployment of lovernment for the public good. It is essentially a State where moderation prevails. Its climate does not go to extremes. Rich and poor are not poles apart—wealth is broadly diffused. Personal drive for power and place is tempered. Radicalism does not flourish, nor yet blind reaction.

It is a goodly land, fair to look on, rich in life's enjoyment for those who seek it here. Its people are friendly without being officious, helpful without being oversolicitous. They find in frequent communion with nature, at the seashore, in the mountains, along lakes and rivers rest and refreshment

for their souls.

In this centennial year, we are looking backward, reviving memories of our past, tying in dress and in exhibitions to recreate the Oregon of a century ago. But, in the phrase which has almost become a cliche, the past is only prelude. So we look ahead and face forward, fully conscious of the fact that our next century will be what the Oregonians of today and tomorrow make it. The foundations of natural resources are lood. The roots of the population are firm and sound. Hence, the promise is good that our second century will be one of progress it not of spectacle, and that we shall build here a society and a government worthy of our endowment.

## Diversity in New Hampshire

EXTENSION OF REMARKS

# HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. COTTON. Mr. President, the June 22 issue of Broadcasting magazine, the business weekly of television and adio, devotes a 44-page special section to a discussion of "What's Really Hapbening in New England?"

As a New Englander, who for many years has been striving to correct the stale stereotypes which picture the region as a victim of steady stagnation, I am heartened by the perceptive and interesting articles in this special section.

Based on a 2,500-mile tour covering over 90 percent of the area's population, this special section dispels all doubts about the present health of its economy and the bright prospects of the future.

While nobody outside was looking, old New England has been turning modern. It has been lifting its face and strengthening its muscles. The deserted mill is no longer the landmark of the region. A more accurate symbol is the modern factory built of aluminum and glass and set in a land-scaped park just off a six-lane highway.

New England isn't what it used to be. It better, much better; so much better that it is now one of the Nation's liveliest markets for merchandise—even though a lot of beople with merchandise to sell don't know it.

This is the way Broadcasting leads off its special section on New England.

Among the articles in the section is one entitled "Diversity in New Hampshire," which highlights the industrial progress of my State. I ask unanimous consent that the article on New Hampshire from the June 22 issue of Broadcasting be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIVERSITY IN NEW HAMPSHIRE—MILLS AND TOURISM BRING MONEY INTO STATE

The triangular State of New Hampshire matches its three-sided geographical pattern with a rising economic trinity—employment, income and population. All three of these factors show steadily soaring tracks on economists' charts.

This rocky area's three and one-half-century background of tough individualism finds civilization's progress making important changes in its commercial and living habits. Manufacturing is gaining despite the normal New England textile decline, especially in southern Hillsboro County (Manchester and Nashua) where a third of the State's population dwells.

Hillsboro's hills are dotted with factories, many of them new. Shoes and textiles are now aided by electronics, metal products and other types of industries that give the section the variety it needs. Manchester is famed for one of the all-time textile calamities—closing of the Amoskeag mills in 1935, largest textile cluster in the world (see p. 82)

Manchester citizens recovered from the blow, and neighboring Nashua overcame a similar catastrophe that followed shutdown of the Textron plant (3,500 employees). The long pull back by both cities is recorded in many accounts of the textile decline.

### STATE PROMOTION

The success of local cooperative projects led to formation by the State in 1952 of New Hampshire Business Development Corp., second of the sort following Maine's ground-breaking effort. Pooled funds were loaned for business undertakings. In 1955 New Hampshire Industrial Park Authority was set up to find industrial sites of the newer suburban type. The State provided a revolving fund, out of which have come two industrial parks and several new plants.

Outside industry liked the State's tax structure, some plants moving across the line from Massachusetts. Several years ago the State's technical labor supply had dwindled but there's no longer a worrisome lack of technicians and engineers. New Hampshire's unemployment ratio is below the national average.

Sunmer and winter tourism is developing; spring and autumn are coming along slowly. Tourism, bringing in \$225 million annually, is based on breathtaking mountains; 1,300 lakes and ponds; fancy ski tows and other facilities for the skiing set; historic shrines, and several busy beaches on the short shore-line. The State is often called Boston's playground, but its tourist logs show heavy entries from the eastern half of the Nation. Better roads are being built and will be a big help, as will new motels and tourist lodgings. Lake Winnipesaukee has 72 square miles of area. The State claims the greatest concentration of ski areas in the Nation.

Agriculture is just about holding its own, though poultry, eggs, and dairying are doing well; apples are, too.

#### OPTIMISM IN THE AIR

Everywhere around Manchester, Nashua, and Concord, the capital, there is a feeling that New Hampshire's industrial future is bright. Raytheon and other names that mark the newer economy are familiar around

the southern strip. Two-fifths of all income comes from manufacturing, well above the U.S. average. Shoe plants can and do turn out millions of pairs a year. Concord granite is famous. Lumber and wood products are important along with pulp and paper.

Manchester is strong and healthy, its economic developers say with conviction as they look around this modern city of 85,000. They document an increase of 10,000 jobs and doubled payroll since World War II. Unemployment is down—less than the wartime peak—and even textiles are doing better than a year ago. Manchester still has many textile mills, including Chicopee with 750 employees. This year looks better than 1958 and 1958 was better than 1957. The largest metropolis in New Hampshire looks back to Amoskeag and displays this label, "The City That Refused To Die." Jack Tuelon, the city's industrial development agent, is doing a brisk promotion job.

When anybody brings up Nashua's textile collapse, the municipal boosters cite this boxscore: shutdown Textron, 3,500 jobs lost; 19 replacement plants, 3,700 new jobs. Nashua worked hard to fill all that empty floor space after Textron left. Keene, another city in the southern strip, is now diversified with machine tools, metal products, American Optical, Pittsburgh Plate Glass and Pepperidge Farm frozen foods. An industrial park is being built on speculation. Miniature Precision Bearings employes 500. Keene's population is 17,000.

Portsmouth, an ocean port, heard vague rumors about a recession but didn't consider it a matter of much local concern. A historic city of 22,000, it also has military neighbors who feed the civic kitty—Navy shipyard, \$3 million monthly payroll; Pease Air Force Base, \$2 million. Only commercial harbor in the State, it has oil, coal and gypsum coastwide traffic. At the shipyard a big 5,600-ton submarine now on the ways will cost \$100 million and take 3 years to build. It's twice as big as the renowned Nautilus and will toss a Polaris missile 1,500 miles.

Concord, 29,000, has the customary State and Federal payrolls that mark a capital city. Its industrial progress was marked recently by the new \$2 million laboratory of Nuclear Metals, Inc. Other citles are Berlin, 17,000; Dover, 19,000; Laconia, 16,000.

## Not Mr. Benson

EXTENSION OF REMARKS

# HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. BEALL. Mr. President, recently there appeared on the editorial page of one of the leading metropolitan newspapers of the Nation, the Baltimore Sun, an editorial about the dilemma of our farm surpluses. The editorial reminds us that, due to this ill-advised program, which Secretary Benson inherited from previous administrations, we now "have wheat in our hair and running out our ears" and "gradually rising up around us in a nightmarish flood." The editorial calls attention to the fact that Secretary Benson has long been pleading with Congress to adopt a farm program which would cut back surplus in wheat and other key crops, and concludes that "if wheat ends by choking itself to death it won't be Mr. Benson who looks silly.'

The sagacious editorial writers of the Baltimore Sun have for mnay years been writing thought-provoking articles which have attracted nationwide attention. The high standard of Baltimore Sun editorial writing has never waned. I would like to say this word of praise for the Sun. In addition to their superior editorial page is, of course, the paper's thorough and faithful coverage of international, national, and local news. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the editorial to which I have referred, the editorial titled "Not Mr. Benson," which appeared in the June 9, 1959, edition of the Baltimore Sun.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun, June 9, 1959] Not Mr. Benson

There is an awful solemnity about the figures in wheat. In a good year we use up for all purposes about a billion bushels. As of June 30, 1953, we had a carryover of 933.5 million bushels. The 1954 surplus figure was 1.036 billion bushels. In 1955 it was 1.033 billion bushels. It dropped slightly in 1956 to 908 million bushels and a little more in 1957 to 880 million bushels. But last year the carryover was 1.2 billion bushels, or a full year's supply, and it will be around 1.4 billion bushels on June 30 of this year, or pushing toward a year-and-a-half full supply. Yet the new wheat crop will run something over a year's supply in itself.

It is against this backdrop of truly psychopathic overproduction that the House is debating a new wheat bill. One of its provisions would boost the support price from about \$1.81 a bushel to some \$2.13 a bushel. Acreages would be reduced, to be sure, but under the new support enticements the demonic knowhow of the wheat farmers would be pretty sure to make up much of the acreage loss through still more efficient production. We are overwhelmed with wheat. We have wheat in our hair and running out of our ears, wheat is gradually rising up around us in a nightmarish flood that makes one think of the sorcerer's apprentice.

So it is no wonder that a new and full suspicion begins to gain ground among even the most sluggish of the political wheatmen in the Congress. As the New York Times was reporting it the other day they are beginning to wonder whether Mr. Ezra Taft Benson isn't outfoxing them after all. Mr. Benson, fronting for Mr. Eisenhower, has long been pleading with Congress to adopt a farm program which would cut back surplus in wheat and other key crops. The political farmers have chortied at these appeals and used them to prove the Secretary and his boss an enemy of agriculture. But if wheat ends by choking itself to death it won't be Mr. Benson, who looks silly.

## Employment for the Physically Handicapped

EXTENSION OF REMARKS

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. WILEY. Mr. President, today I received from Melvin J. Maas, Chair-

man of the President's Committee on Employment of the Physically Handicapped, a copy of the special report of that Committee to the President.

By and large, the report is an illuminating review of the cooperative efforts by the administration and the Departments of Labor; Commerce; and Health, Education, and Welfare, as well as the U.S. Civil Service Commission and the Veterans' Administration, for improving programs in this field. The objective is to enable those individuals unfortunately handicapped to have a greater opportunity to be productive, economically independent citizens of their communities.

The general topics considered by the Special Advisory Council included:

First. "Hire the handicapped—it is good business":

Second. A review of the performance of physically impaired workers in the manufacturing industry;

Third. Efforts to tell foreign countries of the American interest in rehabilitation; and

Fourth. Broader public education on a true understanding of the safe work performance of the handicapped; and others.

In addition, the Advisory Council reviewed such programs as: Services to the handicapped; counseling; vocational rehabilitation; and other constructive efforts to brighten the outlook for the physically handicapped.

All of us regret, of course, that there are a substantial number of our citizens who, for a variety of reasons, find themselves physically impaired. It is always gratifying, however, to note that a vast majority of these do not suffer similar impairment in outlook—in spirit. Rather, they have demonstrated real courage through admirable efforts to adjust to their circumstances and, at the same time, find ways and means to work at responsible jobs, to carry on family relationships, and to integrate themselves as useful, constructive citizens in their communities.

The President's Committee on Employment of the Physically Handicapped, I believe, has made a constructive contribution to better understanding of the problems faced by these individuals, to working out programs of opportunity for them and to increase public understanding of their real needs,

The report, I believe, merits the attention not only of the Senate, but of people throughout the country. The overall objective is to attempt to assure that all of our citizens, including those with impairments through no fault of their own, can and should be provided an opportunity to lead a useful, constructive, independent life.

As an illustration of the constructive work by the President's Committee, I request unanimous consent to have excerpts from the report, reflecting the fine work of Federal departments and agencies, printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

REPORT OF THE SECRETARY OF LABOR

Since the last meeting of this council, the Bureau of Employment Security has continued to emphasize services to the handl-capped, with particular reference to the aims and objectives of Public Law 565. The past year began during a serious economic maladjustment, in which many more workers than usual were unemployed, and job openings were drastically curtailed. As the year closed, the economy was slowly but steadily progressing toward normalcy. During the year the Employment Service increased its efforts to maintain employment opportunities for the handicapped at the highest possible level.

#### SERVICES TO THE HANDICAPPED

During 1958 State agencies received the greatest number of applications of handicapped applicants ever—472,659—a number 5.6 percent greater than the total for such applications in the previous year. This raw of increase was not as sharp as that experienced for new applications by all applicants, which was 13.4 percent above the 1957 total. These ratios indicate that relatively fewer handicapped persons than workers in general sought the assistance of the Employment Service during the year. This fact might be taken as an indication that employers are responding to the President's Committee's appeal to not only hire the handicapped, but to retain them on the same basis as other workers.

The placement of all applicants declined during the past year, and that of handicapped applicants followed the general trend. A 12.7 percent decrease from the 1957 figure for nonagricultural placements of handicapped jobseekers occurred, with such placements totaling 250,757 for 1958. This decrease is somewhat sharper than the decline experienced for similar placements of applicants in general, and seems to indicate that the handicapped found competition with nonimpaired workers not quite as favorable as would be desired.

Despite the unfavorable economic situation employment service agencies were able to place 5,299 of the 10,858 rehabilitated clients of State vocational rehabilitation agencies referred to them. The placement of such persons was undertaken in acordance with the provisions of Public Law 565, which require State vocational rehabilitation agencies to make maximum use of the services and facilities of State employment service agencies in the placement of rehabilitated clients

Counseling service was provided to 152,104 handicaped applicants in 1958, who comprised approximately 32 percent of all handicapped applicants registered by the State agencies.

The emphasis placed upon service to the severely disabled by the Bureau was in-creased during the past year. Intensified efforts on behalf of this group are more necessary than ever when there is a shortage of job openings. Our placement and counseling services to these people were therefore augmented by more extensive job development efforts and by stress in counseling upon broader exploration of occupational possibilities and adequate preparation for employment. Since many of the severely handicapped appeared at public employment offices in need of medical, vocational training, and other services before they could be considered ready for employment, the Employment Service found it necessary to refer them to State rehabilitation agencies and to other agencies for these services. Another example of the emphasis which was given to serving severely disabled groups was the establishment or expansion, in several States, of specialized programs for mental hospital discharges and for the mentally retarded. Such programs were in operation in various States, including New York, Illinois, Rhode Island, Indiana, Pennsylvania Hawali, Massachusetts, Wyoming and Ari-

#### STAFF DEVELOPMENT

Effective cooperation with other agencies a serving severely disabled persons requires toordination of services, mutual understandng of the programs and responsibilities of he several agencies, and the exchange of information about, or useful in helping, the Persons served. In order to develop more elective cooperation, the Employment Servte has joined with rehabilitation agencies h training activities to increase the knowltige and skills of the staffs of both agencies. tuch of this training has been provided brough grants from the Office of Vocational ehabilitation, and has been conducted in astitutes, conferences, and courses dealing ith the rehabilitation and placement probms of various seriously disabled groups. or example, an institute was conducted at ennsylvania State University in July 1958, hich was attended by State agency and ederal representatives of both employment nd rehabilitation services in the North entral and the Atlantic Seaboard States. This institute considered the employment and rehabilitation problems of older cardiacs, the blind, dischargees from mental abspitals, and the mentally retarded. A milar institute—attended by key personhel in the Pacific coastal area, Hawaii and Alaska-was just recently held at San Frandsco State Colege. In these sessions, the Problems of placing difficult-to-place clients the rehabilitation agencies were considered.

## IMPROVING RESOURCES FOR COUNSELING

We have observed that counseling service of a high quality is a critical requirement many disabled persons who must make tuitable occupational choices or job adjustments. One of the fundamental requirehents of such counseling is the availability of accurate and extensive information about the physical and other demands of occupations, so that realistic judgments may ande concerning their suitability for dis-abled workers. During the past year, we have made much progress on a project to collect and organize rather detailed firsthand information about the usual physical demands of thousands of jobs. When com-Meted, this new fund of information will verify and supplement data that we now have, and will enable counselors and others to expand the range of occupations which hay be considered in seeking suitable em-ployment for handicapped individuals.

# COOPERATION WITH THE PRESIDENT'S COMMITTEE

The Bureau of Employment Security and the State agencies continued the active supbort of the President's Committee's procrams, which we have been pleased to pro-Nde for so many years. The national office taff of this Bureau has worked closely with he Committee in a consultative capacity to help keep it informed on matters relative to its programs and objectives and in assisting the Committee in determining matters of brogram planning and emphasis. In most states, the members of the employment servthe staff played a vital role in carrying out brograms of the President's and Governors committees, and in many instances held the cutive offices on the Governors' commit-The presence of so many employment dervice people at the last annual meeting of the President's Committee was evidence of their belief in, and the zeal with which they work for, the objectives of the Comhittee. State and Federal persons were also active in the six regional meetings sponsored in by the Committee during the year and in the nationwide activities observing NEPH Week. An achievement of which the Bu-leau of Employment Security is modestly broud is the prompt duplication and distri-bution to State agencies of the draft guide. Facilities in Public Buildings for Persons

With Ambulatory Impairments," recently prepared by the Veterans' Administration for the President's Committee. We believe that we have an obligation to make the offices through which the handicapped are served as accessible and as comfortable for them as possible, and we have strongly urged the State agencies to adopt the principles contained in this document when altering existing premises or when acquiring new offices. During the past year the Bureau of Employment Security has, of course, prepared and distributed to the State agencies informational and promotional materials designed for use during NEPH Week or on a year-round basis. Also, it has purchased and placed in each regional office a copy of the film "Employees Only" to supplement copies otherwise available to State agencies for promotional purposes.

The Women's Bureau joined with the Office of Vocational Rehabilitation in the publication of the pamphlet "Help for Handicapped Women," which describes how disabled women can be assisted through rehabilitation to become capable homemakers and wage earners.

Of particular interest to the President's Committee and this Council, is the work of the Bureau of Labor Standards to improve workmen's compensation laws throughout the country. This Bureau developed a set of standards for such laws which include provisions for rehabilitation of the injured worker and for second injury funds that will help to eliminate the objection of employers to handicapped workers based on the fear of excessive liability for a second injury. The advantages of these provisions have been emphasized to many interested groups particularly to the Council of State Governments, and the legislative adoption of such provisions by the States has been urged.

We know that important accomplishments of the President's Committee and the Governors' and local committees have helped us immeasurably in our efforts to improve employment opportunities for handicapped workers. Without such help, our task during the difficult year just passed, would have been much more difficult.

JAMES P. MITCHELL, Secretary of Labor.

#### Report of the Secretary of Health, Education, and Welfare

It is a pleasure to meet with you for this annual assessment of our efforts to restore more handicapped people to useful places in American society. The work which the President's Committee and our departments and agencies are doing to bring more handicapped people into useful employment is a phase of the Federal Government's activities which never falls to stir my enthusiasm.

#### WITHIN THE DEPARTMENT

I am happy to report another year of growth, improvement and accomplishment on the part of the agencies of our Department as they relate to the problems of dis-As most of you ease, injury and disability. know, many of our agencies are concerned with the varied problems of disability. The National Institutes of Health and other units of the Public Health Service, the old age and survivors insurance system, the Children's Bureau, the Bureau of Public Assistance, as well as the Office of Vocational Rehabilitation, all are concerned in very real and direct ways with disability in one or more of its various stages.

# ADVANCES IN THE VOCATIONAL REHABILITATION PROGRAM

You will be interested, I am sure, in some of the highlights of last year's achievements in advancing the Federal-State program of vocational rehabilitation.

Number rehabilitated: Another new record was established in 1958, when nearly 75,000 handicapped individuals received rehabilitation services and were established in useful jobs. This was an increase of more than 3,000 over the previous year.

Number served: Another measure of growth is the fact that over a quarter of a million handicapped persons were served by the State rehabilitation agencies last year. The figure represents an increase of 8.3 percent over the previous year, and offers great encouragement for further increases in the number to be rehabilitated in the coming years.

The severely disabled: And equally important gain has been in the number of severely disabled individuals who are served by the State vocational rehabilitation agencies. The proportion has been going up steadily in recent years and in 1958, 10 percent more severely disabled received services than in the preceding year. Associated with this—and reflecting the same trend—is the increased use of rehabilitation centers and related facilities for evaluating and restoring disabled people. In 1958, over 8,000 handicapped people received services in such facilities—an increase of 21 percent over 1957.

Growth of State agencies: As most of you know, the State vocational rehabilitation agencies have been confronted with a mountainous task for these past 4 years—the vastly increased number of people demanding services, the appearance of more and more severely disabled people who require their services, the introduction of the disability benefits provisions under social security, etc. With this in mind, we have been especially pleased to note the growth of the State rehabilitation agency staffs to meet this heavy workload. Their staffs for this year will exceed 4,200 people—an increase of about 300 over last year—and an increase of 1,500 (55 percent) over 1954.

Research: One of the most heartening phases of all our rehabilitation activities is the program of research and demonstration grants. In the swift-moving field of modern rehabilitation, the work we will be doing tomorrow will be heavily influenced by the research underway today.

research underway today.

Last year the Office of Vocational Rehabilitation approved grants to launch 81 new projects, dealing with a wide range of diverse rehabilitation problems. Currently over 150 such research investigations and demonstrations are underway.

Training professional personnel: One of the most realistic problems facing the expansion in rehabilitation today is the need for a drastic increase in the number of professionally trained persons to provide services to the handicapped. To help meet this need. Office of Vocational Rehabilitation administers a program of training grants designed principally to do three things: (1) To help strengthen teaching programs in universities; (2) To give some financial support to students at the graduate level who are pursuing specialized training toward a rehabilitation career; and (3) To provide short, intensive training courses for rehabilitation workers in specialized fields.

I am happy to report splendid progress in the development of this training program. In 1954, before the new act authorized such a training program, only about a dozen graduates in rehabilitation counseling were becoming available each year to meet the staffing needs of the State rehabilitation agencies and other programs. At present, more than 300 graduate students are finishing their graduate work each year, and entering the State agency programs and others.

In the medical field, traineeship grants were made this year to 30 approved residency training programs in physical medicine and rehabilitation, covering traineeships for about 145 physicians. To provide basic re-

habilitation instruction for students in medical schools, grants are now being made to 25 of the 82 approved schools of medicine.

Other grants are helping to offset the shortages in physical therapy, occupational therapy, and other fields. Last year we completed the first year's operation of a training grant program for speech and hearing therapy—which has been one of the most crucial shortage areas in the entire rehabilitation field.

#### OTHER RELATED ACTIVITIES

We have taken pleasure in joining with the President's Committee and other agencies in the series of regional meetings scheduled for this winter and the coming spring. I am informed that the meetings at Montgomery, Ala., and at Indianapolis were highly successful. We look forward to equally productive gatherings at Dallas in April and Atlantic City in May.

The Office of Vocational Rehabilitation has been deeply involved with the President's Committee in the four ad hoc committees which have been investigating certain phases of the problems of the handicapped, on a project basis and the reports from Miss Switzer indicate that very substantial progress has been made. I am glad that we will be hearing the full reports of the committees at this meeting and I assure you that we expect to give every possible help in completing these assignments.

I have reserved for my final comment the highly successful work of the Coordinator's Committee in our Department. This group of personnel officials, representing the agencies of our Department, has done a remarkable job of practicing what all of us preach—the employment of the handicapped. In the 19 months since the Committee was established, 590 handicapped persons have been hired in our Department. The net annual increase in their salaries, as a result of our hiring policy, has totaled \$770,131. At the same time, we have acquired competent workers who contribute as fully to the Department as our able-bodied employees.

In summary, then, we have enjoyed a year of substantial progress in our efforts to bring more handicapped men and women into useful and productive places in life. We appreciate the opportunity to carry forward this work in close cooperation with the President's Committee and the other Federal agencies.

ARTHUR S. FLEMMING, Secretary of Health, Education, and Welfare.

#### REPORT OF THE SECRETARY OF COMMERCE

While, unlike some other agencies represented on the Advisory Council, the Department of Commerce does not have a basic mission in broadening job opportunities for the handicapped, we are nonetheless eager to support this program in every way possible to help insure its success. We sincerely feel that the business community, as well as the Government, has profited a great deal, and can profit considerably more by aggressively exploiting the opportunity to utilize this valuable manpower resource.

Here are some of the Department's recent activities which might be of interest to the Council:

1. Trade fairs. We have made arrangements to include exhibits on utilization of the physically handicapped as a regular part of the International Trade Fair program. This will provide a new and effective medium for publicizing efforts to insure equal employment opportunities for handicapped persons and wilf demonstrate to other nations our efforts to utilize these people.

2. Lobby exhibit. As you know, we have a regular program of exhibits in the lobby of the Commerce Building which attracts a great deal of pulic interest. We are currently featuring the new exhibit developed by the President's Committee as a part of this program. We feel that this display of the exhibit will very effectively promote the Committee's program.

3. Business Advisory Council. The Department has made the Council membership list available to the President's Committee for distribution of Committee material which might be of interest to them. In addition, an opportunity was provided this year for the distribution of Committee material at a Business Advisory Council meeting. Of course, it should be realized that our contacts with the Council on matters not related to its primary purpose are necessarily limited.

4. Internal operations. The Department has continued the aggressive program of placement and retention of the physically handicapped which has received recognition by the President's Committee in the past. This program resulted in the placement of 127 handicapped persons in a wide variety of Department jobs during this past year. We have strengthened our program through the designation of a top staff man as coordinator of employment of the physically handicapped in accordance with the plan developed by the Civil Service Commission. We have also appointed coordinators for each of our bureaus. This has provided us with a smooth-working team in this field and has enabled us to get the program down to the level where results can be achieved.

 Attendance at meetings. Department officials have attended all regional meetings of the President's Committee as well as the meetings in Washington.

LEWIS L. STRAUSS, Secretary of Commerce.

# REPORT OF THE CHAIRMAN, U.S. CIVIL SERVICE COMMISSION

I was not able to attend the meeting of this Council held in January of last year, but I subsequently had proof that Mr. Warren B. Irons, who was shortly to become our executive director, represented the Commission, and me personally, in a most able fashion.

This report will cover five points: (1) Our coordinator program; (2) publication and distribution of the pamphlet "Selective Placement"; (3) specific advances in increasing the employment opportunities for the handicapped in the Federal service—special reference to position of telephone operator; (4) NEPH Week activities; (5) ad hoc committee staff work and general comments:

#### 1. COORDINATOR PROGRAM

Past: The record will show that at the last meeting of the Council we had set a definite date in April of 1958 to hold the first meeting of the Coordinators for Placement of the Physically Handicapped in the Washington, D.C., area. This meeting, an all day affair, was held as scheduled with over 200 in attendance. I don't believe it is too immodest to state that the meeting came fully up to expectations.

Follow-ups by correspondence and personal visits have been conducted and we are glad to say that interest has been maintained and results are being produced, except in a few areas which are being made the subject of special attention. We have established a practice of referring all appropriate problems to agency coordinators in every instance where feasible.

Future: Another meeting of the coordinators is planned for mid-July 1959. This is to be in conjunction with a 5-day conference of the Commission's Regional Medical Officers. Wednesday, July 15, of the week of our Medical Officers Conference, they will attend the 1-day session of the coordinators which is planned for that date, where they will take part in the panel discussions. In other words, the coordinators meeting will

serve as a considerable portion of the conference time our regional medical officers will devote to the Commission's program for the physically handicapped.

### 2. PAMPHLET "SELECTIVE PLACEMENT"

Past: This was reported in the planning stage at the last meeting. We said we were going to bring out a publication as a sort of an interim stock-taking measure in our continuing job analysis activity. This was for two purposes: (1) To try out the effective-ness of a do-it-yourself (by agency rather than Commission people) feature with respect to analyzing jobs to determine the basic or minimal physical capacities; (2) To permit us to lock closely at the current edi-tion or fifth edition of a "Guide for the Placement of the Physically Handicapped. Work had been started on the fifth volume of this publication and we wanted to see (a) whether the present format (individual volumes devoted to agencies or groups of agencies) should be maintained; (b) if duplication and repetition could be eliminated and (c) if the guide could be condensed by emphasis on key or typical positions.

This pamphlet was received from the Government Printing Office just in time for the 1958 NEPH Week. Complimentary distribution has been made. We are also glad to report that the Government Printing Office has sold several thousand copies and a new printing will no doubt be necessary in the near future.

Future: We know that "Selective Placement" is not perfect so we are going to try to find out how we can improve it. Also we want to find out the direction our jobanalysis activities should take and how best to proceed further with the guide.

To accomplish these purposes we are now conducting a survey in approximately 30 of the larger agencies in this area. We have received many very complimentary letters of acknowledgment but this is not enough. We are not asking for comments by letter but we are putting it on a personal visit and interview basis. Mr. Carl Murr, our vocational rehabilitation officer, is conducting the majority of these interviews.

We are saying to the officials we interview that now the pamphlet has been out for approximately 6 months we would appreciate answers to questions such as these:
(1) What is your frank opinion of its effectiveness?; (2) just exactly what use are you making of it?; (3) do you think it has any definitely weak points?; (4) what would you do to increase its usefulness?

We hope to arrive at all necessary conclusions and have our plans for future activities along this line firmed up during the coming year.

3. SPECIFIC ADVANCES IN INCREASING THE EM-PLOYMENT OPPORTUNITIES FOR THE HANDI-CAPPED IN THE FEDERAL SERVICE—SPECIAL REPERENCE TO POSITION OF TELEPHONE OPER-ATOR

Past: Until recently, the physical standards for telephone-operator positions required vision in at least one eye, without exception. In the course of its study of telephone-operator positions, the Commis-sion found that many blind persons can do the work satisfactorily with the use of Braille attachments to switchboards, and that such attachments can be obtained for one-position (80-plug) and two-position (160-plug) switchboards. After observing blind operators use such equipment at the Maryland Workshop for the Blind, the Mary land School for the Blind, and the Columbia Light House for the Blind, representatives of CSC's Medical Division concluded that physical requirements for telephone-oper ator positions in Government should be liberalized. General Services Administra-tion gave the Commission great assistance in this project and that agency has agreed make the attachment available without st to blind operators employed in Govmment. I am now pleased to report that the Commission's examination announcement for the position of telephone operator has been amended to admit totally blind splicants.

Future: We are not always able to publibe our day-to-day work items; however, I on assure you that as far as time and reurces permit, we are constantly looking at tery position under the Commission's jurisction for the purpose of facilitating the facement and retention of the physically landicapped to the greatest practicable exint.

We have considered the positions I am about to refer to on previous occasions, but to are again subjecting them to close study to see what practical arrangements can be worked out to enhance the employment opportunities of the blind. I refer to the positions of X-ray darkroom technician, psychologist (especially from the research angle) and economist. These are examples of the occupational areas we are now working in.

#### 4. NEPH WEEK

Past: In connection with the 1958 week we hade every effort to get our instructions and stide lines out to our regional offices as early a possible. The type of reports of their activities during the week which we wanted were outlined very pointedly. They were given until January 15 to submit their comblete summary reports. The reports are now in and are being studied most carefully and citically.

Future: When the studies of the reports from our regions are completed we will rate them as outstanding, satisfactory, or as leaving noticeable room for improvement. The agions will be advised individually as to our sadings and evaluations. Concerted effort will be exerted to profit by past experiences by using them to develop techniques which will intensify and broaden participation in this year's (1959) NEPH week.

We have already noted beautifully prepared reports by certain agency field installations which were forwarded by our regions that give every indication of wholehearted coperation and very concrete results. It is our intention to see that these reports are brought to the attention of the heads of the agencies concerned.

## 5. AD HOC COMMITTEE STAFF WORK

The Commission was represented on two of the four committees which stemmed from the last Council meeting. Mr. Irons is a member of one committee which has very harly, if not entirely, completed its work. As not made quite as much progress. I will not dwell on the work of these committees at any length since their reports are to be presented later in this meeting. Suffice it to say that I believe that the Commission will always stand ready to lend its resources to work of this nature.

As you have no doubt heard, my appointment as Chairman of the Civil Service Commission expires at the end of this month.

Mr. Roger Jones has been nominated by the resident to be my successor.

As I come to close of my work with the Civil Service Commission, I want to say to You, Mel, and my fellow members of the Advisory Council of the President's Committee, that my association with you in our common objective of seeing that our handicapped citizens are given every reasonable opportunity to make their contributions to their Government's work force has been a most rewarding experience. Even though I will be removed from the Government scene, my interest in the handicapped will not diminish.

Chairman, Civil Service Commission.

REPORT OF THE ADMINISTRATOR OF VETERANS'
AFFAIRS

If you were to ask me what the Veterans' Administration has done this past year for the handicapped, I would say, "very little."

But if you were to ask what the VA has done to help the handicapped help themselves, my answer would be, "very much." For whether you consider VA as an em-

For whether you consider VA as an employer; or as a rehabilitator of disabled veterans; or as a participant in the work of the President's Committee, all of our efforts have been directed toward a single end:

To provide the handicapped with a key to independence. To help them use the key. To help them push open the door, if it sticks on its hinges.

Not charity; not handouts. But independence.

Well, what has the VA been doing since we last met?

ADMINISTRATOR'S COMMITTEE ON THE HANDI-CAPPED

Early last year, I appointed an Administrator's Committee on the Handicapped, to give a new "push," a fresh impetus, to VA's activities in behalf of the handicapped.

Its able Chairman, Dr. H. Dwight York, is himself temporarily handicapped, at home nursing a broken ankle.

Many of the following VA's achievements during the year have stemmed directly from the Committee's insipred leadership.

#### A NEW REPORTING SYSTEM

Exactly how many handicapped men and women work for VA? What are their jobs? How are they performing their jobs? What are their disabilities?

To answer these any many other questions, we have revised our personnel reporting system. I am sure the results will be more than a new table of statistics. I expect them to be convincing proof, if further proof is needed, that it is good, sound practice to hire the handlcapped in all areas of VA operations.

And that it is good, sound practice to hire the handicapped everywhere in the United States.

## A NEW STATEMENT OF POLICY

So that there will be no misunderstanding of VA's official position regarding employment of the handicapped, a formal statement of policy aimed at increasing employment of the disabled was issued to all VA departments and staff offices.

A number of other Federal agencies have asked for copies of our policy statement. I am sure all of you have seen the statement but, if not, we have copies for you.

I might say that it is frank and forthright. It does not hide its exact meaning behind a welter of weak words.

#### IMPRINT ON VA ENVELOPES

If you have received mail from the VA lately, you may have noticed: Every VA envelope now carries the slogan of the President's Committee, "Hire the Handicapped; It's Good Business."

When you consider that the VA sends out some 60 million pieces of mail each year, the message is gaining coverage.

## BROCHURE FOR SUPERVISORS

Our Personnel Office has prepared a booklet which shows—with picture and text—66 handicapped VA employees on the job. This will go to all VA supervisors and should go a long way, I believe, in breaking down any remaining prejudice.

The booklet will be off the press in March,

## ACCESS TO VA BUILDINGS

We are surveying all VA regional offices, hospitals, and centers to find out whether all provide easy access for persons in wheel-chairs. If not, we will take steps to see that they do.

In central office, we have installed ramps for visitors and employees in wheelchairs.

#### VENDING STANDS

A sampling of all VA installations has revealed that one-third now have vending stands, canteens, or newsstands operated by the handicapped.

During the year, the cafeteria in our regional office in Los Angeles was turned over to a blind operator. The cafeteria at our St. Paul Center will be put in the hands of a blind operator soon.

VA VOCATIONAL REHABILITATION FOR DISABLED VETERANS

VA's prime responsibility is to the servicedisabled veteran. In our vocational rehabilitation training program, we have taken a number of steps to bring him closer to gainful employment:

We are preparing a study of occupations held by veterans with epilepsy—which today, unfortunately, still sets men aside, as it did during the dark ages of the Middle Ages,

And we are working on another study of occupations held by the homebound—veterans so severely disabled they are confined to their homes.

Both should be ready sometime during 1959.

They will be used—as are previous VA studies of paraplegics and the blind—in the counseling of disabled veterans planning on vocational rehabilitation training. But they also will be available to other agencies and to individuals, to help conquer the walls of prejudice and to render new hope to the handicapped.

Also, we recently have changed our regulations to help disabled veterans make a smoother and quicker comeback to productive employment.

We now allow disabled veterans to get a head start toward independence by beginning their vocational rehabilitation while they still are patients in our hospitals.

And we now permit veterans to start their training even if they cannot complete it by the termination date—so long as some other agency, such as a State rehabilitation agency, can pick up where we must leave off.

Also, we now offer job-finding assistance and personal counseling to disabled veterans after they have completed their training—if they are having trouble making a go of life, unaided.

And finally, we now help the seriously disabled to find sheltered employment, if they are not able to compete in the give and take of our fast-paced everyday life.

### ONE FINAL WORD

All these many activities didn't just happen at the VA. They were caused by the men and women who work there—men and women who consider the cause of jobs for the handleapped not just another task, but a living and vital crusade.

They deserve our tribute and our gratitude.

SUMNER G. WHITTER,

Administrator of Veterans' Affairs.

## Weights and Measures in Alaska, the 49th State

EXTENSION OF REMARKS

# HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. BARTLETT. Mr. President, when the 44th National Conference on Weights and Measures was in session in Washington, D.C., not long ago, R. A. Findlay delivered an address in which he told how the weights and measures laws are enforced in the 49th State. Since conditions there in respect to enforcement are so different from those in the other States, and since Mr. Findlay has told about this in such an interesting manner, I take pleasure in presenting here the text of the speech he made in Washington June 10, and ask that it be printed in the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Weights and Measures in Alaska, the 49th State

(By R. A. Findlay, inspector, division of weights and measures, department of State police, State of Alaska)

To understand the problems of weights and measures enforcement in Alaska as it differs from those of the other 48 States—or I should say 49 now that Hawaii has been admitted to the Union—one must first have a general knowledge of Alaska in relation to its size, population, and transportation. First then, I will give you a brief outline of our State and the conditions we encounter in enforcing weights and measures supervision.

Alaska is a vast territory which covers an area of 546,400 square miles with a coastline of 33,904 miles. This area is more than twice the size of the largest State in the continental United States, and our coastline exceeds the combined total of all the States, The southern tip of the State's panhandle is 750 miles north of Seattle; the State adjoins Canada on the east and extends north to the Arctic Ocean and west to the Bering Sea—at one point only 21/2 miles separates Little Diomede Island of Alaska from Big Diomede Island off the coast of Siberia, a part of Russia. If you were to fly by commercial airline from Ketchikan, the southernmost part of the State, to Point Barrow on the coastline of the Arctic Sea or to Wales on the Bering Straits, actual flying time would exceed 8 hours. You would experience climatic conditions from a possible 60 degrees above zero to a possible 40-50 degrees below zero during the winter months. Contrary to popular belief, Alaska is not a field of ice and snow. In the interior and southern parts of the State we experience conditions very similar to those you would find in your own State. Around the Fairbanks area, in the summer months the temperature rises to 90 degrees and daylight lasts for 19 to 23 hours.

Alaska's population is estimated at 210,-000, figuring a little more than 2 square miles for each resident. In summer months construction workers, fishermen, and tourists increase the population by another 100,000.

Costs of living are much higher than those in the other States. The latest figures show Juneau prices 21.4 percent and Anchorage prices 35.2 percent higher than Seattle prices. Fairbanks was rated 45.4 percent and Nome 49.9 percent above Seattle. With the cost of living at such a high peak, weights and measures officials and representatives of industry can readily understand the importance of weights and measures supervision in Alaska to protect the public against unfair practices.

Our weights and measures supervision has been a division of the State police with just one inspector to handle all the work of testing, supervision, and enforcement of regulations. As you look at the map of Alaska you may wonder how just one man is able to travel over this vast area and still control and enforce the regulations required of us. First, then our police force is made up

of some 50 officers stationed in headquarters of the larger cities or in outposts in the less-populated areas. This personnel, in effect, has supplied the weights and measures inspector with 50 or more deputies to assist in weights and measures enforcement. The officers do no actual testing of equipment but do help by handling preliminary complaints of violations, which are forwarded to the inspector for investigation. They advise merchants and the public of the weights and measures regulations and in many instances have witnessed the breaking and resealing of equipment that needed repair. Phone service, office equipment, and transportation are provided in many cases when the inspector is in the locality of a headquarters station or outpost.

In order to visit the many cities and towns, particularly in the southeastern part of the State, which is accessible only by plane, testing equipment must be readily available. It would be impractical and expensive to transport test weights and measuring equipment on each trip. To solve this problem, we have purchased a number of test weight kits, 50-pound weights, and 5gallon test measures and have placed them in most of the cities scattered throughout the State for the inspector's use when visiting these localities. Westward or interior Alaska, as we call it, differs from the south-eastern part of the State in that there are some 5.000 miles of highways. I wish to point out that our cities are unlike some of the larger cities in your States where you have populations of 200,000 to over a million in a concentrated area. Anchorage, our largest city, has an estimated population of 60,000, and other cities and towns range from 20,000 to less than 1,000 persons. Such populations, of course, reduce the number of markets, gas stations, and other establishments that the inspector must visit in each city. In some cases it is necessary only to spend a day or two in one of the smaller towns and to then travel to the next city or village.

In 1957 we placed in service a weights and measures truck, complete with test weights, standard measures, and a 100-gallon meter prover equipped with a power-take-off pump for checking vehicle tank and bulk-plant meters. This equipment is stored in Anchorage, some 800 miles from the Juneau headquarters of our weights and measures activity. The equipment is used to cover most of the locations within a radius of 500 to 800 miles of Anchorage, as well as all of the highway system.

If you were to travel with me on a field trip of inspections, we would leave our Juneau headquarters by plane and fly 4 hours to Anchorage, where we would work that city for a period of 3 to 4 weeks. We would then travel by truck the loop route to Fairbanks, 456 miles distant, checking all the gas stations, combination lodges, grocery stores, and small towns on the about 6 days we would arrive in Fairbanks, remaining there for a period of 2 to 3 weeks. We would then take a different highway, working to the Canada-Alaska border, then driving through 500 miles of the Yukon Territory and back to the souths' ern border of the Yukon-British Columbia and Alaska borders. We would work the Alaska Highway again to the small town of Haines, where we would ferry our truck and equipment to Juneau, a trip of 6 hours by water, and enjoy the scenery of the most beautiful mountains and glaciers in the world. By this time we would have spent about 50 days in the field and inspected some 400 pieces of equipment.

After a couple of weeks working around Juneau with our truck, we would take the ferry again and drive through the Yukon Territory to the Alaskan border, then take another route of the seacoast towns, mountain villages, and highways, eventually re-

turning to our starting point at Anchorage From here we would fly to Nome and several other cities that are inaccessible by road. There we would find conditions veridifferent from those in the larger cities that we had just left. Living conditions and prices are much higher, for every item of food, clothing, and fuel must be transported by boat or plane. The people in these remote areas are mostly native Indian or Eskimo. The meat markets instead of selling all beef, have their cases filled with reindeer meat from the local herds of refrederal Government.

The native Eskimo is a herder (better known to you as a cowboy) except that the Eskimo walks with his herd instead of using a horse as most cowboys do. Also, the methods of buying and selling are different from the larger cities. For many years the buying and selling of fish has been exchanged on a size basis instead of the cus tomary weight basis that is practiced in the southern part of the State. This makes is difficult, in some respects, to promulgate weights and measures regulations to be uniform for the entire State. Bread is another item that would be difficult to control to uniform weight and size, as you have in your States. In a number of the remote towns, the local baker may have three of four dozen bread pans that may vary is size and shape-resulting in the product being offered for sale in sizes ranging from 1 pound to 1 pound 4 or 5 ounces, all selling for the same price. If we put out regulation that bread for the entire State must be sold in a 1-pound or 11/2-pound loaf with the generally accepted tolerances we would probably force these small bakers out of business and have the local population run us out of town. I do not wish to give the impression that we in Alaska do not have uniformity in our regulations, however, there are exceptions like those have just stated that must be considered when drafting regulations to be enforced over the entire State.

Other regulations that we do enforce are those covering the sale and repair of weighing and measuring devices. The salesman or repairman must report to the department within 10 days the location and type of equipment sold or of the major repair work performed on scales, gas pumps, or other equipment. Before any repairman may break a seal that has been placed on a piece of equipment by the inspector, he must first obtain a permit issued by our office. These permits are issued on a yearly basis to repairmen who are properly qualified both as to experience and as to general knowledge of weights and measures regulations.

Regulations concerning mechanics of equipment were promulgated in order to control to some extent the practice of sales, men who come to Alaska with an order book to sell scales and ship them to the custome without any follow-up to see that the equipment is properly installed for use. One section of our regulations reads, in part: "Any person who \* \* sells \* \* offers for sale \* \* or exposes for sale \* \* \* a fals weight or measure \* \* \* is guilty of a misdemeanor and upon conviction shall be punished by a fine not exceeding \$500 or imprisonment not exceeding 1 year, or both." Whave notified all known dealers and sales men doing business in Alaska concerning these regulations. They have accepted these regulations and are willing to cooperate in the enforcement of our weights and measures regulations.

Prior to 1956, Alaska had very little weight and measures enforcement, and packer shipped into the State packages having no declaration of the net quantity of the commodity. The merchants were openly selling products on a gross weight basis although the law concerning net weight sales have

een in effect since 1939. This irregularity resses the importance of education, enbreement, and publicity. Unless the mer-hants and packers were informed of the egulations and the weights and measures Incial continually made routine inspections, his habit could have developed into serious omplications which would have been diffi-Gilt to correct. A drive was immediately warted to notify all violators of the requireents. Within a very short time this practe was corrected.

Concerning our future plans on weights d measures administration as a State, e, like a great many of our sister States and jurisdictions, desire to enact the model Sate law, promulgate the rules and regutions as recommended by the National follow the specifications and tolerances conlaned in Handbook 44, with a view to some dy having complete uniformity within all the 50 States of our Nation.

We, in Alaska, feel that we will obtain tals goal in the not-too-distant future by seping before the public our educational Rogram, showing the film, "Assignment— Weights and Measures," to as many clubs and service groups as possible, thus keeping the contact with those officials responsible to appropriations and equipment. Besides the Publicity received during our recent Weights and Measures Week, we also received the State standards of weight and measures. These were presented to the State of Alexten of Alaska by the Secretary of Commerce at the National Bureau of Standards in Washlagton, D.C. These standards, comprising yard and meter bar, gold plated weights from 50 pounds down to one-thirty second ounce, volumetric measures from 5 gallons 2-ounce graduates, and mahoganynished glass cases to display the equipment, ere gratefully received, and they stressed the importance of weights and measures aministration to our State officials.

On March 17 of this year, our legislature w fit to transfer the weights and measures division from the department of State police to the department of commerce. The Govanor has 6 months to make transfers under the State reorganization bill. How this transfer will affect our division is difficult to determine at this time. However, I feel con-dent that our operations in the department of commerce will work out very well and, in ome respects, much better than in the de-partment of State police. Later this year he intend to draft an entirely new weights and measures codes, modeled on the recommendations of this national conference. bust that we may call on the National Bureau of Standards to help develop a future Rogram of weights and measures administration for our State.

Service to the Nation

EXTENSION OF REMARKS

# HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. THURMOND. Mr. President, on Saturday, June 20, at Charleston, S.C., Gen. Arthur G. Trudeau made a most atteresting address to the South Caroina Department of the American Le-Sion Auxiliary. The Members of Congress and the American public should and the American public and this address most thought prevoking. I ask unanimous consent that the

text, of General Trudeau's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### SERVICE TO THE NATION

(Remarks by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, to the South Carolina American Legion, Charleston, S.C., June 20, 1959)

Senator THURMOND, Mr. Harman, distinguished guests, members of the American Legion and the Ladies' Auxiliary, ladies and gentlemen, I am delighted to be here with you this morning as a guest of your outstanding organization and of your distinguished Senator, STROM THURMOND. This is a notable occasion for you because it marks the 41st year that your organization has served the Nation so proudly in its capacity of one of our foremost patriotic organizations. I salute you and all my fellow Americans who are truly devoted to the security and welfare of our Nation and to the rights and privileges of all freedom loving peoples everywhere, particularly those who have worn the uniform of their country in war and the families who loyally supported them.

This morning I would like to speak to you about service to the Nation and what it means to a soldier who has the privilege of serving his country as a member of its Armed Forces for over 35 years. Many of you here, I know, have had an active in-terest in our fighting forces for even a longer period and it is fitting that this convention honor you veterans who have given so unselfishly of your time, effort and talents to further the goals of the American Legion and our country. I wish all citizens would conform to your patriotic practice of as eargerly accepting their responsibilities as they do their privileges.

For several centuries, the fabric of American history has been interwoven with the colorful pattern of South Carolina's strands of courage, leadership, and staunchness of purpose. The past two decades have seen you bear your share of our defense effort and you can well be proud of that record.

Today, many of South Carolina's industries contribute substantially to the national defense effort. The Department of Defense maintains important installations here to include Air Force bases and Army posts and depots. They all play a vital role in the affairs of national defense and this fact is keenly appreciated by the military.

All of us here today are certainly fortunate. We have the opportunity of serving the greatest Nation on earth, each in our own necessary, individual way. As citizens of South Carolina, you inhabit an area that is highly important to our national economy. As members of the American Legion, you contribute to the stability of our national programs with experience, guidance, and enthusiasm in advancing our ideals and resisting subversive and traiterous influences. As Americans, you represent tangible evidence of our Nation's ability to meet the challenges ahead of us with the same courage and determination that has marked your history and your heritage, and let me say it will take the best we have to give to win the titanic struggle ahead.

As a member of the U.S. Army, I would like to describe for you briefly one of the unique facets of the Army's mission in serving our Nation and providing part of the defense forces that now are spread around this planet of ours. This concerns the research and development program that is geared to meet the future needs of the Army and is based on the astounding and accelerating advances being made in science and technology. The sum total of all of

our Army objectives and programs is to provide the Nation with an Army that is skilled, tough, and ready around the clock to meet tomorrow's challenge. This is the kind of Army that must be prepared to stand up against the boasts and sinister threats of communism now and for many years in the future.

First, to place, the requirements of the Army's research and development program in proper perspective, let us examine the threat that faces us—the threat against which we must plan our organization and doctrine and develop our weapons and equipment for the future. Only by better knowing the Communists' record, their plans and their intentions can we properly protect our future.

During the time of the Revolutionary War and the heroic actions of those patriots who fought to gain our freedom, there was no question about peaceful coexistence or the type and kind of a threat to our fledgling Nation. Those stanch citizens took the action they devoutly believed was necessary and banded together to fight for their freedom from Concord to Cowpens; from Bunker Hill to Yorktown.

Some of you have seen Bunker Hill and perhaps thought about its meaning. It is not a very impressive hill at first glance; in fact, it is not a very big hill at all, but it is preeminent among American hills, because the men who fought there were very tall men. They stood for principle and determination. When our country takes a firm position today with respect to Quemoy and Berlin or the Middle East and the Caribbean as frontiers of the free world, it is taking the same firm attitude that those courageous men took at Bunker Hill long years ago, even though the purpose might be somewhat different and despite the dissenting notes of those appeasers who haven't the courage or loyalty to support our national position and way of life in these difficult and delicate times.

Like the immortal fighting patriots of our American Revolution, you members of the American Legion are dedicated to preparedness and to preserving and defending our Nation, and I urge you to let no other motive disrupt this high sense of purpose. We need millions more like you to keep America alert and prepared; to combat the complacency, lethargy, and apathy that pervades our country.

Once again, we are in a most severe crisis. An implacable threat stares us in the face, today, next year, and on into the foreseeable future.

The real crises are ahead.

The name of this threat is communismgodless, imperialistic, materialistic communism-which aims at the destruction of individual freedom and justice and our American way of life, and the creation of a world slave state.

The Communists regard the struggle between themselves and us as a matter of life or death, as it truly is.

Lenin put it this way: "A funeral dirge will be sung over the Soviet Republic or over world capitalism."

Khrushchev says it in just four words: "We will bury you."

The question is often asked: "Why can't we coexist peacefully with the Communists?' Perhaps the best answer comes from them, embodied in their dogma, their policies, and clarified by their leaders.

Basic communistic doctrine states that peace can only exist in a classless world and that any means used to achieve that goal is justified and hence, peaceful. Considering the amoral and immoral practices that emanate from the Kremlin and Peking, it is difficult and even impossible for many of us to compromise or deviate from strict adherence

to those sound moral principles that made our Nation great.

Lenin said the existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end. I agree com-

pletely that this is so.

The latest Communist communicator, Khrushchev, said last year: "Of course, we must recognize that we cannot coexist externally. One of us must go to the grave. We do not want to go to the grave. They (the West) don't want to go to their graves, either. So what must be done? We must push them to their graves."

That sort of talk is the answer to any peaceful coexistence question, as far as the Communists are concerned. I would redefine peaceful coexistence in the Russian mind

as meaning "coaxful nonresistance."
As a result, they have initiated an endless, an all-out, and an all-around offensive against us. They attack—on every front and by every tactic-ideological, technological, subversive, political, and economic—as well as military.

As you know, the Soviets have more than 25,000 warplanes. Many of these, such as their Bison and Bear, are long-range bombers capable of destroying this Charleston metropolitan area with just one hydrogen bomb.

The Soviets have about 500 submarines. Some of them, perhaps with a missile capability, may have already observed your sky-

The Communists have 175 standing divisions in Russia alone, plus 21/2 million men in the Chinese Communist army, and another 11/2 million in the satellite forces. We have less than 15 ready U.S. divisions, the same number as Rumania.

In atomic firepower, Khrushchev is talking about dismantling some of his atomic and hydrogen bombs because he already has more than he needs.

In rockets and missiles, Khrushchev claims a missile with a range of more than 8,000 miles. Even as long ago as 1957, the Communists claimed an intercontinental ballistic missile capable of reaching any target on earth. The three sputnik satellites lend substance to these claims and their lunar probe should clinch it.

Lhave given just a few highlights of the Communist military threat. Let us also keep in mind all the other facets of the Communist offensive whether economic, ideological, diplomatic, or subversive. Let us remember that the Communist threat is a monolithic whole, using whatever means or tactics seem most likely at that moment to penetrate and crumble free world defenses without regard to morals or ethics; in fact our Western code is anathema to the men who rule the Kremlin.

Now let us turn from the threat to the Army research and development program which is my special responsibility on the Army General Staff. It is our objective here to provide the most effective weapons and material for our future Army. The scope of this research and development mission material for our future Army. covers an extremely wide spectrum of developments and we feel our responsibility very keenly whether we are seeking better mobility, communications, firepower or logistical support.

Why is research and development important? Because it determines the future weapons and equipment that soldiers will use in combat. The Army bases its requirements for its program on the expected threat our Nation will have to meet, the concepts of tactics and organizations for the battlefield of tomorrow, and on science and technology today and in the future. These factors are all considered in preparing the characteristics and requirements for weapons and materiel. I have mentioned the type of threat that we can continue to expect and I would now like to describe the

rest of the environment that determines the direction of our developments.

The battlefield of the next decade will be much larger than you veterans ever remember and with even less clear-cut boundaries between units. Mobility will be the key to success and combat units will move fast, concentrate to destroy the enemy, and then disperse rapidly. Soldiers will move in aerial vehicles just above the nap of the earth and carry with them new types of lightweight but potent weapons using not only conventional ammunition but atomic rounds. Communications will be increased by new radios and relay systems using the latest techniques of earth satellite transmission and of bouncing signals off the moon.

Science and technology are the other prominent factors in the research and development equation. Our basic research program continues to investigate the latest discoveries and inventions so that they can be integrated into the development part of the program which results in the hardware that rolls off the assembly lines of industry. We contract basic research out to industry and some 123 colleges and universities. Ten major fields and 74 subfields are covered from mathematics, human factors, and medical projects to polar and arctic research. We will continue to stress this type of work because without it there would be little future development. As a matter of fact, our technological progress today is the chief determinant of the state of the weapon art during the next decade and beyond. We can never afford to neglect basic research in the present technological race with the Communists.

What are some of the more promising results of this program that we can expect to see incorporated into future equipment? New metals have been created under extremes of temperatures and pressures. promise to open a whole unexplored field of alloys that will be stronger, more heat resistant and lighter than anything else that we know of today. Missiles, space vehicles and even tanks will benefit from such advances. Electronics is another field that has seen a quantum jump in the last 10 years and can be expected to surge beyond the boundaries of our imagination in the next 10 years. Electronic parts have been reduced in size through micromodularization so that instead of 7,000 parts per cubic foot we can put 700,000 parts in the same space. Applications of solid state physics has resulted in radios and electronic computers of miniature size that can perform all manner of operations to enable information to be gathered more quickly and accurately in combat.

The next step in the cycle is what we call applied research and development. sults of basic research are incorporated into weapons or equipment designed by the industrial engineer guided by the requirements of the military. This has resulted in a large spectrum of developments in the fields of mobility, communications, firepower, space, and those designed to support the individual soldier.

We have some interesting vehicles under development to give us the mobility that we require for the future battlefield. On the ground we look to the "Goer" type of equipment used in the construction industry where large wheels and tires give true, offroad mobility. New tanks and armored personnel carriers are to be operational soon to back up the striking power of powerful new weapon systems.

In the air we are looking for the type of vehicle that gives us the takeoff and landing characteristics of the helicopter and the advantages of the fixed-wing aircraft in for-ward flight. You have probably seen pictures of some of our flying test beds that look like disks or platforms propelled by unusual powerplants. These are the vehicles that

will give us the answer to flying low and slow and quietly just above the battlefield.

Communications and electronics has en abled the Army to increase its command and control capabilities to the degree required by mobility and dispersion. Included in the area, also, are the surveillance drones the will penetrate enemy lines to send or britis back information recorded by radar, infra red, photographic, and TV equipment. The information will then be sorted and evalu ated by automatic data processing systems give the commander the facts needed for decision.

Firepower is always a critical part of ov rifles an programs. We have improved other small arms soon to be operational that outperform anything we have now. Man types of guided missiles are under develor ment to supplement or replace those this we have now. For instance, Sergeant wireplace Corporal and Pershing will replace the workhorse of our missile arsenal, Ret stone. In addition, LaCrosse will back to the frontline infantrymen. These are surface-to-surface weapons fired at group targets.

The Army has an important mission in the aid defense field, as you undoubtedly know We have a shoulder-fired missile, coming in operational use, for the soldier to use against attacking aircraft along with the field mobil Hawk missile to be employed against low flying aerial targets. Probably our most in portant contribution in the future will b Nike-Zeus, the only weapon system presenti designed to attack incoming ballastic mis siles. We have just successfully fired the sustainer rocket motor for this missile and are now approaching the testing stage of the complete system. In the near future whope to fire it against our own IRBM's and ICBM's to arrive the stage of the system. ICBM's to establish its effectiveness for the air defense of our country. There is an ur gent requirement for such a weapon while we are faced with the ballistic missile black mail of the Communists. We are confiden that Nike-Zeus can do this job.

Another though-provoking addition to ou arsenal is in the chemical field. If the Communists ever use chemicals against us must be prepared for such at attack. On the other hand, recent tests with nonlethal gase have shown the really humane nature such a weapon that incapacitates without killing, even leaving no harmful after effect on humans. This is certainly an advantageous way to capture an objective without destroying needed buildings, bridges, and other manmade structures.

The Army's contributions to the nations space program have been substantial and have enjoyed a good share of success in ou projects for the National Aeronautics ar Space Administration and the Advanced Re search Projects Agency. Probably the mo noteworthy of these were the space problest March, still orbiting the sun as I star here now, and the recent flight of the mon keys in a Jupiter missile. We look forwar to participating in the Mercury astronaus trips in space and to launching more sate lites and other experiments in the future.

There is one other area that I assure you we are most concerned with. And that with the most important factor of and battlefield at any future time—the soldier the week firmly believe that the man on the ground, well trained and well led is the ge to success and still is the most necessari and most fundamental part of our nations military posture. He is the man for wholl we have developed new methods of preser ing foods by radiation, requiring no frigeration; for whom the Medical Corps be developed a bone glue that will enable soldier with a broken leg to walk out of the hospital in 48 hours; and to whom we are constantly striving to give every possible aby vantage in future combat so that he cap perform his vital missions.

My principal objective this morning was remind us all of our obligation for service the Nation and to indicate how, in parcular, Army Research and Development is entributing toward that goal. We need all you to energize support for our Armed forces and a more dynamic national effort, ad to activate the thinking in this country that we can replace fear with faith, and omplacency with courage. That is what we eed today if we are to go forward to meet is tremendous Communist challenge which aces us and will continue to do so for many Mars.

I mentioned earlier that you have an imbortant role to play here in South Carolina Legionnaires. Your sense of urgency, of boldness, and the initiative you display in bur fields of activity, all contribute directly to the advancement of the Nation in facing the advancement of the lies before us.

In the present period of tension, we must ever relax our guard. The Communist treat continues to increase and, as Khruchev said recently, "the clock ticks on." our Nation and our Army must be provided th the best possible weapons systems over the coming years. This is a national task add it depends upon all of us. We will all ty depends upon an of us. We take the challenge that faces us. Let us do so willingly and thusiastically with a greater faith in our destiny based on a justifiable pride in our heritage.

I think it can be said, today, that the fate our Nation depends more on our determiaction, vigilance, and preparedness than

er before in our history.

Our potential enemy's capabilities are unbelievably great and are growing greater in both the military and economic fields. The four grows too late to tolerate that seed of teath called complacency any longer.

Arnold Toynbee has pointed out that 19 of 21 notable civilizations have died from ithin and not by conquest from without.

We must not be No. 20.

That vital challenge of tomorrow is our ceatest opportunity today—the opportunity so advance, so build, so defend, and so therish this land of ours that in the far disan future America will still be enshrined and sustained as the leader of free men in the hearts and hopes of all the people of the world.

The kind of national spirit I believe we hould have—spirit that means service—was spressed clearly by a fellow Vermonter of auch earlier vintage. His name was Ethan Allen.

After he had captured Ticonderoga and hirned in the booty, the Congress in its imidity considered turning the captured captured turning the captured captured turning the captured turning tu Cannon back to the British. Aroused by this Sesture, Ethan Allen wrote a letter to Concess, and this is what he said, among other things:

"I wish to God that America would, at this citical juncture, exert herself. \* \* She dory, freedom, and immortal honor if she but knew her strength."

Thank you very much, ladies and gentle-men. It has been a pleasure to be with you.

Results of the Annual Questionnaire in the Second Congressional District of Washington

> EXTENSION OF REMARKS OF

# HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. WESTLAND. Mr. Speaker, each Year I have sent questionnaires to the voters of my district. The answers to this year's questionnaires indicate the interest of the people in the second district in national and world affairs. answers also are of value to me, the Representative on whom these voters depend. The return has been excellent, amounting to 10 percent of the 75,000 I mailed.

The returns have been grouped into six categories, which are self-explanatory. They include labor, white collar, farmers, professional, business, and miscellaneous. The last category included unsigned questionnaires, housewives, retired persons, students, and others who cannot be classified easily in one of the other groups.

It is encouraging to see the substantial thought given to the issues covered by the questionnaire. Many persons took the time and the trouble to present detailed comments to help form within my own mind the path to follow in representing my district. I appreciate and thank them for their efforts.

Under leave to extend my remarks in the RECORD, I include the detailed results. The figures I use here represent percentages, not totals of those who answered the questions.

First: In order of their importance to you, number the six most important issues today: National defense, social security, foreign affairs, peaceful uses of atomic energy, taxation, agriculture, education, inflation, power, budget, labor, other.

	Labor	White	Farmer -	Profes- sional	Business	Miscella- neous	All
National defense Inflation Taxation Foreign affairs Education Budget Atomic energy Agriculture Labor Social security Power Other	54 12 8 6 5 4 3 (1) 3 3 0 2	50 13 9 13 4 5 2 (t) 2 (t) 2 (t) 2	54 15 13 7 2 2 2 1 4 1 1 0	43 11 -5 18 11 5 3 (t) 2 (t) (t)	49 12 16 7 2 4 3 0 4 1 1 0 2	48 12 8 10 5 3 4 1 1 3 4 (1) 2	51 133 9 100 3 4 4 3 (1) 2 (2)

<sup>1</sup> Less than I percent.

Second. Do you believe a balanced budget is: (A) absolutely necessary, (B) desirable, (C) unimportant.

	A	В	C
Labor	35	60	
White collar Farmer Professional	44 36	52 61	
Business Miscellaneous	42 16	55 79	
All	35	61	

Third. The President has submitted a balanced budget for the next fiscal year, which begins July 1. Do you believe this budget is adequate?

	Yes	No
Labor White collar Farmer Professional, Business Miscellaneous	80 85 93 82 87 85 84	20 15 7 18 13 15 16

Fourth. If you answered question 3 "no," would you finance such increases by: (A) raising taxes, (B) deficit spending. (Percentage results shown here were arrived at by dividing the number of "yes" answers to question 4A and to question 4B.)

	A	В
Labor White collar Farmer Professional Business Miscellaneous All	60 64 72 74 63 63	40 36 28 26 37 37 35

Fifth. Do you favor freer flow of political leaders, students, farmers, businessmen, and other citizens between the United States and the U.S.S.R.?

	Yes	No
Labor White collar Farmer Professional Business Miscellaneous All	65 75 63 81 69 79 69	35 25 37 19 31 21 31

Sixth. Do you favor medical and hospital care for social security beneficiaries with corresponding increases in individual and employer contributions to cover the costs?

	Yes	No
Labor. White collar. Farmer Professional Business. Miscellaneous All	64 44 51 41 38 60 53	31 54 41 55 60 44

Seventh. Do you favor a summit meeting?

	Yes	No
Labor White collar Farmer Professional Business Miscellaneous All	71 77 77 77 75 77 76	29 23 23 23 25 25 23 24

Eighth. The prices of 12 commodities (corn, cotton, tobacco, wheat, rice, peanuts, milk, butterfat, wool, mohair, honey, and tung nuts) are supported at prescribed minimum levels. In general, do you approve the present farm price support program?

	Yes	No
Labor	23 17 16 22 17 24 21	77 83 84 78 83 76 79

Ninth. Do you favor Federal aid to education in terms of: (A) School construction, (B) teachers salaries, (C) loans to students.

	1	1	1	3	(	,
	Yes	No	Yes	No	Yes	No
Labor White collar Farmer	67 53 46	33 47 54	41 34 24	59 66 76	49 45 43	51 55
Professional Business	64 47	36 53	44 33	56 67	56 41	55 57 44 59
Miscellaneous.	53 57	47	40 39	60	51 48	49 52

Tenth. Do you favor continuation of mutual security programs of military and economic assistance to countries outside the Soviet bloc?

	Yes	No
Labor White collar Farmer Professional Business Miscellaneous All	70 83 75 87 75 69 75	30 17 25 13 25 31 25

Eleventh. Do you favor the President's recommendations for labor legislation?

	Yes	No
Labor	75	25
White collar	89	11
Farmer	84	16
Professional	89	- 11
Business	92	8
Miscellaneous	- 86	14
All.	84	16

Twelfth. Do you favor the cooperative development of power from atomic energy by Federal and private industry?

	Yes	No
Labor White collar Farmer Professional Business Miscellaneous All	90 91 89 90 93 91 90	- 10 9 11 10 7 9

It is obvious from these results that national defense is of primary importance to the people of my district. The fact that inflation ranked next in importance and that the budget was among the top six issues is of great interest to me. The people want inflation stopped and support the President's efforts in this direction by asking for a balanced budget.

The people I represent also want this Congress to pass adequate labor legislation. They believe the President's recommendations on labor legislation are good. I hope this Congress will pass legislation along these lines.

I am extremely pleased to note there is no dissension between the six categories. Substantially the majority of each group has expressed the same viewpoint toward all major issues. This means the people of my district are solidly bound together in their feelings toward what is good for the Nation.

## The International Military Situation

EXTENSION OF REMARKS

# HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. THURMOND. Mr. President, on June 13, at the 12th annual conference of the Military Government Association, in Washington, D.C., the Honorable Robert H. Knight, Deputy Assistant Secretary of Defense, made a most enlightening address in which he summarized the international military situation. It is my belief that a reading of this summary will be of great benefit to all of the Congress. I ask unanimous consent that the address by Mr. Knight be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

THE INTERNATIONAL MILITARY SITUATION

(Address by Robert H. Knight, Deputy Assistant Secretary of Defense (ISA), at the Seminar on International Military and Political Affairs, 12th annual conference of Military Government Association, Washington, D.C., June 13, 1959)

Secretary Irwin has asked me to express his personal regrets that he cannot be with you today. He is presently participating in the Foreign Ministers' Conference in Geneva and has, accordingly, asked me to present his views to you.

Underlying the world tension which exists today between the Communists and the free world is the military power of the opposing blocs. While this conflict is being fought on the political, economic, and psychological fronts as well as, from time to time, on a variety of military fronts, the military power basis of each side has a profound effect on all other aspects of the struggle. It is within this frame of reference that I propose to attempt a brief review of the international military situation.

The international military situation presently appears to consist of two elements-the military forces which each side has developed-and the uses to which these forces are being put-now, in this period of tension.

In assessing this international military situation, it is wise to look first at the opposition-to see what are the size, nature and deployment of his forces-and to divine, as best we can, the strategy which he employs. With our best estimates of these factors we can attempt to judge the adequacy of our own forces-and draw some conclusion as to the resultant status of the international military picture.

The total bloc forces today consist of about 8 million men under arms in their regular forces, some 6,750,000 soldiers in their ground forces, 30,000 military aircraft in their air forces and some 3,400 naval vessels of all types.

The foundation of this strength lies of course in the forces of the Soviet Union, with 175 divisions, 20,000 military aircraft and a Navy of some 630 combat vessels, including some 475 submarines. Communist China maintains an army of about 150 divisions supported by some 2,500 aircraft. The remaining forces are those of the European and Asian satellites, whose reliability could vary

from close to that of their Russian or Chines masters, to virtually a liability, as was the case in the Hungarian armed forces in the revolt of 1956. It is pertinent to mention separately the growing Russian missile force, which poses a serious threat today-and which will pose an even greater threat in the years to come.

Although this is the largest military force ever assembled in peacetime under one authority-for one must assume that it can and would be used in a coordinated effortit is not the total of the military resources possessed by the bloc. We must add to these regular forces the millions in militarily trained manpower produced by the militant Communist society and, of particular threat in both hot or cold war, the trained, disciplined Communist apparatus existing in most of the free world countries, an invaluable asset to Communist power in both hot or cold war.

With this tremendous base of military power, one might conclude that it is the strategy of the bloc to employ this power to achieve militarily their goal of world domi-nation. Personally, however, I doubt this. The Communists know, as well as we, the price of such an undertaking-and I doubt that they are willing to pay this price. Why then do they maintain such a large military machine. What is the strategic use to which they are putting or will put this power?

Obviously I am not privy to the strategic plans of the bloc. But I do believe that certain uses to which they are putting their

military power are fairly clear.

First, they must have this military power in order to retain their political power, to suppress any attempts of their subjugated peoples to revolt—both at home especially in the conquered satellite nations While it is sometimes hard for us to believe that so much force is needed for this purpose, the Communist leaders, who came to power through violence, know the amount of powder in the keg on which they are sit-They cannot afford to take chances. The Hungarys and the Tibets must be ruth lessly crushed by overwhelming military power before they have a chance to spread to the main powder magazines.

Secondly, they use this power as a threat to intimidate free nations, large and smallto attempt by the use of saber-rattling to advance their political objectives. One need only review the words of Khrushchev at the time of the Lebanon operation or more recently in connection with Berlin to find the most blatant use of military threats. These threats must be given stature—hence, the second reason for their maintaining such \$

large military force.

Third, they use this power to probe for military weakness—to attempt to grab that which they think we cannot or will not defend. This was their strategy in Kores-We must assume that they would not hesitate to employ a similar strategy again, particularly in such exposed areas as Berlin of

Quemoy.

Fourth, they use this power to support the attempts of local Communists to seize power as was the case in Vietnam, Greece, and Malaya. With the large, well-disciplined Communist apparatus which exists in so many free world nations, we must always be alert to this type of threat, especially in those free world nations whose geographic location lends itself to covert Communist military support. Such countries as Laos and Cambodia, Iran and Iraq, are particularly vulnerable to this type of attack.

A fifth use of their military power which they have only recently begun to explois through Communist style military aid

lograms. In the newly emerging countries, ley have found a market for their surplus ons which they can sell cheaply or barter the products of the local economy. By Reempting the arms markets in certain naons they hope to establish a means of conbl, both through the use of "technical ad-Hers" to train the recipients and through ess to train the recipients and they can supply of spare parts, which only they can Already this approach has begun in The UAR, Indonesia, and Alghanistan, Their most recent venture is the gift of Cechoslovakian arms to the new states of

And finally, of course, the Soviets, them-ves, feel the need for deterrence. Their Poclivity to suspect the West of aggressive deligns, in spite of all we can do to disabuse deligns, in spite of all we can no to disastitude of this fear, creates in their minds also the need to deter. They also realize that in this day of missiles and armed frontiers the control of the specific of the second of the chances of a war—begun by accident rather than design—cannot be overlooked, and they that be prepared to give a good account of themselves should unforeseen events involve them unwittingly in war.

This, briefly, is the Communist side of the bernational military situation, their forces and their apparent strategic plans for using these forces. It adds up to formidable, but hos overwhelmingly military power, being ex-poited fully and intelligently in pursuance

of their goals.

In speaking of our military strategy, I will Coper three basic premises, which I believe the foundation of our military strategy in the cold war. The first of these is detertence. The fundamental role of the milibey in this period of international tension is prevent that tension from turning to war. while in our history we have more often than not forgotten Washington's advice that he be prepared for war is one of the most ectual means of preserving peace"—we talize today that in modern war, with its botential for rapid annihilation, we have no Other choice but to be prepared adequately at the outset. To do this, we have created the most effective peacetime military forces our country has ever known. I need not re-lew for you, I'm sure, the detailed nature of these forces—you undoubtedly are familiar with such forces as our Strategic Air Comhand, the Strategic Army Corps, the 6th and th Pleets—and our combat forces stationed h the NATO area and in the Far East. It by keeping these forces constantly ready to neet military aggression wherever or whenever it occurs.

Yet as great and as costly as is our millthy effort, it alone is not sufficient. We have neither the manpower nor the money to build alone the force necessary to deter the military power created from the nearly billion people under Communist control. This fact has caused us to break historic policy and to join, in peacetime, military alduces with other free nations—so that each can find in concert the security it could not hope to achieve alone. The United States has come to realize that if we are to maintein freedom at home, we must uphold it abroad.

This, then, is the second of our strategic Policies, to cast our lot with the principal of collective security, to help our allies to achieve the military posture, which together with our own, will be adequate to the securiin our own, will be adequate to the second placeds of the free world. To this end, we have implemented the military aid program by which we are helping our allies to equip and train their forces. Together with our things of the second place with our second place with the second place. and train their forces. Together with allies, we have deviced interallied military course, we have deviced interallied machieve commands and planning groups to achieve hore effective utilization of these assets. These include the formal NATO commands of SHAPE and SACLANT, the U.N. Command k Rorea, NORAD here in North America and

interallied military planning groups in the Baghdad Pact and SEATO areas.

During the past 9 years, as a result of our efforts and those of our allies, the military forces of the free world have made remarkable strides toward the goals established as necessary for free world security. The effectiveness and success with the United States and its allies have served this objective is evidenced by the substantial record of achievement in less than a decade. Some of the accomplishments can be cited:

The Armies of the United States and its allies have grown from roughly 4 million men to 6 million men; our navies from some 1,600 ships of all types to nearly 3,200 ships; our air forces from some 33,000 of which about 3,000 were jet aircraft to over 50,000 aircraft of which more than half are jets.

Accompanying these quantitative advancements have been equally impressive but less measurable qualitative improvements. Our forces and those of our allies have been receiving a steady flow of more modern equipment. With the assistance of our MAAG's and missions, the training of the allied forces has been substantially improved. This training has included many interallied exercises wherein the forces of various nationalities learn to operate together under wartime conditions. And resulting from all these measures, although even more difficult to measure, we believe these forces have been instilled with a high degree of esprit and morale. With clear U.S. commitments to assist them and with hard evidence of our material support available throughout their forces, we are confident of the determination of these allied forces to give a good account of themselves should the need arise.

Thus, deterrence and collective security are two elements of our military strategy in this period of international tension. would now like to discuss a third, which perhaps is not so clear because it is a more recent outgrowth of the first two elements. This third element is an organized and determined effort to maximize the contribution of our military forces to our peacetime international objectives.

You might say that this objective stems from the old Yankee tradition of thriftto get the most for our money-or from the principle of war, economy of force-to use our forces to their best advantage. It, in any case, certainly behooves us to squeeze every possible return out of a national asset for which we pay over \$40 billion each year.

The basic concept is to use our military forces to reinforce and support our national, political, economic, psychological, technological, cultural and humanitarian objectives. We realize, of course, the primacy of the first two elements of our strategy. We must not in the process of using our forces for nonmilitary objectives, jeopardize their readiness for combat or their efforts to assist our allies to acquire effective fighting forces. But we strongly believe that in the process of fulfilling the first two elements of our strategy, a substantial contribution can be made to our nonmilitary objectives-given proper planning, coordination and especially imagination and a real understanding of our objectives in various parts of the world. I must hasten to say that by calling this a new element of our strategy I do not mean that our forces in the past have not contributed to our nonmilitary objectives; of course they have, and in large measure. What is new is a recognition of the importance of these past contributions and the vital need to make this new facet of our efforts more effective.

Although sometimes we are prone to forget it, our present military strategy is quite a departure from the traditional strategy of the United States. Historically, we had

always counted upon the protection of the oceans to allow us time to prepare and react. We had studiously avoided peacetime alliances. Fortunately, we now recognize the futility of such a policy in this age of atomics, missiles and Communist expan-sionism. But this change has brought with it new and complex problems which the military has never before been required to face. While not intending that we ignore the traditionally important problems of our forces, such as recruiting, training and equipping, I believe it is worthwhile to examine these new problems—both to see how we might better prepare ourselves to solve them and to discuss possible solutions to some which remain unsolved.

First of all, we are faced with the problem of maintaining forces which are trained, equipped and deployed so as to be able to respond instantaneously to major Communist overt aggression or to limited Commu-

nist military ventures.

Growing from this first problem we are faced with the complex task of securing the bases in foreign countries which are essential to a posture of readiness. Lately in some areas this problem has been re versed and we are faced with the problem of retaining bases which we now occupy in the face of some political opposition. Thus, while in 1939 we maintained forces in only one foreign country, today we have opera-tional or support forces in over 20 foreign foreign countries.

Another change in our military problems arises from our undertaking to help supply and train the forces of some 44 foreign countries. This has made our military assistance program one of our major peacetime undertakings, for it is the keystone in our strategy of collective security.

Stemming from our forces overseas and our MAAG's and missions is a new training problem for our own forces. We must train and orient our personnel to deal effectively with foreign officials, both military and civilian. More than lip service must be paid to the "Ambassadors in uniform" concept, for with more than 40 percent of our military forces located outside the United States, we must equip these personnel with more than just military knowledge, if they are to do their jobs As a recent step in this direceffectively. tion, I might mention the Military Assistance Institute which we established about a year ago to provide specialized training for some of the officers being assigned to our MAAG's and missions. Undoubtedly, more needs to be done to improve the orientation and training of our personnel for these highly complicated and sensitive missions abroad.

Our military forces overseas, together with their dependents, comprise by far the largest group of Americans officially representing their country abroad. This can be a great problem. It is also potentially a great asset. Our job is to assure the latter, to provide that to the extent their primary missions will permit, these personnel with their wives and children, also contribute to achieving our national objectives.

These problems, I believe, point up the changing nature of our military forces and strategy-and outlines briefly the new types of problems which together with our tra-ditional tasks, the Armed Forces of the United States now face.

In summary, I would like to make three points:

that on balance the strengths of the military forces of the op-posing blocs generally might be considered a stand-off-with the Communists possessing the advantage in ground forces-but with the free world having some advantage in air and sea power.

Second, that the Communist bloc is making full use of its military power to achieve its objectives in the cold war by a strategy ranging all the way from threats of missile attack to Communist style military aid programs.

And third, and most important to this discussion-we are striving to achieve the maximum return for our military invest-ment by both deterring hot war through ment by both deterring hot war effective preparation to fight and by utilizing our military assets to the fullest extent feasible to assist in the achievement of our

nonmilitary objectives.

I believe it is worth keeping in mind that while it is vitally important to keep abreast of the Communists in the development of weapons for our Armed Forces, it is no less important that we keep abreast in the use of these forces during all periods of international tension. While the mere existence of our forces and those of our allies serves a major cold war objective, we cannot stop with this; it is vital to our national strategy that our military strategy provide for ob-taining the maximum contribution of these forces toward achieving our national objectives in related fields-economic, political and technological.

## Human Wealth and Economic Growth

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. HUMPHREY. Mr. President, in our efforts to assist economic development in the less developed areas of the world, we should never overlook the fundamental fact that we need more than capital. Our fundamental invest-ment must be in person. Of course, capital investment does affect the lives of persons. But along with our investment in roads, fertilizing plants, steel mills, and other sinews of productivity, we must invest directly in the education of the persons who will operate these new enterprises.

This point is well made in a recent article entitled "Human Wealth and Economic Growth," written by Prof. Theodore W. Schultz, and published in the Humanist, 1959, No. 2. Mr. President, I ask unanimous consent that Professor Schultz' article be printed in the Ap-

pendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

HUMAN WEALTH AND ECONOMIC GROWTH (By Theodore W. Schultz)

(Theodore W. Schultz teaches economics at the University of Chicago and heads the Research Advisory Board of the Committee Development. He Economic studied-and helped to improve-economic conditions in Europe, India, and Latin America, especially Mexico. This article is based on his talk at the Cleveland conference of the American Humanist Association last November.)

We Americans have traditionally taken it for granted that expansion, growth—particularly economic growth—is in itself a good But recently we have witnessed the beginnings of a debate; it is being argued that we are putting too much emphasis on economic growth in national policy and in our thinking, and that is should be given a lower priority. This essentially is the thesis of a recent book by Professor Galbraith of Harvard, "The Affluent Society." In effect, Dr. Galbraith closes the United States off and says that we have grown fairly rich now, and why then be concerned about more economic

This amounts to a very sophisticated new brand of isolationism with which I would quarrel seriously; and I was glad to see an article by Leon Keyserling [The New Republic, October 27, 1958] in which he took Mr. Galbraith and others very much to task for this limited view. Mr. Keyserling said very effectively-not speaking as an economist, and more effectively than an economist could have said it-that if we were truly aware of our responsibility in the world today, we would see that we are indeed very poor.

That is not to argue that economic growth will necessarily solve all the problems of the world. It cannot give us all the necessary and sufficient conditions for world peace. Nor is rapid economic growth always a comfortable process for the countries involved. Very heavy stresses and strains are implicit in the changes brought by rapid growth in the economy. We in the west do not usually consider this when we urge poor countries to move ahead more rapidly. But it is easier to see at home, for example in American agriculture, where change has been so rapid that the social cost is very high. During just one peacetime year, from April 1956 to April 1957, we had two million people leaving American agriculture. That was 10 percent of the American farm population. In leaving a agriculture. sector of the economy they normally had to change both location and job, giving up not only their occupation but their community life as well. When change occurs at such a fantastic rate, the social cost is proportionately high. And we should bear in mind that when rapid growth occurs in poor countries, the same kind of thing happens. This is not to argue against economic growth, but to say that order too has value for the community; that order and change should each have a place in the thinking and experience of communities where change is going on.

What then, we may ask, do people want economic growth for? Do people, as individuals and as communities, want economic growth? Is it important to them, and why? My answer is that economic growth is important on a worldwide scale because there is so much poverty in the world. And we no longer believe that poverty is ordained by God. Men today will not be kept down in poverty because it is a part of the symbolism of a caste or class or religion. Men can, and men will, do something about it.

The example of early industrial develop-ment in the West, of Japan later on and Russia more recently, has become common knowledge all over the world. People in the areas we think of as backward—Africa, some the Asian countries, even the Indians in the mountains of Peru-are rapidly becoming informed and aware of these vital matters, They want first-class citizenship and the right to enjoy some of the fruits of living, and not the bare subsistence that has for

centuries been their lot.

Economic growth, therefore, is important both for us here in the United States and for others; and it is important for us to comprehend the way in which it is brought I believe that we in America do not really understand our own economic growth and how it was achieved. Much of our debate on the subject is in terms of material as against spiritual values; and we think of economics as materialistic, partly because we have identified capital with goods—reproducible goods—and have not seen it in its human context. And this applies to Marxian theory as well as to our own non-

Marxian thinking. At the individual leve the way to achieve economic growth can stated very simply: work and thrift. Yo work hard, you are thrifty and save, and you accumulate something called capits It helps to have chosen your birthplace wisely, to be born where there is plenty of and coal, ores, rich farmlands, harbors and rivers; but I suspect that this is less impor tant than has been supposed. Consider the prosperity of landlocked, mountained Switzerland; or look at what the Puerl Ricans are doing on an island that by almost no resources, or at Mexico, which far from rich in this sense. And there & other examples. The key to economic deve opment, I believe, is in man himself, and not in material resources.

Another road to economic growth has bee revolution-followed by a generation or to of enforced accumulation of capital achieve by forced labor of one kind or another alor with drastic limits on consumption. The h man cost of that road is, of course, appalling It is shown in Boris Pasternak's mucdiscussed novel, "Dr. Zhivago," where we the lives of a few people who try to 55 their souls from the crushing excesses of vast revolution. Similar excesses charge terized the French Revolution, and in son ways also the Mexican Revolution. It would a mistake to see the novel as a pure political document, rather than as an count of what happens to human value during such a revolution. William Faul ner's account of other human values, in "I truder in the Dust," with its setting in of society, is, if anything, sharper and mo devastating than anything in "Dr. Zhivago

WHAT CAUSES ECONOMIC GROWTH?

Let us consider economic growth in the United States, and how it came about. the increases in man-hours of labor, total man-hours worked as our population and labor force have grown, plus the in creases in the stock of real capital, account for most or all of our own economic growt throughout our history? Several recent stud les have been made that bear on this que tion, and they all tell very much the same story.

Consider the period from 1929 to 195 which is fairly recent and avoids some the measurement problems that would met if we went back further. During th time, the total national real income by real income we mean not money income but real things—of this country a little more than doubled. If we think of it is terms of compound interest, this is an in crease of something more than 3 percent

per year.

During this period from 1929 to 195 while total real income doubled, our re sources, in terms of total man-hours in the labor force, increased by 17 percent. At the same time, the total capital stock—that the value of material resources, manufac turing plants, and so forth-went up 42 Pt If these figures are weighed properly cent. the total rise in input (man-hours and caf ital stock combined) is about one thirdin compound interest terms, an increase 1.2 percent per year as compared with 3-percent increase in real income.

The increase in resources, then, would seem to account for about two-fifths of rise in real income, leaving three-fifths operand to be small and to be explained. We added a third our resources, and ended up with twice the product. Where did the rest come from what evaluations the different content of the This is What explains the difference? enigma of our history; we do not under stand it ourselves, and I think most of the political debate on this issue is quite is side the point. Both the liberal and conservative views on economic growth probably wrong.

Businessmen and others who tend to to conservative view would probably argue the if we want more rapid growth in the Ameri

economy, we will have to give larger bentives to people to hustle, to work, save, mest, accumulate capital, build new plants, the so on. Lower taxes on these activities the provide these incentives. And con-tyatives would also argue, no doubt, that ven decisions by government result in the of resources, these should be correged. A fair case might be made here in contection with, for example, some of the mection with, for example, some of the asportation decisions made by the interest of the Commerce Commission and some of on agricultural policies. If, however, as we agricultural policies. If, however, as have just seen, growth in capital accounts for such a small proportion of total growth. it would seem impossible that even subwould seem impossible that even tal in reproducible goods would result in a in reproducible goods would result in a sustantially greater increase in total rowth. It might be wise to do some of the things on other grounds, but that alone bring about appreciably more conomic growth, can be denied.

on the liberal side, our friends in labor which the liberal side, our irrelius have we should say that to get rapid growth we should reduce unemployment; that if, insted of running 5 to 6 percent unemployment on the average, we could get this figbre down to 3 or even 2 percent as they are doing in some European countries, the probwould be solved. Certainly this would result in a larger product in the beginning; there would be a rise when the extra resources in human effort were allowed to work. But it does not follow that this would lead to a higher rate of growth from then one, and the picture in European countries at he work. at present bears this out. Again, I do not present bears this out. Again, I do not have an to argue that a decrease in unemployment is not a desirable thing to achieve; but it cannot by itself bring about economic than the state of the state o bowth of the explosive kind shown in the thexplained figures just given.

Another liberal argument is that the pubsector of the economy should be enlarged, and more resources given to the sovernment to spend in certain ways, in order to achieve this kind of rapid growth. of course, the list of things that ought be done on the public account is a very long one: urban renewal in our large cities; that gement of social security; conservation of course, the list of things that ought to argement of social security, construction of natural resources; improving our parks, there and harbors; development of water tources, dams, power; building highways, achools and hospitals; and so on. But I doubt that even if each of these were inthat even if each or mest would lead to assed by 20 percent, this would read appreciably more economic growth. Certally we are woefully behind in some bublic facilities in our society today, and for the welfare of our citizens we should be spending to these things. But the welfare of our citizens we amount of the welfare of our citizens we amount of the country of the achievement of economic growth in this

# THE FORMATION OF HUMAN CAPITAL

What then is the key to economic growth? The hypothesis which follows has become the center of my own work in studying this subject, and I do not wish to state it domatically as proven; but it seems to or-sanize the relevant facts of our history and therians. the relevant facts of our histories better than any other hypothesis have worked with.

That hypothesis can be stated this way: that hypothesis can be stated this way. looking at our own economic growth from 1923 to 1953, or at the rapid growth of Japan or Garage Countries, one observes or Germany or other countries, one observes what I shall call an underspecification of resources. We have omitted a part whith, and my thesis is that this omission represented by the additions that have made in the stock of human wealth. This human wealth consists of improvethe in human effectiveness arising from fact that man has developed capacities that result from investments in man. We that result from investments in man. We hay feel a bit touchy at having this concept of capital taken over from the realm of reproducible, material things, and applied

to ourselves as humans. And vet perhaps the greatest capital formation that has been going on in our society is this investment in ourselves. It may be that these investments in ourselves-in our abilities, our talents and capacities, in our stamina, our health, the way we live and what we eatare the very kinds of capital that make the greatest returns in terms of reward for our efforts

One aspect of this human wealth, of course, is the great increase in useful knowledge. I first became aware of the importance of this when I tried to understand the rapid growth that has taken place in some parts of Latin America. Mexico, for example, has been an extraordinarily poor country. If anyone had told me, when I first studied it in 1930, that Mexico could achieve the increase in output, in its total production, that it has achieved since that time, I should have said it would be impossible. Particularly I should have said this about the economic area I knew best, agriculture. If I had been told that Mexico, with its pitifully resources, could actually double its output in agriculture—traditionally one of the hardest kinds of output to increase-I should have denied it. But that is what the Mexicans have done. Their gross national product has been rising by 7 or 8 percent a year, but the agricultural product has been rising even faster. In the past 12 years, they have had an increase in gross national product of approximately 80 cent—and they have again doubled their output in agriculture. Although less dramatic, yet similar things have been happening in Brazil and in other places, such as Puerto Rico.

These observations prompted a second look at some earlier work in which I had found that in this country, since 1923, for every 25 percent increase in agricultural output, we had increased our input in man-hours and material resources by no more than 3 to 5 percent. It suddenly occurred to me that some of these countries that are moving forward so rapidly now are doing much the same thing. They have found a way to get a greatly increased output without an input that is proportionately that large. This would appear to be a direct contradiction of the doctrine of the 18th century economists, Ricardo and Malthus, who held that for every increase of, say 10 percent in input, a country would get somewhat less than 10 percent growth in output-the classic image of diminishing returns.

In order to discover just what was going on in these areas, my colleagues and I began a series of studies, particularly of Argentina, Mexico, and Brazil. These studies showed that Brazil and Mexico in particular began to develop, in the late twenties, and achieved an increase in agricultural output that was substantially greater than the additional input. Argentina showed a pattern of growth that looked very much like that of Canada and the United States—until Perón came to power; and then it reversed itself. And unfortunately. Argentina has not begun to move forward again even now, 3 years after Perón's

In another study, I then undertook to try to discover whether these unexplained, omitted inputs could be represented as the return on the investment that has been going into humans. One of these investments is education, in high schools, colleges and graduate schools in the United States. Comparing figures for two dates, 1920 and 1956, we can identify what the economists would call gross capital formation, in ourselves, for this one kind of investment during that period. In 1920, counting all the costs as you would if you were developing capital in the physical sense, our investment in education in the United States was \$1.6 billion. In 1956, this figure had risen to \$22.7 billion. This is a much more rapid increase than the

value of our physical capital during the same period. In fact, it was 7 percent of gross physical capital in 1920, and in 1956 it was up to 28 percent. And even this is an understatement. In terms of net capital (that is, the life of capital when its depreciation is subtracted), the comparison is even more striking, because during this period the life of human capital has been increasing very substantially. A person invests in himself. and then has a longer period of useful activity in society than he would have had 30 vears ago. At the same time, the life of socalled physical capital is getting shorter and shorter. This is one of the notable phenomens of our time.

#### PETTIENS ON INVESTMENT IN KNOWLEDGE

The individual and social returns on our investment in education are suggested in the results of a recent study in which Morton Zeman of the University of Chicago tried to explain the very large differences in the average earnings of urban workers, Negro and white. Using census figures, Dr. Zeman was white. Using census ngures, Dr. Johan was able to classify people, white and Negro, by region, city size, age, and education. He found that in the North, comparing Negro and white workers all of whom had had 5 years of school, the average difference in their earnings was small. The average earnings of nothern Negroes were slightly less than those of whites of the same educational level.

Of course there are other factors influencing earning power, such as age, city size, and so on; and in the South the picture is still more complex. But the extraordinary thing was that, at any rate in the North, the most important factor determining earning power of both white and Negro workers was the amount of education they had had. This suggests that one of the tragic errors in American history has been our failure to invest in Negroes as citizens as we have invested in whites as citizens. One of the great costs has been the lower productivity in the economy, as well as the individual differences in earnings as revealed by Dr. Zeman.

Other studies, of white and Negro farm families, have yielded similar results. The implication is that our economy pays high rewards for more investment in people, as fifth year in school, the sixth year in school, the seventh and eighth and on through the high schools-with each added year of education, the rewards increase.

The social returns on investment in new useful knowledge are demonstrated in another set of studies. In a project underwritten by the National Science Foundation, we attempted to identify particular pieces of new knowledge that have moved into the economy, and to see what they cost the society and what return they make to the society. One such piece of new knowledge that we were able to isolate and treat in this way was the development of hybrid corn.

The history of hybrid corn development in this country goes back to 1910, with relatively few people involved at first, but with a pyramiding of effort in the later stages. A colleague of mine has just published the results of some very ingenious research; he has found that if we count all of the private and public costs of hybrid corn, everything that has gone into its development-and the records on this are quite complete-a total of \$130 million has been invested since 1910. (This figure also allows for compound interest over the time period, but that is a technicality.) Then if we measure all of the product that can be identified and attributed to this particular new piece of useful knowledge, we find that its contribution to the consumer surplus—and it quickly becomes a consumer surplus, which is what made the analysis so difficult and required so much ingenuity-turns out to be no less than \$910 million. That is, the return on the \$130 million invested is running at 700 percent per year.

Most of the time we consider it an improvement if we can work out an allocation of resources that increases the return from 5 to 6 percent. We criticize private or public business if they are sinking funds in 5 percent areas when they could use such resources in activities that produce 6, 7, or 8 percent. My argument is that we should be looking for ways in which human effort and useful knowledge can move us into the range of 50 percent, 100, 200—even 700 percent return. This is the key to the explosion of our own economic well-being.

If my hypothesis is correct, it carries radical implications for our thinking about the rest of the world. It implies that fewer steel mills and other big plants should be built in the underdeveloped countries, and more invested in the people of those countries, as we have invested in ourselves.

As we look at other countries, let me draw a few comparisons. We can now gain new insights on why Great Britain's growth has been appreciably slower than our own during the past 50 years. The British have neglected education of the middle group in their society. Their elementary education system is much like ours, perhaps better. But at what we call the high school level, before university education begins, the story is of two different worlds. Our high schools, like the elementary schools in both countries. still deal in mass education. At this level we are still investing in people on a mass basis. In Britain, on the contrary, only some 15 to 18 percent of the people go beyond elementary school.

By way of contrast, let us look at Japan, an Asiatic country, highly populated. Something happened in Japan at a very early date, and it began to produce not only industrial products but also much more food under the most adverse circumstances. The agricultural achievements of Japan between 1875 and 1910—before World War I—stand as a miracle. In 1873, Japan moved to universal education, a 6-year program, compulsory all over the country. As a result, they very soon had a literate population; the rural people became more skilled at farming, and a supply of labor was made available to industry that was more sophisticated than even European countries had at that time, and far more so than that of other Asiatic countries. we should remember that we did not have universal compulsory education for Negroes, or for some whites, in the United States at that time. (Some of my American col-leagues, confronted with these facts, have said, "Why, it couldn't have happened. It hadn't happened in the United States yet.")

I think I now understand why Japanese tenant farmers could come to our west coast and do better at farming than many American farmers with whom they were competing. It is often said that they were able to save and buy land because they were willing to accept lower standards of living. But that is not the whole story. I have seen some of these farms; I remember one, of 231 acres, not far from Stanford, which had been acquired by a thrifty Japanese tenant who came over in the late twenties. He and his family farmed the land intensively, with little extra labor-about 10 people in all at peak periods-and today he is an American citizen, owns his farm, and his three sons are all graduates of the University of Cali-When I visited him, he was selling over half a million dollars' product a year from 231 acres. The intricacy of that farming operation make our agriculture in the most of the United States look simple.

A parallel situation would be the postwar recovery of West Germany. When I saw the destruction of the houses, the factories—whole cities in ruins—like everyone else, even the Germans themselves, I missed completely in anticipating the rate of recovery. We simply could not visualize what would hap-

pen in growth, in production, during the next decade, or up to the present. And the reason was that we were putting too much emphasis on steel mills, plants, machinery, railroads, and buildings. We didn't see the human capital—and it was the human capital that went to work.

#### ALONE ON THE HIGH ROAD?

What does all this mean for U.S. policy? I believe it means that the time has come when we have to understand ourselves, and recognize the predominant role of human capital, human wealth. Somehow we have hit on a productive formula for our own society; and it seems that the Russians also are making large gains on this score. The importance of the role of new physical capital in the Soviet Union is often overstressed. The Russians, like ourselves, have been creating human capital very rapidly; and they have been turning it sharply and directly to economic account—undoubtedly at the expense of values we hold dear in our own free society.

Therefore, as we take a hand and act responsibly in other countries, we should bear in mind that the increase in real earnings, the rise in product that is needed to help the peoples of the world out of their poverty, requires human capital. Whether it be in point four technical assistance programs; in activities like the Rockefeller Foundation work in Mexico with hybrid corn; in the work of church groups operating through some 1,600 mission projects in agriculture, education, and health in Latin America and elsewhere; or through private business-the transfer and development of new knowledge, new abilities, and capacities are the most important contributions we can make. This is where the underdeveloped countries tend to neglect themselves. The great neglect in India, for example, is men. There are now three countries in Africa that are investing more per capita in human resources in this generation than India is. The great emphasis on human capital in Puerto Rico makes it stand out in comparison with other Latin American countries.

We in the United States stand here on the high road, which is indeed well paved with large stocks of knowledge and many developed abilities. This is our good fortune, part of our heritage and history. But is this road for us alone? What about most of mankind, trudging on the low road marked "poverty," working so hard and with so little knowledge? Shall we leave them there, like the lonely cultivator described in Faulkner's "Intruder in the Dust"? "The man and the mule and the wooden plow, which coupled them furious and solitary, leaning terrifically against nothing."

## What "Written Constitution"?

EXTENSION OF REMARKS

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. THURMOND. Mr. President, in the June 29 edition of U.S. News & World Report, Editor David Lawrence ably discusses under the heading "What Written Constitution'?" recent comments by Supreme Court Justices. This provocative editorial provides food for thought for all persons interested in constitutional government. I ask unanimous consent that this editorial be printed in the Appendix of the Record.

There being no objection, the artic was ordered to be printed in the RECOS as follows:

WHAT "WRITTEN CONSTITUTION"?
(By David Lawrence)

Justice Black 2 weeks ago wrote an opinit dissenting from the judgment of five oth Justices of the Supreme Court on the su ject of congressional power to interrogate witness about his Communist connector.

Mr. Black spoke, also, for Chief Just Warren and Justice Douglas. A brief opin agreeing with Justice Black's basic co Cusion was filed by Justice Brennan.

Thus, the high court direction.

Thus, the high court divided 5 to 4. T majority and minority opinions, respective are significant, because of the reasoning the Justices on both sides of the argume The issue in the case turned on wheth

The issue in the case turned on whete anyone connected with the Commun Party can claim the right of protection with the constitution of the consti

This view is refuted convincingly in majority opinion, written by Justice Harvin in behalf also of Justices Frankfurter, Class whittaker, and Stewart. He avers that interests of the people as a whole must balanced against the rights claimed und the first amendment. He calls attention the avowed objective of the Communical Party which differs from other politic parties in that the overthrow of the Gornment of the United States by force advocated. He might have added that the Communist Party is working directly in interests of a foreign government which engaged in a cold war with this countaind hence cannot by any meanes be pon an equal footing with the Republical Democratic, or Socialist Parties in Americans.

This balancing of interests, however, seef to disturb Justice Black, who thinks illest aims of a political party should not be criterion. He writes:

"This is closely akin to the notion the neither the first amendment nor any other provision of the Bill of Rights should be forced unless the Court believes it is reasonable to do so. Not only does this viole the genius of our written Constitution, it runs expressly counter to the injunction to Court and Congress made by Madis when he introduced the Bill of Rights.

"Unless we return to this view of o judicial function, unless we once again cept the notion that the Bill of Rigmans what it says and that this Court menforce that meaning, I am of the opinion that our great charter of liberty will be menored in the breach than in the observance."

What strange words these are to read day, in the light of that 1954 decision who told the country that it must accept a versal of the "psychology of 1896" as forth in the famous Plessy v. Ferguson cision. This had unheld 20 years of supreme court rulings in favor of "separation but equal" facilities.

There was no Communist menace with first amendment to the Constitution ratified in 1791. Might it not be are therefore, that whatever the psychologist 1791, it should not be reversed?

Justice Black says the demands of the Government against protection from Coff or munist activity and in favor of what called self-preservation are exaggers at the court decides some day, apparent till the Court decides some day, apparent after subversives have gained their points.

maybe the situation wasn't exaggerated the all? Can we ignore the "clear and presal danger" doctrine enunciated by Judge and Hand, who wrote that it isn't necessary ary to wait for a plot to be consummated thre the Government takes action to preen its own overthrow?

but the majority opinion which has been alled a change from the famous Watkins he it claims to distinguish between this the lit claims to distinguish between the preceding cases, the fact remains that reading both sides in the five to four reading both sides in the five to four reading both sides in the five whether the sides of the property of the propert have today a written or an unwritten constitution.

The argument of the majority is that Constitution.

the argument of the majority is that compers may, within limits, compel answers of witnesses from whom information is that on which to base the writing of new the minority says this is merely ex-The minority says this is merely exphion be crystallized on the need for cortes we law? Would some of these Justices orlid congressional committees to expose active laws? acteteering in labor unions, just because subjects certain witnesses to "humiliaon and public shame"?

Clearly, the fact that the Justices divided to four on whether the Republic can preserve itself against a group or party that poducive to confidence in the wisdom of the Present Supreme Court of the United Will the latest ruling be reversed as he Justice changes his mind? Is this a riten Constitution?

### The Strauss Debate

EXTENSION OF REMARKS

# HON. A. S. MIKE MONRONEY

OF OKLAHOMA

THE SENATE OF THE UNITED STATES

Monday, June 22, 1959

Mr. MONRONEY. Mr. President, I Mr. MONRONEY. Mr. Fitsher. tunanimous consent to have printed the Appendix of the RECORD an ediorial entitled "The Strauss Debate," which was published in the Washington cost and Times Herald on Saturday, une 20, 1959.

There being no objection, the editorial ordered to be printed in the Rec-Ro. as follows:

THE STRAUSS DEBATE

The Senate debate over the confirmation adm. Lewis Strauss as Secretary of Comadm. Lewis Strauss as Secretary sece finally has come to an end. The out-one is one that must be discomfiting to he is one that must be discomfiting to he President, embarrassing to the admin-tration, and humiliating for the Admiral, tation, and humiliating for the Auditorial is too bad that this result was not avoided y a withdrawal when that could have been a withdrawal when that could have been complished as a gesture of deference to senate which so early disclosed a clear character to confirm the nomination.

The national interest (and even the inter-st of the nominee and of the administraon) may be better served by this result an by a confirmation, with a narrow marby a confirmation, with a harrow the that would only have transferred the share. that would only have translet to a bate from the floor of the Senate to a gate from the floor of the Senate of the Fernand Rer forum. The breakdown of confidence tween the Admiral and the Senate was complete that the quarrel, in one form another than the quarrel, in one form another, surely would have continued. The another another surely would have continued. The another a good thing for the country a merciful thing for the Admiral to this debate is read as a partisan ven-

this debate is read as a partison that or merely as a personal quarrel, it will

be misread. If it is construed as a verdict on the Admiral's competence, ability, administrative talent, and public service, it will be misconstrued. These things were not at issue.

What was at issue was made increasingly clear as the debate went on. The notable addresses of Senator Mongoney and Senator O'MAHONEY, among others, illumined this issue, in the closing week of the debate. The Admiral had too frequently exhibited a disregard of the right of Congress to know about the transactions of the executive departments. And he came before the Senate at a time when many Senators were feeling irritation at the exhibition of this same sort of executive arrogance by other officials.

The Admiral's estimate of the reach of executive privilege would have enormously diminished legislative prerogatives if it had been allowed to prevail. He appeared to the Senate as the virtual spokesman, the symbol and the exponent of a doctrine of executive secrecy that the majority simply could not countenance. Senators had a right to feel that by confirming Admiral Strauss they would encourage the imitation of a philosophy of executive secrecy.

It is this issue that finally overcame, in the minds of many Senators, an initial reluctance to obstruct the President's choice of a Cabinet member.

The Congress does not always have the power to compel members of the executive departments to be communicative about the operations of Government for which it shares responsibility. However, to use an old truism of politics: although it cannot make them talk it can make them wish they had

Political debate, such as that heard these past weeks in the Senate, more than constitutional doctrine or judicial intervention, constantly is at work, refining the separa-tion of powers. Out of such debate emerges better understanding of that reciprocal deference owed by each branch to the others to the end that a system so dependent upon mutual respect and understanding may operate successfully.

## Depressed Areas Hold Back New England

EXTENSION OF REMARKS OF

## HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. OLIVER. Mr. Speaker, we are being continuously brainwashed with economic and financial statistics painting a rosy-hued picture of the recovery of our economy from the deep recesses, which resulted in mass unemployment and loss of growth at this most critical period in our Nation's history.

In the many areas where pockets of unemployment still persist, there is no experience of recovery. My people in Maine who are still unemployed, trying to exist on substandard levels of income, fully appreciate the hollow tone of these self-serving statistics, with which we are being bombarded.

It is not only the severe problem of the depressed area that concerns many of us in Congress. But that which concerns us even more, if that is possible, is the complacency of the leaders of this administration, which permits them to brush off apparently, as in-

consequential the lack of growth and expansion so urgently required to compete with the Sino-Soviet economic challenge.

This country needs to use all the human and material resources which we can command and we cannot afford the luxury of the delay, now stalemating the enactment of the depressed areas bill. This is not radical or extreme legislation. It is not the dream of so-called spenders. There can be no action which is more conservative than the basic philosophy of this bill which is to develop the stagnant areas of our Nation and put people back to work.

Growth and expansion of our economy through full employment and production is the only solution to the common enemies which we are fighting, namely communism and inflation.

The area redevelopment bill should be enacted now to give America the weapon of full employment to win this war.

I am in complete agreement with a summary of the remarks of Mr. Solomon Barkin, research director of the Textile Workers Union of America, recently made at the University of Massachusetts, which are included herein:

DEPRESSED AREAS HOLD BACK NEW ENGLAND

AMHERST, Mass., June 11.—"Twenty-seven major and smaller labor markets in New England continue to be distressed suffering from chronic unemployment despite the substantial recovery which overall nationwide sta-tistics show," said Solomon Barkin, director of research of the Textile Workers Union of America speaking last night before an AFL-OIO institute at the University of Massachusetts.

Barkin spoke on "The Need for Industrial Development in New England." "Average unemployment in New England still is at the rate of 6.5 percent with much higher percentages persisting in the States of Maine and Rhode Island," Barkin stated. "Unemployment in the region is highly

concentrated in the chronically distressed areas. The unemployment rate in these 27 labor markets was 9.5 percent. While they included 25 percent of the working popula-tion, they had 40 percent of the unemployed. In addition to these 27 labor markets, there are 13 other labor markets in which there was a substantial labor surplus exceeding 6 percent of the labor force.

The highest unemployment rates in individual labor markets are to be found in Maine and Rhode Island. In Maine the fig-

ure is 16.6 percent.

"Industrial development of New England has not been sufficient to keep up with the rate of displacement, not to speak of the growth of the working population. Much more must be done by all individual New England communities to improve themselves so as to be attractive for new industry. Instead of depending upon outside companies establishing branch plants, the region must make a thorough study of its resources both human and natural and seek to build upon them. New industrial complexes must be organized to become natural growth centers. Older communities lacking in plant sites should be helped to clear the industrial and slum areas to allow for the construction of new modern plant structures. Residential slums must be cleared up with urban renewal projects.

"New England's universities must be harnessed to engage in research and development work designed to promote local economic enterprise. Untapped water, mineral and power resources such as are found in Maine must be explored for immediate util-

ization," said Barkin.

Barkin called for a new era of industrial redevelopment of distressed communities and urban centers, as a new way to assure economic growth, assure maximum employment, and stabilize the American price level. He noted, however, that the region's leadership which excludes trade unionists has not been enterprising and aggressive enough to assure an adequate rate of growth and expansion in employment. The trade-union movement

must insistently prod the elected officials in these States into more venturesome programs of economic development if the unemployed and the new generations are to find profitable employment.

"Passage of the area redevelopment bill now being considered by the House of Representatives is an essential element in such a program for regional redevelopment," Bar-

kin concluded.

Inflationary Interest Raise Forced by Federal Reserve Strike Against Treasury Permits Tax Evasion by Banks and \$285 Billion Gift From Taxpayer and Is Forerunner of Hair-Curling National Depression

EXTENSION OF REMARKS

## HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. FLYNN. Mr. Speaker, I have inserted in the Congressional Record, under the dates of June 5 and June 17, articles pertaining to the vault cash bill, the banks and the money system. In these articles I have explained that the Federal Reserve System of the United States, at a time when Government bonds were stabilized at 21/2 percent went on strike against the Treasury of the United States and refused to buy bonds at that rate, thus forcing the Treasury Department to gradually increase the interest rate until it is now about 2 percent over what it was in 1952. The effect of this is to cause this Government to pay on its public debt an additional 2 percent a year or approximately \$6 billion in interest. These are inflationary dollars because they are dollars for which the American people get nothing additional in return. This increase in the public debt has had a corresponding effect on the private debt of individuals, corporations and municipal corporations. They are now forced to pay this additional interest meaning that the banks and other financial institutions are collecting untold billions of dollars additional in interest each year. All of these are inflationary dollars and the payment has been forced upon the people because the Federal Reserve banking system went on strike against both the Treasury of the United States and the public in order to force up the interest rate.

After interest rates increased, the Federal Reserve banks and others started to cry "Wolf, wolf," but instead cried "Inflation, inflation." This plaintive cry was designed as a scare to make the American people fearful of what they thought was a loss or runaway American dollar. The fact is that our price-cost index has remained almost stationary for the past 2 years but that this upward spiral of interest brought on by the bankers strike has had the effect of taking the public and the individuals' dollars away on interest without giving them anything in return.

I explained that the interest rate could have been stabilized as it was for many years under the Truman administration by the Federal Reserve bank continuing to support the Treasury bond market on the United States. I explained that when the banks forced the interest rate up, they set up a gimmick by which the banks could entirely avoid the payment of Federal income taxes. I set forth a table showing how it

worked and how the banks actual made a tremendous profit through the use of this gimmick in addition to the complete avoidance of income taxes.

The banks have now forced interes on the public debt to the statutory cell ing of 41/4 percent and the administra tion, with the help of the Federal Re serve System is asking that the interes rate be taken off Government bonds that the banks can strike for still high! price on the interest rate. If successful this will have the effect of raising the interest rate all around the country at if the Government pays 5 percent if terest on its debt, the private rate banks will go to 7 percent or 8 perces just as it did before 1929. That will ce tainly be inflationary. Then, under the guise of stopping inflation which the banks will say is getting out of hand, the Federal Reserve System, as they hal announced in the June 15 issue of U News & World Report, will tighten ! the Nation's economy by decreasing the amount of money and the flow therec to a point where small business, hop builders, and individuals will have compete on the money market at his rates of interest with big corporation and the Government for an insufficiel number of dollars to take care of the needs of the American Nation. shortage of funds, high interest rate and the inability of small business to loans will make it necessary for banks, who will be required to call the loans pursuant to action to be taken the Federal Reserve banks in their dri to tighten the money supply, will for small business into bankruptcy, will cause them to lose everything they have just as in 1929. At that time many well slaves to a money system instead money being a tool for men to use. banks are again, through high intere rates and a tight money supply, at tempting to get the American public accept this system under the scare this we are entered upon a period of run away inflation and that it is either a cal of accepting right money or ruination I This is false and nothing inflation. could be further from the truth. have no others calling for such a ren edy and if the Federal Reserve band will not support the Treasury bond ma ket of the United States, then this Col gress which is charged with the duty coining money and regulating the val thereof, should take such steps as a necessary to prevent a recurrence of the atmosphere that created the depression of 1929. We should start by refusing increase the interest rate on Govern We should then amel ment bonds. the capital laws, statutes, and so fort to make them apply to banks and the prevent the banks from avoiding the payment of income taxes. The Federal Reserve bank holds at

The Federal Reserve bank holds approximately \$25 billion in reserve fund. It is claimed that only \$5 billion of the money is necessary for the needs of the Federal Reserve System and the value cash bill is an attempt by the banks have \$15 billion of the money held by the Federal Reserve bank credited to the right vidual reserves of the individual banks then issue money at the rate of seven it

and could with this money, create and could, with this money. The baks could invest this \$105 billion in 5 ecent Government bonds, if the interrate is raised, and collect over \$5 billo a year interest for 30 years on 30her bonds. The country would end up bying the banks over the next 30 years billion, as follows:

Billion his money during the next 30 years\_\_ 150 repurchase of the bonds given Torepurchase of the bonds bought by bank end of 30-year period .....

The banks will have received this \$285 billion from the American Government bithout having invested one penny of their own money and it will have amounted to \$91/2 billion a year for the heat 30 years. At the end of this period the Government of the United States will owe its present debt of approxia owe its present debt of applications of the strong a bankers' "steal." Let us look for a moment at what we could do for, through the \$20 billion that the Federal Reserve bank holds and which it does not need, we could have paid back through a separate operation, reinvested this reserve in Govemment bonds at the same 5 percent interest, and if they did so and annually thvested the interest received thereon, this \$20 billion would in 60 years grow at an amount that would be adequate to by the entire public debt of \$285 billion and in addition thereto, the Federal Rethe hand would have received the \$20 billion that it started with and would in addition that it started with and would in \$40. addition thereto earn approximately \$30 billion more than is needed which could defray the cost of the program during that period. This could be done without coting the taxpayers one penny—and we Would eliminate our debt in 60 years and to the most part they would not have to del in any security other than U.S. bonds.

Would it not be better for this country to Would it not be better for this manner use the reserve funds in this manner and pay the public debt than it would be to give this reserve back to the Federal give this reserve back to the considered member banks without considered member banks without considered member banks without considered member banks without considered members and operations of the constant of the constan eration? Let us be Americans and operate for the good of all American citizens. Let us not give our stamp of approval to special interests. Let us not approve the backers' "steal." Let us use this money to pay the public debt and let us hold the ine against inflation by keeping the interest rate where it is and by taking steps against the Federal Reserve bank it it persists in following policies that bring about a hair-curling depresoring about a hair-curing of the savings of the and wipe out the savings of the steat majority of the American citizens, and all within a few years time.

Yes, this is a period of prosperity but this is the time that plans are being laid by those who, innocently or not, would bring about the depression which could well mean the end of democracy and liberty for this Nation.

DEFEAT THE VAULT CASH BILL

Please see the diagram attached on how the investment of \$20 billion would bay the national debt in 60 years. [Chart omitted in RECORD. 1

The Fallacy of Security

EXTENSION OF REMARKS OF

# HON. E. L. FORRESTER

OF CHORCTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. FORRESTER. Mr. Speaker, Dr. Frederick S. Porter, a retired Baptist minister, addressed a group in Columbus, Ga., upon the subject of "The Fallacy of Security."

This address should be read by every man, woman, and child in our country, I unqualifiedly endorse his remarks, and I proudly place them in the RECORD,

The address reads as follows:

### THE FALLACY OF SECURITY

Modern man is seeking a new god. Security is its name. Men have always paid tribute to this diety. They have sought to find security against the rainy days, and the hazards that life brings. But never before have men brought such lavish sacrifices and such wholehearted devotion to lay upon the

altar of this new god.

Leslie Gould, the financial editor of the New York Journal American, said recently, "When a young fellow comes in looking for a job, his first question is not what are the chances of promotion, but what kind of pension will he get 40 years hence." A scholastic magazine found, in a survey of 40,000 students, that instead of asking, "How can I get a job that will challenge my abilities and give me a chance for progress?" a discouraging proportion asked, "How soon will I get more money?" or "In what kind of job do I have to do the least work?" One boy replied that he would "like to be a retired businessman." The desire for security seems to be what most Americans want. Many of them are willing to sell even their freedom in order to obtain it.

This new god security demands much. It calls us to sacrifice our wealth and even our first-born upon its altar. We pour billions of dollars into bombers designed to deliver the atom and hydrogen bombs. We work around the clock with experiments in jet propulsion and rocket projectiles. And still

we do not achieve security.

The worship of this new god touches all of life. It finds expression in our efforts to make life easy. We measure the worth of any new program or plan by what it does to remove difficulty. We suppose that in proportion as we make life easy and secure we have become successful. This attitude has crept into education. The lessons must not be too difficult; the school days too long; the duties too severe. It reminds one of the Harvard student, who, after selecting his courses for the new semester said, "The first class begins at 10 o'clock in the morning, and all the classrooms are on the ground floor.

Our physicians tell us that to keep healthy we must exercise self-discipline, and sacrifice indulgence. But we believe in the easy way, so we laugh at our doctors, and indulge our appetites. We follow this procedure until our muscles become soft and the waistline bulges and then we get

It is this soft, secure, easygoing, slovenly way of living that is the bane of our so-ciety. We have come to believe that we can slouch into the better life and hitchhike our way into the kingdom of ease. We do not want to pay the price of living at our best.

A few voices are being raised against this idol worship. The President of Columbia University, speaking to the incoming students, urged them to grab opportunity, not security. He warned, "I am quite certain that the human being would not continue to exist if he had perfect security.'

Such security in its very essence is static. It would drug us to sleep, slow down wheels of progress and bring civilization to its twi-

There is, then, something else that needs to be given priority. The great pioneers who have contributed most to human progress across the years were not motivated by the desire for immediate security. The spirit which distinguishes them was their boldness and courage, their willingness to live dangerously, to build upon risk. One of the great souls of modern times is Madam Curie. She was a young woman with a brilliant mind. One day in the classroom of a university she head a professor say, "Some of you may have stars at your fingertips." That utterance caught fire in her imagination, and she devoted herself to scientific research. She fell in love with Dr. Pierre Curie, and together they searched for radium The road was long and hard. Failure dogged their steps and they were on the point of quitting. One night they walked into their laboratory, to see their evaporating dishes aglow in the darkness. It was radium. Their search was rewarded. They had stars at their fingertips. The real pioneers of progress have been such people, who ask not for security but for opportunity.

The people who laid the foundations of our country were not striving for security. They risked everything for the ideals of free-They resisted the tyrants of their day. They lifted their faces and their hearts to heaven and cried, "We know no king, but thee, O God." With that concept of the sovereignty of God over all the affairs of men they set sail for the new world, to light the fires of freedom. They were not seeking security. Their cemeteries grew faster than their gardens. But by their perseverance, industry, courage and faith they laid the foundations of this free land. Immediate security was not their dominant concern. If it was-it was a security they would win for themselves, earn with their own hands, achieve by their own sacrifice. It was no security they demanded as their natural

right.

Furthermore, the great insights into life have not come in periods of ease and security. They have come out of chaotic days. Our sweetest songs were born in sadness. Our greatest poetry came out of the shadows. It was not in hours of security and ease that men built the Chartres Cathedral, or painted frescoes on the Sistine Chapel or wrote a Constitution in Independence Hall. They came out of dark and dangerous days. The qualities in human life that we like best grow in the soil of difficulty and risk. When the sun is blotted out and the wind blows chill, some people for the first time find themselves. "Defeat may serve as well as victory to shake the soul and let the glory out." We may not like this kind the glory out." We may not like this kind of world, but it is the kind of world best calculated to produce character. We must remember that where there is no hardship there is no hardihood; where there is no suffering, there is no sympathy. Behind every great virtue there is a corresponding difficulty. The soul would have no rainbows had the eyes no tears.

A character in one of Ibsen's plays asks the question of a prima donna: "Who taught thee to sing?" Answer: "God gave me a

sorrow.

If you go into a jewelry store to purchase a diamond, the salesman first will spread a black cloth on the counter. I suppose the dark background brings out the beauty of the diamond. It may be that the jewel of spiritual compensation is all the more beautiful and attractive against a dark background.

I do not mean by this to minimize the importance of certain forms of security, or to ignore the obligation which society has for the good of its members. The fact that people are homeless, helpless, hungry and afflicted hurts us deeply. The conditions causing such distress must be remedied. Our mission, as Christians, in the face of such need is crystal clear. "Inasmuch as ye have done it unto one of the least of these, ye have done it unto Me." But in seeking to place personal security upon the throne we lose the vision of life's possibilities and responsibilities. Christians, of all people, should know what constitutes se-curity. They know it is not found in ease and comfort, nor in any man-made guarantees. It is found in the spirit of free men with a living faith in a living God. truth runs through the Scriptures like a scarlet thread. The Old Testament prophets-Amos, Hosea, Isaiah, and the others-were the pioneers of their day and generation. They were not motivated by security. They challenged the religion which had become soft, comfortable, and undisturbing. "Let justice roll down like waters, and right-eousness as a mighty stream," cried the prophet Amos. The god security has usurped the throne of the living God, and they would have none of it. Their courage did much to restore men's faith and confidence.

The finest passages in the Old Testament did not come out of periods of ease and security, but out of the days of trial and testing. The religious genius of Israel did not record its greatest achievements in the prosperous and secure days of Solomon in all his glory. It was in days of difficulty when the proud waters of Babylonian wrath swept over Israel's soul that faith leaped to life. In such times the prophets put the trumpet to their lips and reasserted the unshaken and everlasting spiritual realities.

When you turn to the New Testament you do not find men searching for security. The Founder of our faith and his associates, and his greatest Apostle, were men who, by a strange paradox, represented themselves as poor, yet making many rich, "as having nothing, and yet possessing all things."

Turning now to another phase of our

The search for material security is hoary with the age and hazards of many generations. Many persons have advanced the theory that it is the task of the Government to protect its citizens from all the material hazards and insecurity of life. Such persons know little about history, human nature, or economics.

Is the principle of mutual security by compulsion a sound method of achieving security? Are we willing to forfeit our basic freedoms to procure it? We call it social security; in reality, it is socialistic security, Woodrow Wilson once said that the history of freedom is the history of the restriction of government, rather than the increase of it. In other words, government intervention starts by doing things for people, and ends by doing things to them. Any popular government having the power to grant monetary or other valuable favors to its citizens will be besieged to do so in increasing measure until it finally bankrupts them to carry the burden they have laid upon themselves. Fiscal responsibility and solvency are absolutely essential to sound government and economic stability.

The government has no means of obtaining the money to meet these obligations except by taxation, increasing debt, or by issue first money. The administrative process which this coercion and distribution necessitates consumes a large part of the moneys dis-tributed. The method is socialistic in its concept, in its administration, in its waste, extravagance and inefficiency. And no insurance actuary in America would endorse it as a sound business enterprise.

Why do men seek security in socializationthat is, depending partly upon the efforts of others to meet their needs? It is said they do this because the state has the power to force others to provide for them if they are ill, indigent, unemployed, unfortunate, or old. But knowing that the state will do this, it is easy to lose self-reliance and slip into dependence-in other words, to develop

the qualifications necessary to obtain public assistance. Thus, a great number of people lose the habit of thrift, initiative and selfreliance. The attempt to obtain security by socialization destroys the hope of attaining security by one's own effort. The loss is far greater than the gain. No collectivism in history has ever attained a measure of security comparable to that which freedom

Facts prove the validity of this conten-tion. While reformers at Washington are dispensing economic security with the right hand of social legislation, they are, with the left hand, simultaneously, through Federal over-spending, tearing down economic security through diluting the purchasing power of the dollar, of all savings, all insurance, all bonds, and annuities. We live in a haven of prosperity suspended over a precipice of fiscal insecurity. While at-tempting to achieve the security of others, we are jeopardizing the security of the state itself, already bogged in debt, deficits, mounting welfare payments and bureau-cratic spending, and increasing regimenta-tion. All of which endangers the national security, aiding and abetting the Communist conspiracy in the United States.

One would assume that with widened prosperity, social security, and productivity that the need for welfare activities would be diminished. As a matter of fact, under the proposed new budget, \$14 billion will be spent, as against \$3.2 billion 10 years ago; and that does not include the program for aiding veterans and farmers—which will amount to \$10.5 billion more.

And all this in an era of record employment, record income, and a record gross na-

tional product.

The end result of our system of security I do not venture to determine. I am not an economist. But this, at least, is obivous. The type of security we have thus far achieved, instead of accomplishing what its sponsors so confidently predicted in allaying our economic ills, anxieties, and tensions, and in promoting a greater degree of confi-dence, happiness, and well-being; instead of that, presents this curious parodox: We claim the highest standard of living in the world, have the greatest wealth, the greatest productive ability, and the greatest degree of security. Yet, we are not a secure and happy people. We find more mental and emotional disturbances, more hypertension, more fear, frustration, and anxiety; a greater erosion of character seen in the pyramiding of crime in all its categories and dimensions; more divorce, drunkenness and drug addiction than has been known in all our previous history.

Our President recently reminded us that the United States could be the richest Nation in the graveyards of history. That fate can be averted only by returning to sound ethics, sound economics, a sound fiscal policy, and a sound currency; combined with morality and integrity in government.

Such is now, and always has been, the price of national survival.

## Sam Hoffman of Rocketdyne

EXTENSION OF REMARKS OF

# HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. HOLT. Mr. Speaker, recently Sam Hoffman of Rocketdyne-a division of North American Aviation, Inc.-located in Canoga Park, Calif., received the Goddard Memorial trophy for outstanding achievement in the missile field. The award was made at the Robert H. God-

dard Memorial dinner, honoring the American father of rocketry, during the national missile industry conference.

Rocketdyne received the Borg-Warner Missile Industry Award. Hoffman was honored individually by the Goddard Memorial trophy presented by Missiles and Rockets magazine.

The award made to Rocketdyne was given for the performance of its liquid propellant rocket engines in missile and space launchings during 1958, and was accepted by T. F. Dixon, chief engineer

Hoffman was chosen for the Goddard trophy by the 14 editors of Missiles and Rockets magazine for "outstanding achievement during 1958 in the missile field."

The first award was presented las year to Dr. Wernher von Braun and the Army Ballistic Missile Agency.

## Lewis L. Strauss

EXTENSION OF REMARKS

## HON, STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. DEROUNIAN. Mr. Speaker, commend to the attention of our colleagues the following editorial, which ap peared in the New York Herald Tribun on Saturday, June 20, on the subject of the Senate action early Friday morning

#### DISGRACE TO THE SENATE

The Democrats have been complaining bitterly about Republican charges that the control of the Legislature has produced 'won't do" Congress. So to prove that the Democratic leadership can bring somethin to a vote, they have refused to confirm, as member of the President's Cabinet, Adm Lewis Strauss, whom Mr. Elsenhower correctly described as one "who in war and peace has served his Nation loyally, honorably, and effectively under four different Presidents."

The Democratic verdict—in which 2 Republicans joined but which 15 Democrative refused to indorse—against Lewis Straus was in itself a disgrace to the Senate. worse was the fact that this country's highes legislative body wasted weeks in acrimonio pursuit of what was essentially a privat

The Senate, of course, has the right to re fuse confirmation of a Cabinet appointment It is a right, however, that has been use with such discretion that only seven previous nominations to the President's official family to the group which the Chief Executif chooses as his advisers, responsible to his and for whom he is responsible to the coun try, have been rejected in the entire histori of this country. Adding Admiral Strauss the list, on the basis of a farrago of unproved charges, strained constructions of word and attitude, and mere dislike, was a wanter abuse of privilege.

The Senate has important work to do Several Democratic Senators, in addition hope to prove to the Nation that they and their party should be trusted with the Government of the United States. One would imagine that the best method of doing so, if the present division of action was the present division of authority between the two major parties, would be for the leading Democratic Senators and their colleagues to set a record of constructive achievement. Instead, they have descended to petty brawling over personalities and simple obstructionism—spitework that can only

arm their own reputation and the business Government.

The knifing of Lewis Strauss will not be brigotten or condoned. But the country is utilled to hope that, having squandered much time in malice, the Democrats of the nate will recall their obligations under the Constitution and get back to work.

## The Federal Debt Management

EXTENSION OF REMARKS OF

## HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959.

Mr. PELLY. Mr. Speaker, the followng comments made by Mr. Reno Odlin, resident of the Puget Sound National ank of Tacoma, Wash., on the Treasury bepartment's proposal regarding savhes bonds have impressed me greatly. lam sure my colleagues of the House will recognize the importance of this subject h its relationship to the debt manage-

ment of our country. Mr. Odlin is a noted authority or Fedtal financing and, under unanimous consent, I include the text of his stateent in its entirety immediately follow-

ng my remarks:

JUNE 10, 1959.

As you know, I have been connected with he savings bonds program for some 18 years. have been working on it from the time the rst War Finance Committee was appointed h this State; I was State chairman, and still ocupy that post in the present Savings londs Division.

This whole question of our monetary and scal policy and our debt management probm has been my avocation for an awfully ong time. I served for 6 years on the board the Federal Reserve Bank of San Francisco, and for 4 years was one of the 12 members the Federal Advisory Council of the Fedtal Reserve System. I was, until very reently, chairman of the executive committee of the Savings Bonds Division of the Treasbry, and withdrew from that job when I was ppointed chairman of the American Bankers Sociation Savings Bonds Committee. I am so a member of the American Bankers Asociation Government Borrowing Committee, which, as you know, is an advisory group which meets with the Treasury rather tequently.

I give you that bit of background just to tresh your own recollection, and to sub-dantiate the fact that I am fairly familiar with the problem over a good many years

I would like to talk to you about the other broposals in the Secretary's message of trans-hission, namely, the question of increase in the public debt limit, and the question of emoval of the interest rate ceiling on Treasdry bonds. I think the Secretary's letter gave pretty convincing historical background to histiry the request for removal of that ceilng. Frankly, we are being penned into the area of very short bills, notes, and certificates because the Treasury hasn't got any elbowtoom at all under the present ceiling, with tespect to longer term bonds. I certainly advocate restoring that flexibility by removal of the ceiling of 4 1/4 percent.

This letter is intended to ask your help in respect to the savings bonds phase of the broblem, rather than to argue the question of interest rate ceilings. I would appreciate It if you would give this your consideration, and if I can convince you that you should go along with my thinking, do everything you can to induce your colleagues to approve the recommendation.

There are \$421/2 billion of E- and H-bonds outstanding. This is about 15 percent of the total national debt. It is that part of the national debt that presents no problem of refinancing, but that has over the years operated to spread the Treasury's indebtedness widely among millions of individuals in the best noninflationary manner possible.

In this money market, with rates steadily increasing and the pressure of continuous demand operating to push them still higher, the present E- and H-bond rate is completely unrealistic. We set a goal the beginning of this year of \$5 billion of sales. We are lagging quite badly behind that objective, and in the first 4 months are already a couple of hundred million below our goal. Meantime, as other competitive investments become more attractive and offer higher returns, the total of redemptions has been rising. The net result is, instead of getting a net inflow to the Treasury, there is a little outflow, not serious yet, but it could become quite a flood.

This proposal now before the Ways and Means Committee is to raise the allowable return on savings bonds, and the intention of the Treasury is to set that rate at 3% percent. There would also be a recognition of the previous buyers and holders by an automatic stepup in the rates of the bonds which they now hold. As you can appreciate, without this step-up there would be a wave of redemptions in order to convert into the newer and higher rate securities.

We have talked this thing over and discussed it with the Treasury for months, and the present proposals are completely in line with my thinking as chairman of the committee, and with that of all the other members of the volunteer organization of the Savings Bonds Division with whom I have consulted over the past several months.

This whole thing is extremely important in the overall debt-management problem. We must be able to offer securities that will attract savings and retain the momentum of the Savings Bonds Division. This pro-posal, I think, will do that, and will enable us to provide the Treasury with a steady net inflow of true savings, which simply cannot be promised unless the rates are in line with existing market conditions.

I very earnestly hope that you will go along with us on this and use every effort you can to see that it is promptly enacted into law. I know the circumstances completely justify the proposal, and I am satisfied that it would reinvigorate the savings bonds program in a most desirable way.

Thanks a lot for your careful consideration, and I hope you will do everything you can in this direction.

With best regards always.

Your very truly,

RENO ODLIN.

Abraham Lincoln Spoke in Olney, Ill., September 20, 1856

EXTENSION OF REMARKS

# HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. SHIPLEY. Mr. Speaker an article was brought to my attention by Mr. Bert Michels of Olney, Ill., one of our well-versed historians, which appeared in the Olney Times newspaper on February 13, 1941. It mentions the appearance in Olney, Ill., of Abraham Lincoln and Stephen A. Douglas on September 20, 1856.

The Olney Times was edited and published by Louis C. Spelman but several years ago was sold and Mr. Spelman is now employed by the Daily Republican Register at Mt. Carmel, Ill. Olney is my hometown and I have read this newspaper article with a great deal of interest. I recommend others to read it and, under leave granted, submit the article for printing in the RECORD:

GREAT EMANCIPATOR VISITED HERE IN 1856-MISSOURI PUBLICATION RECORDS OLD EVENT

The Olney Times is this week in receipt of a letter containing information of Abraham Lincoln's appearance in Olney in 1856. This information has been supplied by Harry Pratt, executive secretary of the Abraham Lincoln Association in Springfield, who has spent much time in searching old newspapers concerning Lincoln's being in Olney. The Missouri Republican at St. Louis in its issue of September 24, 1856, and the Chicago Times of September 25, 1856, gave accounts of the Olney speech by Lincoln.

The item is as follows:

"Abraham Lincoln and Stephen A. Douglas both spoke in Olney at political rallies on Saturday, September 20, 1856. Douglas spoke in a grove near town and Lincoln in the courthouse.

"Douglas left Springfield Friday and at Vandalia met Lincoln, Dick Taylor and his fellow Democrat, William A. Richardson. They took a train for Olney in the evening. At Olney Lincoln met the other two Republican orators, Senator Lyman Trumbull and Ebenezer Peck of Chicago. The Republicans challenged the Democrats to a joint discussion, but met with refusal.

"At 8 a.m. people began assembling in town, delegations coming from all quarters with flags, banners and music, and according to the only two newspaper accounts of the meeting, which happen to be both Democratic, all the banners bore the names of 'Buchanan and Breckinridge.' Not a single Republican banner for 'Fremont and Day-ton' was to be seen. This account was typical of the political reporting of the day, not only in the Missouri Republican and the Chicago Times, which describe the meeting, but in all papers.

'At 10 a.m. Charles H. Constable opened the Democrat meeting with a most effect and beautiful speech and then introduced Douglas who arose amid the deafening cheers of almost 5,000 Democrats. He bowed his acknowledgment and spoke for nearly 2 hours exposing the designs of the Fremont party. He vindicated the Democratic Party in their course in regard to Kansas Terri-Old Ben Bond followed Douglas setting forth the clear duty of the old line Whigs to follow Douglas. At 2 p.m. the meeting adjourned until night. Douglas went on to Terre Haute where he spoke in the evening and the next morning went to Galena for another speech.

"Meanwhile the Republicans had distributed handbills among the Democrats an-nouncing the Republican meeting at 2 p.m. at the courthouse. Trumbull opened for the Republicans. The Democratic press remarked that he stood there hoarse and excited-with that attenuated form, that intellectual face, that sardonic smile, which looked as cold as moonshine-with no more warmth than a frog or a mummy, pleading for bleeding Kansas.

"Then Abe Lincoln tried to get up steam, but with all his tact in that line, it was a dead failure. A rumor was about that Col.

William H. Bissell the candidate for governor would soon resign because of ill health, and Lincoln was to be the candidate. This, said the Democratic reporter, accounts for the herculean labors during this contest,

not all for patriotism.

"Ebenezer Peck of Chicago was the last Republican speaker. To the Democrats he looked like only half a peck. Lincoin, Trumbull, Peck, and Taylor attended the Democratic meeting walking around like bad boys at a camp meeting. The stalwart Abe moved about, brimful of a big speech; but without a crowd. without a crowd.

"Col. William A. Richardson of Quincy and Orlando B. Ficklin of Charleston were the Democratic orators at the evening meeting at the courthouse."

## Poison in Your Water-No. 129

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Bristol, Va., Herald-Courier of October 19, 1958, entitled "Water Pollution Termed Handicap in Bristol Area."

#### WATER POLLUTION TERMED HANDICAP IN BRISTOL AREA

(EDITOR'S NOTE .- This report on shoreline development of TVA reservoirs in the Tri-City area is taken from a special survey conducted by the Tennessee State Planning Commission. The overall report for the State is entitled "Reservoir Shoreline Development in Tennessee: A Study of Problems and Opportunities.")

The Tri-Cities area, which is rapidly be-coming Tennessee's fifth metropolitan region, includes four tributary TVA reservoirs. In addition to those factors which have already resulted in economic growth, there will be added a link of the Federal interstate limited access highway system connecting the central south with the east coast. There is every reason to believe that these highways will further stimulate reservoir shoreline development in those sections of the State where the two are in proximity. There is evidence from other parts of the country that limited access expressways increase the development potential in an area which possesses other advantages for industry. increased accessibility of this area should also further its recreational development.

Since these reservoirs are not linked to the inland waterways system, there has been only passing attention paid to the identification of potential waterfront industrial sites. However, just as Tennessee Eastman is made possible by location on a water supply, there is reason to believe that sections of these reservoirs could develop industrially due to the presence of processing and cooling water. In fact, this region is considered to have among the better industrial waters in the State because of freedom from calcium and magnesium deposits. When the problem of pollution is overcome, the value of water may increasingly appeal to industry.

### SPECIAL PROBLEM

Pollution is a special problem. Both Boone and Fort Patrick Henry Reservoirs have received industrial and domestic sewage from Elizabethton, Johnson City, and Bristol. Significant improvements in water

quality below Bristol and Johnson City have recently occurred as a result of the State's stream pollution control program requiring municipal and industrial treatment measures. Additional industrial pollution at Kingsport below Fort Patrick Henry results in damage to the upper reaches of the Hol-stone River above Cherokee Reservoir. Finally, a serious problem results from the addition of calcium chloride salts by an al-kall plant at Saltville, Va, TVA states that the effects of these latter wastes "persist farther downstream than those of any other pollutant in the valley", directly affecting the length of the Holston River as far as Cherokee Reservoir. In fact, there have been instances in the past where industrial prospects have had to abandon consideration of sites along the Holston River because of inferior water quality.

Even though no specific studies looking toward the identification of water front sites are yet available, there are those who feel that such sites do exist and they point to areas along the Holston River where a series of historical alterations in channel course and depth has left a number of natural terraces which provide level sites with suitable foundation and with access to railroad and highway.

#### HANDICAP CITED

However, the immediate problems and opportunities in this area result from development of the shoreline for residential subdivision and for recreation, in response to the urbanizing influence already at work. The problems resulting from reservoir water level fluctuations are especially acute. fluctuations range of water levels definitely handicaps certain water oriented recreation. Only one county park (located on South Holston Lake and developed with the aid of the Sullivan County Planning Commission) and one municipal park (located on Boone Lake) have so far been developed on the waterfront. Warrior's Path State Park on Fort Patrick Henry has been developed to answer the need for a State park in this area. Practically the entire shoreline of Watauga Reservoir is within the area of Cherokee National Forest. TVA will transfer roughly 4,000 acres of waterfront land to the forest, enabling Watauga to remain in a natural mountain setting with its attendant recreation possibilities.

Another influencing factor is the limited extent of TVA land. These reservoirs have largely been built since World War II and land acquisition policy largely been built of flood easements.

So far, residential subdivision has maintained fairly satisfactory quality. This is due in some degree to subdivision regula-tions established by the Sullivan County Planning Commission whose jurisdiction contains the entire shoreline of Fort Patrick Henry and most of Boone and South Hol-It has been observed that the estimated average value of summer homes built in 1955 fell below that for either 1954 or 1953. This could be an indication that substandard development is a present threat.

There can be little doubt but that pres sure upon shoreline uses will increase in the future. There should be increasing opportunities to utilize recreational, industrial, commercial, and residential values of these lands. This area is comparable to the four metropolitan centers of the State and needs to keep special watch over the development of the shoreline. The recent establishment of a regional planning commission for this three-county area to supplement the work of the Sullivan County and four municipal planning commissions already existing, should prove well suited to coping with reservoir planning problems. The group already has approved a study looking toward identification and reservation of individual sites. This should include the first specific attempt to locate industrial areas on tributary reservoirs.

Communist Prey on Latin American Ills

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article by Mr. Tad Szulc, which appeared in the New York Times, Sunday, June 21, 1959:

COMMUNISTS PREY ON LATIN-AMERICAN ILLS-PRESSURE IN THE HEMISPHERE AIMED AT SUP-PLANTING U.S. POSITION

(By Tad Szulc)

RIO DE JANEIRO, June 20 .- One evening this week a short, smiling man strolled casually into the gardens of Catete Palace here and applauded a speech by President Juscelino Kubitschek that explained why Brazil had just broken off loan negotiations with the International Monetary Fund.

The man was Luiz Carlos Prestes, secretary general of the Brazilian Communist Party. and he could not have been more pleased by what he heard. Although he is personally under judicial indictment and his party has been illegal in Brazil for 12 years, Senhor Prestes and his fellow Communists, who stood in a drizzle waving posters damning the Monetary Fund and demanding trade relations with the Soviet Union, were treated with politeness normally accorded to guests

at a garden tea party.

Senhor Prestes' presence on the palace grounds, and particularly the occasion for his visit, were a striking illustration of the frequently successful tactics and techniques currently employed in Latin America by the local Communist parties, which act these days with a remarkable degree of coordination among them. But the incident also was illustrative of the disturbingly deliberate tolerance granted the Communists by quite a few Western Hemisphere governments that. like Dr. Kubitschek's, do not actually harbor anything resembling Communist sympathies.

#### BIG INFLUENCE

Numerically very small in relation to other political parties, operating legally in less than half of the republics but with ample freedom in most of others, the Latin-American Communist parties are exercising influence that is completely out of proportion to the size of their memberships of even the "fellow traveling" grass roots support they occasionally command.

Although there are no immediate prospects that the Communists can capture, in the foreseeable future, the government of any Latin American nation, they have become in numerous instances forces to be reckoned

Directed by extremely skilled leaders, they rely principally on infiltration in key activities and capitalize on the fact that, in many countries, their practices are tolerated because often democratic governments find it unpalatable to curb communism or because in tight electoral situations they are courted for votes they can deliver even if it is only a matter of a few tens of thousands

Along with supporters of Juan D. Peron. the former dictator, the Communists have been in the forefront of a bitter battle against the austerity measures of Argentina's President, Dr. Arturo Frondizi, whom they backed in the 1958 elections. They infiltrated in certain areas of the government despite anti-Communist measures enforced by Dr. Frondizi. This week the Argentine military, demanding the ouster from the adMinistration of all pro-Communist and proeronist elements, set off a crisis threatening he President's continuation in office.

With the assignment of turning Latin merica against the United States as one of he principal objectives, the Communists e playing on nationalistic sentiments and deep social and economic problems pre-Mling here to gain their goals, and there no doubt their efforts leave a mark.

The Catete palace incident was typical of

als method as the Communists again took e opportunity to agitate for trade relaons with the Socialist camp, a line that finding a growing audience in Latin Amer-

#### MORE COORDINATION

These tactics are not new, but they are eing put into effect with a greater mo-lentum and sense of coordination than at

by time before.

United States and Latin-American intellience experts believe a major push by comunism is underway in the Western Hemihere. They trace it to strategy talks held Latin American Communist leaders who tended the 21st Congress of the Soviet Communist Party in Moscow earlier this har and then traveled to Communist China for further conferences with Mao Tse-tung, the leader in Peiping.

The result of these talks in terms of Com-Munist objectives in Latin America was, in ect, disclosed in a speech in Santiago, Chile, May 10 by Luis Corvalan, secretary eneral of the Chilean Communist Party. In address at a meeting of his central comlittee, he condemned every program of Misting and future inter-American cooperaion. He described plans of the United Natons Economic Commission for Latin imerica for creation of a regional common harket as a scheme for penetration by U.S. harket as a scheme for penetration of the stars, the founding of an inter-American hank as "opening new fields to U.S. capital-sts," and last month's economic conference in p. h Buenos Aires as an occasion when "Latin-American delegates went home with empty Pockets."

A nascent campaign against next Febru-Ty's inter-American conference of foreign ministers in Quito, Ecuador, was in effect announced by Senor Corvalan and subsequently confirmed by a seizure of docuhents of the Ecuadorean Communist Party salling for efforts to discredit the parley. Intelligence exports think the Communists may attempt to disrupt the conference by at

by violent means.

The Communist conferences in Moscow and Peiping are being followed up by re-tional contacts of Communist leaders in atin America. One such meeting was reortedly to have been held in Montevideo,

truguay, this month.

There is little doubt that the Communist trategy in Latin America is directed from loscow. There is a vast amount of travel between the Iron Curtain countries and atin America. The Soviet embassies in dexico, Argentina, and Uruguay, as well as the legations in those countries and in arazil of Soviet satellite states, are in contant touch with local Communists.

### EMBASSY CENTER

The Soviet Embassy in Uruguay, with a taff of 70, is the largest center in the Americas for the dissemination of Commualst propoganda, and presumably instructions, to the local parties. In Mexico, three Soviet diplomats were expelled this year on charge of directing violent strikes. Argenuna did likewise with six Communist diplohats accused of illegal acts.

The Moscow radio is beaming more than hours of weekly broadcast to Latin America, including a program in the Indian Quichua dialect. One hundred especially edited periodicals from the Soviet bloc and Company of Latin. Communist China are circulating in Latin

America, including the monthly Novedades de Union Sovietica (News of the Soviet Union), selling 100,000 copies. Eighty publishing houses and book stores specialize in the distribution of these publications. This effort backs up more than 250 local Communist or pro-Communist publications.

Forty-nine Communist-operated "bina-tional centers" in Latin America appeal to descendants of persons from the Iron Curtain countries. Legislators, artists, and students are constantly invited to visit the Iron Cur-

tain countries.

Undoubtedly this concerted drive by communism is having an impact in Latin America, though it still is indirect, insofar as it is camouflaged into identification with popular local causes. The Communist strategy is to infiltrate to the greatest possible extent into the national life of the Latin-American countries, then seek to influence policies.

#### MEMBERS OF PARLIAMENT

With Communist parties legal in 8 of the 20 Latin-American republics, handfuls of Communist members sit openly in the parliaments of six countries. A few Communists, disguised with the labels of other parties, are members of the parliaments in at least five other republics.

In several countries where the party is technically illegal, such as Brazil, the Communists are completely free to operate. They infiltrate labor unions and student organizations to a considerable extent, and news-papers to a lesser extent. In Brazil there is said to even be a small but influential infil-

tration into the army.

While the current line is to "cooperate with the progressive bourgeois parties," as the Chilean Communist leader said in his speech was the case in Cuba since the revolution, and to work for respectability, the Communist hand is almost invariably seen in most strikes and incidents of violence that are cropping up with growing frequency throughout Latin America. The Communists also often help to stage riots in protest against economic austerity measures.

## Toward Greater Unity in the Atlantic Community

EXTENSION OF REMARKS OF

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, June 22, 1959

Mr. HUMPHREY. Mr. President, I recently participated in a debate on the subject of Atlantic unity in the pages of Western World, the first bilingual transatlantic magazine. My worthy opponent was M. Felix Gaillard, former Premier of France. I ask unanimous consent that my essay, "Steps Toward Effective Unity Are Possible Now," which appeared in the June 1959, number of Western World. be printed into the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

STEPS TOWARD EFFECTIVE ATLANTIC UNITY ARE POSSIBLE NOW

(By Senator HUBERT H. HUMPHREY)

Effective steps toward the goal of Atlantic unity can be taken now, provided the mem-

ber governments and peoples have the will.
With one reservation, of course.
If the phrase "Atlantic Union" is interpreted to mean a federal union of Western democracies patterned after the United States of America, obviously it cannot be created immediately. Even if every man and woman in the countries concerned favored such a union, it would require a great deal of time to bring it into being. This, as we all know, is still far from the case.

But if by Atlantic Union we mean a de-

gree of Atlantic unity adequate to meet the challenge of our time, then such steps are not only possible but overdue. For the foundation has already been well and solidly laid. To the extent that the Atlantic Com-munity is incarnated in NATO, limited Atlantic unity already exists.

This progress has, of course, been greatest

in the field of defense.

Never before, except during actual war, have national governments gone so far in establishing a unified defense structure. In fact, as many of us can remember, the Allies of World War I did not agree upon an overall commander until the final year of the

The nations of the North Atlantic Treaty Organization selected a Supreme Commander 8 years ago. Since then they have created organized forces under a unified command structure. They have established a common infrastructure, including such facilities as airfields and pipelines, for common use, have submitted their national defense programs to an annual review by the North Atlantic Council and carried out programs of mutual defense support and some common procurement.

These accomplishments, the fruit of efforts by dedicated men from all our nations, are as heartening as they are extensive. can we believe that they are enough to meet

the challenge which confronts us?

### THE COST OF UNINTEGRATED DEFENSE

The cost of maintaining our defenses under the present system is straining all our national budgets and may become prohibi-

Far as we have gone toward unity in defense, we are still paying billions of dol-lars a year in costs which might be eliminated by further integration, costs which result from duplication, and lack of standardization in separate national defense programs.

On this subject a very pertinent state-ment was made by Percival F. Brundage, who was recently Director of the Budget in the Eisenhower administration. He stated: "With a complete integration of the North Atlantic forces to include a unified design of weapons, standardization of equipment and ammunition, coordinated navy. air, and land forces, and above all a consistent and united foreign policy, I am convinced that the total expenditures could be reduced by one-third and be more effective

\* \* \* " The Soviet Union is pressing and the source of the soviet Union is pressing and the source of the sour The Soviet Union is pressing us hard, so hard that we may find ourselves forced to do things which we would not otherwise choose to do.

A complete integration of defense would obviously require a considerable degree of political and economic integration.

Experience in Western Europe, the Coal and Steel Community, and the Economic Community, or Common Market, appears to indicate that political integration can be promoted by intimate economic cooperation. Yet the NATO nations have as yet made relatively little progress toward unity in the economic field. The implementation of article II of the North Atlantic Treaty. on which such high hopes were based, has proved exceedingly disappointing. How little has been achieved in relation

to the economic cooperation that is necessary, is indicated by the following passages of the resolution on economic affairs adopted by the Fourth NATO Parliamentarians' Con-

ference on November 21, 1958:

"Trade policy should be coordinated according to common principles among the countries of the Atlantic Community. \* \* \* The North Atlantic Council, in the light of new concepts for defense of the North Atlantic area, should consider ways to minimize the obstacles to effective negotiations on tariff concessions inherent in the insisttence in certain countries on maintaining tariffs and quotas in certain industries because they are considered essential to the national defense."

Efforts to create greater political unity among the NATO nations have been pursued for many years. It is a goal accepted by the North Atlantic Council, by our governments and by a huge majority of our political leaders and our citizens. In May political leaders and our citizens. In May 1956, the North Atlantic Council directed a committee of three Foreign Ministers, popularly termed the "Three Wise Men," to advise it on "ways and means to improve and ex-tend NATO cooperation in nonmilitary fields and to develop greater unity within the Atlantic Community."

Since the report of this committee was approved by the North Atlantic Council in December 1956, some progress toward such unity has been made. Consultation within the Council has been extended to cover developments in all parts of the world as well as the actual texts of the replies of the United States, Britain and France to the successive notes addressed to them by Mr.

Khrushchev.

Yet this degree of unity falls far short of

what the situation requires.

Because of division the West is hesitant in meeting successive Soviet threats. Were the Atlantic Community something with a swift policy of its own it could make its decisions effective with a minimum of risk, Together we vastly outstrip the Communists in essential items—economic resources, actual production, number and skill of available technicians, potential military powerin every item save that of mere numbers. United in a manner that permitted the full use of its power the Atlantic Community would be immeasurably superior to the Communist bloc-and have nothing to fear from

#### THE COMMUNIST DRIVE IS POLITICAL AS WELL AS MILITARY

Although attention at this moment is focused on the Soviet threat to Berlin, most thinking men realize that the Communist drive to dominate the world has become political and economic as well as military. Indeed, many of them believe that Communist expansion is going to be pursued primarily by political and economic offensives.

In pursuing their aim the Communists

possess one asset of outstanding importance; a monolithic unity. They can decide what to do, and act, while we negotiate with one another. Thus, as has been widely agreed and repeatedly stated by President Eisenhower, our critical need is a unity adequate to meet these challenges.

The Secretary General of NATO, Paul-Henri Spaak, has outlined this need very clearly in the current issue of Foreign Af-

"Here we are faced with the real weakness of the Atlantic Alliance in every sphere—the lack of unity. This is the prob-lem which we are up against whether we are dealing with scientific research, armaments, production, aid to underdeveloped countries, military organization, or the conduct of diplomacy. We still jealously guard our individuality I fully appreciate the very genuine values which this encompasses; yet I realize, too, what it is costing us in dupli-

how difficult it makes it for us to get results. This would imply, of course, the conviction that there exists today a real community of interest among the members of the Alliance which must be served with the

cated effort, both intellectual and financial, what it means in terms of wasted energy and same energy, love, and pride, that for centuries have been put at the service of each Individual country. I know that at present this is a dream. Yet the dream must one this is a dream. day become a reality, for it is on this reality that our future depends. Of that I am convinced."

This problem of adequate unity has confronted our governments ever since NATO was formed 10 years ago, and they have not yet found a solution. It involves two exceedingly difficult questions: Just how uni-fied do we need to become to meet the challenge of our time? How do we obtain the unity which is found to be necessary?

Greater cooperation and unity, so long sought by our governments, is now being

sought on two other levels.

The NATO Parliamentarians' Conference has met annually since 1955 and has achieved much success in promoting mutual understanding and a common viewpoint among the legislators of our countries. It has adopted a number of resolutions each year seeking to promote unity in political, economic and military affairs, which have been considered by our governments as well as by the North Atlantic Council.

#### THE ATLANTIC CONGRESS, 1959

Therefore, this year, on June 5, the Atlantic Congress, comprising 650 leading citizens of the NATO countries, is to meet in London. It is expected to be comparable in its size and significance to the Hague Congress of 1948 which led directly to the creation of the Council of Europe and indirectly to the European Coal and Steel, Atomic Energy, and Economic Communities.

Thus the search for greater unity is being pursued by governments, by legislators and by representative private citizens from among our peoples who are the sovereign

power in democratic nations.

The Atlantic Congress was called by a resolution of the Third NATO Parliamentarians' Conference in 1957. One may hope it will have a wide impast on our peoples, through the contacts and exchange of views which will take place, through its resolutions and recommendations and by bringing home to our peoples that they are members of one community.

It can be expected also that the Atlantic Congress will prove exceedingly valuable in focusing public attention in the NATO countries on the need for adequate unity. But it is evident that a gathering of this size, meeting for only 5 days, cannot conduct a comprehensive exploration of how such unity may be attained. For so com-plex a task, some smaller body is required, one which can meet as long as may be necessary.

The resolution of the Third NATO Parliamentarians' Conference which initiated the Atlantic Congress sought to fill this second need as well.

Adopted by a unanimous vote of the Parliamentarians, it recommended that the NATO governments bring about a conference "composed of leading representative citizens selected on a nonpartisan basis and directed to convene as often as necessary in order to examine exhaustively and to recommend how greater cooperation and unity of purpose, as envisioned by the North Atlantic Treaty, within the Atlantic Community may best be developed."

The resolution further proposed that "the members of the conference should, as far as possible, be officially appointed but should act in accordance with their individual con-

This recommendation of the NATO Parliamentarians was unanimously approved by the U.S. Senate Foreign Relations Committee on April 24, 1958, but was not brought to a vote in the Senate before the final adjournment of Congress. Under our system, any legislation which has not been completed must be initiated afresh in a new Congress. Actually, no government has—as I write—shown any enthusiasm for such a

continuing body.

Many of us in the U.S. Senate believe that a meeting of leading representative citizens of the nature proposed could be a very important means of promoting Atlantic unity. Accordingly, on March 19 I introduced, with my Democratic colleague, Senator ESTES KEFAUVER of Tennessee, and my Republican colleagues, Senators CLIFFORD P. CASE of New Jersey and John Sherman Cooper of Kentucky, a resolution designed to fulfill this purpose. Similar resolutions were introduced into the House of Representatives by Congressmen A. S. J. CARNAHAN of Missour and CLEMENT J. ZABLOCKI of Wisconsin, both ranking Democratic members of the Foreign Affairs Committee.

#### A PROPOSED ATLANTIC CONVENTION

It will be noted that the proposed con' vention would be brought about by action of the legislatures and parliaments of the NATO nations. A precedent for such action was the formation of the NATO Parliamen, tarians' Conference in 1955, which resulted directly from steps taken by the North Atlantic legislatures.

I believe that the meeting of the proposed convention would open the way to important, perhaps decisively important, step towards the unity we now require. It would constitute a probing action to determine mine how we can achieve this democration unity without sacrifice of democratic values.

Its members would comprise some of the

foremost citizens of our nations, men and women with experience gained from many

occupations.

They would make an exhaustive survey of our principal problems, meeting as long of as many times as might be required. Free from official responsibilities and speaking only for themselves, they could take a "new look" at these problems and possible solu tions, a task which cannot be carried out by government officials who are restricted within the bounds of existing policies.

And both their surveys and their efforts to find solutions would be conducted on NATO basis, not a national basis, so that all recommendations would be designed to serve the interests of the Atlantic Com-

munity.

Their function, of course, would be solelf advisory. They would have no authority other than to make recommendations. And whether their recommendations would lead whether their recommendations would lead would be a solely would be solely advisory. to action by the NATO governments would depend upon how sound and practicable such proposals were considered by governments and peoples concerned.

Much would thus depend upon the collective wisdom of the members of the pro posed convention. I cannot but believe that a select body of the wisest among our cities zens who were willing to devote time to this complex job would produce at least some proposals which would be regarded as acceptable and thus would enable us to take a large step forward in our effort to attain

adequate unity.

The role of the proposed convention has been compared with that of the commission of leading citizens which have so often beel appointed by our governments to investigat some complex problem. This procedure has been followed with effective results in the

United States and Britain.

In the United States the term "convention has a special meaning due to the great suc cess of the convention of 1787 which created the United States. It was formed in a manner analogous to the meeting now proposed and succeeded in 100 days in inventing new political institutions.

That day was long ago and the situation was not that of today. The American State had already become a loose confederation which needed only further tightening to betome a single nation. And having achieved independence from Britain their major probems were internal.

The NATO countries have remained each fully independent, with no slightest delegation of sovereignty to any single directive body.

It is their common danger from the ever more insolent menace of world communism and their common need of better satisfying the demands of the underdeveloped peoples, that are driving them towards unification—tresistibly if they are successfully to meet the twin challenges.

How far this process of unifying their policies can and will go depends, in my spinion, upon the urgency of these two bressures. But because we do not presently tim at complete union is no reason for not taking the first steps in the essential direction. And time is running short.

#### Lewis L. Strauss

EXTENSION OF REMARKS

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. DEROUNIAN. Mr. Speaker, I commend to the attention of our colleagues the following editorial, which appeared in Washington's Evening Star on Friday, June 19, on the subject of the Senate action early that morning:

THE STRAUSS DEFEAT

The Senate's close vote early this morning against confirmation of Lewis L. Strauss as Secretary of Commerce has deprived the President and the country of the services of very able, patriotic, and devoted man, whose singularly distinguished public service began some 40 years ago—a record which stands unblemished despite his defeat.

Two votes cast the other way would have turned this defeat into victory. The difference was that close. Everybody had long since concluded that it would be very close. But the odds, because of the nature of the case made against him by his critics, seemed to favor Mr. Strauss. It was, in our opinion, a filmsy sort of an excuse for a case which is a greater reflection on the Senate than it is on Mr. Strauss.

The defeat is a rare incident in the history of Presidential appointments to the Cabinet, and a strange departure from the principle underlying the President's right to choose his own Cabinet members, modified by the Senate's right to advise and consent.

What accounted for this departure from that principle, we believe, was an unusual combination of circumstances which had no temote connection with Mr. Strauss' competence or character as a public servant. The nature of that combination of circumstances became more apparent as the uninspired, largely artificial and absurdly rambling speeches of his opponents dragged out the Sanate debate.

One circumstance in this combination is that Mr. Strauss' personality exhibits a certain stubborn confidence in his own rectitude, and made him, long ago, a controversial figure—the controversy being between people who like him and those who dislike him.

Another circumstance is that he has trampled on a great many sensitive toes by sticking to certain principles which he regards as fundamental.

He alienated the advocates of public power. He not only believes in private

enterprise, he speaks up for it and seeks to encourage it against the trends of the times. He became the chief personal target in the Dixon-Yates business, which was a heaven-sent issue for any demagog. And for 5 tense years he was Chairman of the Atomic Energy Commission, years in which the Commission was spending about \$10 billion in a field which is new, which comes close to traspassing in supernatural areas, which invites deep and understandable conflicts of emotion, theory, and economic philosophy, and in which there can be no decision without opposition.

Another circumstance is the Senate's growing suspicion of the highly important principle of executive privilege, which the legislative branch, jealous of its own prerogatives, feels is being ineptly or self-servingly abused. Mr. Strauss came along at a time when he was made the convenient whipping boy and symbol of such abuse, although there are many worthier and untouched candidates for that honor.

Another strange circumstance was Mr. Strauss' refusal to say the expedient thing; or, more importantly, to say what some Senators thought he should have said, in explanation of essentially trivial matters, instead of saying what Mr. Strauss thought he should say.

should say.

Thus, all these circumstances made political bedfellows of a substantial group of Senators whose opinions on other things may be as far apart as the poles but were united in opposition—along with the shrill Communist radio propagandists who will hall their votes as victory.

The other—and very important circumstance—was that Senator CLINTON P. ANDERSON, whose bitter hatred of the candidate became conspicuous, is a popular and respected Senator. He was able to become the catalytic agent which combined these various elements in opposition. And he has now had his victory.

#### Now for Interest Rates

EXTENSION OF REMARKS

#### HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an editorial from this morning's Washington Post:

NOW FOR INTEREST RATES

Now that the House has approved the necessary increase in the limit on the debt, it ought to get down to business on the other half of the President's recent financial proposal: the elimination of the interest rate ceiling on Treasury bonds. There are two aspects of this matter which seem not to be very widely or thoroughly understood at the Capitol and to which the House Banking Committee may wish to direct its particular attention.

First of all, the notion ought to be dispelled that the removal of the interest celling automatically would mean that interest rates would go up. It is probable that an immediate offering of bonds would command rates higher than now allowed—but what is important is that the Treasury be taken out from under the celling so that it can plan its financing and refinancing with greater flexibility. The presence of the ceiling tends to put upward pressure on short-term offerings, and its removal might lower interest rates on such obligations.

In the second place, there is need to scotch the argument that the Treasury can (and just as well might) limp along with shortterm refinancing of outstanding short-term debt, on which the ceiling does not apply. The average maturity of the Federal debt has shortened materially in recent years, contributing to the rising interest burden in the budget. If this trend is to be effectively combatted, the Treasury must be free to float bonds in place of short-term paper whenever an opening in the market presents itself. The fact that the opening is not now readily apparent does not mean that when the present groundswell of recovery investment levels off such opportunities will not be there. As we have said before, removal of the interest ceiling would be no cure-all for the Treasury's difficulties-but it is an essential ingredient.

#### Traffic Safety in the 86th Congress

EXTENSION OF REMARKS

# HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. ROBERTS. Mr. Speaker, the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce has scheduled hearings July 7, 8, 8, and 9 on several bills relating to highway traffic safety. Under permission to extend my remarks, I am submitting herewith, for the information of the membership, an article I wrote which appeared in the April issue of the Traffic Digest and Review of the Traffic Institute of Northwestern University. The article is as follows:

The American motorist is presently permitted to purchase, for premium prices, some assurances that he can avoid death or crippling injury in the event he becomes involved in a traffic accident.

For a slight additional charge, a motorist can have his car equipped with seat belts, proven time and again to greatly reduce the chance of death or injury from a crash.

For a slight additional charge, a motorist can have the dash panel of his car padded with energy-absorbing foam, practically eliminating any chance of a serious head injury in the event of a crash.

For a slight additional charge, a motorist can have his car equipped with windshield washers, assuring him of always having clear vision when driving under adverse conditions.

I will not attempt to list all of the safety devices with which an automobile can be equipped for a slight additional charge.

This, to me, is comparable to letting a housewife go to the market and offering her a choice between tainted meat, found on the market in huge quantities before passage of the Pure Foods and Drug Act, and fresh, safe, Government-inspected meat.

#### POPULARITY NOT A FACTOR

I have been told that the safety features I have mentioned, as well as many others, have not been adopted as standard equipment because they have not proved popular with the public when offered as optional equipment, for a slight additional charge.

With the annual loss of lives from traffic accidents running from 37,000 to 40,000 and the annual economic loss to the country running into the billions of dollers, I think it is evident that we cannot afford to let

ourselves believe we are in a popularity contest.

I do not recall any great hue and cry from the public for the Federal Government to demand purity in meats and other foods and drugs.

Yet, we know without question that before this act was passed, thousands were dying every year from spoiled meats, food canned improperly, and drugs dispensed with no supervision.

Who today can deny that this Government action has been of tremendous value to all of us and to the country as a whole? And what body but the Government was in a position to, or even willing to, assume the

responsibility for this action?

There may be no great public hue and cry for seat belts in automobiles, for padded dashes, windshield washers, or any of the many other safety devices which have been developed; but no one can question their worth, their ability to reduce the suffering and death now being experienced on our highways.

And we desperately need to get these devices out of the optional equipment category and into the standard equipment field.

For the past  $2\frac{1}{2}$  years I have served as chairman of the special subcommittee on traffic safety, and have been recently named chairman of a newly formed subcommittee on health and safety.

The health and safety subcommittee will continue the work of the traffic safety subcommittee.

#### PUBLIC HEARINGS PLANNED

During the time in which I have been active in this field, the subcommittee has heard literally millions of words of testimony from representatives of the automotive industry, researchers, safety officials, law enforcement officers, judges, doctors, and attorneys.

Almost without exception, they agree we still have a long way to go in the traffic safety field, particularly in regard to research.

But here we are talking about some gains which have been made but which are not

being utilized.

Since there have been no voluntary steps made to correct the situation, I have introduced in the present Congress legislation

which would:

1. Direct the Secretary of Commerce to make a study and determine what reasonable safety devices should be standard equip-

ment on all automobiles.

2. Make it unlawful to ship any vehicle which does not have these safety devices in

interstate commerce.

At the earliest possible date, I intend to hold public hearings on this bill, and I will then entertain any suggestions as to why it should not become law.

I am confident that there will be objections, and I am equally confident that the principal ones will come from the northwesterly direction of Detroit.

My personal feeling is that the subcommittee has proceeded with extreme caution in its work and has sought in every manner to avoid compulsory legislation.

But after 2½ years of pointing out some of the things which need to be done, and with no indication of any early action on the part of the manufacturers, I believe that we must pass some sort of regulatory legislation which will insure the public of getting the safest possible product.

As I have said, I anticipate considerable opposition from a powerful industry when this bill comes up for consideration, and I have prepared a counter measure which I have also introduced in the present Congress.

This bill would require the Secretary of Commerce to make the same sort of study of safety devices, and then would require that all automobiles purchased by the Federal Government be equipped with these devices.

The Federal Government is such a good customer of the automotive industry that I believe equipment placed on automobiles for Government purchases would soon become standard on all automobiles manufactured.

It would not be practical to tool a plant one way to manufacture automobiles for the Government and another way to manufacture for regular purchase.

This is a sort of back-door approach to the problem, but I am hopeful the end results would be the same.

#### OTHER LEGISLATION PROPOSED

Briefly, here are some of the other measures which will be considered by the current Congress:

A bill which would provide some Federal funds for research in the driver-training field.

It has been demonstrated time and again that properly trained drivers, drivers with formal driver training, have fewer accidents, fewer fatalities, fewer injuries, and fewer traffic law violations.

This money would not be appropriated for the actual operation of driver-training classes, but would be used for research and study to develop the best possible type of driver-training courses.

The funds would have to be matched at the State level, and control of the funds would be at the State level. States using the funds would, however, have to make a reasonable accounting of the expenditure to the Department of Health, Education, and Welfare.

Still another important piece of legislation is one which would determine how much damage to our health automobile exhaust fumes are causing and require some control of the amount of pollution being discharged into our atmosphere.

At a recent air pollution conference in Washington the Public Health Service said there is some ground for belief that automobile exhaust fumes are a source of lung

cancer.

There is expected to be introduced in the near future, if it has not already been introduced, a bill drawn by my colleagues from Arizona, the Honorable John J. Rhodes, which would set up a central records system of traffic law violations.

In the event of a serious violation, such as driving while intoxicated, hit and run or driving at excessive speed, a permanent record would be made at this central bureau.

The record would be made only for the most serious offenses resulting in license revocation. It would not be desirable or practical to make such records for minor violations, such as parking meter violations, parking in a restricted zone, etc.

#### NATIONWIDE LICENSE REVOCATION

As the situation is at present, a driver in Alabama, for instance, can have his license revoked a traffic law violation, and then skip right across the State line into Tennessee or some other State, complete the necessary residence requirements and get himself a new license which will serve him until he gets into another scrape with the law.

The State issuing the license has no way of checking to see what his previous driving record has been, or even checking to see whether he has been previously licensed in Alabama.

With a central records section reporting on all license revocations and traffic law violations, the examining officer could check any applicant's previous driving record in much the same manner that a law enforcement officer can check a suspect's criminal record with the FBI. In summary, let me say that the Federa Government does not want to and will not needlessly work a hardship on any industry or in any manner invade provinces traditionally governed at the State level.

Human life, however, is too precious and billions of dollars in economic loss is too costly for any of us to stand idly by when solutions to the problems causing these

losses apparently are at hand.

If it falls the duty of the Federal Government to legislate safety equipment onto our automobiles to reduce the pitiful slaughte now taking place on our highways, then say legislate.

If it falls the duty of the Federal Government to legislate funds for improving out driver trtining, then I say legislate. If it falls the duty of the Federal Govern-

ment to legislate action against the pollution of our air, then I say legislate. We have looked in many other directions for constructive action on these problems

and have found little or none.

The time has now come when some responsible body must act to curb this terrible loss of life and property. And act is what we plan to do.

#### A Good Recovery

EXTENSION OF REMARKS

OF

# HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. WALLHAUSER. Mr. Speaker, it is very difficult to be a prophet.

In the field of economic forecasting we are subjected to continual and continuous opinions as to the course that our economy will take, whether up of down, and it is hard to separate the thoughtful prognoses from the guesstimates. Specifically, I refer to the economic conditions of 1 year ago, when we were being subjected to all kinds of cures for the recession, many of them drastic and some unrealistic. If you look back at some of the headlines and new stories, you will be struck by the almost unanimous suggestions of the prophets of gloom and doom that large tax cuts be made, additional billions of dollars be spent, or similar proposals of pump priming.

It is, therefore, comforting to those who resisted these temporary expedients to note that the economic advance of our great Nation has been very substantial. The Labor Department's latest report indicates that more Americans are now at work than in any May of our history, and, furthermore, shows that the number of unemployed has again dropped.

Recessions and unemployment are major problems and deserve the complete dedication of all of us to avoiding them, but sometimes, it appears to me, that the suggested cures would only compound the problem, in the long-range view.

Another signpost of promising recovery is the rise in personal income in May, which was up 7 percent, or \$25 billion on an area basis from May 1957. This, of course, gives an impetus and a gain in the buying power of the average American, especially since retail prices ad-

はのずる

anced only fractionally during the same eriod. Most of this increase in income as in wages and salaries, which is a ery desirable component of the total. this also gives further hope for increase h employment that is so desirable.

The main purpose of these remarks is not to chide those who took the dim view. but rather to stimulate our thinking for being confident that the free-enterprise stem of our great country, proven as it has been by the test of time, can, with try little external assistance, produce own recovery, especially if our citizens retain the necessary confidence in it.

We should derive complete satisfaction Out of the fact that our system, as com-Dired with the Communist ideology, has the resilience to return to the normal, and above, without taking away goods, chattels, and personal liberties of any of our citizens.

#### Albert J. Tully

EXTENSION OF REMARKS OF

# HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. BOYKIN. Mr. Speaker, under ave to extend my remarks in the RECORD, I include an editorial from the Mobile, (Ala.) Press under date of June 15. 1959 entitled "Well Deserved Honor", which editorial tribute is paid to Hon. Albert J. Tully, Mobile attorney, who has lust been elected as president of Kiwanis International.

The good people of Mobile and south Alabama who are familiar with Mr. Tully's long service to his community, his State and his Nation are proud of the honor which has been conferred apon him by this great international civic organization. As this editorial points out, Mr. Tully's election as president of Riwanis International is the crowning Achievement of his 20 long years of unselfish work.

I know of no better ambassador of good will for our city and our State than Mr. Tully. Again I say we are all proud of him—we are proud to claim him as our own and all of us wish for him a highly successful term of office with many many More years of unselfish service to his organization and to his fellow man.

#### WELL DESERVED HONOR

Albert J. Tully, Mobile attorney, richly deserves the singular honor that came to him wednesday in his election at Dallas, Tex., as president of Kiwanis International.

His many friends and acquaintances in Mobile can very well vouch for the wisdom used by this huge parent-body of civic clubs around the world in naming such an outstanding man for its topmost office.

This development speaks eloquently for the personal qualities and the value of Mr. Tully's citizenship. It is the crowning achievement of 20 long years of active service by the Mobilian to his community, State and Nation.

Intelligent, courageous, and progressive, Mr. Tully has made many contributions toward the betterment of Mobile.

His climb to the top of the ladder in Kiwanis International bring worldwide recog-nition to himself and to Mobile.

We look forward gladly to the fact that in his capacity as international president, he will travel widely, not only as a representa-tive of Kiwanians, but also as an able ambassador of good will for Mobile and Ala-

Christ United Church of Christ, Conyngham, Pa., Celebrating 150th Anniversary of Its Founding

> EXTENSION OF REMARKS - OF

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Hazleton, Pa., Plain Speaker of Friday, June 19, 1959.

[From the Hazleton Plain Speaker, June 19, 19591

WEEK-LONG CELEBRATION BEGINS SUNDAY, ENDS JUNE 28

The 150th anniversary of the founding of Christ United Church of Christ, Conyngham, will be celebrated from Sunday, June 21,

through Sunday, June 28.
Under the leadership of the Rev. Harlan A. Breininger, pastor, the congregation will mark the beginning of Christ Church in 1809; cornerstone laying of Christ Union Church in 1826; erection of first frame church in 1872; second frame church in 1873; and dedication of the present church

The Rev. Dr. Allen S. Meck, president emeritus of the Theological Seminary, Lancaster, will be the speaker for the anniversary service at 10:15 a.m., Sunday, June 21.

Other festivities for the same day will include the dedication of memorials and new additions; a guided tour of historical spots in Conyngham at 5:30 p.m.; a covereddish supper at 6 p.m.; and a historical pageant at 7:30 p.m.

#### FORMER PASTORS' NIGHT TUESDAY

Two former pastors will play prominent roles in the observance of Former Pastors'

Night at 8 p.m. Tuesday.

They are: the Rev. A. Gail Holt, pastor of St. Luke's Church, Lancaster, who will be liturgist. Reverend Holt was pastor of Christ Church from 1942 to 1952; and the Rev. Perry L. Smith, national field secretary of the committee of correlation and promotion, who will preach the sermon. He was pastor of Christ Church from 1924 to 1930.

#### REVEREND LUTZ TO SPEAK

Community night, to be held at 8 p.m., Thursday, will feature a sermon by the Rev. Wayne Lutz, president of the Suequehanna Synod and pastor of First Church, Berwick.

Liturgists for the community night service will be: the Reverend Lawrence Delp of Christ Lutheran Church; the Reverend Ray Deming of Conyngham Methodist Church; the Reverend Russell Bechtel of St. John's United Church of Christ, St. Johns; and the Reverend James Gold of the Nescopeck-Mountain Grove Charge.

Refreshments and informal fellowship will follow the services on Tuesday and Thursday nights.

#### CLOSING SERVICE JUNE 28

The concluding service will be the Anniversary Communion and Homecoming, to be held at 10:15 a.m. Sunday, June 28. This will be followed by a covered dish luncheon at 11:45 a.m.

LeRoy Hinkle will be guest soloist for Tuesday night's program.

Margaret Fink served as chairman of the anniversary committee, wrote the pageant and gathered material for the anniversary booklet.

Pastors who have served the congregation and dates of their service are as follows:

Rev. John N. Zeiser, 1820-1839.

Rev. Isaac Shellhamer, 1839-1855.

Rev. John A. Reubelt. Rev. John W. Lesher.

Rev. Samuel Seibert.

Rev. John B. Poerner, 1855-1858. Rev. Henry B. Hoffman, 1858-1870.

Rev. John M. Clemens, 1871-1880.

Rev. Tilghman Derr, 1881-1887.

Rev. J. B. Kerchner, 1887–1896. Rev. A. B. Lobach, 1897–1900.

Rev. C. E. Correll, 1900-1912. Rev. W. A. McClellan, 1912-1913.

Rev. S. F. Hartzell, 1914–1917. Rev. Daniel A. Brown, 1917–1922.

Rev. Perry L. Smith, 1924-1930.

Rev. Irvin G. Snyder, 1930-1939.

Rev. Milton A. May, 1939-1942.

Rev. A. Gail Holt, 1942-1952.

Rev. Harlan A. Breininger, 1952.

#### ANNIVERSARY COMMITTEES

Serving on the various committees were the following persons:

General: Margaret Fink, chairman; William Adams, Mrs. Fred Heppe, Edmund Richards, Mrs. Leslie Schultz, Frank Stratzell, Rev. Harlan Breininger.

Historical: Margaret Fink, Edmund Richards, co-chairman; Mrs. Edmund Richards, Mrs. Sterling Evans, Mrs. Henry George, William Walp, and Mrs. John Luschyk.

Invitation: Frank Stratzell, Mrs. Fred Heppe, co-chairman; Mrs. George Kay, Mar-

garet Fink.

Hostess: Mrs. Leslie Schultz, Mrs. Loretta Karchner, co-chairman; Mrs. Eva Kirch-doerfer, Mrs. Earl Miller, Mrs. Claude E. Miller, Mrs. Sterling Evans, Mrs. Fred Heppe, Mrs. George Kay, Mrs. Harlan Breininger, and Mrs. George Smith,

Anniversary booklet: Rev. Harlan A. Breininger. William Adams.

#### Lewis L. Strauss

EXTENSION OF REMARKS OF

## HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. DEROUNIAN. Mr. Speaker, I commend to the attention of our colleagues the following editorial, which appeared in the Long Island Daily Press on Saturday, June 20, on the subject of the Senate action early Friday morning:

THE SENATE AND MR. STRAUSS

The Senate refusal to confirm Lewis L.

Strauss as Secretary of Commerce: Deprives the Eisenhower Cabinet of one of its strongest and stormiest members.

Renews the question of hewing to the tradition that the President has uppermost rights in choosing his assistants.

Throws a new element of contention into

the 1960 political campaign.

The vote that rejected Mr. Strauss was 49 to 46, 2 Republicans joining 47 Democrats to reject him. Fifteen Democrats voted to confirm him.

It was only the eighth time in our history that a Cabinet appointee was refused confirmation. The last was in 1925 in the Coolidge administration.

The battle over Admiral Strauss, former Chairman of the Atomic Energy Commission, was bitter and prolonged. The scars will be evident in the Senate Chamber for a long time.

Mr. Strauss' public service spans some 40 years. He has made valuable contributions—and he also has made some outstanding foes.

Mr. Strauss is wise when he says he is confident "that history will be just" to him.

History, with its objective perspective, is almost always just in its judgments,

#### Soviet Policy

EXTENSION OF REMARKS

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the weekly newsletter entitled, "Trends," released by the First-Second National Bank & Trust Co., of Wilkes-Barre, of June 18, 1959:

[From Trends, of Thursday, June 18, 1959]

From the Western point of view, it makes a little sense that the Russians, when they get a chance to be reasonable and to contribute to a lessening of world tensions, don't eagerly seize that chance. The Western mind which doesn't quite fathom the Soviet insistence on being difficult is viewing the problem through Western eyes.

If Western diplomats can go to conferences with a dedicated hope of making agreements which will ease tensions, it is because their Governments, resting on the consent of the governed, are free to seek settlements which would let East and West live in real peace. Among the leading Western nations, no objective has priority over this one. On it, our diplomats cannot see eye to eye with the Communists, because the Communists view their revolution as continuing and incomplete.

They can not accept any arrangement which would effectively hamper the spread of Communist power and influence. Their ideological tenets teach that eventually the Communist revolution will encompass the entire earth. Privately, the average Russian worker may regard such thinking as absurd nonsense, and silently wish for an end to tension—hastening the day when even the masses behind the Iron Curtain can live like Americans. Officially, no Soviet politician can turn his back on the Leninist vision of world revolution. In all the years since the Bolshevik revolution, only one powerful Russian figure has appeared even temporarily willing to accept the existing high water mark of Communist penetration tnd try for a period of peace and consolidation. man was Khrushchev, and his aims showed through when he acknowledged the Tito thesis of many roads to socialism and boldly attacked the long reign of Stalin as a chapter of violence and perfity. Had the Soviet leader then been secure in his job, that might have been a good time for brass tacks East-West negotiation of a long-term modus vivendi. Since then, Khrushchev has, under various pressures, reverted to more traditional communism. In protecting his power . against the Stalinists inside Russia and

against the obvious design of the Communist Chinese to win leadership of the Iron Curtain world, Khrushchev finds life easier of he presses the cold war at every opportunity. In frank moments, Khrushchev has told interviewers that he believes Russia can pull up even with the United States in productivity of its agriculture and industry; that he hopes to live to see this; and that he therefore would like to see 5 to 10 years of tranquility.

However, Communists long have operated on the theory that weakness and disunity in the West will provide moments of Red opportunity. Some, who perhaps have longer to wait to the two cars in every garage phase of Russian development than Khrushchev has, see the next year or two as promising in this respect, with the United States facing a presidential election next year, with France still weakened by the Algerian problem, with Chancellor Adenauer reportedly governing with reduced prestige in West Germany and with Britain facing a national election before next summer. These are some of the reasons why Moscow presumably sees no urgensy in an East-West settlement calling for Soviet concessions, and why Western hopes for any real progress toward peace this year are weighted with doubt.

#### Safer Automobiles

EXTENSION OF REMARKS

# HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. ROBERTS. Mr. Speaker, with the toll of dead and injured in automobile traffic accidents bringing new horrors daily, the people of the Nation are waking up to the fact that we need safer automobiles. It is encouraging that the problem is the subject of increasing editorial comment in leading newspapers across the Nation. Under leave to extend my remarks, I wish to call attention to an editorial which appeared June 15, 1959, in the Evening Bulletin of Providence, R.I. The editorial follows:

# WE NEED SAFER AUTOMOBILES

Highway accidents have reached epidemic proportions. They constitute a greater threat to the safety of large segments of the population than some diseases do. In 1957, the death rate among insurance policyholders from automobile accidents was greater than from pneumonia and influenza, from all forms of tuberculosis, and from diabetes. Nearly 39,000 Americans lost their lives in highway accidents in 1957.

Three components in all highway accidents are (1) the driver, (2) the highway, and (3) the motor vehicle. A great deal of attention has been paid to methods of inculcating better habits on drivers and of building increased safety into highways. A few years ago, studies at Cornell University considered methods of building safety into automobiles.

A House subcommittee in Washington next month will open hearings on a bill to compel auto manufacturers to build safer cars. The bill would forbid the Federal Government to buy cars not equipped with safety features recommended by the Secretary of Commerce. Since the Government is the greatest single customer for cars, a law of the kind proposed is expected to lead to the adoption of prescribed safety equipment in all cars.

Seeking enactment is Representative Ken-NETH A. ROBERTS, Alabama Democrat who got Congress to enact a law requiring manufacturers to install escape handles inside refrigerators. The kind of safety devices he would like to see in automobiles, according to the Congressional Quarterly, are safety belts, padded dashboards to minimize the danger of skull fractures in collisions, steering wheels on which no driver could be impaled, rooftop bars to protect collapse of a car rolling over on its side, and seats designed to prevent whiplash injuries of the neck.

Mr. Roberts knows that he faces a battle with the Detroit manufacturers, who believe the value of most proposed devices is yet to be proven. But he says automobiles no more should be exempt from Federal safety standards than airplanes. In his crusade, he hopes to win support from members of the medical profession, such as Dr. C. Hunter Shelden who, back in 1955, said that elimination of hazardous features of interior car construction would save three-fourths the number of lives lost in crashes.

Mr. Robert's efforts to have the industry build a safer automobile will not be lost on a population that sacrifices more victims on the highway than are claimed by discases that once ravaged the land.

#### A Hollow Sound

EXTENSION OF REMARKS

# HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. RAY. Mr. Speaker, the following editorial by Mr. Thurman Sensing, printed in the June 15, 1959, issue of the Southern States Industrial Council Bulletin, is I believe thoughtful, constructive and timely. I am glad to submit it for the careful attention of all Members of Congress:

#### A HOLLOW SOUND

Advocacy of a sound dollar and a stable economy has a rather hollow sound unless it includes return to a redeemable currency. The only way control of the Nation's purse strings can be retained in the hands of the people, where it belongs in a free nation is by means of a redeemable currency. One of the first steps on the road to totalitarian ism, of one sort or another, is by means of a "managed irredeemable currency." If his has been the record of totalitarian government throughout history—and there is no reason to believe it is different here than elsewhere.

When our Government went off the gold standard in 1933 under a Democratic administration, it violated sanctity of contract and broke its solemn promise to the people it robbed the people of 42 percent of their savings; it substituted a dishonest dollar for an honest dollar. It took away from the people their gold, which they had earned and which was theirs, and gave them in exchange pieces of paper. Since that time a dollar has been a dollar only because the Government says it is a dollar.

When that step was taken, we entered upon a period of economic immorality that has permeated the blood stream of our naonal life ever since. It continues under both political parties. The Republican Party advocated a return to the gold standard in its 1952 platform, but for some reason it was not included in the 1956 platform. The Democratic Party has not advocated a return since 1933. There is apparently no hope in the leadership of either party. This leadership must come from the people.

It is the nature of government—any govmment—to spend all the money the people all ever let it spend—and when the people we no control over the amount available, as now the case with us, then the sky is the thit. It can well be believed that the reaneither party is advocating a return to gold standard is because this would limit amount of money available to the poliamount of money available to the police promise all things to all people—and the good on these promises by means of onting-press currency. If the people are disatisfied, they can only complain; whereas, ander a gold standard, if the people are dissatisfied, they can turn their paper money in lo gold and cut off the funds available to the Politicians at the source.

The gold standard, of and by itself, exerts ho magic. It simply provides the conditions magic. It simply provides the conthe only method thus far discovered whereby who knows about as much about money as behaps anyone who could be named, has dollars, commodity dollars, managed dollars. \* They have not worked, and I do not think they will work. But gold has worked ton Alexander's time down. When something holds good for 2,000 years, I do not believe it can be because of prejudice or a mistake in theory."

There are bills now before Congress making there are bills now before congress on debe dollar fully redeemable in gold on demand at \$35 an ounce for the gold. To make the dollar sound again, and to protect themselves against the further ravages of inflation, the public should write their Senators and Representatives insisting on passage of one of these bills. Then the people, by de-manding gold in exchange for their paper noney, could put a stop to Government sending for which new money is being created.

The Treasury still has ample gold to make this feasible. This situation will not hold good forever, though—the way things are go-tradity.—because nationals holding dollar edits abroad—who can demand gold for credits abroad—who can demand good their dollars whereas our own people can-lot—are becoming more and more wary about the value of the dollar and the drain on the dollar and the drain of the dollar and the dollar a on our gold reserve is continuing at a steady Pace. Redeemability put off too long may well become impossible.

John W. Inwood of Western Union Co.

EXTENSION OF REMARKS

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. HOLT. Mr. Speaker, I would like to call attention of my colleagues to the article below complimenting Mr. John W. Inwood, of the Western Union Co., on his 46 continuous years of serv-

INWOOD SERVES 46 YEARS WITH WESTERN UNION

John W. Inwood, district manager, Westem Union Telegraph Co., Los Angeles, has lust completed 46 continuous years of service With the telegraph company.

Inwood started with Western Union 46 Stars ago as a messenger boy in Passaic, h.J. On April 5, 1913, he delivered his first telegram and 5 years later became manager of the Passaic office. He also served as manager at Paterson, N.J., and in 1929 was promoted to the position of superintendent in

Providence, R.I., and superintendent of the Philadelphia office in 1933. He came to the west coast in 1937 when he was appointed superintendent of the Los Angeles office, and in 1957 became district manager of the Los Angeles area.

Inwood is president of the Southern California Chapter of the Armed Forces Com-munications and Electronics Association, and has served on various committees of the Rotary Club of Los Angeles. He is a member of several other local organizations, including Lincoln Club, Jonathan Club, Morse Telegraph Club, Greater Los Angeles Press Club, Beverly Hills Mens Club, Los Angeles Chamber of Commerce, and Merchants and Manufacturers Association.

He is a member of All Saints Episcopal Church in Beverly Hills where he recently served as clerk of the vestry. He has one son, the Reverend Jay McMormick Inwood, who until recently was chaplain for Episco-pal students at UCLA and who has now accepted a parish at Northeast Harbor, Maine.

Secretary McElroy's News Conference

EXTENSION OF REMARKS OF

# HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. JOHANSEN. Mr. Speaker, because of my own concern over the comments of Secretary McElroy regarding the recent Communist jet attack on an American Navy patrol plane off North Korea-which I voiced in my remarks during the debate last Friday on the increase in the debt limitation-I include here, under permission to extend my remarks, the questions and answers on this subject at the Secretary's news conference last Thursday:

Secretary McElroy. I think those are my opening comments. I am available for questions.

Mr. McDaniel (Associated Press). Mr. Secretary, in view of the comments, de-mands, or suggestions from the Hill, has the Navy to your knowledge or in your cognizance instituted or started any action that might lead to the courts martial of any officer over the events in the Far East in the last few days?

Secretary McElroy. No steps have been taken and I have seen no occasion for steps to be taken. I think it might be well for me to say a little something about this event of the shooting up of the Navy plane off North Korea because to my mind the things that have been given the greatest attention are not the most significant things about this incident.

The really important thing to my mind is that here was an aircraft on a peaceful mission, flying over waters which are clearly international waters, and this plane was attacked by what I would consider an irresponsible pair of fighters with the results that are well known.

The only reason a major tragedy didn't take place was because of the high quality of piloting by the Navy pilot. This, in my opinion, should be regarded as no different from the kind of thing that could happen to a military air transport craft which, of course, is not armed. The military air transport craft also is on a peaceful mission. The same thing is true about an ordinary commercial aircraft.

Now when you have a condition of peace in the world or even a condition of cold war you don't expect that you have to be in a position to defend yourself against irresponsible attack if you were flying over in-ternational waters which are clearly your right to fly over.

I think it's not dissimilar to the kind of situation you might have here in Washington. People don't go out at night with guns in their pockets and yet that doesn't mean that some irresponsible person may not attack you and injure you or even kill you.

Now this is serious obviously. This is serious principally to my mind in the increase of international tension. This country, of course, will not have its right infringed, but to my mind the question of whether we provide heavy armament for a ship, an aircraft which is on a peaceful mission in international waters, over international waters, I should say, or a ship which is on international waters, is some-thing which I think is a kind of an aside as against the main issue.

Mr. GREENE (New York Daily News). Mr. Secretary, what are we going to do about it? Secretary McElroy. What are we going to

do about what?

Mr. GREENE. Well, as I recall the last count we have been hit 11 times over international waters by Soviet or Soviet allied planes. They have always started the shooting. Are we just going to keep on and let them keep on shooting or what are we going to do to try to stop it or retaliate?

Secretary McElroy. Well, you see, this becomes a matter of high policy. If we have aircraft in the area, of course we would respond, but let me ask you, do you want to send aircraft where you can't find the people who will perform the assault? What would

you do?

Mr. GREENE. If you want my answer, sir, I would send them all out with fighter escorts and I would shoot at anything I could find. You asked me and I gave you the answer.

Secretary McElroy. Thank you very much. [Laughter.]

Mr. PRINA (Washington Star). Mr. McElroy, can you explain whether the guns on the Naval patrol plane were missing or were they dismantled? They seem to have said from the Far East that parts were missing. That is, they are still hoping to get parts of this type of gun. [Laughter.] What is your understanding of that point?

Secretary McElroy, I don't believe that there is anything significant in the lack of parts. The important gun, if there was any gun on this craft that was important and as think I have tried to suggest to you that isn't the important thing. There's too much preoccupation with that particular gun which isn't the way you are going to knock off a Mig anyway except by very, very unusual marksmanship.

In my opinion, the problem is not spare The aircraft is really being used in reconnaissance in a way in which it was not originally built to be used. It was built to be used as an antisubmarine craft. Now in reconnaissance it has some equipment which is not required for the antisubmarine purpose and in order to get that kind of equipment housed in the aircraft you may very well displace certain of the guns which are placed in the forward part of the craft for antisubmarine use and for reconnaissance would not have important use.

Mr. PRINA. Mr. Secretary, was that done in this case?

Secretary McElroy. Was what done?

Mr. Rogers. Did you displace the forward guns in order to make room for special equipment?

Secretary McElroy. Well, this is what we are trying to get the exact information on. (Secretary Snyder confers with Secretary McElroy.) Well, here is the statement that

was put out, so I might as well read it to you:

"This particular plane was assigned to reconnaissance missions rather than antisubmarine duty during its deployment in the Western Pacific." That is what I have just said. "Because of this, the forward turrent, useful only against surface targets, was deliberately rendered inoperable by utilizing the space to house reconnaissance-type equipment. For a similar reason, and to compensate for the weight of the additional equipment, the top turrent had been removed.'

Mr. PRINA. (Washington Evening Star). But that still leaves the question that may be insignificant as far as you are concerned, but there seems to be a flap going around the point whether-they don't have parts for that type of gun out there.

Secretary McElror. Well, as I say, we have

no indication that there is a lack of parts that's any factor in this problem at all.

Mr. Rogers. Well, Mr. Secretary, were the missing parts available? Could they have been put back on?

Secretary McElroy. Well, what difference does it make? Why is this important, when you wouldn't have put them back on any-way? This seems to me to become ridiculous.

Mr. RAYMOND (New York Times). Mr. Secretary, there are reports coming out of the Far East saying that the crew members referred to missing parts. The crew members apparently thought it important enough to refer to them, and that's why we are asking about them.

Secretary McElroy. Well, I have given you all of the answer I can give you. I don't think it's important in the matter.

Mr. Hackes (NBC). Mr. Secretary, is it your feeling that fighter escorts of any kind are not really necessary, or would you say there had been some flights that would be considered hazardous enough to have a fighter escort?

Secretary McElroy. Well, the instructions are that these flights be undertaken in such a way that they will not be provocative, by which it is meant that they, in proceeding along at a very safe distance outside of what even the most extravagant claim of territorial waters has been, that the direction be such that there would be no suggestion to indigenous forces that the direction was carrying the craft toward those borders.

Now this I am sure has been followed. Under those circumstances there is no flight of the type we are talking about here that I would consider required fighters escort unless you had a recurrence of this kind of attack.

I think this was irresponsible. I don't know why it was done; whether it was some sort of a coordinated harassment with what goes on in other parts of the world in connection with the Geneva Conferences, I don't know. It obviously is a very dangerous thing for anyone to do against this country.

I think it may just as well be known that the commanders in the area have full authority to provide fighter escort if they consider that this is required. They have not done so up to this point according to our information to date.

The PRESS (unidentified). Mr. Secretary, is the nationality of the attacking planes now known?

Secretary McElrox. Not fully identified. We think that the location from which they came would suggest that it would be more likely that they were North Korean, but there is no positive identification.

Mr. Rogers (New York Herald Tribune). Mr. Secretary, there is a report of a photograph having been taken of the attacking airplanes, having been sent to Washington. Is that so, sir?

Secretary McElroy. I don't know.

Mr. REICHER (McGraw-Hill). Mr. Secretary, have there been instances in recent years of Soviet bloc aircraft being sighted or intercepted over our territorial limits?

Secretary McElroy. Ours were not over their territorial limits.

Mr. REICHER. I realize that. That is not my question. Have there been any instances of Soviet bloc aircraft sighted or intercepted over our territorial limits.

Secretary McElroy. Over U.S. territorial limits?

Mr. REICHEK. (Nods.) Secretary McEleov. No. Mr. REICHEK. None at all? Secretary McElsov. No.

The PRESS (unidentified). Over Alaska

too, put it.

Mr. REICHEK. By United States, I mean-Secretary McElroy. It is certainly true that Soviet or North Korean or Communist Chinese-we can't always identify exactly who they are, but craft of those countries are flying the same general area of waters in which this incident took place. Our patrolling craft see craft of the other side with some regularity. This is not unexpected. It's an area where I think both sides have a desire to keep track of what the other side is doing.

#### Preparing for the Future

EXTENSION OF REMARKS OF

# HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. BRAY. Mr. Speaker, the firm of Eli Lilly & Co. enjoys the respect and admiration of all Hoosiers. Its accomplishments in the pharmaceutical field have brought added distinction to In-

It is thus with great pleasure and hope that we greet the new \$5 million agriculture research center which the Lilly Co. has established at Greenfield, Ind. The company now intends to apply its efficient methods of research in agriculture and animal husbandry as it has heretofore done in the field of drugs and medicines. Among the well-wishers of this new endeavor is the Indianapolis News, as expressed in its editorial of June 18, 1959:

#### PREPARING FOR THE FUTURE

There should be little cause for worry about any lack of improved quality food production to meet the demands of a rapidly growing population as long as there are enterprising firms like Eli Lilly & Co.

The company has dedicated a vast \$5 million agriculture research center at the west edge of Greenfield. There Lilly scientists will probe into such questions as animal nutrition, control and treatment of plant dis-

eases, and veterinary problems.

It is a new field for the Indianapolis pharmaceutical firm, but the achievement tradition of the Lilly company gives promise of outstanding results.

The research program should do much good for mankind, eventually resulting in healthier, faster growing livestock, grain, and other food products.

The new center represents the way American private enterprise is ready to meet the problems of the future. The Lilly firm deserves congratulations for another in a long list of forward-looking accomplishments.

Awards Presented by Television Station WWLP, Springfield, Mass.

EXTENSION OF REMARKS

# HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. BOLAND. Mr. Speaker, las Tuesday evening, June 16, WWLP, television channel 22 in Springfield, Mass presented its annual "Outstanding Serv ants of the Public" awards to four pel sons who have participated in the publi life of the community and the Common wealth of Massachusetts.

Those receiving the awards from WWLP Television President William Putnam were Mrs. Margaret C. Ell Mrs. Edna Ludden, S. Douglas Polit mus, and myself. I was unable to be Springfield to appear on television an receive my award personally, because congressional duties here at the Capito but I am most grateful to channel 22 5 Springfield for the honor bestowed upo

Mr. Speaker, under leave to extend m remarks in the Appendix, I include th scripts read by President Putnam making the awards to the outstanding citizens with my remarks, as follows:

#### MARGARET ELLS, SPRINGFIELD

A familiar name in education and community affairs in Springfield is that of Margaret C. Ells. She was born in Dank. Vt., and educated at Castleton Norma School, in Castleton, Vt. Mrs. Ells receive her bachelor of science and master of science degrees from Boston University.

Her long teaching experience include early work in Vermont at Westn Saxtor River and Bellows Falls and as a teaching principal of a four-room school in Amhers

Since 1908, Mrs. Ells has been teaching Springfield—at the Central Street Gram mar School, at the Evening High School Commerce and Continuation, and Trad High School. The latter assignment date from 1934 to 1953. Since 1934 she assistant principal at Trade High School.

In 1954 Mrs. Ells was appointed a par time instructor and scholarship counsel by American International College.

The city of Springfield will honor Margar C. Ells by naming the new Blunt Par school after her.

She has been presented the Pyncho award, the Probus Club award, the out standing citizen award, and the neighbor the month award.

She is an active member of the Catholi Women's Club, the College Club, the Business and Professional Women's Club, American Association of University Profes sors, and the American Vocational Association

#### EDNA LUDDEN, BOSTON

Mrs. Edna Ludden, the public affairs of cer for the Massachusetts Civil Defens Agency, is a native of Lowell, Mass, and was educated in the Moody School.

Long active in public affairs, Mrs. Ludde was one of the first women's division cap tains in the Natalie Hammond Air Ras Squad during World War II.

She is a former social worker for the Massachusetts Department of Correction and

secretary on the late Gov. James M. Curley's imployment staff.

Edna Ludden is the only woman to have een appointed to the city of Boston Charlestown Housing project and was assistint housing manager.

With a group of 32 women, Mrs. Ludden let up the first recruiting station in the rederal building in Boston-3 days after the ttack on Pearl Harbor in 1941. For this temonstration of patriotism the Secretary of the Navy awarded her a special citation.

Mrs. Ludden has been most active in sotial, civic, and political activities for the

last 30 years.

#### S. DOUGLAS POLHEMUS, SPRINGFIELD

Doug Polhemus was born in East Northleld, Mass. He attended school at Mt. Her-non School, Mt. Hermon, Mass., and went in to Oberlin College in Ohio where he recived his bachelor's degree in 1938. The bllowing year Doug was presented his mas-er's degree from Ohio State University. rom 1939 to 1943 he did national and local B Association work in Los Angeles, New fork, and Hartford.

Like many others, Doug found himself in the service of his country from 1943-1945, serving with the Army Air Corps and the

5th Infantry Regiment.
After his discharge from the Armed Forces in February 1946 he rejoined the National TB Association on the program detelopment staff in New York City.

In September 1946 Doug joined the Lacka-vanna TB and Public Health Association Scranton, Pa. He moved to the welfare touncil of Lackawanna County in February of 1949 where he remained until April 1952. At that time he joined the Community Council and United Fund of Greater Springfield. He has served that organization well as executive manager until this year. Doug has resigned to return to his alma mater, Oberlin College, as alumni secretary.

HON, EDWARD P. BOLAND, MEMBER OF CONGRESS

To an outstanding servant of the public for noteworthy achievement in demonstrating the true meaning of the words "public tervant" we take note of EDWARD P. BOLAND and hereby signify our gratitude and that of the citizens of Massachusetts.

#### A Citizen Speaks

EXTENSION OF REMARKS OF

#### HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. HOLT. Mr. Speaker, enclosed and a self-explanatory letter from a constituent of mine, Mr. Richard L. Bean, who resides in North Hollywood. Calif. I wish I would receive more letters from people like Mr. Bean and less from selfish pressure groups. I know that a great many of my colleagues feel the same way. The letter follows:

Hon, Joseph F. Holf, House of Representatives, Washington, D.C.

DEAR MR. HOLT: While others put their hand out, may I put my hand up as one more among the seldom heard from multitudes who subscribe to the principle that more individual hard work and self-responsibility, rather than more welfarism, should ttand as the goals of our Government and our whole society.

This letter is prompted because I feel there is far more support among our total citizenry for the basic principles of independent, self-reliant action than our Government representatives happen to hear. It grieves me—and seemingly virtually all of friends and business associates—to see organized pressure groups constantly cam-paigning for costly, special interest projects. I urge you, who must heed what vocal

groups expound in unison, to keep in mind the unquestionable need to plan and act for the greatest good of the greatest number. And remember, please, that believers in independent, free, competitive pursuit of progress all too often are so independent that they do not themselves join together to apply sure, even for conservatism.

Wherever possible, let us—and you—en-courage Americans to work for the prosperity and advancement we desire, not merely vote

for it.

I wish you and your colleagues would always run Government business as rigidly economically and efficiently as you would your own. Let's take the hard way, not the easy way. Let's put the brakes on spending and open the throttle on initiative.

Sincerely yours,

RICHARD L. BEAN.

# Let's Answer City Critics

EXTENSION OF REMARKS OF

# HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. COAD. Mr. Speaker, as a Representative from primarily a farm area and being privileged to serve on the Agriculture Committee, I have devoted my time and efforts to the task of working out a solution to the complexity of problems which have separately or in combinations caused and contributed to a near social and economic bankruptcy of the family farm operation as well as the rural communities which service the farmer's needs.

Mr. Speaker, I do not pretend to know the answers to the farm problems, but I do know that the following editorial from the June 20 issue of the Wallaces Farmer answers an important side issue which has unfortunately in recent years complicated the processes of developing and revising our National farm policies and programs to meet the needs of our National well-being as well as assist the sagging farm economy.

I wish to commend the Wallaces Farmer for presenting a clear picture of the "beneficiaries of our farm programs."

The editorial follows:

#### LET'S ANSWER CITY CRITICS

Vicious attacks on farmers and farm programs have become a popular pastime with some city people.

Farmers will be the first to admit that our Government programs have some flaws. But many of the accusations being made are ridiculous in light of the facts. Here are some recent samples.

"The farm program \* \* \* is supposed to preserve the family farm. \* \* \* The biggest beneficiaries, though, are the huge, wealthy corporate-farm operations."—Wall Street Journal.

"In short, the whole farm support program, which has cost you \$18 billion in a quarter century, is a colossal failure. You're going to spend another \$5.4 billion on supports this fiscal year."—Life maga-

These are examples of how editorial writers let themselves get carried away when they're discussing farm programs. The

U.S. Department of Agriculture estimates that only about 5,000 farmers get loans on all crops totaling more than \$50,000 a year. Compared with some 5 million farmers, this is one farmer in 1,000 who can begin to qualify as a wealthy operator.

U.S. Department of Agriculture reports a the price support program with \$2.6 billion of grams of \$5.7 billion for 25 years of operation, 1933-58 (rather than \$18 billion).

U.S. Department of Agriculture charges the price support program with \$2.6 billion of the \$7 billion fiscal 1959 budget. Of the estimated \$5.4 fiscal 1960 budget, only \$1.4 billion is allocated to price supports.

Prominent farm spokesmen have risen to answer some of these attacks. One of the best answers came from Senator AIKEN, of Vermont. It was put in the Congressional Record. Some quotes from it:

"Many of these attacks are obviously in-spired by those who would profit by the abandonment of programs which tend to maintain farm income at a reasonable level.

'Most of them, however, are the result of uninformed or misinformed public opinion. Some attacks are strictly diversionary tac-

"The furor over farm programs has become so intense, so biased, and so unreasoning as to cast confusion and suspicion into the public mind.

"Farm legislation, for the most part, has been honestly enacted and conscientiously

applied.

The primary purpose of the modern farm program was to restore and maintain a healthy national economy. The second rea-son was in the interest of national security."

Farm subsidies have been widely criticized. Yet the billions of tax dollars that go to benefit airlines, shipowners, and other businesses are seldom mentioned by the city press. They're said to be "in the public interest."

More than \$2.2 of \$5.4 billion in the 1960 U.S. Department of Agriculture budget is actually a subsidy to consumers and the general public. Most of it is spent in the best interests of the country as a whole, not just the farm segment.

Rev. Dr. J. J. Gavenda, of St. Joseph's Parish, Hazleton, Pa., Named to Rank of Domestic Prelate

> EXTENSION OF REMARKS OF

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hazleton Plain Speaker of Friday, June 19, 1959:

#### DUE REWARD FOR SERVICE

The naming of the Reverend Dr. J. J. Gavenda, of St. Joseph's Church, to the rank of domestic prelate brings honor not only to his parish, but the community as well.

For 25 years Monsignor Gavenda has unostentatiously served as pastor of one of the community's largest churches, compiling a record of service seldom equaled.

The temporal achievements of his pastorate stand as visible memorials to his ad-ministrative ability. These include a mod-ernized church and the St. Joseph's school which provides educational, recreational, and social facilities which are enjoyed by the community as well as parish members.

But the measure of his service lies pri-

marily in the field of spiritual leadership.

Beloved by his parishioners, respected by the people of the community and admired by his fellow clergymen, Monsignor Gavenda represents everything a pastor should be.

Quiet and unassuming, Monsignor Gavenda has been a great leader of a great parish. His people, for the most part from the moderate income laboring families, have responded with diligence and faith to follow in his footsteps to move ever forward.

Monsignor Gavenda's elevation to the rank of domestic prelate provides due recognition

for years of outstanding service.

He holds doctorates in canon law and sacred theology from the Lateran University

He serves on the board of examiners for diocesan clergy and is spiritual director of the Slovak Federation.

His years of service to the Scranton diocese include instructing at St. Thomas College (now the University of Scranton) and Marywood College and 8 years as vice chancellor of the diocese.

He attended St. Thomas College, St. Bernard's Seminary, Rochester, N.Y.; St. Vincent's Seminary, Latrobe; and Catholic Uni-

versity, Washington, D.C.

Despite this outstanding educational background and important service, Monsignor Gavenda retains the humility that marks the typical parish priest as a sincere man of God.

People of all faiths in the Greater Hazleton area join the members of St. Joseph's parish in extending congratulations to Monsignor Gavenda.

#### For Shame, Senators

EXTENSION OF REMARKS OF

# HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I want to insert an editorial from the June 20 edition of the Indianapolis Star:

FOR SHAME, SENATORS

The defeat of Adm. Lewis L. Strauss as Secretary of Commerce was described by one Washington correspondent as a blow to the prestige of the President. It was nothing of the kind. It was a blow to the prestige and honor of the U.S. Senate and the Democratic leadership that brought it about. For they have exposed themselves, this Senate majority, as vindictive, petty, basely partisan, and mean-willing to dishonor a man who has served his country more unselfishly and far better than any of those who voted against

Admiral Strauss has had one of the most outstanding careers in American public life. Starting in the traditional American way, as a poor shoe salesman, he made two brilliant careers, in the U.S. Navy, where he rose to the rank of admiral, and in the field of finance, where he became a wealthy man.

Like many other Americans who have risen in this free land to eminence and wealth, Strauss was not content to just sit and count his money. Instead, he devoted 42 years of his life to public service. He served as aid to five American Presidents, of both political parties, and was commended by all for his achievements. He has received five of his country's highest decorations for service.

Yet now, near the close of his public career, he has been subjected to one of the most merciless public character assassinations in the history of the Republic by mean and petty men and women who have put politics and personal prejudice ahead of

integrity and honor. What were the charges against Strauss? That he favored the dismissal of Robert Oppenheimer from work on atomic weapons-because Oppenheimer admitted he lied to security officers about his Communist associations; because Oppenheimer admitted he contributed regularly to the Communist Party while working in U.S. atomic laboratories; because he admitted an attempt to cover up a Communist spy attempt to gain atomic secrets. What honorable and patriotic American would not have doubts of the loyalty and reliability of a man with such a record?

Strauss has been accused of favoring private power development and opposing the socialization of the American electric industry. Does this make him "an enemy of the people" as Senator Wayne Morse described him? If so, so is President Eisenhower "an enemy of the people" for he favors the same thing.

Strauss opposes trading with the Soviet Union. He believes that such trade will strengthen the Communist countries in their attempt to destroy this country's lib-erty and independence. Is this a reason to castigate and smear his character and achievements with malicious innuendos?

No wonder we get so many mediocre and stupid people serving us in our Government when men of highest personal integrity and character can be subjected to such an "ordeal by slander," when a man whose devotion to his country and to the people of America has been demonstrated by a brilliant career can be dragged through the mud of personal vilification and abuse. Thus the U.S. Senate majority rewards honorable service to the Nation.

President Eisenhower was right when he said yesterday, "It is the American people who are the losers in this sad episode." Not only did the people lose, but so did honor, freedom, and justice.

We are ashamed of the Senate of the United States and the Democratic majority. We are proud of Admiral Strauss, And so we say to him, "Be of good cheer. You have been judged by your inferiors and found superior.

A World of Danger and Challenge

EXTENSION OF REMARKS OF

# HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. WHITENER. Mr. Speaker, on June 2, 1959, Dr. Charles H. Malik, President of the General Assembly of the United Nations, delivered the commencement address at Belmont Abbey College, Belmont, N.C., at the 81st commencement exercises of that splendid institu-

Dr. Malik's remarks are very timely and point up the serious situation confronting the free world today. I am pleased that he was able to visit my district and take part in the commencement exercises at Belmont Abbey Col-

The school is an outstanding Benedictine institution of higher learning and Dr. Malik could not have had a more appropriate place to deliver his forceful message on international relations. I include his address in the Appendix of the RECORD:

A WORLD OF DANGER AND CHALLENGE (Commencement address by Dr. Charles H. Malik, president of the 13th session of the General Assembly of the United Nations, at Belmont Abbey College, in Belmont N.C., at the 81st commencement exercises on June 2, 1959)

Young people graduating from college and stepping forth into the world constitute a special breed of men. They know the sort of world from which they are emerging but they have no clear idea of the kind of world into which they are stepping. It is not nec essary for my purposes today to raise the question as to which of these two worlds is more real, but I may indicate in passing that it is by no means certain that the worldly world of clash and action is more real than the thoughtful world of study and learning. The discrimination between these worlds and the assigning to each one of them of its proper reality is one of the most fascinating philosophical investigations, but 1 shall not go into that here. The decisive point is that these young men are actually getting into this worldly world and therefore it is the duty of those of us who are im mersed in that world and who are called upon to address them at this solemn hour in their life to give them some inkling of what sort of world they are getting into. It is world at once of great danger and gre challenge, and in painting the danger I shall also indicate the conditions that would face and overcome that danger. I beg the young these situations but to treat them as real challenges with which they have to wrestle and through which, when real responsibility in due course shall devolve upon them, they could build a far happier and more peaceful world than this into which they are now stepping.

There is a menacing situation in the Far

East. The combined weight of China and the Soviet Union could prove too much for that region to bear indefinitely without cracking, and the cracking already began month ago in Tibet. Four conditions are therefore required: To promote the real independence of the Chinese mainland; to cause Communist China to change its policy of hatred and hostility to the West; to build up native strength especially in Japan; and to develop much closer and friendlier asso clation among the non-Communist forces of that area. So long as China and Russia act as one, so long as the Chinese Communists hate the West, desire its destruction and do everything in their power to weaken it, and so long as there is softness and looseness of association opposing the Communist camp peace is in constant danger in the Far East-

There is a menacing situation throughout Asia and Arica. The Communists are boring and infiltrating everywhere and the average standard of living is about one-thirtieth of that in the United States. Three conditions are therefore required: To give well-founded hopes to the masses that their lot can be improved without yielding themselves to Communist control or direction; to support and strengthen the non-Communist elements who are dedicated to independence and are genuine believers in the values of freedom and human dignity; and to counteract Communist infiltration and intrigue by every possible means. Peace is exceedingly fragile h Asia and Africa so long as the Communist olitical and ideological thrust is not adeluately counteracted politically and ideologtally, so long as the forces of freedom are reglected or abandoned to their fate or given inly lipservice or hollow consolation, and so long as the masses discern no tangible hope thead.

There is a menacing situation in the Midtle East. The Communist infiltration is at very advanced stage, the Berlin crisis may e only a feint to allow this penetration to eepen further, the internal divisions within he area are most debilitating, and the West eeps on withdrawing unceremoniously. our conditions are therefore required: to o what can be done, and a little more, to hinimize the divisions and antagonisms in he area on the basis of independence and listice and with a view to removing hostility and promoting friendship toward the West; b support and strengthen the non-Comhunist forces who really believe in the values of freedom; to abandon the disastrous policy drift, and to develop a vigorous, daring, and imaginative policy with respect to the Middle East; and to devise a sound scheme development of the area through the maxhum equitable utilization of its oil re-Sources. So long as the West displays Paralysis and disunity in its policy toward important sections of the Middle East, and long as the forces of freedom keep on contracting in that area and international communism works havoc directly or indictly everywhere, the Middle East could set thame the powder keg of the world.

There is a menacing situation in Eastern Europe. The Iron Curtain clamps down tight upon Europe at its center. Beyond every existing emergency with respect to Berin and Germany in general, two conditions are therefore required: To restore the integity and cultural unity of Europe by lifting the Iron Curtain so as to permit free ecotomic, intellectual and political intercourse between the eastern and western halves of the old continent; and to insure to the So-Met Union in return for the lifting of the fron Curtain every guarantee against aggression from its western frontiers. So long the spiritual unity of Europe is broken and so long as the Soviet Union in permiting the restoration of this unity is not combensated with absolute guarantees of security so far as Europe is concerned, peace h Europe remains absolutely chimerical.

There is a menacing situation in the ranks of the West. It is doubtful that there is adequate internal unity in America, in Britan, in France, in Germany, in Italy, to meet the Present challenge, and there are evident agns of friction and division among the Western allies. Two conditions are therefore required: that the countries of the West he given much deeper and more vigorous leadetship so as to arouse the comfort-ridden Public from their lethargy and complacency and bring about the maximum possible in-ternal unity; and that they sink their rivalries and divisions between themselves by some of them really sacrificing for the sake of the whole. A divided West, a softened-up West, an unawakened West, a West with each part thinking only of itself and seeking only to save its skin, cannot save either itself or the world. the world from catastrophe.

There is a menacing situation with respect to subversion and indirect aggression. The processes of infiltrating, undermining subverting, and taking over whole countries from within are going on apace. One condition therefore is required: to wake up to these new tactics of war, to stop talking about aggression as though it were the only means of waging or achieving the aims of war, to take energetic countermeasures, including solemn arrangements by treaty, as such against indirect as against direct aggression, and to prove in fact that not only

direct aggression will not pay but indirect aggression will not be rewarded. So long as the international conspirators subversively operate with impunity, war is already raging and winning without the softened and luiled and blind and stupid noticing it.

There is a menacing situation in the technological field. So far as the means of delivery are concerned practically every month the Soviet Union puts forth an extraordinary feat unmatched by anything from the other side. One condition therefore is required: to demonstrate equal or superior technological accomplishment by the West. So long as this technological discrepancy in rocketry is not visibly corrected people could miscalculate and the uncommitted areas could lose heart and the whole structure of peace and security could suddenly collapse.

There is a menacing situation with respect to the apparent relative strength of East and The successive withdrawals in China, in southeast Asia, in the Middle East and in Europe, and the none-too-self-confident words and acts of the West, yield the impression that the Communist onslaught is irresistble and the nonCommunist world does not have the strength to halt it, and reinforce the suspicion abroad that communism is after all the wave of the future and we are here dealing with an irreversible historical process. One condition therefore is required: a firm determination supported by action to demonstrate that there is no preponderance of strength on the side of communism and the wave can be both arrested and reversed. So long as the record shows one advance after another and not a single retreat, not even for one inch, where is the tranquility of order which constitutes peace?

There is a menacing situation with respect to the moral and psychological resolve. Pacifism, namely, the acceptance of peace at any price, and appeasement appear to be rampant and possibly on the increase, either because of fear, or because of misguided principle, or because of the decadence of the soft and comfortable, or because of ignorance of the nature of communism, or because Communism has succeeded in softening up the non-Communist world. Two conditions therefore are required: to make perfectly clear that only the peace that is based on justice, freedom and truth is worth the ticket, and any other peace could only be a shortsighted postponement of the day of reckoning; and to rouse the soft and satisfied from their slumber, stupor and slothfulness. So long as the spirit of pacifism, for whatever reason, enfeebles the moral resolve, so that people are not prepared to die in defense of something infinitely worthwhile for which they desire to live, people may have been already conquered without a fight.

There is a menacing situation in the intellectual and ideological order. You know what the Communists believe and want but you do not know what the West believes and wants, and what you do know of this is not adequate to counteract the Communist intellectual thrust. One condition therefore is required: a more robust faith in the power of ideas leading to the articulation of an honest, true, and universal message. So long as the believers in matter and force outwit the believers in mind and persuasion in the use of intellectual weapons, the conquest of the mind by subterfuge and falsehood will go on by sheer default.

There is a menacing situation in the discrepancy between the performance of international communism and the performance of whatever is its opposite number on the other side. There is nothing coming from the West comparable to the absolutely superb organization, vigilance and dedication of the Communist Party. Two conditions therefore are required: to identify and counteract the direct and indirect agency of the Communist Party wherever

if functions; and to promote an internationale of freedom that can somewhat compare in organization, dedication and mutuality of support with the international Communist movement. So long as the west operates for the most part through external economic, political, and military arrange-ments with independent national states; so long as it does not recognize that these diverse nationalisms require some inclusive international system; so long as the friends of the West do not meet with the same warmth, fellowship, support and protection which the Communist Party accords its members and friends through the world; and so long as the ideological content of the realm of freedom is deficient, the free world will always find itself on the defensive vis-a-vis the international Communist assault.

There is a menacing situation in the fact that the enemies of freedom take advantage of the amenities of freedom to undermine and destroy freedom. Thus the free world does not have in the Communist world anything like the field day that the Communist world enjoys in the free world. One condition therefore is required: to restore this balance of operation between the two worlds by every possible means. So long as it is possible for communism to penetrate the Middle East, Asia, Africa, Europe, Latin America, and even the United States, with no corresponding possibility for the free world to penetrate China, the Soviet Union and Eastern Europe; so long as there are Communist Parties outside the Communist realm but no free parties inside the Communist realm; so long as one doctrine only is allowed in the Communist world whereas in the non-Communist world there is a virtual infinity of doctrines: the enemies of freedom will always find it possible to exploit ruthlessly to their own advantage these civilities which flow from the very nature of freedom.

There is a menacing situation in the fact that the quest of success, security, and pleasure appears to be the dominant passion The result is a most paralyzing of vouth. climate of complacency and softness. thing therefore is required: to fire youth with noble and unselfish quests, to reactivate the great principles of self-sacrifice, selfcontrol and self-denial, to set up great and worthy causes to which youth can completely dedicate themselves. So long as people seek and lead only a life of ease and comfort, so long as they are not swept off their feet by something eternal that takes them completely outside their petty selves and interests, society will degenerate and the tremendous issues facing us all will not be met.

There is a menacing situation in the fact that men of good will are not united enough. Good will abounds in the world but this vast reservoir is not sufficiently tapped. Two things therefore are required: to pray and work hard that the initiative of Pope John XXIII in calling an ecumenical council to try to unite the Christians, or as many of them as possible, according to the will of Christ be crowned with success, and to bring as many men of good will, even beyond the Christian family, as possible together on the basis of the natural law. So long as the forces of evil and darkness appear to act in greater unison than the forces of good and light, the cause of man and truth will continue to suffer.

The present moment of history then is made up of these 14 distinct situations, each constituting a real danger and each calling for real possibilities of action and achievement. We talk about the foundations of peace, as though there is such a thing in general. Peace cannot be founded today without the most serious consideration of these situations. Concrete decision by responsible leaders is daily, hourly, called for with respect to each one of them. They cover virtually the whole gamut of human

existence. They prove that man is pro-foundly troubled today—they prove that he is not at peace with himself. It is very well to wish mankind sweetness and light and peace; it is very well to sentimentalize and say, let us all be brothers, let us all live in peace. Would that stubborn reality were so responsive as to yield docilely to our kindly wishes. Who or what is preventing us from living together like brothers in peace? These 14 situations: Some of them involve very hard judgments indeed, upon you and upon the world, and facing them the sensitive and tenderminded may not be able to sleep. But it is better to face the truth and die than to live a thousand comfortable years in falsehood and escape. The basic truth today is that there is an inescapable conformation between communism and the rest of the world calling for historic decision, and I am not sure the effective forces of freedom are sufficiently aware of what is at stake, nor whether they are adequately prepared, on every level of human existence, to meet the challenge. Perhaps the Berlin crisis or the Middle East crisis or the Tibet crisis will awaken them; but I am not sure.

A vision of something great and tremendous, a call to an heroic mission, the challenge of a truly universal message—this is what is required today and this is alas what is lacking. The immediate situation then presents the aspect of a final and total judgment—everything is being weighed—one's life, one's values, one's culture, the vitality of the whole civilization to which one

It is very much then like the last day. And those who believe will tell you that God is there and that most certainly He watches over His own, even if He should sorely chasten them still.

## Nuclear War Hearings

EXTENSION OF REMARKS

# HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. HOSMER. Mr. Speaker, on Monday next the Joint Committee on Atomic Energy's special Subcommittee on Radiation, under chairmanship of our distinguished colleage from California [Mr. HOLIFIELD], will commence its hearings on the biological and environmental effects of nuclear war. We do not live in a dream world but in an actual world in which every day everybody faces risks of one kind or another. The degree of these risks is to some extent under our control by reason of our freedom of choice as to what we eat, what we do, how we work, and many other matters of choice. The degree or some of the other risks we face is not a subject of our own choosing but are conditions of the world in which we live.

In approaching these hearings such an evaluation of risks must be kept in mind. Rightly or wrongly the free world has based its defense on nuclear weapons simply because Communist manpower resources give them overwhelming conventional arms superiority. Unless all its past actions are to be disregarded, the ultimate objective of the Communist bloc is one world, a Communist one.

Realistically, it is safe to say that nothing stands in the way of accomplishing that objective except Sino-Soviet reluctance to pay the price of a nuclear war.

The hearings will deal with what that price is. What it is to the United States and what it is to the rest of the world. What it is to present generations and what it might be to future generations.

Capitulation to the Communists would avoid possible payment of the price of a nuclear war. But there is also a price tag on capitulation. It is the destruction of Western civilization and the relegation of its millions of souls of this and succeeding generations to the slavery of the communes.

What the hearings should provide is the information needed to compare these two prices; that is, the price of possible nuclear war and the price of capitulation. I have no doubt that the price of capitulation will be shown by far the most costly.

I am frank to say that I opposed holding the hearings, not because of what they will disclose, but for fear that the intricacies and technicalities involved, as well as temptations of the sensational, might make it difficult for the price tag I mentioned to be reported accurately to the public. However, the witnesses have been selected with extreme care. They are men of stature and knowledge. They will present their statements insofar as possible in nontechnical language understandable to the layman.

I am hopefully confident that newsmen covering these hearings will report them fairly and fully, without concentration upon the sensational, and in full awareness of the hearings' relationship to the future of Western civilization, as well as the United States. It will be understood that there is a price for not running the risk of nuclear war, as well as for running it. There may also be disclosed in these hearings ways and means to substantially minimize the latter.

# Coal Industry Blames Dwindling Oversea Sales on Low Prices

EXTENSION OF REMARKS

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Sam Dawson, Associated Press business news analyst, that appeared in

the Hazleton (Pa.) Plain Speaker on Thursday, June 18, 1959:

COAL INDUSTRY BLAMES DWINDLING OVERSEA SALES ON LOW PRICES

(By Sam Dawson)

New YORK.—One American industry that hasn't priced itself out of the world market despite high wage scales says today one reason its oversea sales are dwindling is that its prices are so low.

its prices are so low.

The coal industry says it is being barred from same markets by prohibitive tariffs or

import quotas and is having trouble in a fet others because of continuing dollar short

Dr. Ludwig Erhard, West Germany's Minister of the Economy, promised during his recent visit here that his country's tariff of American coal would be lifted as soon as surplus German coal piled up at Ruhr pitheads could be straightened out.

Paul C. E. Finet, of Belgium, president of the Europeon Coal & Steel Community, whi is here this week, also thinks his organization will have the coal glut licked before to

long.

American coal producers hope so, but the wonder if the German problem is temporar or chronic. They say they can deliver coal of Germany at a lower price than many European mines can produce it. And in time Europe will have to face up to it.

Piles of unsold German coal and increase mine unemployment led West Germany to clamp on a 20-mark (\$4.76) a ton levy on imports, after the first 4½ million tons a year

which are duty free.

Dr. Erhard's ministry says U.S. coal averages 70 to 80 marks (\$16.66 to \$19) per to delivered there. At 80 marks a ton the dut comes to 25 percent, making the price \$23.8

The National Coal Exporters Association of the United States has different figure. It says that at present Atlantic freight rates. American low-volatile coal for steel mill us can be delivered in Germany at \$15 to \$1 a ton, so that the flat \$4.76 duty is about \$1 percent, and the top price \$20.80.

percent, and the top price \$20.80.

In either case, both sides agree it is prohibitive and intended to be. And little American coal is entering Germany.

American coal exports took a big spurt if 1957. Europe was racing to raise industrial output, and was hampered by the oil crist following the Suez blockade. Then ocean freight rates slumped sharply. And German importers signed long-term contracts for American coal.

The national coal policy conference put total exports that year at 59 million tons, o which 50 million went to West Europe, with Germany getting 15½ million of them Last year the total toppled to 38 millions, with Europe taking 80 percent of it.

tons, with Europe taking 80 percent of it.

The conference estimates that total sports this year will slide to 30 million top with Europe's share 24 million.

Coal men blame tariffs and import quotas and an increase in sale of residual oil by Venezuela, although the slowdown in Burope's industrial drive (especially in steel making) was also a prime factor.

making) was also a prime factor.

Since Germany clamped on the tariff that it is a second our biggest customer, buying 5 to 6 million tons of coking coal for the metallurgical industry. Japan takes 2½ to million tons. Brazil, Argentina, Chile, and Spain are good customers—when the dollar problem isn't troublesome.

Lower ocean freight rates aren't the only reason America can sell coal cheaper in Germany or Ireland than the Ruhr or New

castle can produce it.

According to the conference, mechanization has raised productivity here to 11 top per man per day, while West Europe averages less than 1 ton per man per day, and Britain 11/4 tons.

Mechanization doesn't work well there be cause most European mines are too deep at the seams too narrow, too short and too it regular for the use of the big machine that scoop it out of the rich American contents.

But a lower price won't help if other governments choke off imports to keep their own mines ones and their own mines ones are their own mines ones and their own mines of the mines of their own mines of their own mines of their own mines own mines of the mines of their own mines of the mines of their

own mines open and miners employed. The same kind of motivation is found here in other industries that we, too, was to protect. Coal men, for instance, have been known to favor import quotas on heavifuel oil. And so have domestic oil producers.

日西田田田

Poison in Your Water-No. 130

EXTENSION OF REMARKS OF

## HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. DINGELL. Mr. Speaker, pursuant o permission granted I am inserting nto the Appendix of the Congressional RECORD two articles appearing in the cople's Voice, a newspaper published in Helena, Mont.

The first article, entitled "Pulp Mill Pollution of Clark Fork Blamed for Fish Which appeared in the People's oice of August 15, 1958, shows the vice and evil of using our precious lifegiving vaters for disposal of poisons and waste. The same poisons which killed the fish h the stream would have the same toxic effects on humans.

The second article appearing in the People's Voice of June 12, 1959, entitled Central Exchange Takes Big Step Ahead in Stream Pollution Control," de-Scribed how the Farmers Union Co-op has installed two new processes in their lefining at Laurel, Mont., to eliminate dumping of impurities and poisons into the Yellowstone River.

Both the Central Exchange Co-op and Refinery and the People's Voice are to be commended for their part in helping to clean the streams of this country of toxic substances.

I hope the two articles are read together to prove that it is not necessary to dump poisons and filth into our waters and that we can have both industry, large municipal population and bure water for our people if we act wisely and vigorously on all levels of government.

The articles follow:

[From the People's Voice, Helena, Mont., Aug. 15, 1958]

PULPMILL POLLUTION OF CLARK FORK BLAMED FOR FISH KILL

Evidence presented at a meeting in Helena Monday by the fish and game and State health departments definitely established that waste discharges from the Waldorf Paper Co.'s pulpmill west of Missoula taused the recent health hill in the Clark caused the recent heavy fish kill in the Clark Fork of the Columbia downstream from the pulpmill, according to a press statement reeased by the two State departments.

In attendance at Monday's meeting in addi-In attendance at Monday's meeting in audition to representatives of the two State agencies were representatives of Waldorf Paper, and the Western Montana Fish & Game, and Game Association.

The evidence that established the cause of The evidence that established the cause the fish kill included: (1) Its location, as almost every fish found or reported to be dead was below the pulpmill; (2) fish held in cages above the pulpmill did not die whereas those held below the mill died particularly those held below the mill died particularly when a dark colored foaming efficient was discharged from the mill.

In addition to the fish kill, State fish and game biologists stated that "excessive Srowths of slime have resulted from the pulp-mill discharge and the pulpmill discharges." These smother fish food organisms and prevent fish from reproducing. Although the condition is just starting in the Clark Fig. 1. Clark Fork River, it was proved disastrous to fish in streams affected by pulpmills in other States, according to the biologists.

Dr. G. D. C. Thompson, State board of health executive officer, asked specific ques-tions to determine whether or not the permit to continue operation of this mill should be extended. As a result, Mr. Sandberg agreed that a new lagoon would be in operation within 10 days. The mill will be shut down for approximately 1 week in early September after which time the complete lagoon system, covering approximately 100 acres, will be in operation.

This legoon system, in addition to absorbing any waste due to any future malfunction of the plant, is intended to treat the waste and prevent the development of slime in the Clark Fork River. Within the plant a new monitoring system is to be started immediately to insure that harmful wastes are not discharged into the river, Waldorf officials concluded.

From the People's Voice, Helena, Mont., June 12, 1959]

CENTRAL EXCHANGE TAKES BIG STEP AHEAD IN STREAM POLLUTION CONTROL

BILLINGS .- A \$200,000 investment in the welfare of Yellowstone Valley residents was recently made by Farmers Union Central Exchange through the installation of two new processes at their petroleum refinery at Laurel, Mont. The new system practically eliminates any problem of stream pollution from the refinery, and further safeguards residents who depend on the river to supply their homes, businesses and crops with an uncontaminated source of water.

Water used at the refinery for the production of steam and for cooling purposes is now run through a large cisternlike tank known as a Cyclator, where certain chemicals are added to separate out any impurities. A sludge is formed that settles to the bottom of the tank and is later removed and burned. A slow-moving arm skims the surface of the tank continuously to remove any minute particles of oil clinging to the surface. The clear water flows out of the tank and back through the refinery to be used again and again before it is discarded. The reuse of the waste water that is permitted by the new process drastically reduces the total amount of water that is discharged into the

When the water becomes too hard to reuse, when the water becomes a hard of least, it is run through the Cyclator, but instead of going back to the refinery, it is pumped out to a retention pond capable of holding over 5 million gallons of waste water. During the 15 days it takes for water to pass through the two basins of the pond, undesirable chemicals evaporate into the air, and oxygen from the air completes the purification job. The purified water passes directly from the pond to the Yellowstone River.

ONE OF FIRST OF ITS KIND

The new system is one of the first of its kind and is designed primarily to solve the problem of phenol pollution caused by the new catalytic cracking units used in the refining of high-octane gasoline in recent years. The phenols are chemicals that tend to give drinking water an unpleasant and somewhat antiseptic taste and smell when they appear in strong enough concentration.

The project began in the winter of 1958 when Universal Oil Products Co. was hired by the Central Exchange to make a study of existing waste disposal facilities at the refinery and submit their recommendations for improvement. Their recommendations were improvement. Their recommendately and enthusiastically accepted by refinery officials and the Montana State Board of Health. The U.S. Public Health Service and the Water Pollution Council also aided in the formation of final plans for the project.

FUCE HAS SHOWN BOLD LEADERSHIP

When informed of the completion of the new facilities, Dr. G. D. Carlyle Thompson, executive officer of the Montana State Board of Health, had this to say: "The Central Ex-change has shown bold leadership in vigorously attacking this problem of water pollution that is of vital concern in many sections of the United States today. This new system of waste disposal and pollution controls adds nothing to the operating efficiency or output of the refinery, but has been carried out be-cause the Central Exchange feels a definite responsibility for keeping the water supplies Yellowstone River residents pure in every spect. We can be pleased with and thankful for their attitude toward this problem."

Ever since the Laurel refinery was acquired by the Central Exchange in 1943, determined action has been taken to prevent the pollution of the Yellowstone River. Over a third of a million dollars has been spent at the site during the past 16 years on ever-improving waste water disposal systems.

# The United States and the International Court of Justice-Part 3

EXTENSION OF REMARKS OF

#### HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. REUSS. Mr. Speaker, last week it was my privilege to offer for the REC-ORD the first two parts of an outstanding review of the United States and the International Court of Justice by Columbia University Prof. Herbert W. Briggs. Today, under leave to extend my remarks, I present the third and final part of this excellent analysis. The first two parts appeared at page A5210 of the June 17 CONGRESSIONAL RECORD and page A5329 of the RECORD for June 19.

THE UNITED STATES AND THE INTERNATIONAL COURT OF JUSTICE: A REEXAMINATION-PART 3

(By Herbert W. Briggs)

RESERVATION OF DISPUTES ENTRUSTED TO OTHER TRIBUNALS

Little purpose seems to be served by the reservation by which the United States excludes from its acceptance of the compulsory jurisdiction of the Court-

"(a) Disputes the solution of which the parties shall entrust to other tribunals by virtue of agreements already in existence or which may be concluded in the future."

If the parties to a dispute which has not been submitted to the International Court of Justice entrust it to another tribunal, the reservation is unnecessary. If the parties to any case of which the Court has been seized agree to its discontinuance in order to submit it to another tribunal, no reservation is required for this purpose, since, by article 68 of the Court's rules, the Court "shall direct the removal of the case from the list." The only purpose served by such a reservation would appear to be that in which a party violates its prior agreement to submit certain matters to tribunals other than the Court and files an application against the United States before the Court. Even in the absence of a reservation, the Court might feel constrained to allow a preliminary objection to its jurisdiction be-cause of the violation of the prior agreement by applicant state.

It may be doubted whether the United States reservation-which has been followed only by Liberia and Pakistan 48-would be

Footnotes at end of speech.

applicable to situations in which the parties agreed to refer a dispute, not to another tribunal, but to the United Nations Security Council or to a commission of conciliation. Comparable reservations (with slight verbal variations) of fourteen other states \* ex-clude from their acceptances of the compulsory jurisdiction of the Court "disputes in regard to which the parties to the dispute have agreed or shall agree to have recourse to some other method of peaceful settlement." a reservation which appears to have been picked up from bilateral treaties of arbitration and conciliation, in part to preserve special arbitral procedures and in part to safeguard the procedure of conciliation.50

Article 95 of the United Nations Charter

provides that-

"Nothing in the present Charter shall pre-vent Members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be con-cluded in the future."

No particular harm is done by the U.S. reservation which follows this phraseology, although, by resolution 171C(II), adopted on November 14, 1947, the United Nations General Assembly expressed the view that, "preferably and as far as possible," arbitration clauses in treaties should envision submission of disputes to the International Court of Justice, 51

#### THE MULTILATERAL TREATY RESERVATION

Only Pakistan has copied the obscure reservation by which the United States purports to exclude from her acceptance of the compul-

sory jurisdiction of the Court-

(c) Disputes arising under a multilateral treaty, unless (1) all parties to the treaty affected by the decision are also parties to the case before the Court; or (2) the United States of America specially agrees to jurisdiction."

The origins of this lamentable reservation are found in the Dulles memorandum of

July 10, 1946, which observed:

2. Reciprocity: Jurisdiction should be compulsory only when all of the other parties to the dispute have previously accepted the compulsory jurisdiction of the Court.

"Comment: The Court statute embodies the principle of reciprocity. It provides for compulsory jurisdiction only 'in relation to any other state accepting the same obligation' (art. 36(2)). Oftentimes, however, disputes, particularly under multilateral conventions, give rise to the same issue as against more than one other nation. Since the Court statute uses the singular 'any other state,' it might be desirable to make clear that there is no compulsory obligation to submit to the Court merely because one of the several parties to such dispute is similarly bound, the others not having bound themselves to become parties before the Court and, consequently, not being subject to the charter provision (art. 94) requiring members to comply with decisions of the Court in cases to which they are a

This incomprehensible statement, characterized by Judge Hudson as "a jumble of ideas," 35 led the Senate Committee on Foreign Relations to observe that article 59 of the Court's statute, providing that the Court's decisions have "no binding force except between the parties and in respect of that particular case," removed all cause for doubt. The committee added, however:
"If the United States would prefer to

deny jurisdiction without special agreement in disputes among several states, some of have not declared to be bound, article 36(3) permits it to make its declaration conditional as to the reciprocity of several of certain states." <sup>14</sup> To meet Mr. Dulles' objection, the com-

mittee therefore proposed the text of the

U.S. reservation quoted above, and the U.S. Senate, on motion of Senator Vandenberg, adopted the reservation without clarifying debate, and without understanding its meaning or its implications." The language of the reservation betrays much confusion of thought. To this day no one is quite sure what it means. To the extent that the reservation requires that the United States "specially agree(s)" to the Court's jurisdiction, the special agreement will, as Judge Hudson observes, replace the declaration as the basis of the Court's jurisdiction, and the United States will be denying the compulsory jurisdiction of the Court in disputes arising from multilateral treaties. Whether the "affected by the decision," Judge Hudson, "applies to the parties to the treaty, or only to the treaty itself, the Court would lack jurisdiction under the American declaration unless every party to the treaty is a party to the proceeding before the Court. And if the phrase requires that all parties bound by the decision must be parties to the case before the Court, the reservation becomes meaningless.34 Other commentators tell us that the Senate did not intend by this reservation to nullify the effect of the U.S. declaration in relation to disputes arising under multilateral treaties.67

Since the record fails to support the view that either Mr. Dulles or the Senate had any clear grasp of the problem they vaguely envisaged, one is forced to inquire whether there is any problem relating to the Court and multilateral treaties which creates a danger against which the United States needs protection by a reservation. There are hundreds of multilateral treaties currently in force to which the United States is a party. Although the United States, pursuant to its declaration under article 36(2) of the statute, eccepts the compulsory jurisdiction of the Court in all legal disputes concerning '(a) the interpretation of a treaty," it is, by article 59 of the statute, clearly not bound by a decision of the Court in a case to which the United States is not a party. It may, nevertheless, believe that its interests will be affected by a decision of the Court con-struing a multilateral treaty to which the United States, as well as the litigants actually before the Court, are parties. In such a case, the United States can fully protect its interests by intervening the the pending case. The construction of the multilateral treaty given by the Court will then be binding on the United States but, according to article 59, only "between the parties and in respect of that particular case." It is not seen how this works injury to the United States merely because certain other parties to the multilateral treaty were not before the Court. Between them and the United States the Court's interpretation has no binding force. This may be inconvenient, but the Court cannot, under its statute, require states to intervene in cases before it. Nor can the multilateral treaty reservation of the United States accomplish this purpose. Its only effects are to nullify United States acceptance of compulsory jurisdiction and sterilize the rule of law with regard to a large and important category of cases.

#### RESERVATIONS RATIONE TEMPORIS 59

By its current declaration, the United States limits acceptance of the Court's compulsory jurisdiction to certain disputes hereafter arising. One of the preliminary objections filed by the United States in the Interhandel case was to the effect that the Court lacked jurisdiction because the dispute was alleged to have arisen before August 26, 1946, the date of deposit of the U.S. declaration.

The reasons for excluding a dispute from the operation of the rule of law merely because it arose before a certain date are not obvious. The current declarations of 17 States \*\* contain no reservations limiting the jurisdiction of the Court ratione temporis. On the other hand, 22 declarations a currently in force contain such reservations All 22 of these declarations limit acceptance of the Court's compulsory jurisdiction to disputes arising after a certain date, and 16 03 of the declarations contain the further limitation that the situations or facts giving rise to the dispute must also be subsequent The exclusion date is deterto that date. mined by various formulae, frequently the date of entry into force of the declaration or (in case of renewals) of a prior declaration.
Apparently only the Union of South Africa today follows the policy of excluding from each new declaration disputes for which jurisdiction had been accepted under the previous declaration.

It has been pointed out 68 that many of the great arbitrations of the past would not have come within the jurisdiction of tribunals if past situations or facts had been excluded by reservations ratione temporis The potential development of the system of compulsory jurisdiction is also limited by the fact that, because of the condition of reciprocity contained in article 36(2) of the Court's Statute, reservations of disputes situations, or facts ratione temporis may become available as defenses even to States which have included no such reservations in their declarations.

It seems desirable that the United States should omit the reservation ratione temporis contained in the words "hereafter arising" when it deposits a new declaration. If, how ever, reasons are thought to exist for excluding certain past disputes from the operation of the rule of law, the new declaration should at least accept compulsory jurisdiction for legal disputes arising after August 26, 1946.

#### DATE OF TERMINATION

Paragraph 3 of article 36 of the Statute of the International Court of Justice provides, in part, that declarations may be made unconditionally \* \* \* or for a certain time-Of declarations currently in force, 10 specify no time limit for their duration." declarations of Thailand and Cambodia are currently in force for designated periods of 10 years each, after which the declaration of Thailand will expire unless renewed and the Cambodian declaration will continue in force subject to denunciation on notice. The declarations of Belgium (1958) and Japan (1958) are currently in force for 5-year periods, after which each continues in force subject to denunciation on notice. The declaration of Turkey is apparently for a 5-year period, although it has twice been renewed retroactively after expiration. The declarations of Switzerland and Liechten stein are terminable on 1-year's notice of denunciation. The declarations of the United States, China, and Mexico are now terminable on 6-months' notice given at any time. The declarations of Luxembours (1930), The Netherlands (1956), Denmark 1956), Norway (1956), Sweden (1956) and Finland (1958), in force for 5-year periods, are automatically renewable for 5-year Per riods unless notice of termination is given not less than 6 months prior to the expiration of any 5-year period. The declaration of Honduras (originally for 6 years) is also automatically renewable.

All of these declarations may reasonably be

said to meet the requirement of the statute of being made unconditionally \* \* \* or for a certain time. On the other hand, the declarations of Canada, New Zealand, the Philip, pines, France, Liberia, Australia, Union of South Africa, Portugal, Israel, the United Kingdom, Pakistan, and the Sudan are currently terminable on notice; and the dec larations of Cambodia, Belgium, and Japan will become terminable on notice after the elapse of the time specified. This trend is unfortunate and has already been abused by States seeking as by States seeking to avoid being made re-spondents in particular cases, se

Footnotes at end of speech.

The provision of the current U.S. declarathe provision of the current o.s. deciment that it is terminable on 6 months' helice is not undesirable; but the Scandihian formula of automatic renewal for 5hr periods unless denunciation is made not than 6 months prior to the expiration of 5-year period is probably preferable.

#### A SUGGESTION

t is the considered judgment of the writer t is the considered judgment of the the national and international interof the United States would be fully protected and the rule of law in international and the rule of law in the sales would be appreciably furthered if the Dated States, giving the required 6 months holice, withdrew its declaration of August 14 1946, and deposited a new declaration subulating:

That the United States of America recoghis as compulsory ipso facto and without spicial agreement, in relation to any other State accepting the same obligation, the hisdiction of the International Court of Justice, in conformity with article 36, para-Shiph 2, of the Statute of the Court, in all legal disputes concerning:

(a) the interpretation of a treaty;
(b) any question of international law;
(c) the existence of any fact which, if
established, would constitute a breach of
an interpret an international obligation;

(d) the nature or extent of the reparation to be made for the breach of an interhational obligation;

Provided, That this declaration shall remain in force for a period of 5 years and shill be renewed by tacit agreement for further periods of 5 years unless it is deholinced by notice received not less than 6 months prior to the expiration of any such 5-year period."

"However, the Japanese Declaration of september 15, 1958, contains the following exclusion: "This declaration does not apply to dispute have disputes which the parties thereto have agreed or shall agree to refer for final and bliding decision to arbitration or judicial settlement."

# The Risks You Run With Cheap Eyeglasses

EXTENSION OF REMARKS OF

# HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. COAD. Mr. Speaker, I would like to take this opportunity to acquaint my colleagues with an article which appeared in the April issue of Good Housekeeping entitled "The Risks You Run With Cheap Eyeglasses."

This article frankly discusses the risks involved in so-called quickie or cutrate eyeglasses and by so doing lends considerable support to my bill, H.R. 345, which, if enacted, would prohibit the advertisement in the District of Columbia of the retail sales price of eyeglasses.

Prohibition of price advertising in a number of States have been successful in discouraging sales of questionable products used for ophthalmic purposes. The article follows:

THE RISKS YOU RUN WITH CHEAP EYEGLASSES

They're considerable, and many people are unaware of them. The glasses we're talking about are sold by so-called quickie or cutrate operators. They often advertise whileyou-wait service and free examinations and sell glasses for as little as \$7 to \$10 (in cases, for example, where the same customer might pay \$20 or more for glasses through conventional sources). Although such glasses sometimes do their job adequately, there's a strong chance that something will be wrong with them. That something could be minor enough to make little immediate difference to the wearer. But it could also be enough \so that the glasses would aggravate, instead of correct, a vision problem. It could create totally new problems, and, in extreme cases, the result could be serious damage to vision. Here are some of the corners that can be cut in the process of delivering a cheap pair of glasses:

The prescription may not be filled accurately. If you need glasses, an ethical ex-aminer will have tried to determine the exact specifications of lenses that will correct your eye problem. Almost all places that sell glasses maintain a supply of readythat sell glasses maintain a supply of ready-made lenses already ground to the most frequently called for specifications. It is quicker and cheaper to provide you with lenses directly out of stock than to grind them especially for you or to do additional grinding on stock lenses. (A routine sam-pling by Good Housekeeping of glasses bought at cutrate stores in several cities indicate their lenses did not always meet the prescription. Some lenses were close to, but weren't the prescription. For example, in a pair of glasses that was bought for \$7.50, one lens met prescribed specifications; but the other lens was off sufficiently to fail to give the correction that was needed.)

The lenses may be of second-best quality. Even if ground to the same specifications, not all lenses are the same. Quickie dispensers often use what are known as toric lenses. These cost about 25 percent less than a new kind-corrected-curve lenses. Although a toric lens can meet a prescription's exact specifications, the wearer still could get distortions and aberrations when looking through some parts of the lens. Corrected-curve lenses eliminate, or greatly minimize, such distortions: (The Good Housekeeping sampling turned up several cases where at least one of the lense used Too, bargain operators often was toric.) rely on inferior foreign-made lenses or on rejects and second-quality lenses from American factories. These lenses may have various defects that may serious affect transmission of light.

The optical center of the lens may not be placed correctly. Somewhere on the lens is a point that should be directly in front of the center of the pupil. This is called the optical center and is the main point of focus on the lens. In order to prevent any discomfort-commonly referred to as strain—the optical center must be positioned properly. Accomplishing this sometimes involves a process known as decentering the lens, when it is cut to size. (Lenses brought from wholesalesr are much bigger than when they're finally inserted into frames.)

The fittings may be wrong. A proper fitting cannot be accomplished in the minute or two that frequently is allotted by quickle operators. In a first fitting, the fitter using precise measuring instruments—de-cides where the optical center is on each lens. He also determines how large the lenses should be and what frame would be most desirable in size and comfort. After glasses are assembled, a fitter should check alignment of the optical center with the pupils. If either fitting is careless, the wearer could fail to get full benefit of glasses that technically met the prescription.

Inferior frames may be used. Cheap, in-ferior frames lose shape rapidly. If the glasses slide down your nose, you no longer look through the correct optical center without strain. Among frames of glasses bought by Good Housekeeping, there was considerable difference. Those on cheaper glasses were obviously inferior.

Little service, if any, is provided after glasses are bought. All glasses, no matter what the price, may require adjustment of some kind after they've been worn for a while. A screw may have to be tightened, a sidepiece straightened, and so on. The rep-utable dispenser generally provides this service at no charge and encourages customers to use it. Such servicing isn't always available at the quickie stores.

Mistakes, of course, occasionally happen even when glasses are bought from highly reliable dispensers. That's why glasses should always be checked by the examiner who prescribed them. The conscientious

<sup>1</sup> Many States now prohibit price advertising for glasses.

examiner-if he doesn't provide the glasses himself-will insist that patients bring their

glasses for a checkup.

The basis of proper eye care is a regular, thorough examination by a competent practitioner, who prescribes glasses only when they're necessary. Ophthalmologists—medi-cal doctors who specialize in care of the eye-either provide their patients with glasses or recommend reliable opticianstechnicians who fit and make glasses—to fill the prescription. Optometrists-they are not M.D.'s, but are vision specialists licensed to examine eyes and prescribe glasses-usually fill their own prescriptions

As a rule, cutrate eyeglass dispensers have examiners on the premises. The examina-tions they give rarely take more than 15 minutes. Most ophthalmologists and optometrists say a complete eye examination re-

quires at least 45 minutes.

#### Protecting the Public Purse

EXTENSION OF REMARKS

#### HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. COHELAN. Mr. Speaker, in an editorial entitled "Protecting the Public Purse," the Journal of Accountancy recently took note of the variety of legislation before Congress which calls for financial reports. The editorial goes on to say that unless such financial statements are supported by independent audits and that unless such audits are "in accordance with generally accepted auditing standards" and by agents with professional qualification "there is very real danger that the public and public officials may think they are getting protection when they are not."

Under permission to extend remarks in the RECORD, I submit this editorial for the consideration of my colleagues:

PROTECTING THE PUBLIC PURSE

The U.S. Congress and Federal administrative agencies have recently been showing much interest in the financial reporting of organizations with which the Government is

directly or indirectly concerned.

Adequate financial statements are an obvious necessity wherever public money is involved. Government lending and regulatory agencies cannot perform their functions properly without such statements. In addition, they are essential to proper management of the reporting organization. These facts are receiving greatly increased recognition both in legislation and in agency action.

The Small Business Administration, for example has recently issued regulations requiring that any small business investment company licensed by SBA "shall submit at the end of each fiscal year, a report containing financial statements for the year and an opinion thereon by an independent certified public accountant based on an audit conducted in accordance with generally accepted auditing standards" (Journal of Accountancy, January 1959, p. 14).

The Pension and Welfare Funds Disclosure

Act, passed in the closing days of Congress last summer, provided that the administrators of such funds must file with the Secretary of Labor each year financial reports "sworn to by the administrator, or certified

to by an independent certified or licensed accountant, on the basis of a comprehensive

The Securities and Exchange Commission has, of course, since its inception required the filing of detailed financial reports with registration statements, and has also required independent audits in connection with them.

Another important Federal agency very much concerned with financial statements is the Rural Electrification Administration, which requires them from local cooperatives borrowing Federal funds. About a decade ago REA decided that instead of relying entirely on its own staff for audits of electrification cooperatives, it would require independently audited statements, and specified that such audites be conducted by certified public accountants.

In the present Congress, bills have been introduced calling for financial reports from labor unions, certain tax-exempt organizations, public housing authorities, the National Association of State Militia, Federal credit unions, the Great Lakes Compact Commission, and certain activities of the Tennessee Valley Authority. While it is un-likely that all or even many of these bills will be enacted during this session, there is every reason to believe that legal requirements for financial reports will become more widespread as time passes.

Some of the bills now under consideration would require that the financial statements be supported by independent audits. Others, notably some of the labor proposals, are either vague or silent on this point.

There is serious danger that legislation or agency regulations calling for financial reports may be adopted which will fall far short of the intended purpose. If audits are not required, or if auditors may be selected who lack the necessary qualifications, or if the scope of the auditor's examination may be limited by the organization under examination, the effectiveness of requirements that financial statements be filed with Government agencies may be undermined.

The executive committee of the American Institute of CPA's has given much thought to this problem. After careful consideration, the committee adopted a general policy which was reflected in the testimony of Research Director Carman G. Blough before the Senate Committee on Banking and Currency last January (Journal of Accounting, Mar. 1959, p. 73). The two basic points of this policy are: first, that any legislation requiring independent audits should provide specification of the professional qualifications of the auditor, either in the law itself or in regulations to be issued later; and second, that audits should be conducted "in accordance with generally accepted auditing standards." Mr. Blough emphasized the fact that this phrase has a clear meaning both in law and in rules of professional conduct. As all professional ac-countants know, it is part of the standard form of auditor's opinion. Unless it is stated or clearly implied, the term "audit" by itself may have little significance.

Without clear standards, there is very real danger that the public and public officials may think they are getting protection through adequate independent audits when they are not.

The public-including the management of the organizations directly concerned-may even be dangerously misled by vague provisions for financial reporting which will be wholly insufficient to protect the public interest.

The accounting profession has an importjob of public education to do while legislation and regulations of this nature are in the making.

Attorney Gilbert S. McClintock, of Wilkes-Barre, Pa.

EXTENSION OF REMARKS OF

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. FLOOD, Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Wilkes-Barre Record of Friday, Jun 19, 1959, as well as an editorial from the Wilkes-Barre Times Leader of the same date:

[From the Wilkes-Barre Record, June 18 19591

#### GILBERT S. MCCLINTOCK

Because it has been so useful, the life Gilbert S. McClintock has spoken eloquent for itself. He was dedicated in the best sens of the word-in terms of service-to the we fare and advancement of the community and of a host of its institutions. The list is long and varied. It reflects Mr. McClintock's W and zeal for worthwhile undertakings. was wholehearted in pursuing them and net er seemed to lack the energy to give of by best to every cause that enlisted his support and leadership although his interests cov ered a wide range.

He was a son of Andrew Hamilton MC Clintock and a grandson of Andrew Tool McClintock, two distinguished lawyers

Admitted to the bar in March 1912, Gilber McClintock was a member of the American Pennsylvania, and New York Bar Associa tions. He was a graduate of Princeton in 1908 and of the University of Pennsylvania Law School Law School. Whether he was identified with commercial, financial, cultural, or philar thropic organizations, Mr. McClintock we not only a forceful leader but an advise whose counsel was invariably sought and

highly respected.

His stature was shown by his many high posts in industry, banking, church, civil life, and cultural organizations. His was career of enduring service and worth, and any one of a number of posts that he held would have made him well known far outsid the confines of the community as well within. As examples, he was chairman the board of Glen Alden Corp. and of Miner National Bank of Wilkes-Barre. He rated a chief founder of Wilkes College. He will a prime mover in Wyoming Valley Commu nity Chest. Children's Service Center W conceived and promoted by him. He was largely instrumental in starting the Bol Scouts in Wyoming Valley, and "Who's Who in America" listed him as a member of the library council and advisory council, depart ment of art and archeology of Princetos University. He was one of a group of mel who promoted the establishment of an ar museum on a site at South Street between South River and West River Streets. A groul of wealthy people had agreed to contribute when the depression came along resulting a suspension of the undertaking.

The setbacks of the anthracite business found Gilbert McClintock continuing his in terest in its welfare and showing a concern against any mishandling in this industry

Considering the character and the breadth of his activities and the fact that his cares was unmatched, Gilbert McClintock prob ably made the most valuable contribution to Wyoming Valley of any man in its history.
His associates in all his endeavors will

miss him sadly for he was a friendly indi-

ual with the respect of all and the affec- LAWS AND RULES FOR PUBLICATION OF n of everybody who knew him well.

from the Wilkes-Barre Times-Leader, Friday, June 19, 1959]

GILDERT S. MCCLINTOCK

lawyer, banker, industrialist, civic leader, Micator, the cator, philanthropist, clubman, and mber of a distinguished family, Gilbert McClintock easily qualified for a place among Wilkes-Barre's leading citizens.

Son of Attorney Hamilton McClintock and andson of Attorney Andrew Todd McClintook, whose roots were deep in the soil of area and who were outstanding citizens of their day, Attorney McClintock inherited, ong other things, prestige and a promibest place in the community. But he was an satisfied to rest on the laureis of his lorebears. He carved a new career for himand enhanced the family's reputation for public service.

Attorney McClintock stood out in so many delds that it is impossible to identify him th one. Many men are known because of their profession, business or some extracorricular activity. But Attorney McClintock was preeminent in so many spheres that he defied normal classification. If anything served as a measure of his worth

the community, it was this: As chairman of the board of Glen Alden Corp. and the Miners National Bank of Wikes-Barre, he made a substantial conbibution to the economy of the region, his decisions affecting thousands of families.

Despite the pressure of private interests, gave unstintingly of his time, talents, and resources in community service, heading and organizations as the hited Fund, Community Chest, Boy Scouts America, Wilkes College, Legal Aid Soci-Society of Arts and Sciences, and Graphic History Society of America. He was dentified with more than a score of other dies as a director or officer. In many in-tinces, as in the case of Wilkes College and Wyoming Valley Council of Boy Scouts, to cite two examples, he was a founder.

The record is lengthy and impressive. The public knows most of the story, but not all especially his benefactions. He was forever doing things behind the scenes, just a a few weeks ago he gave a valuable painting 10w weeks ago ne gave a value of the princeton balversity.

Associates knew him as a warm friend, associates knew him as a warming and dependent thinker, and good neighbor and citizen. Wilkes-Barre had reason to be Stateful to this native son who served it so long and ably. His sudden death yesterday afternoon leaves a void in the community.

GOVERNMENT PUBLICATIONS FOR SALE Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, phis 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interthe With the prompt execution of work for Government. The Superintendent of occuments shall prescribe the terms and conditions under which he may authorize the the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take . Il needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION, 182b. SAME: ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .-Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- -The Public Printer shall 2. Type and style .print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript .- When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of sald manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Mem-

bers without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.-The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections .- The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in

the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record .- When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. Official Reporters .- The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

# Daily Digest

#### HIGHLIGHTS

Senate cleared for President bill on wheat support and adopted conference report on housing bill.

House debated bill relating to interpretations of conflicts of Federal and State laws.

# Senate

# Chamber Action

Routine Proceedings, pages 10353-10389

Bills Introduced: 16 bills and 5 resolutions were introduced, as follows: S. 2212-2227; S.J. Res. 111; S. Con. Res. 50-51; and S. Res. 135-136. Pages 10355-10356

Bills Reported: Reports were made as follows:

S. 551, to declare portions of Bayous Terrebonne and LeCarpe, La., to be nonnavigable streams (S. Rept. 409);

S. 1356, to increase an authorization relative to dam No. 3 on the Big Sandy River, Ky. (S. Rept. 410);

S. 1264, to provide for a program to eradicate the dogfish shark in the Pacific coastal waters, with amendments (S. Rept. 411);

S. 1451, mutual security program for fiscal 1960, with

amendment (S. Rept. 412);

S. 283, 1135, 1705, 1828, 539, 640, 1791, and S. 1940,

private bills (S. Repts. 413-420, respectively);

H.R. 4603, to amend the Bankruptcy Act so as to consolidate referees' salary and expense funds, with amendment (S. Rept. 421);

H.R. 7176, fiscal 1960 appropriations for general Government matters, with amendments (S. Rept. 422);

H.R. 7040, fiscal 1960 appropriations for independent

offices, with amendments (S. Rept. 423);

H.R. 7343, fiscal 1960 appropriations for the Departments of State and Justice, and the judiciary, with

amendments (S. Rept. 424); and

S. Res. 135, authorizing appointment of a special committee to represent U.S. Senate at ceremonies in Juneau, Alaska, on July 4, 1959, where the first U.S. flag bearing 49 stars will be flown (no written report)-referred to Committee on Rules and Administration.

Pages 10354-10355

Bill Referred: One House-passed bill was referred to appropriate committee.

Printing-Bristol Harbor, Maine: Report of Secretary of Army on review of report dated May 6, 1959, from Chief of Engineers on Bristol Harbor, Maine, was ordered to be printed as S. Doc. 30. Page 10365

Alaska Rail and Highway Commission: Senate con curred in House amendment to and cleared for Pres dent S. 498, to extend life of Alaska Rail and Highwa Commission.

Airport Compact: Senate passed with committed amendments S. 2183, granting the consent of Congres to interstate compacts for the development of operation of airport facilities.

Bills Placed on Calendar: Two bills, as follows, were ordered to be placed on calendar: H.R. 5515, to increase an authorization relative to dam No. 3 on the Big Sand! River, Ky.; and H.R. 7500, mutual security program for fiscal 1060.

Legislative Program: Majority leader announced that highest priority will be given on the program ahead fi appropriation bills and conference reports. He pointed out that the following three appropriation bills were reported today and will be taken up as soon as possible H.R. 7176, general Government matters appropriations H.R. 7040, independent offices appropriations; and H.B. 7343, State-Justice appropriations. Reported bills of calendar may be called up on motion at any time, and Senate will meet in evening sessions and on Saturday if necessary, to complete legislative action on the appro priation bills by July 1. It was also pointed out that S. 1512, transferring responsibility for making appraisal from FCA to Federal land banks, and S. 1513, to clarif. status of Federal land banks, will be taken up as soop as they are cleared with Members interested.

Pages 10352-10353, 1038

Housing: By 56 yeas to 31 nays (motion to reconside tabled), Senate adopted conference report on S. 57 Housing Act of 1959.

S. Con. Res. 51, to make a technical correction in the enrollment of S. 57, was adopted.

Pages 10383-10384, 10389-10431

Wheat: Message from House rejecting conference ff port on S. 1968, to strengthen the wheat marketing quota and price support program, was laid down and Senate then adopted by 44 yeas to 40 nays (motion [4]

# Appendix

# Need To Strengthen Columbia Basin Interagency Committee

EXTENSION OF REMARKS

# HON, RICHARD L. NEUBERGER

OF OREGON

THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a thoughtful editorial from the Oregonian, of Portland, of June 16, 1959, which by the property of Portland, of June 16, 1959, which by the property Committee in order to recommend sound and wise regional water-development programs for the Pacific Northwest.

In addition, the Oregon Daily Journal of Portland, Oreg., of June 16 has likewise advocated a more decisive role for the Columbia Basin Interagency Committee. I ask unanimous consent that this informative editorial, entitled "Stronger Role for CBIAC," also be brinted in the Appendix of the Record.

There being no objection, the editonals were ordered to be printed in the RECORD, as follows:

[From the Oregonian, June 16, 1959] NEED FOR STRONG CBIAC

The Columbia Basin Interagency Committee is reappraising its role in the Northwest and some of its members seem determined to make CBIAC a stronger force for comprehensive development of the region's water resources. The Oregonian, which has been critical of the committee's failure to put together a master plan, supplementing that of the Army engineers for navigation, flood control, and power, and its avoidance of the controversial, roadblock issues, is hopeful if skeptical.

CBIAC certainly can improve its work by stabilishing a small, permanent staff and a secretary who is not changed each year with the chairmanship. This probably will be done. But then what?

It was made very clear at a meeting at Imberline Lodge, Friday, both by members of the parent Federal Interagency Committee in Washington, D.C., and by Maj. Gen. J. S. Bragdon, Special Assistant to the President for Public Works Planning, that the regional representatives of the seven cabinet departments on CBIAC must operate "within the framework" of their departmental laws and Policies. In other words, CBIAC cannot make decisions; it can only advise and recommend.

The committee has made some recommendations, as in the request for funds for fashery research. But when it comes to the Point of saying what dams should be built, it is often stymied. In the Middle Snake, for example, the Federal Power Commission refused a license for Mountain Sheep Dam and suggested construction of Nez Perce Dam; the Department of Interior wants a light dam at Pleasant Valley site; the Army favors a high dam at Mountain Sheep. Any

one of these projects would rule out the others.

Since CBIAC no longer has a rule of unanimity, it could, however, express its views and work in a positive way for accomplishment of such congressional proposals as self-financing of the Columbia River power system and making a Federal corporation out of Bonneville Power Administration. It remains a question whether CBIAC will wish to get involved in this controversy in which political battlelines already have formed in the region and nationally. But how can it justify its existence if it fails to act in a matter so important to the Federal water program in the Northwest?

CBIAC has taken no leadership, either, in seeking congressional restoration of Western States' water rights destroyed by the Supreme Court decision in the Pelton Dam case, despite the presence of seven Governors as nominal members of the committee.

The Governors have produced little leadership to justify their addition to CBIAC, although sporadically they have been active. Gov. Mark Hatfield, of Oregon, now is taking the lead in seeking a stronger CBIAC. We hope he prevails on other Governors to participate in the work of the committee, rather than delegating their seats to subordinates. Governor Hatfield Friday suggested that positive decisions might be achieved by changing the bylaws to provide that a majority vote of the States and a majority vote of the Federal departments should govern.

eral departments should govern.

The 1954 charter of CBIAC charges the committee, along with coordination and planning, "to provide means by which conflicts may be resolved" and "to promote resolution of interagency problems at the regional level." It has failed to meet these objectives, With a dozen Federal agencies active in the water resources field, and sometimes working at cross-purposes, the need for this type of coordination and resolution of conflicts is demanding. CBIAC is the only agency, weak as it has been, that is sufficiently representative to do the work. We will watch the reorganization movement with interest and hope for success.

[From the Portland (Oreg.) Journal, June 16, 1959]

STRONGER ROLE FOR CBIAC

That organization is the strongest which is willing, now and then, to take a frank look at itself, acknowledge its defects and seek ways to remedy them.

The fact that the Columbia Basin interagency committee has done this, in forthright discussions at Timberline Lodge last Friday, might very well be interpreted, then, as a sign of strength rather than of weakness.

It should be noted that Gov. Mark Hatfield's criticism of the CBIAC were prefaced by an acknowledgment of its achievements "in providing a forum for discussion and dissemination to the public of facts and group thinking" and in developing essential basic data on resource development through its subcommittees and task forces.

Governor Hatfield was not the first to suggest that the CBIAC ought to play a stronger role in resolving conflicts which are barriers to basin development.

Brig. Gen. Allen F. Clark, North Pacific division engineer, CBIAC chairman for the past year, has been saying somewhat the same thing. The CBIAC executive subcommittee prior to Friday's meeting had outlined some proposals designed to clarify its goals and strengthen its authority in matters of resource development.

The same subcommittee has now been charged with producing a positive program for achieving some of these aims. This will not be an easy task. For the CBIAC represents Federal agencies which sometimes have conflicting interests and States which may have differing views relative to the merits or demerits of a given project.

Further, the committee cannot escape the fact that the final responsibility in the authorization and financing of Federal projects lies with Congress. At best, the CBIAC's pipeline to that body will be a long and sometimes leaky one.

But Congress would listen better if the voices from the Pacific Northwest were less blurred by conflicts among ourselves. The Corps of Engineers itself has sought to reduce the blurring. Its revised 308 review report tried to take into account the varying interests of different segments of our economy. But it obviously did not and could not satisfy everybody. Voices against the report have, been loud enough to hurt many of its proposals in congress.

The CBIAC has already acted to point out those projects on which there is little or no conflict. It has taken preliminary steps to analyze and determine the validity of the objections to some of the others.

Its ability in the future to speak with a stronger voice in behalf of Pacific Northwest resource development will depend to some degree on the willingness of the people of our region themselves to recognize that no particular interest can have all its wants in one phase of development without stepping on somebody else's toes.

The term "comprehensive development" is bandied about freely. But there are practical limits to "comprehensiveness." What we need to seek is "optimum development," that which offers the most in return to all the people on the basis of reasonable compromises where obvious conflicts exist. Perhaps the CBIAC can take the lead in trying to build the kind of "public climate" necessary to achieve this.

# Russian View of Vote on Nomination of Lewis L. Strauss

EXTENSION OF REMARKS

OF

#### HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. GORE. Mr. President, it is interesting to note that the news media behind the Iron Curtain have interpreted the vote on the nomination of Mr. Lewis L. Strauss as a blow to the prestige of the President.

I ask that an Associated Press dispatch from Vienna, Austria, be printed in the Appendix of the RECORD.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

VIENNA, AUSTRIA.—The Senate's refusal to confirm Lewis Strauss as Secretary of Commerce was reported by Communist bloc broadcasters in Austria today as follows:

"This was a blow at Elsenhower's prestige, the like of which no President had suffered in 3 decades. But then Strauss was a big banker who got his admiral's rank for producing atom bombs, and he was also noted for advocating the most reactionary views in domestic and foreign policies of the United States."

# Responsibilities of a Citizen in a Democracy

EXTENSION OF REMARKS

### HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, three visitors have come to my office this week from New Jersey. They are high school juniors who will spend the next 3 weeks in Washington on summer senatorial scholarships. They will visit legislators and other Government officials. They will gather data on projects which interest them. The two boys and one girl were chosen by a panel of newspaper judges from 400 students who submitted entries from the entire State. The judges paid particular attention to essays written by the students with each entry. I, and others, have been impressed by these essays; the students have given serious thought to the theme: "My Responsibilities as a Citizen in a Democracy.'

I ask unanimous consent to have these three essays printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WINNING ESSAY SUBMITTED BY MISS ZOHARA MUSHINSKY, OF HAMILTON HIGH SCHOOL, TRENTON, N.J.

Just 3 months ago I stood before a judge at the Federal Naturalization Court, in Trenton, and with my heart full of joy took the oath that made me a citizen of the United States. My happiness was tinged with a little guilt. however, when I thought of the multitudes who had dreamed, hoped, fought, and even died for such rights and privileges as I was about to receive by merely raising my right hand and repeating a few words. This land had welcomed us when we were driven from my native country by the engulfing Red terror of communism. Here we found shelter, peace, and above all, the blessed freedom which had once been only a hopeless longing. We had been relieved of the fear which once was a constant part of our lives.

But I was once again afraid as I remembered that my own country had once been free, and its citizens had not always worn the heavy yoke of totalitarian rule. Its people, feeling safe and secure, had become apathetic and careless of their duties toward their country. When World War II came, it

found the country unprepared and unable to mobilize rapidly. After the bitter years of fighting, a weakened and exhausted nation fell easy prey into the Jaws of the Russian trap. The citizens emerged from their lethargy too late; they had not lived up to their responsibilities, and so democracy was denied them.

"Could this happen here, also?" I asked myself. Yet I already knew the answer. It could happen anywhere, for a free country can remain free only so long as each and every individual works to maintain that precious liberty. American citizenship brought me many rights and privileges, and the only way in which I can express my gratitude and love to my new country is by carefully fulfilling all the obligations which citizenship entails.

For many years we had been kept ignorant of true world conditions by strictly censored newspapers which showed the Marxist point of view. We were surprised at the diversified opinions found in American newspapers and at the factual reporting. To help maintain this freedom of the press, it is my duty, as it is the duty of all citizens, to read these papers and keep informed of America's achievements and problems. Freedom of speech has been granted us here, but we might use it wisely and well. It is our sacred obligation to speak openly against tyranny and injustice wherever we may find it. For if we fail to live up to this, one of our most important responsibilities, we may one day find that free voice silenced, because we failed to use it in a time of crisis.

The highest privilege granted to a citizen also bears with it the weightlest duties and most sacred obligations. It is the right to participate in our country's Government, our right to determine in whose hands we shall place the fate of our Nation, the right to vote. It is the responsibility of every citizen, as it one day shall also be mine, to vote at every election and to always select the candidate who will best serve democracy's cause. Freedom flourishes only when an uncorrupted, honest government rules. The duty to provide America with such unimpeachable administration rests with its citizens.

The United States has been described thus, "A government of the people, by the people, and for the people, whose just powers are derived from the consent of the governed." America has always dealt uprightly and fairly with her citizens. Never once has our Government failed us.

It is therefore our moral obligation to be equally just and honest in our dealings with the Government and to rally to our Nation's defense in any emergency. It is a citizen's duty, not only to protect his country in time of war, but also in peacetime by supporting such organizations as the Civil Defense and the Red Cross. America spends billions annually for the defense and welfare of her citizens. Consequently, it is every citizen's responsibility to pay his income tax honestly and willingly, for it bears the expense of the many privileges we all enjoy.

The United States has given me, an individual citizen, more than I shall ever be able to repay. Perhaps living up to my responsibilities as a citizen in this democracy will serve as partial recompense for the glorious gift of liberty which was given my family in the haven we found.

If I could speak to every American and know that my words would be heard, I would say, "Do your duty to your country with eagerness and pride, for by doing so, you guard this Nation from the tragic fate which has befallen half the earth. Each responsibility well carried out helps the flame of democracy burn a little brighter, shedding healing light on this partially darkened world."

WINNING ESSAY SUBMITTED BY MR. ANTHON'S NOWELS, STUDENT OF MANASQUAN HIGH SCHOOL, MANASQUAN, N.J.

The greatest single threat to the peace and advancement of the American people today is not the Soviet Union, nor the hydrogen bomb. Granted, that these offer a very real danger to us and all peace-loving nations but they can never represent as great a danger as the apparent apathy and indifference on the part of a great many Americans.

Every person who lives in our democracy is granted certain privileges, and in return is expected to accept responsibilities. Unfortunately, many people are endangering their own country by a lack of interest of refusal to take an active part in their own Government. The laxity of so many citizens even as far as their hard-fought-for right wote, is one of the best examples of this problem, which constitutes a malignant threat we democracy on every governmental level.

democracy on every governmental level.

In view of this, I see two very real responsibilities: First to make sure that I am not guilty of this negligence, that I will vote when I come of age, that I will keep myself informed, and familiarize myself with important issues; and especially to check the records of the various candidates and evaluate their platforms. Also a participation is community affairs, the preservation and protection of my civil rights, as well as the rights of others, is of prime importance. And if I should enter the field of politics as candidate, it would be my duty to honestly represent my constituents, refrain from any connection with special interest or pressure groups, and to retain independence of judgment and action. I must in all ways be a participating member who helps to make our democracy a functioning reality instead of a beautiful dream.

The second, and most difficult responsibility, is not only to stamp out this apathy and dangerous indifference, a blight if allowed to spread, that could easily bring an end to the democratic system of government; but to instill the pride of being an American I must be willing to take the initiative to organize and to inform other people of their obligations as Americans.

It is important that I, together with my fellow citizens, create an active interest in civic affairs and in our Government so that the best qualified persons are selected for the most important job: That of governing the people of the United States.

WINNING ESSAY SUBMITTED BY MR. DONALD B. READ, STUDENT OF RIDGEWOOD HIGH SCHOOL RIDGEWOOD, N.J.

"I hereby declare, on oath, that I will absolutely and entirely renounce and abjure all allegiance and fidelity to any foreign prince, potentate, state of sovereignty of whom or which I have heretofore been a subject or citizen; that I will support and defend the Constitution and laws of the United States of America against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; and that I take this obligation freely and without any mental reservation or purpose of evasion; so help me God."

There are the words uttered by an alient as he becomes a citizen of the United States. He has pledged to renounce and support many principles of government. Are not those who are citizens by virtue of American birth similarly pledged? What does out oath hold us to? What must we do as citizens of this Nation?

In the first place a citizen must defend our Constitution and laws. These laws have been set up as guides for our particular segment of democratic civilization. The Constitution is the supreme law of the land; the other laws are the detailed guides. The citizen's support of the laws should not be passive nor should it be one of blind ac

ptance. He should know the Constitution of understand the laws which affect him. he feels that a law is wrong he should all that he can to have it corrected; but it proves to be best for the majority of

tople, he must obey it.

Secondly, the citizen must be active in his poort of the Government. The basis of a mocratic state is an informed public. It mocratic state is an informed public. It the duty of every citizen to be aware of Nat is happening in his Government, what adidates for office stand for, what changes h be made for the better, what his part can in local and national affairs. A citizen a privilege to vote—it is also his duty. We ballot is the greatest tool of democracy. the of the greatest freedoms given to us is be right of choice. To use this freedom well ten we go to the polls we must know some y definite things: what the power of each cted official is, all one can find out about th candidates, what qualifications are cessary for the office, as much as possible but each proposal for referendum.

The citizen must be willing and eager to we his country in the best way he can. He hast be ready to accept public office and do he best to be as successful a public servant

s private citizen.

The third point is defense of this Nation. the citizen must defend the laws, the Govenment, and the country as a whole from ternal and external enemies. This defense by force of arms if necessary. This is our by force of arms if necessary. This is Government, our Nation, our home; we must

The people who take the oath of allegiance have worked and studied to become citizens. They realize the value of the democratic life the United States, for they have had the experience of living under other types of govenment. Should these new citizens be more ware of their duties than are we? No. We must be just as ready as they to assume the control of their duties of their duties of their duties as ready as they to assume the control of their duties of their duties. the duties, responsibilities, and privileges of our Government. We must inform our-selves, vote with great care and decision, and serve our local, State, and national govsumments to the best of our abilities.

# Millions Affected by Rural Redevelopment

EXTENSION OF REMARKS OF

#### HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

EDMONDSON. Mr. Speaker, More than 15 million Americans would be eligible for rural redevelopment beneats under the provisions of area redevelopment legislation, S. 722, as reported by the House Committee on Banking and Currency

According to information furnished me, the population of the 663 counties in the United States likely to benefit from the rural redevelopment provisions of the bill was 15.5 million in 1958, and constituted 18 percent of the total population of the 20 States in which they are located.

These rural counties included more than half the population in some States. For example, in Mississippi, they repreented 89 percent of the State's population; in South Carolina, 74 percent; in West Virginia, 70 percent; in Arkansas, 60 percent; and in Alabama, 56 percent.

The States in which these rural counties eligible for rural redevelopment benefits included between 25 and 50 percent of the population were Tennessee with 43 percent, Kentucky with 37 percent, and North Carolina with 30 percent

Other States with significant proportions of their population in the rural distressed counties were Georgia with 23 percent, Louisiana with 21 percent. and my own State of Oklahoma with 16 percent.

Mr. Speaker, at this point I should like to insert the following table which gives statistical data in this connection:

Population in counties eligible for rural redevelopment benefits under area redevelopment legislation (S. 722, House revision)

	Counties eligible for rural redevelopment benefits		
State	Number of counties	Population (1958)	Percent- age of State popula- tion
Total	663	15, 531, 600	18.2
Alabama Arkansas Florida Georgia Illinois Kentneky Louisiana Michigan Michigan Minnesota Missouri New Mexico North Carolina Ohio Oklahoma South Carolina Tennessee Texas Virginia	28 5 2	1, 782, 100 1, 044, 200 273, 300 885, 600 20, 400 886, 400 656, 600 63, 700 51, 200 1, 882, 800 220, 900 69, 000 1, 373, 900 77, 000 361, 400 1, 767, 500 612, 200 715, 400	56.0 59.5 62.2 23.1 22.6 621.0 9 2.0 88.5 17.7 30.3 15.9 442.6 6.4 442.6 6.8 4.1 48.2

Mr. Speaker, as a further example of the support for this area redevelopment legislation, I should like to insert in the RECORD at this point a copy of the resolution adopted by the Conference of Southern State Municipal, Leagues and Cities:

RESOLUTION ON AREA REDEVELOPMENT BILLS ADOPTED BY CONFERENCE OF SOUTHERN STATE MUNICIPAL LEAGUES AND CITIES, JUNE 12-13, 1959, WASHINGTON, D.C.

Where as the Conference of Southern State Municipal Leagues and municipal officials, sponsored jointly by the American Municipal Association, has considered the enormous benefits to States and communities in the southeastern United States of the area redevelopment bill approved by the Senate (S. 722) and under consideration in the House of Representatives of the U.S. Congress; and

Whereas S. 722 provides \$389.5 million of loans and grants to foster industrial growth, with one-half of the funds earmarked for underdeveloped rural areas and one-half for large industrial centers with chronic unemployment; and

Whereas 65 percent of the total loans and grants authorized by the bill will be available to southern communities in 628 underdeveloped rural counties and to 53 southern cities with excessive unemployment; and

Whereas the depressed areas legislation proposed by the President (H.R. 4278) discriminates against the South by eliminating all assistance to rural areas, 94 percent of which are located in the South; and

Whereas the provisions of S. 722 will accelerate the balancing of industry with agriculture in depressed rural areas, thereby reducing the enormously costly emigration of population and affording permanent relief from the billions of dollars of annual subsidies now poured into rural areas to support farm income: Therefore, be it

Resolved, That the Conference of South-ern State Municipal Leagues and Cities urges the Members of Congress for the South to support a sound area redevelopment bill and oppose the proposal of the President and others (H.R. 4278) which discrimantes against the South by eliminating all assistance to depressed rural areas; and be it

Resolved further, That a copy of this reso-lution and the statement of fact adopted by this conference be transmitted to all Members of Congress from the southeast and to the mayors of some 2,000 southern com-munities which would benefit from the provisions of S. 722.

National Parks as a Source of Prosperity Through Encouraging the Tourist Industry

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 23, 1959

Mr. NEUBERGER. Mr. President, I have been sponsoring two bills which have-as their goal-although via different methods-the establishment of a national seashore park in the Oregon Dunes and Sea Lion Caves.

Some bitter-end opponents of my proposals, as contained in S. 1526 and S. 2010, have charged that the Oregon Dunes National Seashore would be a failure because they allege that the Olympic National Park - northward along the Pacific seaboard-is a failure.

I challenge that claim, Mr. President. To my knowledge, no national park is a failure. However, I might be said to be a prejudiced witness. The same cannot be said about Lawrence E. Davies, distinguished and accurate correspondent in the Western States for America's No. 1 newspaper, the New York Times.

In the New York Times of June 22. 1959. Mr. Davies has written an extensive dispatch from Port Angeles, Wash., about the 1959 tourist prospects for the Olympic National Park. The headline sets the theme of the article. It reads: 'Olympic Park Set for Busy Summer.'

That tells volumes, Mr. President. Further on in the course of his informative article Mr. Davies writes:

Port Angeles, a city of 15,000, has substituted tourism for its once thriving lumber industry. It has been rapidly building motels and now boasts it has 500 units for park visitors.

Mr. President, if our Oregon Dunes and Sea Lion Caves National Seashore is established, I predict that prosperity through tourism likewise will come to the Oregon seacoast communities of Flor-ence, Reedsport, Newport, and others. Why should national parks bring prosperity elsewhere but not to Oregon?

I ask unanimous consent to have printed in the Appendix of the Record the dispatch by Lawrence E. Davies, of the New York Times staff, from that newspaper of June 22.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

[From the New York Times, June 22, 1959]
OLYMPIC PARK SET FOR BUSY SUMMER—MILLION VISITORS EXPECTED IN SEASON—SCIENTISTS STUDY CLIMATE FROM OLYMPUS

#### (By Lawrence E. Davies)

PORT ANGELES, WASH., June 21.—Science and the great American motoring public have begun their 1959 summer invasions of Olympic National Park.

Science is curious about glaciers and climate. A five-man party established itself last week on Blue Glacier high up on Mount Olympus, the tallest peak in this primeval

area of northwest Washington.

At the same time a summer crew of seasonal rangers and naturalists completed training. They will help handle more than 1 million prospective visitors on the park's 600 miles of hikers trails, 150 miles of automobile roads, and 25 scattered campgrounds.

The Office of Naval Research is underwriting a summer-long study of Blue Glacier from a camp on Snowdone, 6,800 feet up on 7,954-foot Olympus. It is a continuation of a project started in the summer of 1957, under a grant by the National Science Foundation, as part of the 18-month International Geophysical Year.

#### OPERATED BY UNIVERSITY

The project is operated by the Department of Meteorology and Climatology of the University of Washington, headed by Dr. Phil Church. Ed LaChapelle, a Foreign Service meteorologist from Alta, Utah, directs the science party, as he did during the International Geophysical Year.

William Fairchild, a pilot from Port Angeles, where park headquarters are cituated, carries men and supplies to the glacier camp in a light ski plane. Heavy equipment was dropped on the area in 1957 by the Air Force.

Weather records kept by the party in 1957-58 showed this area to have the greatest precipitation in the country. It is thought that a normal year may produce 200 inches, or close to 17 feet, of precipitation in the Biue Glacier vicinity.

The fact that other parts of the wilderness area have upward of 140 inches of rain a year is one reason for the existence of Olympic National Park.

Its great rain forests, with virgin spans of Douglas-fir, western hemlock, and Sitka spruce, and with lush growths of mosses, ferns, and other plants, compete for attention with the snow-capped Olympics, part of the coast range.

Olympic National Park is only 21 years old. By Executive order, President Franklin D. Roosevelt increased the original 643,000 acres by more than 200,000. President Harry S. Truman added 47,753 Federal acres to the park area, bringing it to 898,000, or about 1,400 square miles.

#### HARD-ROAD PLAN OPPOSED

Today some conservationists oppose the hard-surfacing of any more roads within the park boundaries, as is envisaged by the Mission 66 program of the National Park Service.

This year, thanks to \$5 million paving project, motorists may drive over an 18-mile improved highway from the northern park boundary near Port Angeles to Hurricane Ridge. The view from the top of the ridge is generally regarded as one of the conti-

nent's superb vistas. Much of the 60-mile snow-crowned Olympic chain is visible on a clear day from this grandstand seat.

More hard surfacing of park roads is in

Oscar A. Sedergram, assistant park superintendent, noted in the absence of Superintendent Dan Beard that the Olympic Park staff has only 12 permanent rangers to patrol the vast acreage. Glenn D. Gallison, the park naturalist has one assistant.

the park naturalist, has one assistant.

For the summer, 22 seasonal rangers and ranger-naturalists have been added.

This park has done little so far to develop overnight accommodations except for providing small campgrounds. Some of these lack modern restrooms.

The major concessionaire, National Park Concessions, Inc., is adding 10 units to Government-owned Lake Crescent Lodge. This is a well-run establishment on a lakeshore in the park's northwest corner, where about 100 persons can be housed. Several less modern groups of cabins are scattered through the park.

Port Angeles, a city of 15,000, has substituted tourism for its once thriving lumber industry. It has been rapidly building motels and now boasts, it has 500 units for

park visitors.

#### **Backing Public Officials**

EXTENSION OF REMARKS

#### HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter to the editor, published in the New York Times of June 18, 1959, and authored by Mr. Robert H. Austin, of Johnson City, N.Y.

In his letter, Mr. Austin not only pays tribute to conscientious members of Congress, but also suggests a nonpartisan organization of public-spirited citizens to help good Members of Congress get a fair break in public relations.

It is so rarely Congress receives any pleasant bouquets, that Mr. Austin's letter should be of interest to all Senate and House Members.

Mr. Austin is an outstanding publicspirited citizen, well known in New York State, who has devoted many of the best years of his life to civic causes.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 18, 1959] BACKING PUBLIC OFFICIAL: MOVE TO COUNTER SMEAR ATTACKS ON NATIONAL LEADERS PRO-POSED

To the Editor of The New York Times:

The tragedy of John Foster Dulles had a profound effect on me. It must have also affected millions of other thinking citizens. Here was a devoted national public servant who literally fought his life away with unyielding courage and persistence for what he felt was best for America. Yet he was subjected to cruel and unreasonable abuse and criticism, with few defenders, until he was close to death.

Then, and only then, was there a public awakening and appreciation of his unselfish

public devotion and sacrifice. The same we true with the late Senator Robert Taff former Secretary of Defense James For restal, and other national figures.

Why should there not be an organized nationwide group of public spirited citizens nonpartisan, who would make it their bushness to see that the public has all the fact is accurately informed about our Senator Congressmen, and national leaders who as subjected to unfair and unjustified abush from selfish or ignorant sources because the stand firmly for courageous and faithful representation?

Under our form of government, for instance, a U.S. Senator can look only to political party—whichever it may be—for of ganized help in defending his public record

no matter how fine.

Surely there must be many thought? Americans who would join a nonpartise movement to show public appreciation to integrity in office and faithfulness to the public trust. In this way false propagand and smear attacks against a truly hone Senator, Congressman, or Cabinet office could be dispelled by the light of fact and truth, rather than be permitted to polse the minds of unthinking voters.

I have unstintedly given many years of my life to local and State civic activities. But to survive the present struggle with communism our form of government must fund

tion at its best.

In my opinion it cannot do this unless and until our citizens, in a nonpartisan spirit show greater appreciation and give some for of strong public backing to our nations public servants, who through courage, hone devotion, and unselfish fighting spirit profitheir worth beyond question.

JOHNSON CITY, N.Y., June 15, 1959.

# Greater Use of International Court

EXTENSION OF REMARKS

# HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATE

Tuesday, June 23, 1959

Mr. HART. Mr. President, it enormously encouraging to me, as I sure it is to all Members of the Senat when we find examples of distinguished educators in our communities joining with the press of our towns and cities present material on public questions an instructive and interesting fashion Such an example is an article which ap peared on May 23, 1959, in the Hillsda (Mich.) Daily News. Written by Dr. H. Roberts, head of the history department of Wildeland ment of Hillsdale College, it gives actual background surrounding our par ticipation in the International Court Justice, and presents in persuasive fash ion the reasons why the Congress should repeal the so-called Connally reserve tion.

The senior Senator from Minnesol [Mr. Humphrey] has submitted a resolution (S. Res. 94) to remove this reservation, and I hope, as I know he does that there can be hearings on the measure in the present session of the Congress.

I ask unanimous consent that the biticle from the Hillsdale Daily News printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES MAY LEAD WAY TO GREATER USE OF INTERNATIONAL COURT

(By Dr. W. H. Roberts)

A significant movement is underway which bound to effect profoundly the interpreation of international agreements. We have earned from experience that no matter what he Soviets agree to do, they will eventually ome up with an interpretation which will Aullify the agreement for all practical purloses.

The United States is considering putting nto every treaty and agreement a clause which says, "That any dispute that may arise s to the interpretation of the agreement be submitted to the International Court of Justice and that the nations signing the agreement shall be bound by the inter-

Pretation of the Court."

The movement to reemphasize a rule of hw administered by a court of justice began new some months ago. A year ago President isenhower proclaimed May 1 as Law Day in the United States. In 1958 there were over 20,000 ceremonies on that day emphasizing the importance of law and the courts. Last May 1 there were also many thousands of events commemorating the day.

In his state of the Union message last anuary the President called attention to this movement and stated that he would soon call on Congress to make significant changes In our relations to the International Court.

The American Bar Association has thrown the weight of its influence behind the movement. It has a committee on world peace through law. The chairman of this committee, Charles S. Rhyne, delivered a scholarly address on the subject in Washington last March before the ninth conference of national organizations called by the American Association for the United Nations.

The leading lawyers of the free world are banded together in a momentous task to improve the procedures and increase the use of the International Court. They feel that if the efforts of the international scientists could split the atom, the best legal minds of the world can in time achieve a major breakthrough in the problem of international peace.

Last April 13. Vice President RICHARD NIXON delivered an able speech before the National Academy of Political Science in New York. This speech was a sort of trial balloon on the issues that the administration has been considering.

In the administration program is the plan eventually to include the above mentioned clause in regard to the interpretation of agreements and also a request to Congress asking for the repeal of part of the Connally reservation which was attached to our ratiacation of the statute of the present Interhational Court in 1945. This has to do with domestic issues.

No one is asking that the International Court should decide issues that are domestic in the characteristics. in character. But the Connally reservation excludes domestic issues "as determined by the United States of America." This pre-Judging by us violates all principles of a court of law by allowing the litigant to decide his own case. The friends of law are willing to let the Court decide whether the issue is domestic or not.

Our example has been followed by other states to the extent that few cases ever get to the International Court. We presented the case of the Russians shooting down our plane over the Sea of Japan and asked for \$1,300,000 damages. All the Russians had to do was to say that it was a domestic issue and the Court had to dismiss it. This unilateral decision on whether it is domestic or not is a two-way street and can be used against us.

The International Court is the least used of all the organs of the United Nations. There are 15 judges who are elected for 9 years. They draw a salary of \$20,000 a year. of the best legal minds of the world sit upon this Court. All great legal systems are represented. In the last 13 years the Court has handed down only 10 judgments.

In the same length of time the Supreme Court of the United States has handled close to 13,000 cases and has heard oral arguments

in 1,300 of these.

It is believed that the business of the Court would greatly increase if this reservation to decide unilaterally the character of the case were removed. If the United States sets the example, other states will follow us.

It is also proposed that the Court hold sittings at the U.N. headquarters, either as a full court or in chambers of three judges which the statute of the Court would permit. It would also greatly reduce the cost of litigation and increase the business of the Court if it met in places near the countries which brought the dispute before it.

The United States would be true to its historic character if it should take the lead in increasing the functions of the International Court. Throughout most of our his-

tory we have led in this field.

In the Jay Treaty with England in 1795 we agreed to arbitrate the disputes growing out of the Revolutionary War settlement. This gave great impetus to the cause of arbitration as also did the Treaty of Washington in 1871 which provided for the arbitration of the Alabama claims. During the 19th century 177 cases were settled by peaceful arbitration.

We played an important part in the founding of the Permanent Court of Arbitration at the Hague in 1899. The first case that ever came before it, the Pious fund case, was brought by the United States. Elihu Root, an American, helped write the protocol of the first world court in 1920. American judge has sat upon that Court and the present one from the very begin-

The refusal of the Senate to join the Court established by the League of Nations was a gross violation of the traditional spirit of this country.

It is true that the Soviets will not be eager to submit their interpretations of agreements to a court of law but they do desire the good will of the world. It would make their professions of peaceful intentions look phonier than they do if they deliberately reject the clause to submit the differences on interpretation to a court of

The use of a court of law is the road that all civilized men have followed in passing from barbarism and violence to civilization. If mankind is to survive on this planet, it will have to sooner or later learn to use a court of law for the settlement of disputes.

Resolution on Milk Sanitation Standards and Federal Milk Marketing Orders

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. W. L. Henning, secretary of agriculture, Commonwealth of Pennsylvania, and a resolution adopted by the Northeastern Association of State Departments of Agriculture at its annual meeting, held on May 25, 1959, at Easton, Md.:

> COMMONWEALTH OF PENNSYLVANIA, DEPARTMENT OF AGRICULTURE Harrisburg, June 17, 1959.

Hon, DANIEL J. FLOOD, Congressman from Pennsylvania, House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: I am enclosing a copy of the resolution adopted at the annual meeting of the Northeastern Association of State Departments of Agriculture, held recently in Easton, Md., concerning milk sanitation standards and Federal milk marketing

Your kind consideration of the position of the northeastern departments of agriculture will be greatly appreciated.

Sincerely yours,

W. L. HENNING. Secretary of Agriculture.

RESOLUTIONS UNANIMOUSLY PASSED CONCERN-ING MILK SANITATION STANDARDS AND FED-ERAL MILK MARKETING ORDERS

Whereas the Federal milk marketing order program materially affects the returns that the majority of milk producers in the Northeastern States receive for their milk; and

Whereas the several Federal milk marketing orders in operation in the Northeastern States take into consideration, in determining the level of class I prices, variations in economic factors affecting the production and marketing of milk in each specific marketing area, including labor costs, sanitation standards, taxes, feed costs, etc.: Now, therefore, be it

Resolved, That the Northeastern Association of Departments of Agriculture, duly assembled at Easton, Md., on May 25, 1959. goes on record as being unalterably opposed to the inclusion in any northeastern Federal order any provision which would limit the level of class I prices as determined pursuant to the several economic formulas used in computing such class I prices, by relating such prices to the Midwest condensary price or other manufactured milk price;

Whereas the enactment of Senate bill No. 988 or House of Representatives bill No. 3840, known as the National Milk Sanitation Act, would result in further concentration of' authority in the Federal Government and a diminution of power of the several States, which is contrary to the policy of the National Association of Departments of Agri-culture: Now, therefore, be it Resolved, That the Northeastern Associa-

tion of Departments of Agriculture duly assembled at Easton, Md., on May 25, 1959. goes on record as being unalterably opposed to the enactment of such or similar legis-

John Hobbs Memorial Dedication

EXTENSION OF REMARKS

OF HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. TRIMBLE. Mr. Speaker, John Hobbs, of Rudy, Ark., was an immigrant, but he loved this land and gave his life

to its betterment. It was my good fortune to know him for many years. He worked for and encouraged the development of rural Arkansas, was a leader in boys' and girls' club work, and was an outstanding advocate and promoter of rural electrification. He left his mark upon his adopted country.

Douglas G. Wright, Administrator of the Southwestern Power Administration, was the speaker at the dedication of the John H. Hobbs Memorial Substation at Cassville, Mo., on June 8, 1959. He gives good insight into the character of Mr. Hobbs, and, under unanimous consent, I insert his address following my remarks:

Mr. Evans, beloved family, friends, and neighbors of Uncle John, when asked to give this address, I feared I might not be able to do it because I might be too emotional. And then, I thought: Nobody would ever really be emotional unless he were sad, and no one who ever knew Uncle John could be a sad man, because Uncle John's life con-

tained no place for sadness. Little more than a quarter of a century ago there was born in this land a new movement of economic liberty, conceived in cooperation and dedicated to the proposition of self-service. For the past full quarter of a century this movement, since its birth, has undergone the constant struggle to determine whether that movement or any movement so conceived and so dedicated could endure or, whether or not, it must succumb to a so-called, free-enterprise system which is actually nothing more than a regulated, profitmaking monopoly.

Uncle John Hobbs was a man in this program. And this program should perhaps first be analyzed before we analyze the man

whose memorial we dedicate today.

This program was actually an emancipation proclamation. It did not bear the popular appeal of freeing human beings from bondage inflicted by other human beings. Rather, it bore only that appeal that would fill the heart of a man like Uncle John, who decided that drudgery should disappear from the lives of rural people, and that rural people and common people were entitled to all the great things that electricity could bring to them if it were made available.

Do you think this movement meant bringing it only to the rural areas? No, it was bigger than that. It meant harnessing the resources of the country—the water resources of the country, the other resources of the country-for the first time in the history of this country-for public benefit rather than for private profit. There was no room in this program, and we found that out, before its birth, at Muscle Shoals Dam. We found out that it could not be done except as a program of public benefit. We found it had to be done that way or it wouldn't be done at all. We found out that with this development of resources came this dream of bringing the resources to all people-all people-wherever they lived-whatever their state in life.

If you think this program wasn't important, visualize for me, if you will, and with me: What would this country be today if that movement of economic freedom had not been born 25 years ago?

I doubt very much if we would have won World War II. I doubt very much that, without the mighty gigantic generators of TVA and Bonneville, and yes, of Grand Lake—I doubt if we would have produced the sinews of war that enabled us to turn an almost disaster into a glorious victory. I doubt very much if the farmers of this land could have produced the food that it took to feed the world during that period.

I doubt very much that the young people, who today look forward to living on a farm and having the advantages that you created-I doubt very much that they would be interested in a farm at all.

I know people like me wouldn't be trying to get back on one. I'm not about to try to get an outside privy and a copper wash tub. You don't have to have them. I'm not going to do without my TV, and you don't have to. I doubt if we could have been sitting there in air-conditioned comfort in that dining room where we had lunch today if Uncle John hadn't walked the first mile, and got the first member for his co-op. I doubt that this country would have looked anything like it does today, if there had not been the greatest emancipation that man has ever seen since slaves were freed.

Yes, this movement-this birth, and this movement-that Uncle John contributed so much to, and through which I am thankful, I had a chance to know people like Uncle John, and with which I was privileged to work, has brought progress to rural America.

This movement has changed America. If America has a higher standard of living than any other country in the world today, it is directly traceable to this movement-and to no other. If you think other countries in the world have social unrest, which we please to call a feeling of nationalism, it is because they didn't have an Uncle John, and they didn't have that birth of economic freedom 25 years ago which has been, and is, known as the REA program and the hydroelectric development through Federal projects.

What manner of man was Uncle John? What was there about him that fitted him for this type of program? Was he a big fellow? No. Was he a dynamic person, who, by his very appearance, overwhelmed you? No. Was he a rich man? No. Was he a man who had been elected to high office and by this prestige had accomplished great things? As a matter of fact, to understand what Uncel John was you probably can look at no other individual than the Lord himself. Because Uncle John was filled with a white flame-something that no man can see but no man can help but feel. Faith, hope, and charity. "These," said the

Lord, "are the greatest virtues."

Uncle John had all three, sufficient not only for himself, but sufficient for all the people with whom he came in contact. He had faith in all men. He was human. He could get just as mad as any of us. But he had an undying faith that the things that were right would come true. And he hoped; he hoped eternally that people would recognize and appreciate those things that were right. And then, greatest of all: The charity in Uncle John's heart. The charity that man had was a love such as we talk about but never understand.

You know, if there is a religion on earth, it is the love of man for his neighbor. And who is your neighbor? All men are your neighbors.

There's a difference between love and like. You don't have to like a person to love him. But you can love him and you can give of yourself, and you can sacrifice some of those things that God has given to you. All these things Uncle John did. He understood faith, hope, and charity. And then, in addition to that, like Jesus Christ himself, Uncle John never thought of what had happened to him, or what would happen to him, in the work that he performed.

When I studied what I would say to you today at his memorial, I could think of nothing more appropriate than a verse of prose that I read somewhere. Where, I cannot remember. Who wrote it, no man knows. That verse said something like this:

"He never owned any property. His family was poor and of the lower class. He was never elected to public office, He never made

great successes. His own generation condemned him. And when he died they cast lots for his garments—the only things he owned. And yet, no man ever lived—and yet, no man who ever lived—affected the world as did that poor Nazarene, whom we call: 'Lord'.'

Now Uncle John must have had-he must have had-and all of you who knew him, I am sure, believe it with me that somehow he did have—that living spirit which we find only in the supernatural, only in the things that make a man go far beyond the last mile and so enshrines himself in the hearts of his friends, that he is immortalized in memories of all people everywhere.

If I were trying to dedicate a memorial to Uncle John, I could not but fail. His memory is dedicated in your hearts far beyond my poor power to add or detract. But I would rather ask that you try to find in your own life, in memory of this man, some of the greatness, some of that white, living flame that made him and this program true in his

day and in his hour.

The struggle is not over. The economic liberty won by the things you have done, by its very success, breeds and enhances constant efforts to bring man back into \$ different form of slavery. Any time man has conquered the natural drudgery and the things imposed upon him by nature, his success in that conquering has attracted other men who wish to exclusively enjoy it. You must not let that happen.

The white flame of Uncle John must live in you and be transferred on to your children in such a way that this economic liberty shall not perish from this land.

It is with that hope and that prayer that I dedicate this memorial.

Thank you very much.

# Arizona Watershed Program

EXTENSION OF REMARKS OF

# HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Tuesday, June 23, 1959

Mr. MURRAY. Mr. President, on June 17, 1959, it was my privilege, as chairman of the Committee on Interior and Insular Affairs, to arrange for a discussion of a notable contribution the State of Arizona is making to water conservation. Through the good offices of the distinguished chairman of the Committee on Appropriations, Hon. CARL HAYDEN, Mr. Joseph Arnold, director of the watershed management division of the Arizona State Land Department. presented a pictorial description of the Arizona watershed program. The presentation was made in the hearing chamber of the Interior and Insular Affairs Committee.

Mr. Arnold explained, and his slides showed, how the State of Arizona has combined all its facilities in a program to ascertain the best methods for getting full use of the rain and snow that falls in the State. The State departments of lands and of fish and game, the State university, the Federal Forest Service, the Bureau of Land Management, the Bureau of Indian Affairs, and a number of other Federal and State agencies and private organizations are cooperating in this study of watershed management.

Broad public support is provided by a brivate organization of distinguished titizens known as the Arizona Water Relources Committee.

This fine effort was brought to our ttention earlier in this session by Senaor HAYDEN's remarks which were pubshed in the RECORD of February 9, 1959. Shortly afterward, Senator HAYDEN proided each of the members of the Inerior and Insular Affairs and the Pub-C Works Committees with a copy of the rochure published by the Arizona Vater Resources Committee under the Itle of "Preliminary Economic Considrations of the Arizona Watershed Protram." Largely in response to this re-Nort, Senate Resolution 48 was amended In the recommendation of the Interior Committee to provide that reduction of vapotranspiration losses is to be condered by the Select Committee on Na-Monal Water Resources.

The background previously furnished by Senator Hayden increased the value of Mr. Arnold's presentation. In addition, by way of introduction, Senator Rayden briefly reviewed the purposes of the Arizona watershed program, and his informative remarks are set forth at the conclusion of my statement.

Mr. Arnold's presentation was heard by a number of Senators and by the staffs of the Interior, Public Works, Agriculture, and Appropriations Committees. Also present were representatives of several of the executive departments that are concerned with waterments that are concerned with watermed and other natural resources proframs. The national headquarters of various conservation organizations also were represented at the meeting. I have received a number of comments expressing interest in this Arizona profram and commending the very clear and interesting description that Mr. Arnold gave.

We are indebted, it seems to me, to the State of Arizona for pioneering this ane cooperative effort to make the most of our limited water resources. I thank the senior Senator from Arizona [Mr. HAYDEN] for making possible the presentation. I am confident this presentation contains many worthwhile suggestions that may be applicable to other states.

Mr. President, I ask unanimous conbent to have printed in the Appendix of the Record the statement made at the June 17 meeting by Senator HAYDEN.

There being no objection, the statement was ordered to be printed in the Econp. as follows:

THE ARIZONA WATERSHED PROGRAM

(Introduction by Hon. CARL HAYDEN)

A study of watershed conditions by noted scientists sponsored by the State land debartment. University of Arizona, and the Sait River Project Association initiated the Arizona watershed program in 1956. Reborts of these scientists were published in two volume documents, "Recovering Rain-lall."

To implement the most feasible recomhendations of the watershed study, a watershed management division was set up in the State land department, and a citizens group, known as the Arizona Water Resources Comlittee, was created in December 1956, to bring about public participation. Numbering approximately 60, committee and subcommittee members represent major economic interests of the State-municipal, industrial, and agricultural users; mining, timber, and livestock interests, hunting, fishing, and other recreational interests. With this broad representation, the committee comes with built-in democratic checks and balances-so important to serving the greatest good to the greatest number. Working closely with Federal, State, and municipal agencies, the committee and division encourages research and application of accepted practices leading to better managed watersheds.

Objective of the Arizona program is to recover a greater percentage of precipitation falling on the State's watersheds. The underlying principle of treatments now being tested on pilot watersheds is aimed at reducing evapotranspiration losses of water by converting worthless tree and shrub vegetation (which wastes water) to grasses and herbaceous plants (which are

more efficient users of water).

Anticipated benefits include: (1) Increased water yields for municipal, industrial, and agricultural needs; (2) accelerated growth and increased quality of timber; (3) reduced costs of controlling wildfires and reduced losses of timber products; (4) increased production of forage and browse for livestock and game; (5) improvement of fishing habitats; and (6) reduced erosion, particularly in plnyon-juniper and chaparral types—which are now reported to be the worst

contributors of silt.

The Arizona watershed program places particular emphasis on upstream phases of water management which have not kept pace with advances in downstream water management, as evidenced on the Salt and Verde Rivers by the dams, canals, irrigation ditches, the purification plant for the city of Phoenix, the network of stream gages, and the 10-year rehabilitation program of the Salt River project aimed at reducing seepage and evapo-transpiration losses by enclosing irri-

gation water in concrete conduits.

By contrast, we are only now getting started on a program of watershed management—a program aimed at recovering rainfall more efficiently in order to maintain adequate quantities of water behind the dams that supply downstream municipal, industrial, and agricultural needs. Closely allied to other water conservation efforts, sound watershed management will certainly be needed to make most efficient recovery of any increases in precipitation resulting from cloud seeding tests and in providing water for recharging underground aquifers, a new program just getting underway in Arizona.

Mr. Joseph Arnold, of the Arizona State Land Department will now discuss the Arizona watershed program.

Monetary and Fiscal Policy

EXTENSION OF REMARKS

OF

# Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two fine editorials, from Bakers Weekly, commenting on monetary and fiscal policy.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From Bakers Weekly, June 15, 1959]
THE PRESIDENT STATES HIS CASE FOR A SOUND ECONOMY

It was our privilege the other day, as a member of the Society of Business Magazine Editors, to attend a conference with President Eisenhower at the White House. He is, of course, laboring under a schedule that is even heavier than usual with manifold problems, of which the apparent deadlock between the Soviet and the West in the Geneva discussions and the struggle to get some constructive legislation out of Congress before the summer adournment, are two major examples.

On other occasions he has indicated his growing concern over the size of the national debt and the importance of narrowing the gap between Government receipts and expenditures. He has taken a position which, al-though firm, is in our opinion altogether realistic. There have been no optimistic predictions that this could be accomplished overnight through any magic action by either the adminstration or Congress. The President is, however, ready to throw the full weight of his personal prestige and the authority of his position behind a demand that Congress recognize the peril of the continuing inflationary pressures and make at least a start on a program aimed at bringing the budget into balance sometime within the foreseeable future.

To achieve that goal he will need solid support from a majority of the American public. If businessmen in general, and industry leaders in particular, can be persuaded to use their influence in their own communities, they can promote the broader understanding of the problem that is needed to encourage Congress to take remedial action.

With this in mind, the President took advantage of the visit of the business magazine editors to deliver a 15-minute extemporary discourse, in down-to-earth Eisenhower language, about his convictions on this subject.

We decided that the only way to present an adequate report of what the President had to say was to bring our readers the complete text of this discussion. It appears in this issue.

We feel sure that most of our readers will agree with the President's basic objectives. Even those who may disagree on one aspect or another will concede that he has reduced a complicated subject to its simplest terms and made a persuasive case for his position on this issue.

[From Bakers Weekly, June 15, 1959] BALANCING BUDGETS AND DIETS

At the annual convention of the American Medical Association in Atlantic City this past midweek, President Eisenhower had much to say that was of special interest to his doctor audience, but took advantage of the occasion to reiterate the message he had given the business magazine editors a few days before. At one point, he drew a parallel between eating and spending habits, with a plea for common sense. Here it is:

"The relationship between the balanced diet and the balanced budget is easily understood. Neither is an end in itself. There are some useless items of food all of us crave and often eat, no matter how unwisely, just as there are always products and services for which we, the Federal Government, thoughtlessly spend, often to our own detriment."

To which, once again, we can only say "Amen,"

# Retention of Passenger Train Service in the United States

EXTENSION OF REMARKS OF

# HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 23, 1959

Mr. NEUBERGER. Mr. President, because many Members of the Senate are vitally interested in the retention of railroad passenger service in the United States, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Roseburg (Oreg.) News-Review of June 17, 1959.

This editorial, written by Charles V. Stanton, editor of the Roseburg News-Review, draws the contrast between the progressive passenger policies of the Baltimore & Ohio Railroad and the defeatist program under which the Southern Pacific system is trying gradually to withdraw from passenger operations.

I commend the editorial by Mr. Stanton to all of those who desire to see the passenger train survive in this country and not fade into limbo.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEETING COMPETITION (By Charles V. Stanton)

The morning's mail frequently brings materials from railroad lines seeking to preserve and rebuild passenger travel.

The Baltimore & Ohio offers a typical

example. The B. & O. has improved equipment and service, provides better schedules, is using air-conditioned trains, self-propelled diesel cars, observation coaches, private sleeping accommodations, and, at the same time, has made a big cut in fares.

In other words, the B. & O. is competing

for patronage.

In direct contrast is the policy of the friendly Southern Pacific Co. which is drastically reducing its passenger service and, in my opinion, is seeking to discontinue passenger trains entirely as quickly as it can conveniently do so.

Criticism has been directed at me be-

cause I insist the friendly Southern Pacific should furnish passenger service. I was told, for example, that in this area we have a great deal of freight and that running passenger trains on a line where freight is being carried forces freight cars, producing reve nue, onto sidetracks to permit passage of

unprofitable passenger trains.

DIFFERENT SPIRIT NEEDED

Personally I can't see how passenger trains would provide much interference for the one and only freight train we get out of here each 24 hours.

The friendly Southern Pacific puts a great deal of emphasis on the fact that it loses money on its passenger trains; that they provide a totally unprofitable operation; that freight rates could be reduced if the railroad line didn't need money to sup-

port unused passenger trains.

Some of my critics have insisted that I am impractical and unfeeling to want the railroad company to perform an unprofitable

Anyone, I am sure, will agree that the friendly Southern Pacific can't make passenger trains pay so long as it tries to discourage use of the trains.

For example, I saw a letter in another newspaper not long ago from a railroad pas-senger who asked: "Why are the railroads setting up schedules which are next to impossible for the commuter and which any schoolboy could predict in advance would be

A friend of mine who lives in another city says he called up a certain railroad line to get a seat on a passenger train. He was told by the ticket agent, he says, that all accommodations were taken. But, hoping to get the train, he went to the depot on the lone chance that someone would cancel out. He found just six passengers on the train he had been told was sold out.

#### PASSENGER COMPETITION

Obviously it is true that railroads today have far more competition than in years past. Where the railroads once furnished the only method for long distance inland transportation, we have private automobiles, buses, and airplanes in direct competition. These methods of transportation have cut deeply into railroad passenger travel.

But how deeply would they cut had railroads attempted to give up-to-date service and schedules. Let's don't forget, too, that we have more people and more leisure time

and more travel.

If railroads had speedy, comfortable coaches, stewardess service, adequate schedules and connections, drive-yourself automobiles at reasonable rates at terminals, and other conveniences, would they attract enough passengers to permit profitable op-eration? Some railroad lines seem to think They're going after the business.

But the friendly Southern Pacific takes a defeatist attitude. It maintains a service that has had little improvement since the Spanish-American War, schedules that don't meet, upstairs ticket offices with propaganda and advertising for the airlines, and discouraging information to prospective passen-It is quite evident that it wants to kill off passenger trains rather than enter into the competitive field.

#### Nomination of Admiral Strauss

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Tuesday, June 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the Senate action taken last Thursday on the nomination of Adm. Lewis L. Strauss has not, as might be guessed, gone unnoticed by the press. Unfortunately, some editorial writers have chosen to wave a lazy finger and cry "politics." In few cases was there an effort to judge the vote for what it was: the attempt of individual Senators to weigh a very worthy tradition—almost unfailing Senate confirmation of Cabinet level officers-against the poor case made by one such nominee during 6 long months of testimony.

The news column by James Reston in the June 21 edition of the New York Times was a refreshing exception. In sensitive, thoughtful fashion, Mr. Reston describes the levels of the controversy which other observers have overlooked. I was also pleased to see the editorial which appeared in the Bergen Evening Record, Hackensack, N.J., on June 20.

Instead of angry words, the Record of fered calm appraisal.

The Christian Science Monitor's editorial of June 20 also provided some perspective on the issues involved in the Senate vote. Walter Lippmann's column from today's issue of the Washington Post is another significant analysis.

Mr. President, there can be no unanim ity of opinion on a question as contro versial as the one decided here last Friday, but I believe that the question is one worth very deep consideration by those who present facts or interpretations to the citizens of this Nation. For that reason, I am particularly pleased to offe these for the great interest they hold. I ask unanimous consent to have thes four articles printed in the Appendix of the RECORD.

There being no objection, the article were ordered to be printed in the RECORD as follows:

[From the New York Times, June 21, 1959] THE VETO POWER THAT CAN WORK BOTH WAY

(By James Reston)

Washington, June 20 .- All the reporters and instant analysts who tried to explain this week why the Senate refused to confirm Lewis L. Strauss as Secretary of Commercial had a rough time of it, and no wonder.

They were dealing, under the tyranny of a deadline, with the mystery of life, with the savage passions of Washington politics and the irreconcilable conflict of personal con-

science and personal ambition.

The great human stories of Washington are beyond the scope of daily journalism. Lewis Strauss, with his rigid concepts of personal and family conduct, his missionary zeal, his unyielding loyalties to the old Commonwealth of Virginia, to the President, to the Republican party and to his religious crusade against the Communists, is the proper subject, not of a newspaper column but of a psychological novel.

It is easy to explain President Eisenhower's sense of outrage at Admiral Strauss' defeat It is easy to explain the negative votes of men who fought and opposed the admiral in the great power struggles over the budget, power policy, internal security policy and nuclear testing policy.

What is more interesting and harder to define is the feeling of sensitive and moderate men, such as Senator MIKE MONEONEY of Oklahoma, who turned against him in the end, or Senator J. Fulbright who was so torn by his own divided feelings that he left the Senate chamber late Friday evening before the vote and spent a sleepless night at home.

PROPHETS AND HISTORIANS

Rather than probing into the maze of conflicting theories about the personal motives of the Secretary of Commerce and his opponents, it would probably be wiser to leave the admiral to the prophets and the historians.

Who is to say, even now, where the truth lies in the complicated lives of other Wash ing figures who have wielded great power and then vanished in glory or defeat?

John Foster Dulles was virtually canonized at the end. Dean Gooderham Acheson was vilified. Senator Walter George was re-warded for a lifetime of service by being rushed off the stage by HERMAN TALMADGS Another former chairman of the Foreign Relations Committee, Tom Connally, has joined the company of ghosts in Washington who cannot retain power and who cannot go home. The first Secretary of Defense, James Forrestal, took his own life, and so did Senator Bob La Follette after he was defeated by Joe McCarthy.

Politics in Washington is a kind of war. It has its own heroes and villains and scapeloats. It is played hard for large stakes and few who play it to the hilt escape the yranny of the counterattack. It has its basualties, like all wars, and Admiral Strauss has now been added to the list.

If he had fought it in another way, he night have avoided his spectacular defeat, but even when allowances are made on both ildes for all the personal feuds, the chances are that he would have lost.

#### THE DIVISION OF POWER

For this is not a normal situation in which he President can rely on the normal asumption that the Senate will confirm anybody he appoints. The Government of the Inited States is a divided Government. Three times in the last 6 years the electorate las given control of the legisature to the Democrats.

In this situation, each party has a veto over some actions of the other. Nevertheess, the President, with the full knowledge that many influential Democrats in the Sentle had no confidence in Admiral Strauss, brought him back from retirement, and taked for his confirmation.

This was done, moreover, while the President was exercising his veto over the legistature, and threatening to use it whenever he disagreed with the judgment of the Democratic majority. It was done, too, at the beginning of a fierce battle for Presidential succession, when the majority leader of the Senate, Lyndon Johnson, was being condemned by the Republicans for presiding over a "won't do" Congress.

Lewis Strauss was thus the victim of many factors. Johnson could have saved him in the end, but he chose to demonstrate that in a divided Government the veto power works both ways.

|From the Bergen Evening Record, June 20,

#### THE VERDICT ON MR. STRAUSS

The Senate's rejection of Lewis L. Strauss as Secretary of Commerce is the first such rejection of a Presidential Cabinet nomination since 1925. It is only the eighth in U.S. history. As to the 49-46 vote against confirmation, this is irrelevant.

Mr. Strauss was rejected on the basis of a number of facts and allegations, including his being an Old Guard Republican, Napoleonic in character, deceitful in congressional dealings. On the more involved questions—his private-power advocacy in the Dixon-Yates mess and his impelling the Security-risk exile of Dr. J. Robert Oppenheimer—he created stubborn hostilities and stubborn questions as to philosophy.

The denial of Mr. Eisenhower's nomination was almost entirely on the strength of the Senate's Democratic majority. Forty-seven of the 49 voting not to confirm are Democrats. This majority has not, as a unit, been disposed to oppose the President or to test his strength in this kind of public contest. There is little reason to believe the administration has been more than incidentally rebuffed. Mr. Strauss has been found wanting by a jury largely competent and not emi-nently unfair. If the question of his ad-ministrative ability has not been seriously disputed, the patterns of thought and attitude which accompany that ability have been raised to a point sufficiently serious to make the Senate action not indefensible in the trial by history for which Mr. Strauss has appealed.

[From the Christian Science Monitor, June 20, 1959]

#### STRAUSS REJECTED

Senate refusal to ratify the nomination of Lewis Strauss to be Secretary of Commerce looms large in terms of personal and political drama. But it is not likely to alter greatly the course of history. For few of its causes hinged on long-range national issues.

This rare rejection of a President's choice for a post in his Cabinet had its partisan aspects. No doubt many Democrats' welcomed an opportunity to rebuff Mr. Eisenhower. They have recently been frustrated both by his veto power and by gains in the economic situation which give support to his, rather than their, planning. The vote was largely along party lines.

Some votes may have gone against Admiral Strauss because of his secrecy policies while Chairman of the Atomic Energy Commission. Some doubtless for his position in the Oppenheimer and Dixon-Yates controversies. But these AEC actions hardly disqualified Mr. Strauss for the Commerce post. They probably were not decisive in causing the Senate to go so far as to deny the President the right to choose his own Cabinet.

There is reason to believe rather that the nomination falled because a number of Senators were convinced by Mr. Strauss himself that Congress could not depend on him to cooperate with it or to give it reliable information. Floor debate and the minority report of committee hearings indicate that his own explanations of his conduct defeated him.

Patriotic and reasonable Senators were lined up on both sides of this controversy. It is possible to be grateful for the able and devoted services of Admiral Strauss and still recognize good motives among his opponents.

[From the Washington Post, June 23, 1959]

# THE STRAUSS AFFAIR (By Walter Lippmann)

Admiral Strauss has suffered through a painful ordeal which need never and should never have happened. The whole wretched business arose from the fact that the President's political advisers at the White House failed to take account of the political situation in Congress.

Admiral Strauss's 5-year term as Chairman of the Atomic Energy Commission expired on June 30, 1958. As this date was approaching the question of reappointing him to another term was much debated in Washington—at the White House, in Congress, in the press. The most careful soundings were taken. The President did not reappoint Admiral Strauss, and the reason was well known at the time. The admiral had made so many enemies in Congress that it was doubtful whether he could be confirmed by the Senate. It was certain, moreover, that, if confirmed, he and the Atomic Energy Commission would be in continual trouble.

After June 30, 1958, the President assigned Admiral Strauss to various posts having to do with atomic energy, all of them posts which did not require confirmation by the Senate. But in the early autumn, following the resignation of Mr. Sinciair Weeks, the President appointed Admiral Strauss as Secretary of Commerce. The date of the appointment is significant. It was October 24, about a fortnight before the congressional elections in which the Democrats won a huge majority in the Senate.

There is no reason to think that the White House took the trouble to find out what the majority leadership, which was Democratic, would do about the appointment. This was a grave error. The White House was on notice since the affair of the chairmanship of the Atomic Energy Commission that Admiral Strauss was a highly controversial figure in Congress. With a congressional election pending, the White House should at the very least have held up the appointment to the Department of Commerce until after the elections were over.

For only then would it have been possible to obtain the "advice," as the Constitution says, of the Democratic leaders as to whether the majority would "consent" to the appointment.

The failure to take this elementary precaution, which was required both by commonsense and by courtesy, precipitated the horrid struggle which ended last week. Had the White House sought the advice of the Senate before making the controversial appointment, the President might well have received assurances that Admiral would be confirmed. Or if the White House had found again, as it had found a few months earlier in regard to his appointment as Chairman of the Atomic Energy Commission, that he would be fiercely attacked and perhaps defeated, the appointment should never have been made. As it has turned out. it would have been better for all concerned. including Admiral Strauss, if he had not been appointed.

What is the explanation of the failure of the White House to seek the advice of the Senate leaders before seeking their consent? The main explanation, I would guess, is that in October with a hot election campaign in progress, with Gov. Sherman Adams no longer at his post, the whole matter was fumbled. Later on, when opposition began to appear, the White House reassured itself wishfully with the thought that it is not right to oppose an appointment to the President's Cabinet.

This theory is a feeble one. It is true that the Senate has only eight times rejected a nomination for the Cablnet. But the Senate has very often—I do not know how often—been sharply divided about confirming a nominee for the Cablnet, and nothing was ever said before that the minority who voted against were somehow violating the spirit of the Constitution.

As a matter of fact, Roosevelt's nominee for Secretary of Commerce, Mr. Harry Hopkins, was opposed by Senator Vandenberg, and Roosevelt's nomination of Henry Wallace was bitterly opposed by Senator Taft. In both cases, the opposition voted against the nominee, not because he was accused and convicted of any wrongdoing, but because the opposition disagreed with his political philosophy.

philosophy.

That is the reason why Admiral Strauss was rejected. There were strong personal objections to him on the part of many. But the fight would never have been waged so persistently against him had it not been that there is between him and a majority in the Senate a deep ideological difference.

The other day, at his press conference on June 3, the President was drawn into making some remarks, quite unrelated to the Strauss affair, about the problems of a government, like the present one, which is divided between the two parties. Mr. Eisenhower said that he and Mr. Dulles had often talked about whether it would be better to have a parliamentary system in which the government stays in power only when it has the confidence of a majority of the legislature.

They had decided, he went on to say, "to stick with what we have." For my own part, I think they were right. For a parliamentary system, attractive as it is when it works well, would be difficult, perhaps impossible, to operate in a Federal union on a continental scale. But this does not mean that we should not under our system do what we can to see to it that the executive branch has the confidence of the legislative. This is most particularly necessary when the government is divided between the parties.

Thus, if the Eisenhower administration is to get along well, the President needs a Cabinet which can count on the support of a congressional majority. This would never have been true of Admiral Strauss.

#### The Development Loan Fund

EXTENSION OF REMARKS

# HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two editorials from the Christian Science Monitor and the Minneapolis Star and Tribune commenting on the action recently taken by the Senate Foreign Relations Committee to place the Development Loan Fund on a long-term basis. Each of these editorials demonstrates the need for Congress to take such action this year.

There being no objection, the editorials were ordered to be printed in the Recons, as follows:

[From the Christian Science Monitor, June 16, 1959]

#### RESCUE OF A WHIPPING BOY

We are pleased to see Senator Fulbright's 5-year, \$5 billion plan for foreign development loans get off to a good start. It will need all the momentum it can muster. At best its passage through Congress will be difficult. And at the end of the congressional gantlet stands the President, who twice recently has reluctantly disowned this legislation he himself did so much to generate.

To be sure, the bill has moved forward only slightly in being approved by an 11-to-4 vote of the Senate Foreign Relations Committee. But its sendoff by a strong bipartisan majority was impressive. The big test lies ahead in the House.

If the bill survives this ordeal, we hope Mr. Eisenhower will reconsider his opposition and not use his veto power. In 1957 the President called for a substantial 3-year program for the Development Loan Fund. In 1958 his administration asked for a 5-year, \$5 billion program; exactly what the Fulbright bill now seeks.

Mr. Eisenhower's reluctant about-face reportedly was caused by a triumph of the arguments of his Treasury Secretary over those of his State Department. While it is true that the bill would tap Treasury revenues by up to \$1 billion a year, this need not unbalance future budgets if other spending is kept down. Mr. Fulsmight's measure merely gives the loan fund a priority for being instrumental to national survival, thus rescuing it from its present exposed position as Congress budget season whipping boy. We feel the President should be glad to let some other less vital expenditures take a turn in that position.

[From the Minneapolis Star and Tribune, June 12, 1959]

#### A WAY TO CLOSE THE GAP

Many prominent Americans have called attention in recent weeks to the importance of narrowing instead of widening the gap between the have and have-not nations of the world.

Adlai Stevenson, Fugene Black of the World Bank, Representative Chester Bowles, and other leaders have emphasized the importance of solving the problem of poverty in the underdeveloped areas of the world.

As a result, there is more than the usual interest this year in the additional money being sought from Congress for the Development Loan Fund. This is an agency that

makes long-term, low-interest loans to spur economic growth and thus serves as a tool to improve living standards.

At the moment, the chances appear to be good that the Fund will get at least the \$700 million sought by the Eisenhower administration. Whether the authorization will be on a long-term basis or for only 1 year is another question, however.

The administration has taken a curious tack on the Development Loan Fund. Three years ago it wanted a 3-year authorization. Now it wants only a single year's approval. The President has admitted that he now is against the long-term authorization because it conflicts with his new fiscal policy.

So far this year the House has voted an \$800 million addition to the Loan Fund, while the Senate Foreign Relations Committee has recommended that the Fund be authorized to loan up to \$1 billion a year for a 5-year period.

It is doubtful, according to Chairman Ful-BRIGHT of the Senate Foreign Relations Committee, that the House will approve the Senate committee's recommendation even if the Senate does. But the fact that the House went beyond the administration's request in money and the Senate committee went beyond the administration's request for authorizing legislation seems to indicate that the Fund should not suffer in any compromise which will come out of Congress.

The Fund certainly can plan better if it knows that it is going to have a certain amount of resources over a given period of time. And it can provide more aid for underdeveloped countries—and thus help close the gap—if it has more money to loan. So we hope Congress will take the broad view on both counts in approving compromise legislation.

#### Where Do We Go From Here?

EXTENSION OF REMARKS

#### HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. FALLON. Mr. Speaker, under leave to extend my remarks, I wish to include the recent weekly newsletter by Senator John Marshall Butler, "Where Do We Go From Here?" I am doing this at the request of Mr. George D. O'Neill, with whom my friendship extends over a long period of time:

WHERE DO WE GO FROM HERE?

(A weekly newsletter by Senator John Mar-SHALL BUTLER)

Washington, June 15, 1959.—In the present state of world conditions, this question is frequently asked. It is, of course, difficult to answer. The solution will require the wisdom, forthrightness and vision of our national leaders and the unflinching support of our people. Courageous decisions will be meaningless unless all Americans are prepared to meet the challenge. The United States and its allies must not be timid in telling the Soviets that the free world will resist without hesitation all further Communist aggression in any area of the globe.

Former President Hoover phrased the challenge of these critical times in this manner only recently: "The time has come for a determined stand \* \* \* against creeping Communist conquest." In his view, a lack of firmness on the part of the Western World has accounted for many of today's problems and frustrations.

Under conditions of equality with respect to nuclear weapons, a total war would cause devastating damage to the United States as well as to the Soviet Union. The Russians realize this, and it is doubtful that they would do anything which would lead them down the road to destruction. So long as our military strength—our retaliatory and deterrent capabilities—are effectively maintained, general war is only a remote possibility. But, it can be expected that the Communists will continue to stir up affairs in as many places as they can at one time.

U.N. General Assembly President Malik tells us that communism now controls one-third of all mankind and that it has penetrated the remaining two-thirds to a varying degree. Within our own borders, according to FBI Director J. Edgar Hoover, American Communists have started a new drive to infiltrate some of our basic industries. The prime objectives of the Kremlin to communize the entire world and to destroy the values of freedom are obviously unchanged.

And so, wisdom, forthrightness and vision are needed domestically as well as internationally. If the United States and the Western World fall, all is lost. Our allies must substitute deeds for words—they must stick with us in resisting the Communist onslaught. If foreign aid is to be a permanent instrument for the conduct of international diplomacy, these funds should be dispensed to those countries who unhestitatingly and vigorously stand with us.

In this vital effort, all Americans can help by exposing the menace which would consume us for what it really is, and by awakening those who feel that it is no longer necessary to defend, with courage and conviction, freedom and liberty.

#### The Connecticut Jewish Ledger

EXTENSION OF REMARKS

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. DADDARIO. Mr. Speaker, the Connecticut Jewish Ledger was founded in 1929 as the Springfield, Mass., Jewish Ledger, covering western Massachusetts and the Greater Hartford area. Despite hardships of the depression years, it expanded to Bridgeport and New Haven.

The Ledger survived the flood of 1936 in Hartford, when it was printed in Holyoke, Mass. The final trip of papers was made in rowboats to the offices on State Street in Hartford. During the 1938 hurricane, the paper was published by candlelight.

With the rise of nazism, the Ledger assumed new importance, filling a vital need to inform Connecticut Jewry of the new dangers and problems abroad. Wartime presented the problems of a big drop in advertising and a shortage of newsprint. But the Hartford Jewish Ledger overcame this hurdle, too.

Publisher Samuel Neusner, who founded the paper, suffered a heart attack in October 1945 but remained active. He is now inactive due to illness. He used the Ledger as an instrument of Zionism in the fight for an independent Jewish

state in Palestine. He obtained support from newspapers in the Connecticut Valley in this battle.

In the first issue of the Ledger, Mr. Neusner said it was founded to give Conhecticut Jewry local means of recording its life and voicing its need, and to make known the interests and institutions of the Jewish communities in the region. The paper also was designed to mirror the movements in Jewry, the religion, the thought, the literature of the Jewish people, Palestine and its romance, the Diaspora and its needs.

Today, as a recipient of the first award of excellence of the American Association of Anglo-Jewish newspapers—now the American Jewish Press Association—the Ledger, as one of the English-language Jewish weekly papers in Connecticut, strives to cover local, State, national, and international events of interest to citizens of the Jewish faith in Connecticut.

While certainly not the spokesman for Connecticut Jewry, the Ledger often is the voice of its aspirations.

The editorials of Rabbi Abraham J. Feldman, editor since the paper's founding, have been widely acclaimed.

The present managing editor is Berthold Gaster.

#### Red Menace in the Americas

EXTENSION OF REMARKS

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. FLOOD. Mr. Speaker, the rising wave of communism in the Americas was described in an editorial in the June 5, 1959, issue of the Star and Herald, of Panama, Republic of Panama, the well-known and well-posted Isthmian newsbaper. The editorial follows:

#### RED MENACE IN THE AMERICAS

Political unrest appears to have broken out in more than one of our Latin American hations. It is reportedly, and we might also say factually, growing under the support, factual or strongly suspected, of Communist influences in many of our free American hations, possibly in all.

There are few nations around the world that do not have their Communst parties. Perhaps the Red aim is currently the sabolage of our Americas.

Russia is spending millions in all of our free Americas. She has taken a critical time for this drive. She is using craftily trained agents, well-educated men, yes, and women too, all well supplied with cash to be used in areas which are feeling the economic aqueeze in soaring food costs, unemployment, kindred tile.

Our lead story Thursday, reporting rioting in Guayaquil, Ecuador, notes that martial law has been enforced. Civilians are reportedly fighting the police, with the list of dead set at over 20, and casualities surpassing the hundred mark.

Ecuador's president is reported as blaming the Reds. Our Guayaquil dispatch yesterday from the Associated Press reported nightlong rioting as civilians battled in the streets with army forces. Tanks and armored cars were patrolling the streets.

These are not isolated fires. They are part of a godless movement on the part of Soviet Russia to communize the world. The Kremlin is out to dominate the free world and doesn't give a hoot for the human suffering which must result.

It is time for our free world as we know it to get wise to the situation. Communism is a menace to our free way of life. The Reds grow daily more belligerent. It is time for us of the free world nations to stand up and be counted. Time is truly running out.

#### National Honors for Liberty Tree Project

EXTENSION OF REMARKS

# HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. HARRISON. Mr. Speaker, on May 5, you took time from your heavy schedule of official duties to receive a liberty tree from the Junior Chamber of Commerce of Strasburg, Va. Similar pine seedlings were presented as patriotic reminders to the other Members of this House, many of whom acknowledged them in letters to the Strasburg Jaycees praising the undertaking.

These little trees, planted in soil from Valley Forge, Bunker Hill, the Alamo, Jamestown, Yorktown, and Virginia's historic Shenandoah Valley, also were left at the White House for the President, and at the offices of other high officials of the executive branch, and were presented to the Members of the other body.

Because of the generous encouragement the Strasburg Jaycees received during their distribution of liberty trees at the Capitol, I believe the House will share my pleasure at learning that this project won top honors at the Jaycees national convention, held last week in Buffalo, N.Y.

Under leave to extend my remarks in the Appendix, Mr. Speaker, I include the pertinent portion of a press release announcing this national recognition of a patriotic effort planned and carried out by the energetic and public-spirited young men who compose the Strasburg Jaycees:

#### U.S. JAYCEE CONVENTION

As the U.S. Jaycee convention came to a dramatic close Friday, June 19, after a whirlwind week in Buffalo, N.Y., delegates were still shaking their heads in amazement at the sweep of national project awards by one of the smallest chapters in the Nation. Strasburg, Va., with 30 active and 12 associate members, halling from the Shenandoah Valley of Virginia, walked off with 4 first place awards, including a national sweepstakes winner in "Public Affairs" and the coveted "Grand Project of the Year" given annually for the most outstanding Jaycee project conducted in the United States.

Jaycee observers were hard pressed to recall when a chapter had made a similar sweep, and all agreed it had never been done by such a small chapter. Having taken its population division first place award in two

different fields, tiny Strasburg went into the national sweepstakes in the "Public Affairs" category against first place winners from four other communities and took the national. Then in the judging in the all inclusive "Project of the Year" finals which pitted together five first place winners who had themselves been selected from thousands of projects Strasburg captured the No. 1 project award in the Nation.

The top award winner is a program called Liberty Trees, and Jack March, project chairman, who was on hand to receive the awards for the chapter, explained that Liberty Trees were small white pine seedlings planted in red, white, and blue pots, containing soil from historic spots; the Shenandoah Valley, Jamestown, Yorktown, Bunker Hill, Valley Forge, and the Alamo.

It is designed, the chairman added, as a countermeasure to the Communist celebration of May Day and is a program to "Encourage Americans To Learn About America." Besides being sold locally, where proceeds went into a scholarship fund, every Senator and Congressman was presented with a Liberty Tree as well as other high officials including President Eisenhower, Secretary Herter, FBI Director Hoover, and Governor Almond of Virginia,

#### Democrats Versus Democrats

EXTENSION OF REMARKS

#### HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. RAY. Mr. Speaker, the following editorial clipped from today's June 23 issue of the New York Daily News is interesting as an analysis of some political thinking and planning in the Congress. I submit it without comment.

DEMOCRATS VERSUS DEMOCRATS

The Democratic leadership in Congress is coming in for some interesting attacks from a number of its friends.

Two left-slanted outfits—Americans for Democratic Action, and the National Committee for an Effective Congress—are putting the curse on Senator Lyndon B. Johnson, Democrat of Texas, and his congressional pals for surrendering to the Republicans.

Especially, say ADA and NCEC, have these lawmakers knuckled under to the GOP on the Government spending issue (which NCEC calls irrelevant), whereas Johnson & Co. ought to battle for the old New-Fair Deal policy of flinging the billions to the breezes.

We believe another Democrat—Senator Harry F. Byrd of Virginia—is much more in tune with current public opinion when he says our colossal national debt plays right into Khrushchev's hands.

BYRD'S contention is backed up indirectly by Senator Homer Capellar, Republican of Indiana, who says our next war will have to be financed on a pay-as-you-go basis, "because we simply could not afford any greater national debt."

If you ask us, Johnson & Co. are merely being smart politicians in trying to grab the "party of economy" label from the Republicans and ignoring the ADA and NCEC. These groups apparently cannot see the public-opinion pendulum swinging away from spend-and-spend and toward save-

Welfare in a World Perspective: A New Look at Race Relations

> EXTENSION OF REMARKS OF

# HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. BOLLING. Mr. Speaker, the speech which follows is one of the finest speeches I have ever seen. No doubt it will annoy many people because it does not oversimplify the terribly difficult problem of race relations. But the thoughts it contains and the approach it takes deserve the prayerful consideration of every man of good will in the United States. In my opinion through this speech our able colleague from Connecticut, the Honorable CHESTER BOWLES. has performed still another great service to the Nation.

WELFARE IN A WORLD PERSPECTIVE: A NEW LOOK AT RACE RELATIONS

(Remarks by the Honorable CHESTER BOWLES at the Annual Health, Welfare, and Rec-reation Conference of the Health and Welfare Council, Hotel Statler, Washington, D.C., Friday, May 22, 1959)

Mr. Morgan, Mr. Tribble, Mr. Aiello, delegates to the annual Health, Welfare, and Recreation Conference, no invitation I have had since I returned to Washington in January has been more welcome or challenging than this opportunity to speak to you today.

Those of us who temporarily occupy one position or another in public life-particularly those of us who call ourselves legislators-often come to think in legal, statistical, overgeneralized terms.

It is refreshing to be once more in the midst of people representing nearly 200 agencies who are spending their time and talents day after day in helping to solve the practical problems of the 2 million people who live in our National Capital area.

With considerable hesitation, I have decided to take this occasion to discuss our most critical and embittering social problem-race relations.

This week is a particularly good time to take stock. Five years ago last Sunday our Supreme Court ruled that color alone could no longer bar any child from a public school.

It was a momentous occasion and we all felt it. Those who had long favored desegregation thought the struggle had been won. And most of those who opposed it assumed that the only question left unanswered was the timing and the technique. The fact itself was accepted by the vast majority of Americans-north, east, south, and west.

Since then, more than one-fourth of the biracial school districts in the 17 southern and border States which officially practiced school segregation have been nominally desegregated, usually in a quiet and healthy manner which has escaped the headlines. In this connection the record of the District of Columbia, which so many of you helped to write, has been historic.

But these 5 years also have been scarred with smoldering resentments, defiance of court orders, and outbreaks of violence.

These expressions of racial conflict have not been limited to our Southern States. Nor are they symbolized merely by a deserted school in Little Rock.

On the contrary, the attempted bombing of an integrated high school in Hobbs, N. Mex., a white mob stoning a Negro home in Levitttown, Pa., an outburst of racial gang war in Chicago-these are signs to give pause to all the participants in America's racial conflict.

In 1954 the Nation as a whole underestimated the significance and meaning of the Supreme Court's decision. Since then we have tragically missed opportunities for constructive action.

After several years of optimism and com-placency it is now clear that integration is a bigger, more stubborn, more universal, and more important problem than many of us imagined. We know now that racial differences and discrimination go deeper than Su-preme Court decisions, not to mention paratroopers, can reach.

All of us, North and South, Negro and white, need to think anew.

Where and how do we go from here?

For we must go on in fulfilling the promises of the Constitution and of our national conscience. We can pause for reappraisal, but we cannot stop or go back.

The problem is full of agony and, as in most great issues, no one side has a monopoly of truth. Each has its points which must be considered with both humility and tolerance. All of us need to be awakened from our dogmatism and from our cliches.

My remarks today will undoubtedly dis-appoint those who have taken extreme positions in this controversy. Yet my approach inevitably reflects my personal experienceas a longtime friend of the South, as a former Governor of a northern industrial State, as a former Administrator of a large Federal agency in the turmoil of wartime Washington, and as U.S. Ambassador to India, where I saw our difficulties as the dark-skinned two-thirds of the world see

I offer my views not as solutions, but as guidelines to the kind of national discussion which I think is long overdue.

1. We must recognize the problem of discrimination as a national, not a sectional

Half of all American Negroes now live in the North. There is now no northern city without its tensions and its shame.

Yet many northerners still smugly look at racial discrimination as a sectional problem. Thus they condemn what they consider to be the slow place of integration in the South. while remaining indifferent or nearly so to the discrimination all around them.

There are 39 States outside the South. Only 19 have established Fair Employment Practices Commissions. In the other non-Southern States, there has been no legislative action on employment discrimination at all.

Since 1949, when we in Connecticut first authorized our State Commission on Civil Rights to prevent discrimination in publicly owned housing, there has been some progress elsewhere. Yet today only nine States outside the South have adopted antidiscrimination legislation affecting publicly assisted housing. In 30 other non-Southern States, no official action to end housing discrimination has occurred.

The great northern and western industrial cities are all drawing Negroes out of the South, and are all faced with the demoralization of city slum life that goes beyond race.

There are five times as many Negroes in Chicago as in Birmingham, four times as many in Detroit as in New Orleans, six times as many in Los Angeles as in Miami.

In most northern cities the professed equal protection of the laws still hides extensive segregation in fact—by residential exclusion, and by the natural selection of poverty. In view of our major northern cities do more than 20 percent of the Negro students attend school with white children.

To be sure, some cities such as New Haven. Pittsburgh, and Washington are now taking far-reaching steps to rebuild themselves, including the slum clearance and human rehabilitation essential to the solution of racial

Yet almost any northern community that honestly examines its own racial relations will realize how far it is from living up to its professed ideals. And once we see what is missing in our own cities and States, we will be less inclined to feel that it is enough to denounce the foolhardy actions of white extremists south of the Mason-Dixon line.

Nothing too will speak more persuasively to the South than a better example among the too-ready critics farther North.

2. The Constitution as interpreted by the Supreme Court will ultimately prevail.

The Constitution, after all, is color-blind-The 14th amendment does require the end of racial discrimination in all parts of our public life. The universal declaration of human rights, endorsed overwhelmingly by the people of the world, affirms this as one of the first principles of world order.

Moreover, our Constitution will be enforced. The Supreme Court has ordered desegregation with all deliberate speed.

Negro litigants will see that this is com

plied with—and the new Negro arising in the South and elsewhere, will supply all the litigants necessary, no matter what pressures are organized to stop him.

There can be no question but that in parts of the South, school desegregation will continue for some time to be massive ly resisted. The courts, the Department of Justice, and the President have no choice but to enforce the Constitution, gradually. case by case, step by step.

The courts and the country obviously will accept very gradual steps in good faith compliance. But regardless of what party is in power, the observance of the law ultimately will prevail.

The great hope, however, is not for a reluctant and grudging acceptance of the in-Rather, the hope evitable force of the law. is that recognition of historical necessity will encourage an increasing effort to bring the various elements in each community

into harmony.

3. We must supplement litigation with persuasion.

Of course the law itself is a powerful teacher. The end of segregation in the Armed Forces, in the Nation's Capital, and on interstate trains did more to convince many skeptics that integration in these areas made sense than any amount of talk could have done.

There appears to be a temptation, how ever, to rest on the oars of lawyers and judges and say that this is all now a matter of law and order.

The President seemed to say precisely this when he stressed that he has told no onenot even his wife, whether he thinks the Supreme Court desegregation decision was right or wrong.

But Court orders alone will not suffice to change the minds and hearts of people Somehow those who seek to end racial prejudice must go deeper than statutes and Court decisions.

If this were merely a legal issue between those who believe in upholding the law and those who seek to circumvent it, then there would have been no issue until the Supreme Court acted in 1954. But this turns the problem upside down.

The Court acted because the constitut tional guarantee of equality involves the deepest political principles of this Nation and because there was a moral issue pre-sented which went to the heart of our Bill of Rights and our Christian civiliza-

The law does not get its sanction merely because it is the law. It wins support because it embodies the moral purpose of so-

The task of our political leaders, and of all who want to establish equal rights is not only that of invoking and carrying out court decisions but also of convincing people that they are right.

That is why the proposal for an independ-th Federal agency like the "Community Relations Service" advocated by the Senate majority leader, Senator Lynpon Johnson, could be so important. Conciliation, provided it is consistent with the guarantees of the Constitution, is precisely what is needed to

help the law.

As Senator Johnson himself has said: Controversies involving civil rights have eached a point where they can be paralyzing b whole communities. But they are contoversies which can be settled if the yawning chasm between people can be bridged
to the channels of communication among our people."

4. The new generation, white and Negro, must rise above the deep-seated prejudices

of their elders.

The spectacle of Negro children in Little Bock, Clinton, Sturgis, Nashville, and the Integrating cities of North Carolina walking Quietly to and from school through jeering angry mobs shocked most Americans, as it did people around the world.

When one remembers the fears of childhood—of changing to a new school, even when everyone is friendly and of the same race-one can imagine how these lonely Ne-Sto children felt in the midst of unfriendly

White crowds.

Yet is not the old prophecy coming alive Are not the children leading us now? In almost every city and town in the South where school integration has begun, the children are making out all right together. "If the grownups would just leave us alone, there would be no trouble," said a white student in Little Rock.

5. White and Negro moderates both have

an historic role to play.

Many white southerners are still content to say that the problem will take a long time to solve and that the Negro must be patient. No thoughtful man expects a quick solution. But we cannot afford to forget that a lot of time has already passed.

It is now 96 years since emancipation, 183 Years since a southerner wrote the declara-

tion to which this Nation is dedicated.

That all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that to secure these rights governments are instituted among men—these are not just the words of Thomas defferson. They are the political creed of this country. Yet the historic timetable for establishment. tablishing these equal rights for all Americans has been gradual indeed.

The white southerner nevertheless has a case he can and should make. Generations of slavery, second-class Negro citizenship, inferior schools, houses and jobs are now blaguing us in the form of high rates of discase and crime and a low level of education in areas where Negroes predominate.

To be sure, such demoralization is also the state of much of the rural poor whites of the South and Puerto Ricans brought up

and trapped in our congested urban slums. But the Negro has been an outcast longest, has suffered most, and is now the most exreme example of a problem facing the whole

country.

This argument is indeed a good reason than simply integrate the for doing more than simply integrate the schools. It underscores the need for getting at the very conditions which produce the

demoralization in the first place.

The demoralization of the Negro does endanger southern white society, just as the demoralization of any members of a community endangers that community.

Take a county where a depressed Negro population outnumbers the white two or three or four to one. If that Negro com-munity is ill housed, ill fed, ill clad, if it is sick, ignorant, and angry, can a relatively well-off white minority be "safe" in any meaningful sense of the word?

Or take a big southern city. If half of the town is a Negro slum, breeding uneducated bitterness, juvenile crime and racial violence, what kind of community will this be for the white people who pretend to want to live there?

The new South that is now taking shape has no room for low and inhuman standards

of life for anyone.

Instead of using demoralization as an excuse for doing nothing about integration, it should cause the southern moderate to insist that a vast amount more must be done in a number of fields.

We need a far-reaching program to end the demoralization of much of the Negro community and of the poor whites as well. By championing slum clearance and measures for adequate housing and public health, the white South might then be in a position to ask the Negroes, the courts, and the rest of the country to accept a realistic pace for school integration—perhaps beginning only in the first grade and at the college and university level, with a voluntary transfer system with even segregation by sex in some areas where coeducation adds to the fears about integration.

But by holding back, southern moderates leave the field not only to the white demagogues but to future Negro demagogues.

So far Negro leadership has been on the whole remarkably intelligent and restrained and the Negro people have accepted its counsel. They have steadily offered the hand of friendship and compromise for acceptance by at least some substantial part of the white South.

A new Negro is standing up in the South and elsewhere. His expectations may not all be met. But some good and true men of the white South must meet him face to face, must sit down at roundtable conference, must talk with him and understand

Without such a minimum response, it is too much to expect that the majority of Negroes will forever stand by the moderate ministers of the Gospel and the well-trained lawyers who now speak for them.

6. I believe that the Christian Church must take the initiative in advancing a

racial reconciliation.

Let's face it: In many churches in America, a minister who goes against the prevailing sentiment of his congregation risks his job as much as the politican who alienates his constituents.

But from the beginning of the Christian era, it has been the church's duty to prevail against erroneous opinions, even at the price of martyrdom. Surely the church today should be the last citadel against the public relations approach that his infected so much of American life.

Many bishops and ministers in the South have spoken against violence and in favor of law and order. But is this enough?

There will be violence, and the law will be frustrated, unless the two sides in the racial conflict now splitting every southern community begin to communicate again with each other, to negotiate, to reason together, to find common remedies.

Is this not the time for the white and Negro ministers of every southern community to form a continuing roundtable conference dedicated to finding Christian solutions to the racial problems of their community?

For, after all, no country should be in a better position than the United States of America to solve this problem this way. Not only do we have nearly two centuries of democratic experience behind us, but the

racial groups in this country, particularly in the South, have the great good fortune and blessing to share the identical Christian faith.

It is no coincidence that it was a white minister in the South, perhaps the most fervently religious section of our country, who said of the integration crisis: "There's just one question to ask: what would Christ

In our hearts we know the final answer. We know that Christ came to demonstrate the fatherhood of God and the brotherhood of man. We know we are our brother's keeper.

We know too that we have done those things which we ought not to have done and left undone those things we ought to have

We know that the pride of race, the fear of the strange and the different is one of man's original sins and that it has not been fully erased from man's mind anywhere.

But we also know, as Lincoln said, that the Declaration of Independence "gave liberty not alone to the people of this country, but hope to all the world. It gave promise that in due time the weights would be lifted. from the shoulders of all men, and that all should have an equal chance."

Our religious and democratic faith tells us to get on with this job like men.

7. Our capacity to deal with discrimination in America is a measure of our capacity to lead a worldwide revolution for freedom.

My own perspective on this problem has been, I confess, affected by looking at it for some time from the other side of the globe. As a former Ambassador to India, I know how spectacularly American prestige rose as a result of the Supreme Court desegregation decision.

While touring Africa 4 years ago I sensed against how vital a successful solution of our racial troubles is for our future relationship with the two-thirds of the world's

people who are colored.

In the winter of 1957 in South Asia I saw the enthusiasm generated by the successful conclusion of the Negroes' bus boycott in Montgomery, Ala. Later in the Soviet Union I saw the Communists take full propaganda advantage of the bombing of Negro churches in the same State.

Of course we can say that prejudice is as old as the hills and just as persistent. India, for instance, has known conflict and caste through centuries of struggle between Hindus and Moslems, Brahmins and untouchables.

In Algeria there is open warfare between the French minority and the Arab majority. In all of Africa the out-numbered white man feels the stirring of the slumbering African masses,

Therefore as we Americans concentrate on a new effort on our own major social problem, we can take mild comfort from the awareness that our country does not stand alone in isolation as an immoral historic throwback to a bygone age of prejudice.

Having said this, I hasten to add what is merely the other side of this coin. The world community has a vested interest in the speed and effectiveness with which we end discrimination in the United States. Our own role in the world depends increasingly upon the same proposition.

As is true in so many other aspects of our national policy today, the world situation is requiring us to do the things which we should do anyway. No one but a cynic would argue that we should suddenly become interested in equal rights for Negroes merely because our propaganda position in the world would be helped by such progress.

Nevertheless, it remains more true today than it was in 1947, when one of our distinguished former Secretaries of State, Henry L. Stimson wrote:

"No private program and no public policy, in any section of our national life can now escape from the compelling fact that if it is not framed with reference to the world, it is framed with perfect futility."

In closing, I should like to suggest that all of us, northerners and southerners, easterners and westerners, Negroes and whites can learn much from a study of that incredible man, Mahatma Gandhi,

There were always two sides to Ghandi's program. One was direct resistance to unjust laws or practices. The other was constructive popular action to create the conditions of justice.

He begun his career before the turn of the 20th century in the Union of South Africa where he went as a lawyer for some Indian

traders.

In 1893, South Africa was a land run by some million Europeans who sat on top of some 5 million Africans who had almost no rights at all. In addition, were 100,000 Indians, most of whom had been recruited as cheap labor for the white plantations and

Soon after he reached Pretoria, the young man of 24 invited all the Indians in the city to a meeting. He urged them to fight racial discrimination but without hating or hurting their opponents.

And since their aim was to reason with the whites, the first thing they should do, he said, was to consider the reasons given by the whites for their discrimination

In the Indian merchants before him. known for slick dealings and sharp bargainings, he proposed complete truthfulness and more concern for the poor. He called on all Indians to do something to improve the unsanitary conditions in the Indian sections

Why wait for legal victories for the necessary drain cleaning? he asked.

We can't blame the whites for all our troubles, he argued. Perhaps we can't by ourselves end all the poverty in which our people are trapped, but if those of us with some money and some education will join in, the slums can be cleaned up, freshened with a coat of paint and made habitable; the illiterate adults can be taught to read; volunteer schools can be provided for the children of the poor.

And he began to build the institutions to do these constructive tasks.

In 1913 he returned to India, after negotlating a settlement with Prime Minister Smuts who once jailed him but later came to say to him, "I am not worthy to stand in the shoes of so great a man." And for over 30 years in India, Ghandi pressed his constructive program of village improvement, the end of untouchability, and the reform of individual lives.

The bus boycott in Montgomery carried out with dignity and restraint represented an adaptation of Ghandhian principles in democratic America.

"We are seeking to improve not the Negro of Montgomery but the whole of Montgom-ery," said Rev. Martin Luther King on the occasion of the formation of the Montgomery Improvement Association which conducted the boycott.

Instead of merely sitting by until the Supreme Court ruled bus segregation unconstitutional, the Negroes of Montgomery in amazing unity carried out a courageous, peaceful, direct action which took the Nation by surprise.

The long-term effects of this Ghandiantype action on the white conscience may take time to register. But it had an immediate effect in changing the Negroes.

Perhaps the change is best reflected in the story of the old Negro woman who, when asked if her feet were not tired from plodding so many miles each day to work replied. "Brother, for a long time my feet have rested, but my soul's been tired. Now my feet are tired, but my soul is resting."

In this light, with good cheer, let us move ahead with all deliberate speed.

#### Father of a Deceased Veteran Speaks Out

EXTENSION OF REMARKS OF

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following letter from Mr. M. E. Powell, Sr., of Folkston, Ga., in which he expresses his feelings and views regarding the shooting down by the Communists of U.S. planes while on peaceful missions. Mr. Powell lost his son in 1956 on a flight over the China Sea when his plane was shot down by Communist fire:

FOLKSTON, GA., June 18, 1959. Hon. Daniel J. Flood, Representative from Pennsylvania,

Washington, D.C.

DEAR SIR: I hope you will pardon me for taking the liberty of writing you, as I realize you are a most busy man, and no doubt have plenty of correspondence from the constituents of your home State. But after reading the attached newspaper clipping, I wish to advise that I am wholly in accord with your statement.

On August 23, 1956, an idential type plane, operating from the same home base, Iwaukini, Japan, was shot down over the China They were not as lucky as this last one was, my son and 15 others fine young men went to a watery grave.

I wonder, and I suppose the other mothers, fathers, wives, sisters, and brothers of those sixteen men wonder also; were their loved ones also out there as sitting ducks for a trigger happy Communist to murder at his

Congressman Flood, as I stated above, I only wrote this letter to let you know that I, as well as thousands and thousands of other Americans, feel as you do about this unnecessary murder of our young men by Communists.

But why in heaven's name can't those in authority in the military see that these young men are dear to their loved ones, whether they be just enlisted men or admirals, and give them something to fight back with?

Any person in the present (shrinking) free world today, with just common sense, knows Communists cannot be trusted no where, no place, or no time. It doesn't matter whether his name be Mr. K. Mr. M. Mr. G. or what have you, the only thing you can say they have been honest about is their avowed intention of ruling the world anyway they can get there, other than that the words agreement, honor, and integrity mean nothing to these boys. They only recognize force with respect, why can't we at least show them a little of that with a promise of plenty more if necessary.

Thanking you for taking the time to read this, I am,

Most respectfully yours,

M. E. POWELL, Sr.

In Memoriam of John Foster Dulles

EXTENSION OF REMARKS

#### HON, ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BOSCH. Mr. Speaker, as further tribute to the life and work of our late Secretary of State, the Hop orable John Foster Dulles, and under leave to extend my remarks, I include memorium written by Heinrich von Brentano, Foreign Minister of the Fed eral Republic of Germany, which ap peared in the June 1959 issue of the German News:

IN MEMORIAM OF JOHN FOSTER DULLES (By Heinrich von Brentano, Foreign Min' ister of the Federal Republic)

The news of the passing of the forme U.S. Secretary of State and personal advise to the President, John Foster Dulles, has caused profound and genuine sorrow to millions of people throughout the world. Both his friends and his opponents will agree that a person of outstanding importance has departed from the stage of world politics. name will be linked forever with the event

ful and tragic history of our age.

While conducting his country's foreign policy, John Foster Dulles developed a style all his own. A profusion of tasks and an uncommon measure of responsibility were thrust upon him. Supported by the unqualified confidence of the U.S. President to whom he was linked in mutual sympaths and friendship, he created for himself and exceptionally strong position in the political

life of our time.

The experience he had gathered in a splen did career as attorney at law enabled him to be one of the most brilliant negotiator and mediators in his time. Filled with profound and unshakable belief in the justice of his cause as protagonist of the free world he met this man who was cool and yet fer vent, strict and yet kind, unyielding and yet understanding, earnest and yet serens was left untouched by the magnetism of his personality. personality. For John Foster Dulles no antagonism existed between politics and ethics; it was that quality which was appreciated by his friends, respected by his of ponents and feared by his enemies.

Like all great ideas, the conception accord ing to which John Foster Dulles conducted American foreign policy during the difficulty years of his tenure of office, was basically clear consistent, and clear, consistent, and convincing. In look ing back upon the lifework of this man, even those will recognize this quality who falled to understand the Secretary of State in the confusing ups and downs of daily events and reproached him with lack of ideas, with

rigidity or opportunist tactics.

When taking up his office, John Foster Dulles was at once faced with that tragic and dangerous antagonism between the Essi and the West from which all mankind suffering. Those who reproach him with having frequently emphasized and relentlessly defined that antagonism rather that bridging it over fall to make the bridging it over, fail to realize the historic significance and the ideological basis of the struggle between the free West and the totalitarian resolution talitarian, revolutionary system of bolsher

Not every question of foreign policy lead to a satisfactory answer at once, much a responsible statesmen may labor to find solution. John Foster Dulles always deal solerly and specific forms. soberly and sincerely with the political factors determining contemporary internations

relations. His instinct for what was possible, enhanced by experience, prevented him from engaging in wishful thinking such as some his critics substituted for actual facts. and yet this perspicacious statesman, this traly sympathetic man, was not without hope or confidence in the future.

In spite of all his disappointments he never Pacillated in his conviction that a worldwide easing of political tension could be accom-Pushed in peace. He knew, on the other hand, that it could only be achieved by the rediness of the free West to defend its inalienable rights with firmness. He never had any illusions about the hardship involved in such a course. But he was not prepared to surrender to difficulties; he was a statesman regalved to overcome them.

The death of John Foster Dulles has bereft the German people on either side of the line that tragically separates them, of one of their most faithful and genuine friends. leaded the legitimate interests of the German people with all his passion for justice. He regarded it as one of his chief tasks to restore to Germany the right of self-determihation. He was aware that the unnatural division of the German people was both a reflection and a consequence of world tension, which he was anxious to end in order to restore and secure world peace. This in-aight and this aspiration were the basis of his close political cooperation with the German Federal Government, and also the basis of the profound personal friendship that dereloped between him and the German head of government, Federal Chancellor Adenauer. Saye rise to that identity of action which has Proved its worth in so auspicious a manner. It will be incumbent on German policy to continue the same close cooperation with the Successor to the late Secretary of State in his high office and thus faithfully to hold in

trust the legacy of a friend.

Like all great men John Foster Dulles was an idealist in the truest sense of that term. idealism in thought and realism in action, far from being mutually exclusive, complement each other. He who denies the power of ideas can only fall back on sheer might, while he who ignores reality becomes an illu-

How strongly the thinking and acting of John Foster Dulles was determined by ideas and reality alike, he once expressed at a time of crisis as follows: "At times the free world seems to be governed more by its antagonism than by that which unites it. Its will in foreign policy always develops in full view of every one, and this encourages our opponents to sow distrust. All this is confusing that the second of the se and tiresome. At times a feeling threatens to overcome us that what we do is senseless. But we should never forget that diversity is the hallmark of freedom. It is a fact that detatorship is always weaker than one thinks and democracy always stronger than it seems to be a seem of the seems of it seems to be."

The counsel and aid of John Foster Dulles will now no longer accompany us in the worldwide political conflicts we face. But whenever doubts or discouragement threaten to overcome us, we should always remember overcome us, we should always this courage and deep power of conviction.

EXTENSION OF REMARKS

# HON. FRANK W. BURKE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. BURKE of Kentucky. Mr. Speaker, in the consideration by the House of

H.R. 3 there is a strange admixture of intense feeling by men of good will but of fundamentally different persuasions concerning interpretation of the law.

Conflicts of law is one of the most vexatious subjects in the whole field of jurisprudence. Those who have, over the years given attention to conflicts of law have struggled with comity, the obligations imposed by the doctrine of full faith and credit and the relationship between the States and the Federal Government in those fields wherein each is competent to act.

In recent years, the Nelson case and others like it have given thoughtful lawyers pause. Certainly, the courts let stand for too long the impression that by the Nelson case the States were disarmed from protecting themselves against subversion.

If H.R. 3 sought only to make clear the power of the people to defend themselves through their governments against subversion, it would have a laudable purpose. Undoubtedly, clear-cut legislation aimed at the problem of subversion and the interpretation of laws concerning that crime would receive unanimous support in this body.

When, however, H.R. 3 aims not at subversive activities but seeks in two pages to restate the law of conflicts as devolved through 150 years of jurisprudence it leaves the field of constructive legislation and sows confusion in the fields where clarity and general understanding have characterized the law for

Every interstate carrier, every packer and processor of food, every importer and exporter of goods, will be threatened with a relitigation of legal relationships which have been accepted as the law based on scores of decisions. If there is a corn on our jurisprudential toé, let us not seek to relieve the pain by amputating the leg at the hip. If the sponsors of H.R. 3 truly seek to define the respective interests of the States and of the Federal Government in the field of subversive activities, let them, by direct and positive action propose legislation so aimed, and they will find multitudes of supporters where they now meet oppo-

#### Edwardsville, Pa., Incorporated as Borough 75 Years Ago

EXTENSION OF REMARKS

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the Wilkes-Barre Times Leader of Wednesday, June 17, 1959:

EDWARDSVILLE AT 75

Having attained the respectable age of 75, the Borough of Edwardsville, which was incorporated in 1884, is celebrating its diamond jubilee fittingly. In 1934, it staged an Old Home Week celebration to mark its 50th milestone. In 1984, if all goes well, it is expected to go to town on its centenary.

Although the borough itself is relatively young, as towns go, Edwardsville's history dates back to colonial days. As the years passed, Welsh, Irish, Scotch, English, Ger-mans, Jews and immigrants from countries in central and eastern Europe flocked in to populate the municipality, then known as Morgantown. At the time of its incorporation, its name was changed to Edwardsville in honor of Daniel Edwards.

Edwardsville, with a population of 6,686, according to the 1950 census, has had an interesting history. Many of its sons and daughters not only have become prominent figures in Greater Wilkes-Barre, but they are to be found today all the way to the

west coast.

Edwardsville has known moments of great joy and sorrow. As a mining center, it has made a substantial contribution to the economy of the region and today is experieconomy of the region and today is experi-encing an era of prosperity it has not known for many years, thanks to extensive build-ing operations and business expansion. Through its talented sons and daughters, its famed eisteddfods, as well as its churches and schools, it has made a considerable cultural contribution as well.

Through good times and poor, through peace and war, Edwardsville has carried on as a well-knit community, taking challenges in stride. The spirit, in which it is celebrating its 75th milestone, is an indication of its vitality and neighborliness.

On this auspicious occasion, we take the liberty, on behalf of Edwardsville's neighbors, to extend best wishes.

# The Militarist Federal Government and the Peace-Loving GDR

# HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include an article from the June 1959 issue of the German News. The article dispells for all time the claim of the Soviets that the Republic of Western Germany is being built into a militaristic fortress intended upon attacking East Berlin and East Germany. I commend this article to your attention:

THE MILITARIST FEDERAL REPUBLIC AND THE PEACE-LOVING GDR

At Geneva and at several other occasions representatives of the Soviet Union and the Soviet zone of Germany claimed that the German Federal Republic was a "hunting ground for militarists, Fascists, and revanchists," that the government of Bonn was "preparing a military attack against Germany's Eastern neighbors" and that there-fore the Federal Republic was a "grave danger to the peace of world." At the same time it is being asserted that the so-called German Democratic Republic is a peace-loving country doing everything to combat the revival of German militarism."

The following figures show what these arguments—which are being brought forward to support the Soviet proposal for a "peace treaty"—are worth in the light of facts and figures and how double-faced Moscow's policy really is.

In the German Federal Republic the strength of the armed forces is as follows:

	Men
Army	123,000
Navy	20,000
Air Force	47,000
Territorial defense forces	12,000
Border guards	12,000
Armed police forces of the Länder (State police)	14, 000
Total	228, 000
Compared with this the figures	of the

Compared with this the figures of the Soviet zone of Germany—the so-called German Democratic Republic—are:

	Men
National People's Army	89,000
Navy	10,000
Air Force	11,000
Armed police forces	91,000
Armed militia	300,000
Union for sports and technics	
(paramilitary organization)	625,000
Total	1, 126, 000

# Anniversary of Forcible Occupation of Baltic States by Soviet Russia

EXTENSION OF REMARKS

#### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. PROXMIRE. Mr. President, the American citizens of Lithuanian descent of Racine, Wis., commemorated the 19th anniversary of the forcible occupation of the Baltic States with a mass meeting in Racine last Sunday.

This anniversay marks one of the most flagrant acts of Soviet imperialism—the occupation and integration into the Soviet Union of Estonia, Latvia, and Lithuania.

Mr. President, I ask unanimous consent that a resolution adopted by the Racine branch of the Lithuanian-American Council on June 14, 1959, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE LITHUANIAN-AMERICAN
COUNCIL, INC., RACINE BRANCH, RACINE,
WIS.

Whereas Lithuania, Korea, Hungary, Tibet have shown that in this modern world a new imperialism has arisen which comes from only one source, that political doctrine of man's enslavement which is called communism; and

Whereas the totalitarian nature of the Soviet Russian regime creates hostility to human dignity and the institutions of freedom: Therefore be it

Resolved, That we should not in any way condone the many acts of physical and moral assassination committed by Communist dictators against ideological opposition; and be it further

Resolved, That fraternizing ideas and ideals with the cruel and ruthless dictators will dishearten millions of liberty-loving people in the Communist orbit as well as in the free world itself.

Therefore, we, the here undersigned, are firmly convinced that a summit meeting under present circumstances will strengthen only the cause of international communism; and be it finally

Resolved, That we would very sincerely like to express our heartfelt thanks for many efforts which we know are being made by the President, the Senate, and the House of Representatives of the United States on behalf of those who are yet behind the Curtain of Iron and who still dream of the freedom which must surely and certainly come to them if such efforts will be continued.

MARTIN KASPARAITIS, Chairman. PETER PETRUSAITIS, Secretary.

RACINE, WIS., June 14, 1959.

#### Profit Sharing in American Industry

EXTENSION OF REMARKS

# HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 23, 1959

Mr. BRIDGES. Mr. President, despite the fact that the practice of profit sharing has accomplished great success in American industry during recent years, there still remain many glaring misunderstandings about the economics of this plan.

Rev. Bernard W. Dempsey, S.J., chairman of the department of economics at Marquette University, recently delivered an outstanding speech on this topic which analyzes the profit-sharing plan and clarifies many of the misconceptions surrounding this program.

This is a very revealing address, Mr. President, delivered by one of the greatest authorities on profit sharing in this country, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ECONOMICS OF PROFIT SHARING

(By Bernard W. Dempsey, S.J., chairman, Department of Economics, Marquette University)

Profit sharing is subject to genuine economic analysis, analysis most fruitful and revealing. Yet in elementary textbooks of economics commonly used in American colleges and universities profit sharing is scarcely mentioned at all. In more advanced texts on labor relations it is bundled into a supplementary section on wage supplements even though wage supplements are elbowing their way to a place of their own in the national income estimates because quantitatively they can no longer be ignored. But profit sharing, in spite of its obvious practical successes, in spite of its evident practical possibilities, and in spite of its analytical attractiveness, remains for most economists a controversial subject like God and truth and sin about which scientific men are forbidden to have convictions.

One minor but legitimate source of misunderstanding about the economics of profit sharing must be brushed aside at once. The things that are shared in a profit-sharing program are not always or even principally profits in an analytical sense, though of course they are profits in an accountil sense, i.e., not disposable revenue. In the cases where they are true profits, they are not profits that would be there to accret to the owners if the program did not exist thing shared is usually efficiency earning reduced cost due to the participation everybody in the organization doing his form the most economic fashion—which he nothing to do with speedup and stretchool

When a sound program utilizes the e perience and native ingenuity of the wor force and "why don't we try it this way?" listened to seriously, then we get a remark able economic phenomenon. The rewards innovation, in economic analysis, are is puted to the bold entrepreneur, the spes head of economic progress. But under sour profit sharing a steady series of minor and even minimal innovations continually original nates in the work force and through program accrue, as they should, to the work force. Furthermore, the very introduction of the profit-sharing program is itself organizational innovation in which the wo force also participates, and to the extent the general efficiencies arise from the organization tional innovation new and true profits appe to which all members of the new organis tion have a title. But we may repeat, the are not profits that would be there to shared by stockholders without the prograff

Such purely verbal difficulties should no cause serious trouble. All of economic seence got along for a hundred years, not to well we must admit, under the terminolog of the British liberal school to whom land meant water, labor meant management, as corn meant wheat. The Council of Profi Sharing Industries has been aware from it beginning that the term was not satisfactor but usage and custom sanctioned it so was retained. Yet within this year charge was seriously made that the return on capital had to be lower in the profisharing companies than in others because something that belonged to the stockholder was being paid to somebody else. A modest statistical study revealed clearly thi profit-sharing companies do right well their return on capital and have nothing fear by comparison. The objection reveals chiefly complete ignorance of the economic of profitsharing.

The fact that profitsharing goes by name that is not perfectly satisfactory po ically and analytically has a certain pro priety in its impropriety. Profitsharing anything but a planned movement; it be few a prioris. Profitsharing has grown slowly step by step and piecemeal out good will, intelligence, and experient Until about 20 years ago, when the experience ence table had grown to a point where gross margin of error had largely disal peared, profit-sharing programs emerg where independent minds, concluding the there must be a better way of doing often inspired by religious motives, install a program and adjusted it as they we along. Profitsharing today is the result this gradual workaday, practical development. Practice has far outrun theory and the economics of profitsharing is therefo a description and analysis of what has be done rather than a blueprint for should be done. Profitsharing is a bund of practical wisdom born of experiment experience whose dominating merit is this it works, not that it conforms to someone idea of what will work.

Because profitsharing grew up as a home spun affair, its variety of operation is becappreciated on the hoof. The impression sears Pension and Profit-Sharing Fund almost \$800 million owned by some 200,00 employers has come to be well known, as deserves to be. Especially is the Sears of ample impressive, because Sears is primarily a mercantile business and people

whed to belittle profit sharing frequently ald that profitsharing might work in small anufacturing companies where the relation ween cost and waste, spoilage, rejects and the like could be clear to anybody. But in large enterprises where these relations reand pulled around corners and upstairs, brontsharing would have no perceptible exect on operations. Nor had it any place in a mercantile business, where these relamercantile business, where the total up with less tangible things like service, courtest and the other concomitants of personal contact.

But while the size and nature of Sears' auccess with profit sharing have served to show that it can work in a very large combany and in one which is not primarily in physical production, there are endless other impressive profit-sharing successes. In a certain manufacturing business the equipment, though in mechanical running order, was old and needed to be replaced. Replacement cost was high and management was not in a position to get good financing conreplently on good terms. The profit-sharing fund had the money and the proposition was put to them. The machines were bought and installed, replacements substan-tally the same as the old ones. A deprecia-tion schedule was set up based on the experience with the old machines. But when the men realized that they were now working on their own machines, not only in the broad sense that is true under any profitsharing program but in the literal sense that their fund actually owned them, the depreciation schedule simply lost its meaning. At present writing it looks as though the hachines may last forever with the care and haintenance they are getting, and whether this value accrues to the fund directly on its investment or indirectly through higher brofits makes little difference.

Before the price decline of 1948-49, a certain company had been selling its product at a market price around 25 cents a pound. Prices broke to 16 cents a pound and some companies were in serious trouble. The head substantial profit-sharing firm in this industry stated to this writer, "We could sell for 11 cents a pound." In a certain processing business, the average cost per foot of a standard product is 47 cents. Product and process are uniform and universally known for years; there is no room special gains arising from a peculiar knowledge of trade secrets. But a particular profit-sharing company in this industry could sell its product for 84 cents a foot and sell its product for 54 tents, you are all familiar with the achievement of Lincoln familiar with the achievement o cola all familiar with the achievement compensation of hourly rated employees in recent years has been more than \$11,000, more than years has been more than of which they are a part, and yet they are selling a better product than they sold in 1934, at twice that of the industry of which a brice lower than was charged at the depth or the depression. I have given two wellknown examples and two little-known examples. The process and its effects are the same; examples could be multiplied indefinitely.

Actually, profit sharing has worked so well Actually, profit sharing has worked so where the disregarded an analytical vacuum and filled it with its own achievement. At the present moment it is common knowledge present moment it is being that economic analysis has no web-theory worthy of mention. As far as economists worthy worthy of mention additional addit that economic analysis has no wage honic worthy of mention. As in a monistry worthy of mention. As in a monistry worthy analysis is concerned, economists freely admit that even apart from the additional confusion produced by the complica-tion of inflation, there is no way of really bryving categorically that wages in a particular industry—or in the economy as a shall are too high or too low. Economic analysis analysis simply does not have the tools, the apparatus. There is no perfectly certain

analytical way of revealing whether union organization has had any effect on wages as a whole and no certain analytical way of testing the commonly held proposition that relative gains by organized labor are primarily at the expense of unorganized labor. Wages are cost to the company and income to the workers. The company says unemployment exists and growth is stifled because cost is too high—the unions say because income is too low. And except in gross cases, economic analysis cannot give an unequivocal decision between the two contentions. In short, you can take your choice and say that profit sharing is a practical success in spite of the fact that it was in contradiction to such wage theory as was prevalent or because of the palpable inadequacy, the inconclusive and uncon-vincing quality of such wage theory as was available.

Actually, contemporary wage theory has only one valid instrument of analysis—the marginal productivity method of wage anal--and this instrument performs very differently under different forms of economic organization. This one trustworthy instrument of analysis is the brainchild of one of the early practitioners and almost the sole analyst of the economics of profit sharing, John H. von Thunen.1

The approaches to a theory of wages which still prevail in the United States were the product of an English economist, David Ricardo (1772-1823). Circumstances which need not concern us here caused Ricardo to take it for granted that economic factors and social classes were coextensive and antagonistic. As the Red Queen remarked, The moral of that is the more there is for me the less there is for you." Karl Marx (1818-1883) admittedly and explicity took over from David Ricardo two ideas, (1) the labor theory of value—that the relative value of all commodities depends on their labor content; and (2) the theory of class conflict, based on the identity of economic factors and social classes, and leading to the conclusion that the normal and inevitable wage for labor was a subsistence wage. Since labor was the sole cause of the whole value and labor did not get the whole value, labor was obviously being swindled. Ricardo's conflict of class interest became Marx's class

Now these theories were in most open and violent conflict with common American experience. Our most typical enterprises in the early American economists like the Careys, and later, Henry George, pointed out. But they mixed their good points with bad ones and cultured Europe had nothing to learn from scholars in buckskin. Our most typical enterprises in the 19th century were familyowned and operated farms and family-owned and operated small businesses in which the same persons were landowners (actual or prospective), capitalists (actual or pros-pective) and workers. There is no possibility of conflict between factors and classes in an owner-operated farm. The owner's concern as to how his net income breaks down into wages, interest, rents, and profits is a very secondary and purely analytical one—it's his income. While there may be opportunity for personal conflict in a family business, there is little more opportunty for the identification of classes and factors than there is on the owner-operated farm. The presence the frontier effectively prevented wages from approaching the minimum of subsistence in the United States. They seem to have been about three times the wages of comparable workers on the continent of Europe.

Yet in the face of this plain and common experience, American business and labor came to think and talk and act wholly in terms of the Ricardo-Marxian theorems that never had more than momentary validity even in England and Europe. The sons of the one-family farm went to college and learned about the opposition of interest from economics texts. The widely used work of John Bates Clark (published in 1899) even raised the principle of marginal productivity under competition from an analytical method into an ethical norm. After about 1875, workers learned the same theorems from European agitators who were long on British and continental theory and short on American facts.

Adam Smith had prepared the way for the acceptance of this unsatisfactory and confused thinking, partly by a purely verbal twist. There is no question that specialization by human persons greatly enhances output; by specialization a particular task is done better, easier, faster, and by the ex-perience gained on the specialized task, the task itself may be simplified, abridged or even eliminated in favor of some more economic alternative. What is true of specialized tasks is also true and inevitably bound up with the location or site of the activity. If we were to move the dairy farmers of Wisconsin and Minnesota on to the orange groves of Florida and California we would have the same work force and the same land, trees, and animals but we would have less butter and fewer oranges. This efficiency arising from specialization on one type of land, is one of the valid arguments for private property.

These elementary facts were well known to Aristotle 2 and were refined and elaborated by the scholastic writers from the 12th to the 17th century. By 1600 these basic notions were accurately described as first divisio operis, the division of the task, and divisio rerum, the division of resources, which we now call provate property. But resources are designed by providence for the use of all men. The division of resources does not destroy that designation and destination, but Application of labor to the is a means to it. resources so divided does not change their destination, however subdivided the tasks performed on these resources may be for the

sake of efficiency.

But Smith, in the famous first chapter of his first book in his classic example of pinmaking, spoke not of the division of task but of the division of labor. In spite of the thorough and complete classical and medieval work on these points, Smith's analysis was regarded as a new idea. Now the example in itself is perfect—a pin is a highly useful little object which sells for a very small fraction of a cent. And if you ever doubt the value of the division of tasks and the subsequent specialization of labor, try making your own pins and see what a poor product you get for how many frustrated man hours. But the analysis and explanation was not as good as the example. Smith described this process as the division of labor, not of the task, and the reason for its existence he described as man's propensity to truck and barter. From this in-adequate analysis grew the faulty but in-fluential notion of the economic man. What was divided first was the task, the job, an objective thing, not labor, a personal thing. Cicero long ago well defined labor as "the carrying out of a more burdensome task or duty." Labor is a personal thing the performance of a human being. A man

On this and the points in the preceding paragraph, see the author's forthcoming "Frontier Wage," Loyola University Press, 1959

<sup>&</sup>lt;sup>2</sup>Cf. St. Thomas Aquinas, "Commentary on the Ethics of Aristotle," book V, lesson 9,

<sup>&</sup>quot;Tusculan Disputations," 2:15:35.

is not divided; it is the task which is divided. The man, the agent, specializes but remains a whole man and the whole man specializes.

The division of the task and the division of resources are based on the interdependence of men with their providential variety of talents and interests. The development of these talents and interests is the source of the increased product which is the essence of a higher standard of living and a

better economic life. Smith gave a superficial and inadequate reason for specialization-"the propensity to truck and barter"-and used an unhappy term to describe it, the division of labor, though well describing its benefits. Ricardo identified classes and factors with resulting opposition of interest partly due to Smith's unhappy terminology and Marx took Ri-cardo's class conflict and labor theory of value and bound them into an aggressive class struggle. Many Americans who are by no means Marxists talk in terms of an essential and enduring opposition of interest which could not possibly be true. Marx solved Ricardo's problem by having one class kill the other off. The United States has solved the problem by making everybody middle class. To Marx, with his hatred of the bourgeoisie and respect for titled nobility, this may seem an awful fate-but clearly it is the less bloody solution and more people have had more meat and potatoes than under any alternative. can continue to live under it.

Profit sharing by going back to real fundamentals restored unity and order to the economic process. Resources are divided in private property; tasks are divided and subdivided under specialization. But men are united in interdependence and productive activity. This they always have been and always will remain; the merit of profit sharing is that it brings to light and uses these simple, inevitable relationships. Nothing is ever produced at all except to the extent that factors of production do actually cooperate in any economic system. Profit sharing emphasizes this obvious and essential, inescapable unity and provides sound economic motives for its efficient promotion. The marvel is not that profit sharing when soundly programed produces the wonders that it does. The marvel is that the basic, inescapable elemental truths which it clarifies and utilizes could have been obscured and ignored as long as they were.

The economics of profit sharing is therefore the rational explanation of the enormous efficiency which it makes possible. This it does:

 By tossing aside the unrealistic Ricardo-Marxian motion of opposition of interest which is in clear and simple opposition to the daily cooperation of workers and management in producing anything.

2. More positively, it highlights the personal functional unity of men in production. Resources may be divided, tasks may be divided. Men are united and goods are multiplied.

3. This is the practical working out of Henry Pesch's exposition of the fatal analytical weakness of socialism. Socialism seeks to socialize things and processes—property and production. These things are passive, impersonal material. Men on the other hand, not only can but must be socialized. Men produce a decent standard of living only to the extent that they do actually cooperate, working together in unity. Profit sharing is a tried and proved method of achieving this essential purpose.

4. In any program motives are provided which not only furnish a release for the developed powers of the common man but furnish an occasion for their further development. The untapped potential of human abilities is almost certainly our greatest unutilized resources.

In deferred programs where the worker becomes in some sense inevitably an investor and is not solely dependent on some State social security payment.

6. By providing a solid living wage as the base and a variable productivity figure above this, profit sharing combines two legitimate goals of workers, a firm base for a living wage, and the maximum possible return for his productive efforts without introducing a strangling rigidity into costs.

#### Geneva and the Soviets

EXTENSION OF REMARKS

#### HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BOSCH. Mr. Speaker, I know that all Americans are very proud indeed of the actions of our Secretary of State, Hon. Christian A. Herter, during the trying times of the now ill-fated Foreign Ministers' Conference which has been adjourned to July 13, 1959. His actions and those of France and Western Germany regarding West Berlin are in support of President Eisenhower's position not to budge an inch, but what about Great Britain whose actions seem to leave a suspicion that she is not nearly as firm on this issue? If, as Secretary Herter reports, Khrushchev obviously hopes to grab West Berlin and then West Germany, then the best way to use the 3-week Geneva recess would be to dispel any iota of doubt as to the unified position of the Western Powers that such cannot and shall not come to pass.

Under leave to extend my remarks, I include an article from the German News of June 1959, which is an information service published monthly by a nonpartisan group of German parliamentarians:

GENEVA AND THE SOVIETS
(By our special correspondent at the Conference)

There will be no reunification of Germany for the time being. This is one of the conclusions one is forced to draw after observing the talks of the Foreign Ministers at the Geneva Conference. When analyzing the results of the Conference one must bear in mind that the representatives of the Western Powers were practically forced to meet Mr. Gromyko at the conference table after the Soviets had provoked the Berlin crisis. This crisis was devised to fit into the present Soviet timetable and it is now becoming obvious what Moscow's intentions are. There was, of course, the Berlin ultimatum. Fittingly the Western Powers presented their proposals for the German capital city on the eve of the day originally selected by Nikita Khrushchev to start turning West Berlin into a concentration camp of the installment system. These proposals were rejected by the Soviet delegation.

By threatening to run Western troops out of Berlin through a one-sided cancellation of the Four Power Agreement the Soviets created an atmosphere of uncertainty and

fear as well as a period of increased tension during the course of which their psycholog ical warfare machinery went into full tion. Moscow was at least partly successf in creating a feeling in the West that some kind of an agreement must be reached uf der all circumstances, or something terrib will happen. However, for the Soviets Berlin question is nothing else but a devi which is to get the whole German proble moving-in the direction Moscow wants to move. As was to be expected the Sort Soviet draft for a so-called peace treaty the Geneva Conference. He asserted the this treaty must be signed first and that question of German reunification will left to the two German states. A study this draft makes it clear what the Sovie are after with regard to Germany:

1. There will be no reunification, but confederation of the two German staff which, in the end, will lead to the communication of the whole of Germany.

2. The withdrawal of foreign troops at the creation of a zone free from nucle weapons will swing the military balance; power in favor of the Soviet Union, whit commands the strongest armed forces on the European Continent.

3. West Germany is to be left defenseled the political future of Germany is to be the of enforced neutrality—for the time bell anyway.

4. West Berlin is to be put under the ? litical and economic administration of t Ulbricht regime.

The proposals contained in the Soviet dr will never be acceptable to the German pe ple, and Mr. Gromyko knows it. He will at have realized by now that the Western Pot ers will not agree to any such settlemer The Soviet tactics, therefore, boil down this: Keep talking in a comparative friendly atmosphere, force home the vis according to which the German Democrat Republic is a reality. In the Soviet view has already been merited by the West Geneva—insinuate that the German Feder Republic has become the hunting ground Nazis, militarists and revanchists, and eth leave the Berlin question an open proble until a summit conference or let the bright regime in East Berlin blockade Berlin, in case the latter appears to be mo opportune at that particular moment. Fro a summit conference the Kremlin expects settlement which will guarantee the stati The spe quo in Europe for the time being. The spe and determination with which the Soyle want to achieve this aim has been more the remarkable. They obviously want to be into a position to turn their backs to Euro for a while in order to devote their streng resources, and manpower to a number other objects, such as the economic conso dation of the Soviet bloc.

Their present political offensive shout therefore be met by a counteroffensive. Dutch Foreign Minister recently stated the West would be in a much better barguing position if the NATO Powers blockade. Soviet Russia at the Straits of the Dardane and in the Baltic Sea. Furthermore, the litical offensive should be carried into Morcow's European satellites by a policy, which would make the enslaved people behind the following process of freedom and democracy. Greecould have more open support in her disputively made and the forces deserve the wholehearted support of the West, who represent the most effective bulwarks against bolshevism. Best will be the testing ground for the determination and the strength the free world is willing and capable of mobilizing in order.

combat the Soviet offensive. Risks? What could be more risky than the prospect of a policy which, in the end, will put the whole of Europe at the mercy of Stalin's heirs?

## Thought-Provoking Addresses

EXTENSION OF REMARKS

# HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. McCormack. Mr. Speaker, this commencement season has brought forth an excellent crop of thought-provoking addresses. Our universities have also seen it fit to give due recognition to the service of men who are outstanding leaders in their respective lines of human endeavor. Honorary degrees are more than a mere accolade. In their highest academic sense they are an acknowledgment by the community of scholars engaged in the pursuit of truth of achievements of lasting value in government, science, arts, and the professions.

Three of our famous institutions of learning in this country have honored this month a world figure who has won the admiration and regard of our people. Boston College, Brown University, and the New York Medical College chose Gen. Carlos P. Romulo as their speaker.

In conferring on him the degree of doctor of laws honoris causa, Boston College gave General Romulo the following citation:

Recognizing its mandate to bear unceasing witness to the majesty of God and the secred dignity mirrored in man, the Christian university propounds the perennial affirmations which are at once the stone of the altar and the foundation of public order. Yet this is not enough. The university looks for opportunities to single out and applaud those men of service whose lives exemplify the concepts of faith and freedom which lie at the heart of our civilization. One conclusion which emerges from profound reflection on the state of humanity is the need for some supranational authority which will unite the hopes and the good
